"Man, what you're saying doesn't mean anything anyway," a black student shouted. Others joined in a cacophony.

"I can't hear your questions," Bunzel told the class.

"Man, you haven't been hearing all your life," a student said.

TWO MILLION OMITTED

The black students demanded to know why no readings from Stokely Carmichael or Huey P. Newton were assigned. Bunzel replied that some two million other choices had been omitted.

The books on the list, the students charged, were racist.

C. Wright Mills and Talcott Parsons racists? By what standards? Bunzel asked. Had anyone read them?

"If you put it on the list, nine times out of ten it's a racist book," a voice replied.

At the end of half an hour, Bunzel dismissed the class, telling the students: "I intend to teach this course as it has always been taught."

"If we have to bring guns in here you won't teach it," a youth replied. "We'll teach you about community power."

On Friday, Bunzel again pleaded with the students to be allowed to begin. When the heckling continued, an administrative official was called and ordered two of the Negro students suspended. The class was again dismissed, with the first lecture still to be given.

INTIMIDATION CHARGED

At a press conference later, Black Student Union members declared that "black students were harassed, intimidated and suspended" in Bunzel's class that morning.

Tony Miranda, a leader in the Third World Liberation Front, said the militants were determined to "stop the functioning of the class and educate people on what the class is about. Any class he'll be teaching will have his attitudes and perceptions of our society and that is hurting the people. We're saying he's in direct opposition to our struggle at this point. And as such he's an enemy."

Bunzel, a cool, calm scholar, is somewhat puzzled by the vehemence of the attacks against him, for he prides himself on his long liberal record—the fight he led for admission of Negroes into clubs at Princeton in the 1940s, his outspokenness against Sen. McCarthy and against the California loyalty oath in the 1950s, his support for a black studies program at San Francisco State College as long as four years ago.

He became a special target of the militant students last October, when he published that article in the quarterly, "The Public Interest." In it, he questioned whether the black studies program being drawn up for the College by Nathan Hare would allow for enough diversity in points of view on racial questions.

"It was a cautious piece, hardly something to provoke a kamikaze attack," he said.

Yet it is exactly that caution which angers the militants. For Bunzel, with his careful weighing of all sides of the question, represents to them a liberal enemy—the man in the middle who fails to take sides clearly and so blocks the revolution.

He not only questions their black student studies program but also has failed to support the American Federation of Teachers' strike, explaining that he believes "it is the wrong strike at the wrong time, and besides, I'm not completely persuaded that the industrial trade union model is appropriate to the academic community."

WORSE THAN WALLACE?

"He's much more a dangerous thing than a man like George Wallace," a BSU member told me. "With Wallace, everyone knows where he stands. But when Bunzel says something people say, yeah, he's a liberal so that must be right."

But to Bunzel, the right to say or write what he believes and to teach the class as he wants to is "the irreducible minimum of academic freedom."

"I will not be intimidated but I will not be afraid to acknowledge that sometimes I'm scared," he told me. "I've had police protection at home now for four months and that's a lousy way to live."

FASCELL INTRODUCES BILL TO ALLEVIATE INEQUITIES IN FEDERAL EMPLOYEES' COMPENSATION ACT

(Mr. FASCELL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FASCELL. Mr. Speaker, I introduce today legislation to correct a Government practice which affects only a few people but is of extreme importance to those few who are involved.

I refer to the policy of cutting off a Federal employee's pay as soon as he files a compensation claim for injury suffered on the job. In many cases the paperwork delay in processing a justifiable claim amounts to weeks or months. Meanwhile, the injured employee is expected to meet all of his continuing expenses—which may include supporting a family of many children—without any income.

Clearly this is an unfair and inequitable situation, since the employee is injured through no fault of his own. He was carrying out his official Government duties when injured, and therefore the Government has an obligation to provide for his support until he is able to work again.

Under present practices, the Government's obligation to such employees is not being met. Rather, the faithful employee's urgent need during the critical period of his on-the-job injury is ignored as the Government slowly processes his justifiable request for compensation. We cannot allow this treatment to continue.

My legislation would allow Federal employees injured on the job to continue to receive their regular pay until there is a decision and compensation payments may begin. I think it is only fair that we enact this system so that an injury on the job will not result in an automatic lengthy cutoff of all income.

My bill would amend the Federal Employees' Compensation Act to accomplish this goal. It provides safeguards so that any differences or discrepancies would be adjusted by withholding portions of the compensation payments in a manner that will be equitable to the employee and the Government.

My bill also makes another amendment of the Compensation Act, to provide that employees who are on the compensation rolls will continue to earn annual and sick leave.

Under existing law, an employee receiving compensation payments because of duty-incurred injuries is deprived of the right to earn annual or sick leave for those periods which exceed 80 hours of leave without pay.

This practice is just the opposite when the employee is on annual or sick leave. When an employee is away from his job on such leave, he is earning more leave credits.

I fail to see why a different rule should apply to those who have been injured on the job. Consequently, I seek to amend the law to provide equal treatment for those who are injured.

I have introduced this legislation for the past several Congresses, but to date it has not become law. This session, I hope we can enact these needed reforms which will help produce equitable treatment for our injured Federal employees.

INTERNATIONAL PETROLEUM CO., THE HICKENLOOPER AMENDMENT AND U.S. RELATIONS WITH LATIN AMERICA

(Mr. REES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. REES. Mr. Speaker, on April 4 of this year, President Nixon may be forced to commit our Latin American policy to a course that would irreparably damage future U.S. relations with that region. I refer to the April deadline upon which, under the statutory sanctions of the Hickenlooper amendment to the Foreign Assistance Act, the U.S. Government must suspend all assistance to the Government of Peru, if the conflict between that Government and the International Petroleum Co., a subsidiary of Standard Oil of New Jersey, remains in stalemate. The IPC oil expropriation

case has made headlines in the United States and throughout Latin America, and well it should—it is creating perhaps the greatest crisis in United States-Latin American relations in our time, and the manner in which the U.S. Government reacts to this incident could propel us into a future of total alienation from the Southern Hemisphere.

In my mind, the IPC case points up the vital necessity of an immediate reassessment of U.S. policy toward Peru, and indeed, all of Latin America, and calls for, in particular, a thorough study of two aspects of that policy: first, the Hickenlooper amendment and it seriously negative effects on overall U.S. relations with Latin America; and second, the future course of U.S. private investment in that region, and U.S. Government policy concerning investment.

With regard to the Hickenlooper amendment, I seriously question the wisdom of such a statutory prohibition as an instrument of our foreign aid policy. Its application to the current IPC expropriation case is a prime opportunity to evaluate its validity in our aid policy and to determine its effectiveness in protecting and encouraging private investment in Latin America.

The confusing and complex issues of the IPC case have been aired many times in the press, and I will not attempt to explain them here. But I feel that the most important point, and one which many of us have lost sight of in the current hysteria of this confrontation, is that Peru's expropriation of the IPC holdings is a unique case, and it is regarded as such by the Peruvian Government. It is based on a recurring dispute between IPC and Peru that has persisted for 45 years. During that time, it has been a constant source of resentment on the part of the Peruvians against what they believed, perhaps unjustly, to be economic exploitation of their natural resources by U.S. business interests. It is not a preview of a new anti-American wave surging through Latin America and it will not result in a massive seizure of U.S. business interests in Peru and elsewhere, or in a general rejection of U.S. influence in the Latin nations unless the United States, through acts of sanction and retaliation imposed by the Hickenlooper amendment, causes that alienation to occur. I cannot emphasize this point too strongly—the manner of official U.S. action on this matter is all important—we must be willing to show the Peruvians and other Latin American nations that we are approaching this situation from a sound, reasonable policy, and that we are actively seeking a just and equitable negotiated settlement in the interests of both sides. The danger is in leaping too fast to impose punishment before there is a reasonable opportunity to settle the case by negotiation, and this dangerous leap is precisely what the United States must make if the provisions of the Hickenlooper amendment remain in force.

In the view of the current Peruvian Government, the expropriation of the IPC holdings was a lawful and just act to recover Peru's national rights. The act represents reparations for what the Government at this time believes—correctly or not—was IPC's illegal exploitation of Peru's oil wealth. Gen. Juan Velasco, Peruvian head of state, has stated his Government's position on the invocation of the Hickenlooper sanctions as follows:

> As a free and sovereign nation, Peru is not able to understand nor can it accept the fact that a powerful nation . . . would attempt to enforce its laws outside its territory, and even worse, to use these laws to protect the interests of an enterprise which openly acts outside the Peruvian laws and morals and acts overbearingly without caring for the dignity and sovereignty of this country.

In his view, if the U.S. Government enforces the Hickenlooper amendment, it would be a clear case of economic pressure, aimed at usurping the dignity and sovereignty of a small nation.

And we are only deluding ourselves if we believe that the other nations in Latin America will be sympathetic to U.S. retaliation in Peru. The threat implicit in the Hickenlooper amendment has led to charges throughout the Latin nations of economic imperialism, a U.S. return to the big stick policy, and a modern version of landing the Marines. To say that enforcement of the Hickenlooper amendment would be gravely injurious to the U.S. image throughout Latin America is hardly an exaggeration.

The issue of foreign economic influence in Latin America, especially U.S. influence, is an extremely sensitive one. It has resulted in strong nationalistic sentiments stemming from a deep-seated resentment of the massive U.S. economic presence and the control exercised by outside business interests. The "big stick" method of the Hickenlooper amendment is contributing to this rising tide of Latin resentment, and fanning the flames of Latin nationalism and anti-Americanism. Peru's General Velasco is regarded as somewhat of a hero among his people and other Latin nations. Convinced of his righteous cause, he has dared to defy U.S. demands and strike back against the "Yanqui aggressor," regardless of the disastrous economic effects which that defiance will wreak on the Peruvian economy. For many Latin Americans, he is becoming a symbol of Latin courage and independence.

The intent of the Hickenlooper amendment was to protect our private investors against foreign expropriation without just compensation, while at the same time encouraging them to invest in foreign economies for the mutual benefit of the United States and the nations concerned. It was meant as a warning to foreign governments concerning the repercussions which such action would provoke in U.S. policy. In the case of Peru, its warning has proved to be totally ineffective—the Peruvian Government acted in reprisal for what it considered illegal acts, the Hickenlooper amendment notwithstanding. Moreover, the amendment is detrimental to the U.S. policy of encouraging private investment in the less-developed countries. Rather than encouraging a nation to solicit private investment, it serves to warn that nation that to encourage U.S. private investment is to incur the risk of being subject to U.S. economic pressures, supported by the U.S. Government.

The U.S. Government has always stood ready to support the American investor in cases where his property is illegally seized. Our Government has never accepted any principle other than fair compensation for expropriated property. There are well-established diplomatic and legal procedures for securing just settlements in these cases, and diplomatic channels have been successfully utilized in the past. The Hickenlooper amendment can only serve to impede progress through negotiation.

President Nixon has dispatched his special emissary, John N. Irwin, to enter talks with the Peruvian Government concerning the IPC case and other issues creating friction between our two nations. We place in him the highest hopes for an amicable solution to the problem and wish for the successful conclusion of this important mission. Diplomatic initiatives like this, and not arbitrary legislative enactments, are the way to solve delicate problems of conflicts between nations.

U.S. policymakers have consistently rejected such sanctions in our foreign policy on the grounds that they could seriously injure vital U.S. national interests, including those pertaining to our national security; that these sanctions subordinate the conduct of foreign policy and perhaps our entire relationship with certain foreign nations to a single foreign policy interest; and that by making it appear that U.S. aid programs are substantially motivated by a desire to protect U.S. private investment, provisions such as the Hickenlooper admendment play into the hands of the Communists, who have long alleged that U.S. foreign aid is actually designed to facilitate the exploitation of underdeveloped nations by Western capitalists.

It is my feeling that the existence of the Hickenlooper amendment is negating its own purposes, obfuscating a responsible U.S. position in this situation, and placing us on a direct collision course with Peru, and perhaps all of Latin America.

Such a dollar diplomacy scarecrow should be repealed before it does serious damage to U.S. standing throughout the world.

I would like to address myself now to another aspect of our foreign policy which, I feel, must be reassessed; namely, the future course of private investment in Latin America and what U.S. policy will be.

President John F. Kennedy once stated:

> Economic and social growth cannot be accomplished by governments alone. The effective participation of an enlightened U.S. businessman, especially in partnership with private interests in the developing country, brings not only his investment but his technological and management skills into the process of development. His successful participation in turn helps create that climate of confidence which is so critical in attracting and holding vital external and internal capital.

Peru, like the rest of Latin America, needs a tremendous amount of foreign capital investment in order to develop its resources and raise its terribly low standard of living. Much of this capital

must come from private sources, and Latin Americans generally acknowledge that U.S. business is beneficial to their nations. It has entered industrially depressed areas and raised the living standards of the people there; it has introduced modern methods and technical skills; it has stimulated local industry; it has created job opportunities for thousands of unemployed; it has helped train a managerial and technical class; it has improved the living standards of the small consumer; it has contributed to the beginnings of a modern industrial plant in many nations. All these elements are essential to Latin American development.

But American business has failed to make these accomplishments understood or appreciated by the great mass of Latin people. And Latin American business and government leaders, while appreciating the widespread benefits of U.S. business for their nations, do not want to be dominated by U.S. business. There is a broad spectrum of relationships between our investments and the economies of foreign nations, and I feel that these should be defined.

In February, President Nixon announced that he was sending Gov. Nelson Rockefeller, a man highly respected by Latin Americans for his knowledge and interest in their nations, on a formal mission to Latin America. Governor Rockefeller's trip is to be the first step in an administration plan to reassess our entire policy in Latin America and to discover what is lacking in that policy—why the Alliance for Progress has not been as effective as was hoped; why government instability persists in that region; why there has not been a substantially greater improvement in the lives of the people. I propose that a team of first-rate economists be sent with him to examine the aspects of U.S. private investment in Latin America, with a view toward further encouraging those investments. This proposal is wholly in keeping with President Nixon's announced goal of putting more emphasis on trade and business in Latin America.

It can be hoped that the Rockefeller trip, followed up by a comprehensive reassessment of the overall U.S. policy toward Latin America, will dispel widespread Latin criticism that the United States has turned away from its southern neighbors and is not concerned with their problems.

Our future policy toward Latin America is all important—not only with regard to the way in which we handle this explosive situation in Peru, or the formulation of a new posture toward private investment, but overall, in our concrete dealings with the people of that region.

Too long this Nation has lacked a strong positive policy toward Latin America. Too long our policy has been a meandering, inconsistent one. Too long that region has occupied very low priority in this Government. Too long the United States has lacked a positive image there.

In a recent speech in Washington, Galo Plaza Lasso, Secretary General of the Organization of American States, voiced concern about current United States-Latin American relations. We would do well to concern ourselves with his statement:

> Obviously it is in the United States' interest to have stable and prosperous neighbors, but it is also its obligation . . . to collaborate with its fellow men as they strive for a better life. Time is running out in which we can develop a policy of genuine benefit to the entire hemisphere and make an indispensable contribution to the peace and stability of the world.

I say that it is time that we in the Congress, those in the executive branch of our Government, and the people of this Nation apply our efforts to the task of creating an atmosphere of mutual respect and fraternity among the peoples who share this hemisphere. It is time that we begin to create a long-term, consistent policy toward Latin America, a policy in which we deal with our neighbors as equals and as partners in the desire to create, throughout the Western Hemisphere, a better and more creative life.

KOCH: NO MORE WAR APPROPRIATIONS FOR VIETNAM

(Mr. KOCH asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KOCH. Mr. Speaker, here we are more than 2 months into a new administration. An administration that indicated in the course of the recent campaign that its goal was to bring the war in Vietnam to a conclusion. In the course of that campaign, everyone agreed, including the new administration, that a military victory was impossible and ought no longer to be discussed. Our generals have been saying for years that they can see the "light at the end of the tunnel." In truth, the tunnel has become an abyss filled daily with the blood of our soldiers.

Since March 1968, when President Johnson decided to pursue a negotiated settlement of the war, 11,500 American lives have been lost and 37,000 Americans have been seriously wounded in combat. Last week there were 351 deaths and 1,401 wounded. The week before there were 336 deaths and 1,694 wounded. And all for what? To keep in power two South Vietnamese generals, both of whom will do all they can to prevent peace from being achieved at Paris. Why? Because they know that in any settlement, they will be deposed. It is not in their self-interest to seek peace. Dictators thrive on war, and these two are no different.

We must demonstrate to the South Vietnamese military clique that they cannot depend on our bayonets and the blood of our soldiers to keep them in power and make it clear that we do intend to withdraw and withdraw completely.

I am in complete accord with the view of the junior Senator from South Dakota that—

> We are trying to win, on the battlefield and in Paris, what the Saigon government long ago lost beyond all recall: the allegiance of its own people and the control of its own land.

Our policy must not serve the interests of these petty tyrants. Our policy must serve the interests of the American people. And without question, Mr. Speaker, the interests of the American people demand that we begin to withdraw our soldiers now.

If the Nixon administration will not promptly heed the anguish and anger of the American people seeking to terminate our military involvement in Vietnam, then Congress must exercise its power and refuse to appropriate the billions of dollars being spent for killing in Vietnam.

We must not defer to the insiders and the experts on this paramount issue. We know the magnitude of our blundering—we know the depth of our shame. I for one will vote against any appropriations for the further prosecution of the Vietnam war.

TERRITORIAL WATERS OF THE UNITED STATES

(Mr. EDWARDS of Alabama asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. EDWARDS of Alabama. Mr. Speaker, I am today introducing a joint resolution designed to stiffen U.S. policy in establishing and enforcing our territorial waters claims and ocean fishing limits.

This action is, in my judgment, required for two very good reasons. First, U.S. fishing boats are being subjected to outrageous humiliation by nations which themselves are undercutting our own fishing industry which is in a badly depressed condition.

Second, our shorelines are being subjected to intense electronic surveillance by Communist nations which enforce claims to territorial waters to far greater extent than we do.

International agreements and understandings with regard to territorial waters, if they ever were significant, today are without any meaning. Effectively every coastal nation sets its own claims without regard to others. This means chaos which will, if not corrected, become extremely serious.

My resolution proposes two steps. First, it says that we should adopt a policy of reciprocity in our territorial waters and fishing limits. This means that we would impose on any ship the same territorial and fishing limits which that ship's national government imposes in its own coastal waters. Of course we would in any case maintain our 3-mile territorial limit and our 12-mile fishing limit.

Second, my resolution calls for a new international conference for the purpose of reaching agreement between all coastal nations on territorial limits.

Mr. Speaker, the United States follows the normal traditional practice. This provides for a 3-mile limit for the purposes of sovereign territorial jurisdiction and for a 12-mile limit for the purposes of fishing.

Actually, we have entered into certain agreements liberalizing these limits. A Soviet-American fishing agreement in late 1967 provided that Soviet fishing trawlers could venture to within 6 miles

of certain areas off the Long Island and New Jersey coasts.

In exchange for this concession the Russians agreed not to fish certain other areas off Cape Cod, but proceeded to violate the spirit of the agreement by sending trawlers flying the Polish flag into the areas in which their own ships were prohibited.

Legitimate fishing is only a part of the consideration at hand, since it is common knowledge that Russian and other Communist fishing trawlers are fitted with highly sophisticated electronic surveillance equipment.

On February 8 of this year the Coast Guard observed a fleet of 60 Communist-bloc trawlers off the Virginia coast well within the 12-mile limit. It must be assumed they were both fishing and engaging in surveillance.

And we took no action to enforce the traditional limit. Clearly it is ludicrous to speak of any effective traditional limit either in terms of what we enforce on our own coasts or what others both claim and enforce.

Only yesterday it was reported that a fleet of some 175 Soviet-bloc trawlers were operating in a formation 40 miles long and 15 miles wide off the Virginia-North Carolina coast.

This represents a new high level of Soviet fishing strength in and near American waters. And although we are told these trawlers were some 35 miles off the coast, what assurance do we have that they may not venture up to within 3 miles?

And what assurance do we have that if they do indeed violate the 12-mile limit that we will take any action beyond yet another warning?

If the traditional limits were ever considered to be binding the day has passed when this is realistic. The brutal fact is that we invite, through our practices, both espionage and unfair invasion of our coastal fishing grounds.

Only 29 of 98 coastal nations of the world now observe the so-called traditional limits. The others all claim wider limits.

The 3-mile sovereign limit is a thing of the past. The U.S.S.R. and most Communist nations claim 12 miles. And we can be assured that the claim is rigidly enforced.

The *Pueblo* tragedy provides evidence that at least in some cases Communist nations are fully prepared to seize ships even beyond the 12-mile limit when they believe they can get away it.

Peru and Ecuador go to the extent of claiming 200 miles for both sovereign territorial waters and fishing limits. We all know of recent cases in which U.S. tuna boats have been seized when within these 200-mile limits but well beyond the 12-mile limit.

On February 15 a U.S. boat was attacked while located from 26 to 50 miles off the Peruvian coast. Again last week two more U.S. boats were seized at about the same distance.

It must be emphasized that these incidents are not uniquely recent. They have been going on for far too long. And so have efforts to correct the problem.

More than 2 years ago, in early March 1967, our Assistant Secretary of State Lincoln Gordon spent 5 days in Peru, Bolivia, and Ecuador in an effort to solve the problem. Even at that time seizure of U.S. trawlers within 200 miles but well beyond 12 miles was a long-standing fact.

We were talking in those days about enforcement of the Kuchel amendment which requires that U.S. aid be cut off to any nation that seizes American property. We are today in 1969 still talking about enforcing the Kuchel amendment, and chances are that 2 and 5 years from now we will still be talking about it.

The "tit for tat" policy I recommend will, of course, not solve the entire problem. What it can be expected to do, however, is put some backbone into U.S. behavior on the high seas where other nations have come to believe that our patience is inexhaustible.

Just as important it could provide the thrust needed to convince other nations that a new worldwide agreement is needed. International conferences in Geneva failed to produce agreement in 1958 and again in 1960.

Presumably, one of the reasons they failed was that too many nations believed it was in their national interest to set their own policies while others, such as the United States, adhered to the so-called traditional international standards.

This issue is of serious concern to the American fishing industry. But it is an issue which transcends the interests of our country and involves world stability.

I earnestly solicit the support of this House in early consideration and approval of this resolution.

CONGRESS SHOULD CLOSE INCOME TAX LOOPHOLES AND LET THE SURTAX EXPIRE

(Mr. KARTH asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. KARTH. Mr. Speaker, it is being made clearer each day by various spokesmen that the administration will request the extension of the "temporary" 10-percent income surtax.

I cannot help but feel this is an "easy way out" which will bear most heavily upon the 50 million low- and moderate-income taxpayers who are being squeezed by inflation.

There is a better way, a more equitable way, of obtaining the additional money which is urgently needed to finance the added expenses of the Vietnam war.

I am proposing, through my bill H.R. 7045—and it is being proposed in similar bills—that this Congress let the surtax expire and obtain the $9 billion in revenues which the surtax is expected to raise, by closing those tax loopholes for individuals and corporations who are profiting unduly at the expense of our overheated war economy.

Through these tax loopholes some giant corporations and millionaires escape paying taxes on most or even all of their income.

In a memorable appearance before the Joint Economic Committee on January 17, 1969, outgoing Secretary of the Treasury Joseph W. Barr warned of a brewing "taxpayers revolt" incited by the flagrant inequities made possible by loopholes in the law. Mr. Barr cited chapter and verse and explained that in 1967 there were 21 Americans with incomes over $1 million who paid no Federal income tax at all; there were 155 individuals with 1967 incomes of over $200,000 who paid none.

Some corporations, too, have enjoyed special tax favors at the expense of other corporations and the low- and moderate-income taxpayers. Oil companies are especially notorious for their "piggy-backing" on the public. The Treasury Department estimates that the cost of the average oil well is recovered 19 times over. Through the 27½-percent depletion allowance gimmick the 20 leading oil companies in the United States, in 1966, legally paid Federal income taxes at the rate of 8½ percent on their $4¾ billion profit. This is about the rate paid by a wage earner and his wife at a poverty-level annual income of $3,000.

My bill would raise the $9 billion in additional revenues which are needed to replace an expiring surtax by: reducing mineral and oil depletion allowances, eliminating a tax "break" for multiple corporations, repealing the 7-percent investment tax credit which is causing inflationary industrial overexpansion, limiting the "hobby farm" income-loss gimmick, and other unwarranted subsidies or preferences which enrich favored classes of people and firms. I believe these reforms could speedily be considered by Congress and enacted into law to replace the expiring surtax provision.

It is certainly not my intention that this tax reform bill be a substitute for the comprehensive revision of the income tax laws now being studied by the House Committee on Ways and Means. I would hope, however, that all the essential features of this bill would, at least, be incorporated in the long-awaited revision. They would be a long-desired first step to bringing a greater measure of justice to our tax system.

WAYS AND MEANS COMMITTEE HEARINGS ON TAX REFORM, LOOPHOLES, ETC.

(Mr. MADDEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks, and include extraneous matter.)

Mr. MADDEN. Mr. Speaker, this morning I appeared before the Ways and Means Committee and testified regarding the necessity for early action by the committee and the Members of the 91st Congress to enact effective legislation that will curtail and repeal some of the fabulous and, in many cases, fraudulent tax loophole bonanzas that have been placed on our statute books over the years. I appreciated the remarks and questions of many members of the Ways and Means Committe as to the necessity of effective Federal tax reform.

I include my testimony before the Ways and Means Committee this morning:

STATEMENT OF CONGRESSMAN RAY J. MADDEN, BEFORE THE WAYS AND MEANS COMMITTEE, MARCH 26, 1969

Mr. Chairman, I wish to thank the Chairman and the Members of the Ways and

Means Committe for giving me an opportunity to testify on this much-needed Federal tax reform legislation. I also want to commend your committee for calling these long-delayed hearings in order to secure first-hand information for the American public on the deplorable conditions which our Federal tax system has reached in recent years. During my 27 years in Congress I have been shocked by the gradual increase in power, year by year, of specially privileged and powerful segments of our economy slowly and cleverly securing favorable legislation until, in some cases, they are totally exempt on Federal taxes from their exorbitant profits.

Our Federal tax laws, as of today, have become riddled with tax concessions, loopholes, tax credits, and depletion exemptions to a favored few who have the finances to employ powerful lobbyists to relieve their clients of the responsibility for providing the revenue necessary to finance the enormous cost to keep our land the No. 1 nation in the world.

Former Treasury Secretary Joseph Barr revealed in January that 21 persons with incomes over $1 million paid no taxes at all in 1967, while 155 with incomes of over $200,000 also escaped taxes entirely.

When the wealthy escape taxes, it is the average taxpayer who gets hit for higher taxes to make up the difference. The best example of this is the 10 percent tax surcharge. Faced with the need for more revenues, the Administration came running to the average middle class taxpayer, while doing nothing to make wealthy foundations, oil millionaires, real estate speculations, and highly-paid corporate executives pay their fair share. Those with incomes of around $15,000 a year or less already pay nearly two-thirds of all personal Federal income taxes, and the surcharge simply adds to their burden. But to the wealthy exploiter of loopholes the surcharge is no problem at all—*10 percent of nothing is still nothing.*

If just a modest number of the fantastic and excessive tax loopholes and exemptions were eliminated there would be no need for an extension of the 10% surcharge tax. I have introduced H.R. 9195, which if enacted into law would bring in more than $9 billion in additional revenue by plugging 13 of the more notorious loopholes in our Federal tax system. This happens to be the same amount that an extension of the 10 percent tax surcharge would yield in fiscal 1970. Thirty-one other Congressmen have sponsored identical legislation.

Among the loopholes this bill would close is the depletion allowance for oil and other minerals. Largely because of the oil depletion allowance, the 20 largest oil companies in the country paid only 8½ percent of their net income in taxes in 1966. One large company with profits ranging from $61,110,000 in 1962 and similar increased amounts of income in 1963, 1964, and 1965 paid no Federal taxes whatsoever.

Standard Oil of New Jersey had an income of $1,271,903,000 in 1962 but paid only sixtenths of one percent of their fabulous profits. In the following four years their percentage tax on similar profits ranges as follows:

	Year	Net income before tax	Percent tax paid to Federal Government
Standard Oil (New Jersey)	1962	$1,271,903,000	0.6
	1963	1,584,469,000	4.3
	1964	1,628,555,000	1.7
	1965	1,679,675,000	4.9
	1966	1,830,914,000	6.3
Atlantic Oil	1962	61,110,000	0
	1963	56,747,000	0
	1964	61,081,000	0
	1965	105,299,000	0
	1966	127,384,000	

Some companies do not do as well as the oil companies, however. Perhaps they do not have as powerful a lobby in Washington as "big oil."

The following statistics on three coal companies illustrate the contrast:

	Year	Gross profit	Percent tax paid to Federal Government
Consolidation Coal Co	1964	$44,863,073	26
	1963	39,568,737	28
	1962	32,918,065	26
Pittston Co	1964	13,721,024	30
	1962	14,699,420	35
Island Creek Coal Co	1964	7,713,060	18
	1963	5,149,930	24
	1962	3,459,563	(1)

[1] Lost by SEC.

The oil lobby will of course argue that the 27½ percent depletion allowance is needed to insure an adequate supply of reserve oil in emergencies, that it is vital to our national defense, that our economy will collapse without it. Fortunately the Treasury has just released a thorough-going study of the tax breaks currently enjoyed by the oil industry and their effect on the level of oil reserves. The study, done by the CONSAD Research Corporation of Pittsburgh, challenges these oil industry arguments, concluding that the depletion allowance and special expense deductions enjoyed by the oil companies add only a small amount to the Nation's petroleum reserves. Furthermore, the Report goes on, the depletion allowance encourages excessive drilling and inefficient production methods and discourages research into other potential fuel sources. I don't think this is a very good bargain for the $2.25 billion worth of loopholes we gave to oil men in 1968. Big oil has been enjoying this financial bonanza for years. Real estate speculators are almost as generously treated at tax time as oil men.

Former Treasury Assistant Secretary Surrey, in a speech last year, said, "The Treasury recently examined the 1966 tax returns of 13 real estate operators, all of whom had very substantial gross incomes, and found that depreciation 'losses' reduced the tax liability of nine of them to zero and of two others to less than $25."

Doing away with the accelerated depreciation gimmick on speculative real estate would head off operators of this sort and bring in an extra $150 million in tax revenues each year.

Another gaping tax loophole is the 7 percent investment tax credit, enacted in 1962, which permits business firms to subtract from their tax bills 7 percent of the value of eligible new equipment installed during the year. It was intended to stimulate the economy by providing a subsidy to private investment.

However, our economy has been overstimulated and we are now in a period of serious inflation. fed in part by the 7% investment tax credit. The credit concentrates inflationary spending power on precisely that portion of the economy that is already most overheated—the capital goods section in the first place, it creates a second round of inflation by causing business to hasten to invest before inflation drives up capital goods prices even further.

The Commerce Department Survey of business fixed investment plans for 1969, released on March 13, underscores the need for repeal of the investment tax credit. The survey predicted that total 1969 expenditures for new plant and equipment will reach a whopping $73 billion, a 14 percent increase over 1968. This contrasts with year-to-year increases of only 4 percent in 1968 and 2 percent in 1967.

This survey indicates strongly that it is capital goods inflation that is most serious, yet the Administration still insists on a 10 percent surcharge on the average consumer to combat inflation. If it is inflation they are concerned about, why not get at the real culprit by repealing the 7 percent investment tax credit?

The list of tax loopholes can be extended almost to eternity, as this committee well knows.

Capital gains which pass through an estate at death are not taxed.

The unlimited charitable deduction allows many millionaires to escape taxation entirely.

Special tax treatment for stock options allows highly paid corporate executives to get tax advantages not open to the average wage earner.

The tax exemption for municipal industrial development bond interest encourages plant piracy and gives unwarranted subsidies to wealthy corporations, while costing the Treasury millions in lost revenues.

As an example, certain states of the Union who enjoy the exemption privileges of Section B of the Taft-Hartley Law are paying sub-standard wages to millions of factory workers in their localities. These sub-standard wage workers are practically out of the buying market in regard to $3–$4 thousand dollar automobiles, $400 refrigerators, etc., etc., and are adding nothing to the employment and prosperity in factory production of our Nation. This, of course, is an exemption over which the Ways and Means Committee has no responsibility. On the other hand, your committee has recommended, and the Congress has enacted, tax exemptions for municipal industrial development bonds. This exemption encourages plant piracy and gives unwarranted subsidies to wealthy corporations and industrial factories to move into these 14B states. Thousands of towns and cities in these areas have taken advantage of the tax exempt industrial development bonds with cheap land and cheap wages to capture thousands of industrial factories from states paying a living wage to its workers. Multi-millions could be brought into the Federal Treasury by the repeal of the interest on municipal and other local civic bond promotion.

The hobby farm loophole allows wealthy part-time farmers to escape taxes by using fictional farm "losses" to offset income.

I will not take more of the committee's time by extending the list of loopholes, for time is something we don't have very much of because of the need for immediate action in repeal of tax loopholes, exemptions, etc.

The American people are weary of being told that we are all very concerned about tax reform, that we are working very hard on it, and that it is very difficult and complicated and it is going to take a long time. The taxpaying public is running out of patience, and the surcharge is doing little to make them more tolerant.

Therefore, I would urge the committee to act within the next two months on as many major tax reform items as possible. Tax reform should not be postponed until we can put together a neat, tidy, "skim milk" package that everyone can agree on. We will be here until the year 2000 if that is the goal.

I am not going to take the time of this committee in detailing the fabulous and fraudulent raid on the Federal Treasury by thousands of tax-avoiding estate foundations. A former Secretary of the Treasury stated before a Senate Committee that he could not speculate as to how many foundations are operating and enjoying tax exempt benefits. Some foundations are engaging in free enterprise industry in competition with regular tax paying corporation and non-exempt business and industries. One official in the Treasury Department testified that he could place the number of foundations enjoying tax exemptions at approximately 25,000. Congress-

man Wright Patman and other Members have gone into the foundation tax bonanza in detail before your committee, and I know your committee and all Members of Congress are familiar with its tax-avoiding ramifications.

Every tax dollar lost through these loopholes must be paid by another source. For the most part, this loss—and it has been estimated to be a whopping $50 billion—is paid by moderate income groups, by small people with incomes of $15 thousand and less, who cannot afford to hire high-priced accountants and tax lawyers to enact loopholes, credits and exemptions.

The House should be given an opportunity to work its will on tax reform at the earliest opportunity. I firmly believe that the heavy financial obligation of Government would warrant your committee concentrating on major loopholes which involves literally billions of escaped taxes by certain segments of our economy. Your committee, I hope will report a bill closing the top-bracket tax-escaping loopholes so the Congress can act immediately on the same. The minor loop holes can be taken up by your committee and considered later in the year. The American public has become familiar in recent years with the necessity of taking the gigantic tax load off the wage-earner and the salaried citizen while mammoth corporations and gigantic mergers of corporations profiteer on the American public. I do hope your committee will not submit a weak, and ineffective recommendation on the closing of the tax loopholes. As a Member of the Rules Committee, I for one, and I know of others that for the first time in years, will insist on an open rule on this legislation. This will give the other 410 Members of Congress an opportunity to answer the demand of the almost unanimous cry of the American public for effective tax reform.

It has been suggested by some Members that this legislation could be enacted in the next few months if the major loophole recipients, whose payments on their huge profits is but a pittance, would start paying into the Federal Treasury a blanket minimum Federal tax ranging from 15 percent to 30 percent of their profits. They then would join with the small businessmen and the wage and salaried citizen in supporting our huge domestic and foreign programs and Federal obligations.

AN APPRAISAL OF THE CONFLICT IN VIETNAM

The SPEAKER pro tempore (Mr. PATTEN). Under a previous order of the House, the gentleman from New York (Mr. RYAN) is recognized for 60 minutes.

GENERAL LEAVE

Mr. RYAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days within which to revise and extend their remarks on the special order which I am about to undertake.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. RYAN. Mr. Speaker, 3 weeks ago, the National Urban Coalition under the chairmanship of former Secretary of Health, Education, and Welfare, John W. Gardner, issued a report on progress made during the last year in meeting the challenges posed by the President's National Advisory Commission on Civil Disorder. In area after area of domestic need—housing, education, unemployment, discrimination, pollution of our atmosphere and water—the report of the Urban Coalition concluded that no progress had been made in the year since the National Advisory Commission on Civil Disorders issued its call to the Nation to respond to these pressing urban problems before our cities deteriorated beyond repair.

As the situation in our cities becomes daily more crucial, the war in Vietnam, which has consumed more and more of our Nation's resources and, even more tragically, cost the lives of over 33,000 American servicemen, continues. While our cities disintegrate and our country becomes increasingly disunited, a war which was ill conceived from the beginning rages on with undiminished fury.

From the beginning of this tragic conflict I have consistently warned of the threat which the war poses to both the welfare of the Vietnamese people and the stability and integrity of the United States. Since 1964 the domestic needs of our people have been neglected as our Nation's resources and energies have been committed to the Americanization of the war and the constant escalation of our military role—an escalation carried on with the consent, if not the advice, of the Congress, which, despite the opposition of a few of us, has readily authorized and appropriated some $30 billion annually to conduct the war in Vietnam.

Last March, in the wake of mounting opposition to the war—opposition which spread from the campuses to important segments of the labor movement, business community, and even within the policymaking apparatus of the Government itself, and which was then finding expression through the political process—the Johnson administration changed course. The President declined to commit the 206,000 additional troops which General Westmoreland had requested. On March 31 he announced a curb in the bombing of North Vietnam, said he would move toward peace through negotiations, and removed himself from consideration as a candidate for reelection. A short time later, in May of 1968, the preliminary peace negotiations got underway in Paris.

For those of us who had long opposed our deepening involvement in Vietnam, and who had urged that the President stop the bombing in the North and rely on diplomatic means for a settlement of the war, the President's announcement appeared to signal a deescalation in the war and at least the beginning of a move toward a negotiated settlement.

That was 1 year ago.

What is the result of that "change in direction" today? Has the level of violence in Vietnam declined?

Last week, the Pentagon announced that 351 American servicemen had been killed during the week ending March 15. 1,401 Americans were wounded.

In the week previous to that, 336 Americans were killed and 1,694 wounded. And in the week ending March 1, 453 Americans died in combat and 2,593 were wounded.

This makes a total of 1,140 deaths during 3 weeks of the current North Vietnamese-Vietcong offensive.

These statistics by themselves, however, do not fully reveal the intensification of the fighting that has occurred since the so-called reversal of direction was announced by President Johnson. It is significant that almost one-third of the total number of 33,063 American servicemen who have died in Vietnam since 1961—10,565 men—have died since the preliminary Paris peace talks began on May 10, 1968.

As these grim figures show, despite the general expectations of the American public that the advent of negotiations would produce a deescalation of hostilities in Vietnam, the fighting has intensified to the point that 3,459 lives have been lost in the 3 months since South Vietnam joined the Paris talks on December 7.

Moreover, the death and suffering which have been the lot of the Vietnamese people for over two decades now continues unabated. The Senate Select Subcommittee on Refugees has estimated that between 3 million and 4 million people in South Vietnam are presently without shelter or occupation, with very little hope that their condition will improve in their own lifetime. No one knows how many Vietnamese have been killed or maimed during the past 4 years, but estimates run to the hundreds of thousands.

Mr. DERWINSKI. Mr. Speaker, will the gentleman yield?

Mr. RYAN. I yield to the gentleman.

Mr. DERWINSKI. I am rather disturbed that there are only about 20 Members on the floor for such an important address. If the gentleman wishes that I suggest the absence of a quorum. I will unless the gentleman does not care to have an audience.

Mr. RYAN. That is a point of order which the gentleman from Illinois may raise in his own discretion.

Mr. DERWINSKI. The gentleman will be discreet.

Mr. RYAN. A number of Members plan to participate in this discussion during the course of the afternoon, many of whom are on the floor already. Others will join us, and I assure the gentleman that we will be making recommendations to the Nixon administration and to our colleagues which I hope will be heeded.

Secretary of Defense Melvin Laird has said that the blame for the renewed intensification of the fighting rests squarely with the "enemy." "I want to state unequivocally," he stated on March 11, "that if these attacks continue unabated, an appropriate response will be made."

President Nixon on March 14, also said that an "appropriate response" would be taken if the North Vietnamese attacks continued.

According to New York Post columnist James Wechsler, however, Ambassador Averell Harriman, the chief Paris negotiator for the Johnson administration, has said that the "present North Vietnamese offensive is essentially a response to our actions rather than a deliberate attempt to dictate the peace terms or torpedo the talks." Ambassador Harriman's comments echo an earlier warning which the New York Times made last

December 14, when it warned that an escalation in U.S. military activity—coupled with a decline in the number of battalion-scaled assaults by the North Vietnamese and Vietcong—was endangering the Paris talks. The editorial cautioned that an upset in the military balance in Vietnam in advance of a settlement "is bound to produce a reaction sooner or later" that could "wreck the chance for a negotiated peace."

Stepped up offensive military actions by the United States is being used, however, to attempt to upset the military balance. In the hopes that the occupation of territory long held by the Vietcong will produce a settlement more favorable to the Saigon regime, the U.S. military has continued to make extensive use of aggressive "search and destroy" missions. In spite of the fact that in the past each U.S. escalation has been matched—and that the only result of an intensification of hostilities has been more death and destruction—the American military command appears to persist in its belief that "just one more sweep" will tip the military balance in their favor. This strategy has failed to produce any significant military gain in the past. For, as I have repeatedly stated in numerous speeches to this body, the Vietcong does not intend to dissolve in the face of U.S. firepower. The National Liberation Front, and its predecessor the Viet Minh, have been fighting for over two decades to rid Vietnam of foreign influence. Any amount of American military pressure, short of total destruction, will only produce an "appropriate response" on their part. And the destruction will go on.

A little more than a year ago, on March 11, 1968, when General Westmoreland was asking for an additional 206,000 troops, I said that the choice was clear. "Will additional thousands of American young men be sent to their death in Vietnam? Will more billions of dollars be spent, which should be spent on our domestic crisis, only to reach new levels of destruction in Vietnam, only to achieve a continued stalemate at a new plateau? Or will the administration negotiate a political settlement?" The lack of progress at the Paris peace talks and the actual intensification of the war since the talks began leaves little doubt that neither the Johnson administration nor the Nixon administration has taken the steps necessary to obtain a negotiated political settlement. Instead, more treasure has been spent, and more lives have been sacrificed.

At his last press conference on March 19, President Nixon ominously threatened that "he had warned North Vietnam once" and that he would not "warn them a second time."

With the possibility increasing that President Nixon may take some retaliatory action against the latest offensive by the North Vietnamese and the Vietcong, it is imperative that the Congress make clear its opposition to any renewal of the policy which I described on March 1, 1966, as "mindful escalation." As I have stated, such retaliatory action will only lead to a counterresponse and a new round of escalation of the war. And the result will only be the unnecessary prolongation of the suffering of the Vietnamese population.

By speaking out now—before the Nixon administration takes such measures—the Congress can prevent any new escalation. If Congress fails to define our objectives in Vietnam, the President will have only the counsel of those in the Pentagon and the foreign policy establishment who have led us into this morass from the outset.

The presidential primaries of last Spring—in which both Senator Kennedy and Senator McCarthy won decisive victories on programs advocating a deescalation of the war and an emphasis on diplomatic negotiation as the means to peace—made it clear that the American people want this war ended. Indeed, that feeling seemed to be almost universally accepted by all candidates.

As long ago as March 1968, in the course of the New Hampshire primary, Presidential candidate Nixon said, "The next President of the United States must end the war." He declared that his statement about ending the war "was not a vague campaign promise." "I do have some specific ideas on how to end the war," he said. "They are primarily in the diplomatic area."

In his testimony before the Senate Disarmament Subcommittee on March 20, Secretary of Defense Laird said that if the Paris talks "failed to produce a negotiated settlement" of the war, the Nixon administration had "other alternatives" which it was prepared to pursue.

The Congress should demand that the administration make clear the nature of these "other alternatives."

In March 1968, Presidential candidate Nixon had "specific ideas on how to end the war." In March 1969 President Nixon has "other alternatives." Vague "alternatives" are no substitute for a clearly defined statement of our goals and objectives in Vietnam.

It is time for the President to explain those "specific ideas" and "alternatives."

Moreover, it is time for the Congress to assert its own role in the formulation of foreign policy and insist that the administration take steps to get the Paris negotiations off dead center and on the road to a prompt and early settlement.

What should those steps include? For the most part, those of us who have long advocated an end to the war have already spelled out—on numerous occasions—what must be done to bring this war to an end. Let me reiterate them, however.

First, the Congress must refuse to approve any further appropriations for military activities in Vietnam.

As I said on May 5, 1965; March 1, 1966, March 2, 1967; and June 11, 1968—when I voted against funds for the Vietnam war—the authorization and appropriations process offers the only opportunity to debate our policy in Vietnam; it is the only way in which we can exercise influence over the administration's war policy. We have never had before us the question of a declaration of war. Approval of appropriations for the war has been interpreted by President Johnson as congressional approval of the administration's war policies. It will continue to be regarded as approval so long as we continue to vote funds for the war.

Proponents of the present policy have in the past attempted to pose the question of war appropriations as one of support for our boys who are fighting the war. No doubt they will continue to pose the question in this manner. But that ploy is nothing less than an attempt to hide the catalog of error and bland assurances of progress that repeatedly have been belied by events in the cloak of providing adequate protection for our fighting men. No one in this House has ever suggested that our courageous fighting men in Vietnam should not have whatever they need to protect and defend themselves. But the appropriations have been used to escalate the war. Let us not forget that our fighting men are not responsible for the policies that send them into battle to risk their lives. If those policies have resulted in the needless sacrifice of thousands of American young men, it is at least partially because Congress has been unwilling to halt those policies by halting the appropriations which support them.

Second, the administration must accept the participation of the National Liberation Front in the future political life of South Vietnam. Our present refusal to grant the NLF any role in the postwar political environment of South Vietnam is a major obstacle to progress at the Paris talks. To expect that either the NLF or the North Vietnamese will agree to a settlement which does not permit them a political role in South Vietnam after nearly 25 years of struggle on their part to achieve power is totally unrealistic and out of keeping with the political realities of South Vietnam. We do nothing to further the evolution of democracy in South Vietnam by propping up a regime so corrupt and unrepresentative that even its proponents believe it would immediately collapse in the face of United States military withdrawal.

So long as our own policy continues to emphasize military strategies over political compromise, the Saigon generals will retain the power to destroy the prospects for a negotiated settlement of the war. For, despite their undemocratic ways and lack of popular support, they seem to have prosecuted the war with greater efficiency than their predecesors. However, if the United States makes clear its determination to achieve a negotiated settlement of the war, Thieu and Ky would have no choice but to pursue a course of conciliation and compromise, since they are completely dependent upon support from the U.S. Government.

Once the President expressed his willingness to accept a coalition government in South Vietnam which included the NLF, the Saigon regime would have no recourse except to broaden itself to include those non-Communist elements which favor some sort of compromise with the NLF. For they could neither prosecute the war on their own nor hope to withstand the pressure from the Vietcong without the aid of those groups which they now imprison and repress.

What about the argument of those who say that a coalition government would only be rapidly taken over by the NLF?

I must say, in all candor, that I do not believe there is any way we can be assured that that will not happen. The NLF has sought to become the ruling force in South Vietnam for many years now. But there is reason to believe that the NLF would not be able to eliminate all political opposition in South Vietnam.

Richard Barnett, the codirector of the Institute of Policy Studies, who has recently met with both the North Vietnamese and the NLF negotiators in Paris, has said in a recent statement that—

> The NLF is under no illusions that political opposition to them will disappear once the Americans leave. They are going to have to accommodate the various factions or else continue a bloody civil war which it is the interest of no Vietnamese to prolong.

Several of the religious groups are well organized and ready to compete for power once they no longer have to face the day-to-day harassment and persecution which the Thieu-Ky regime perpetrated against them. As Dr. Barnett concludes:

> The sooner such groups are released from prison and harassment and can rehabilitate themselves, the sooner they can unite their forces and deal with the Communists from greater strength.

So long as the United States acquiesces in the face of the present regime's suppression of these groups, potential opposition to the NLF will remain fragmented and disunited.

A third important step by which the United States can advance the peace talks is by withdrawing significant numbers of troops from Vietnam. This would speed the belief in the mind of the North Vietnamese that the United States indeed intends to withdraw its troops from Vietnam, which, as James Reston pointed out on March 7, is essential to achieving a negotiated settlement.

In his March 19 testimony before the Senate Armed Services Committee, Secretary of Defense Melvin Laird revealed that the assumption of the Military Assistance Command in Vietnam—MACV—was "that no reduction of U.S. personnel would be possible in the absence of total withdrawal of North Vietnamese troops." If James Reston's conviction that the withdrawal of some U.S. troops is essential in order to convince the North Vietnamese of our willingness to eventually withdraw all troops is correct, then the military's "assumptions" will clearly prevent any progress at the talks in Paris. The result will be a continuation of the stalemate in Paris and the killing in Vietnam.

The time has come to indicate our commitment to a diplomatic settlement of the war by withdrawing a significant number of U.S. troops—at least 100,000—as soon as is logistically possible. Moreover, the withdrawal process should be continued by not replacing those portions of our military force which are rotated back to the United States after their tour of duty in Vietnam. This would have two effects:

First. It would provide concrete proof to the North Vietnamese of our sincerity in seeking to deescalate the level of hostilities on the battlefield and thereby expand the possibility of achieving a breakthrough at the Paris negotiations, and

Second. It would serve notice on the Saigon regime that the United States does not intend to remain indefinitely in South Vietnam and thereby accelerate pressures on the Saigon generals to broaden their own political base in preparation for serious discussions with the NLF. This strategy would additionally—and not unimportantly—greatly reduce the level of fighting which has characterized the war during the past 10 months.

To continue to pour vast amounts of men and money into South Vietnam in the ill-founded hope that the South Vietnamese Government will someday be able to carry on the war without U.S. aid is to commit this country to an indefinite presence in Vietnam and to condemn the Vietnamese people to still more suffering and destruction. My reply to Secretary Laird's statement that he was "encouraged and impressed" in his talks with South Vietnamese leaders "with their repeatedly stated desire to take on more of the responsibility for fighting" is to refer him to one of his predecessors, Robert McNamara, who said in June of 1965:

> The South Vietnamese are fighting effectively. We continue to see increases in their recruitment. We continue to see some increases in their strength.

As the Washington Post said on March 20:

> We've heard it all before.

How many times will we accept these bland assurances of progress, assurances that are repeatedly repudiated by the continued ability of the enemy to inflict high casualty rates on both American and South Vietnamese troops?

The Congress must reject the bankrupt solutions of the military strategists and make clear its own determination to end this tragic war by refusing to approve any further appropriations for the Vietnam war. The people of this Nation through the political process have repudiated the very policy which still prevails. Too many lives have already been sacrificed in a vain attempt to save the faces of those who conceived and carried out this wasteful war. The only recourse now is to promptly terminate this war and to turn our attentions to the urgent problems in our own society which are even now ripping apart the social fabric of the United States.

It is time to stop saving faces and to start saving lives.

Let me emphasize that I do not speak in a partisan way today. This war is not of President Nixon's making; he inherited it. But it is now his responsibility to follow the mandate of the American people and end it. If the President does not take immediate steps to get the Paris negotiations off dead center, he will be responsible for the continued death and destruction in Vietnam, and his capacity to direct the resources of this Nation to the solution of domestic problems will be curtailed, even as his predecessors ability to respond to those problems was curtailed.

The message to the President from Congress must be clear: Get us out of Vietam now, for the urgency of our crisis here at home demands your full energies and preoccupation. More importantly, that message must be backed up by the exercise of the only power Congress has to regulate the conduct of foreign policy, the power of the purse. If Congress refuses to appropriate additional funds to prosecute the war, the President will withdraw troops because he will have no alternative. If Congress fails to end its support of the war, it cannot shift all of the responsibility for the continuation of the war to the President. Congress must recognize that it can stop the war and that, if it does not, it will be at least partially to blame for the additional violence and suffering that will ensue.

It has been argued that the withdrawal of American troops from Vietnam, before the security of the Saigon government is assured, would make all that we have poured into that country—including the men we have lost and the vast amounts of money we have spent—a waste. How could the American people ever accept this, it is asked. How could any American Government ever explain that the sacrifices made by over 33,000 young American men have been in vain? There is no simple answer. But pouring more and more money into this war, and sacrificing thousands more men, is surely no answer.

The blunt fact is unavoidable that this country has erred tragically in the conception and carrying out of this war.

There really are only two courses. We can continue—like the poker player who stays in the game for the one more deal that will salvage his losses—to pour more men and money into Vietnam in a foredoomed attempt to gain something from our sacrifices. Or we can admit frankly to the American people that the best way to correct bad policy is to simply stop perpetuating it. Surely our stature in the eyes of the world would be improved if we admitted the error of our policies and rectified them. I believe the American people as well would prefer that course to the continued destruction of Vietnam and indeed, our own society.

As I have said, President Nixon is not responsible for the tragic consequences of our policy. Yet, he has an unparalled opportunity to correct mistakes that are not of his doing. So does the Congress. Both must exercise their mutual responsibilities of explaining to the American people that the war has been a disastrous and tragic mistake.

Mr. ROSENTHAL. Mr. Speaker, will the gentleman yield?

Mr. RYAN. I am delighted to yield to my colleague, the gentleman from New York.

Mr. ROSENTHAL. Mr. Speaker, 1 year ago next Monday an incumbent American President renounced renomination because the war in Vietnam had shattered his role as party and national leader.

Today we watch his successor closely, seeking assurance that the lessons of Vietnam animate President Nixon's search for peace.

Those lessons are:

An exhausting, cruel, and tragic war was fought for the empty delusion that American arms could impose conformity to our political ideas. We should ex-

pect other strange ideas in other strange countries. What shall we do?

Our military leaders, who promised a military victory time after time, have led us instead to a political catastrophe. We should weigh their advice more carefully in the future.

We have paid over 30,000 American lives and $150 billion in this vain war effort. Comparable sacrifices for genuine domestic needs elude us.

We have been told that we should give the new administration 100 days in office before criticizing its conduct. I would wait forever to criticize our present policy in Vietnam if I thought such forbearance would end the war 1 day sooner. But the new administration gropes, with little apparent difference from its predecessor, toward an illusory military victory.

Peace will not come at the Paris conference table any more than it will come in the jungle fighting in Vietnam. Peace will come when we Americans begin to withdraw our forces—which are the only foreign troops in Vietnam—and let Vietnamese political processes achieve the equilibrium which arms could not impose.

It seems to me that the critical judgment is not necessarily whether they put all their energies into a peaceful settlement. I suspect that each administration, past and present, would assert that they did do that. But it may be that they misunderstood the nature of the conflict in Vietnam. Maybe they misunderstood what has to be done. It seems to me that the original mistake in 1954 was the belief that we could achieve through military means a political objective. We did not fully understand that we cannot decide for ourselves what style, type and quality of government there should be in another land.

And even if we were able to make that decision, as General Ridgway suggested, our military imposition was not manageable. We saw this from 1965 to 1968—the period of escalation—that the administration felt that we could achieve through military victory, a political solution. President Johnson finally determined that the military was leading him down a primrose path. He finally saw no success at the end of it, because a viable, tranquil peace can never be achieved in any country unless the people involved in that country are involved in trying to make that peace obtainable and workable.

The biggest stumbling block I think was not an inadequate desire to make peace but our inability to understand the nature, quality, and style of the government in South Vietnam. Until the elements of the populace in South Vietnam could join together, live together, and build together, their own political entity, there could not be peace. Our tragic misunderstanding was in not seeing that there could not be peace imposed at a military price that either the people of the United States were willing to pay or the world was willing to let us pay.

We should look to the past to see where we made our mistakes, but not to inquire to the motivations of the individuals involved. I would like to look to the future.

I think the Nixon administration ought to learn the lesson that others failed to learn: there must be a government in South Vietnam that is going to deal with all political elements. Past governments in South Vietnam simply were not going to take themselves out of office. I do not know how credible recent statements to the contrary are.

These governments knew that maintenance of the war and maintenance of their military posture kept them in a position of power. As long as they refused to deal with other elements in Vietnam society, there could not be a viable, meaningful peace. Yet only through such refusal could they keep their power. It may well be that President Nixon has secretly indicated or perhaps he could do it publicly also that the American Government is dissatisfied with the posture of the autocratic regime in South Vietnam. If we were to begin withdrawal of our troops, that regime would be pushed into a position of compromise. Other leaders could come to the fore in South Vietnam who would be willing to make a durable and lasting peace.

It may well be that that has happened. I certainly hope so. I believe President Nixon and his administration must be reminded that it cannot achieve a military victory, because it is absolutely unobtainable. We have to resort to the political process, painful as it might be. That is the lesson of Vietnam.

What type of government will follow from a coalition of political elements? What kind of peace will follow? It may be to our liking and it may not be to our liking. But the hard, cold fact is that we do not have a choice. We clearly cannot dictate the style and the quality of government they have.

I would hope that it would be a democratic government with legitimate representation of all interests in society there. It does not necessarily have to follow our style, but I think it should have at least a basic element of democratic representation. But if it does not have that, if it is something more than that or something less, whether it violates my own poor judgment is somewhat irrelevant. The Vietnamese will have to deal with their own government, as we must deal with ours, at their own pace, under their own conditions. We cannot impose our will there. Military events cannot be permitted to make policy in the United States. The President must clearly enunciate what American objectives are.

I commend the gentleman and his colleagues for taking this time to make these very important statements. I hope the message is clear for the present administration; we cannot sit back and let military events overtake policy.

To summarize, I urge our Government to make clear:

First, we want peace; second, we want it under conditions that are satisfactory to the people in South Vietnam; third, that it is our intention to withdraw our forces from South Vietnam as rapidly as possible, and fourth, the Vietnamese must make their own way in the world.

As soon as Americans and Vietnamese understand that, the world will applaud us for supporting principles of democracy and fair and honest and legitimate representation.

Mr. RYAN. Mr. Speaker, I thank the gentleman for his contribution. I certainly think he has put his finger on the key element; that is, the determination of past policymakers to pursue a military victory and their failure to understand that this was essentially a political problem which required a diplomatic solution.

Furthermore, of course, there must be a recognition of the need to broaden the Government to include all elements of the population. The refusal on the part of the past administration—I hope there will be a change by this one, but so far there has been no indication of any change—to recognize that the NLF—the National Liberation Front—has a role in the future political life of the South Vietnamese people is, of course, the stumbling block, in my judgment, to a negotiated settlement. Once that is accepted, it may be possible to bring about a settlement.

The immediate withdrawal of 100,000 American troops from South Vietnam would make it clear that we do not intend an indefinite military presence in South Vietnam.

Mr. ROSENTHAL. Mr. Speaker, if the gentleman will yield further, there is one further point I want to make, to reaffirm the point made by Ambassador Harriman, who suggested, in an article published by the International Press, that, when President Johnson decreed there should be no bombing in the North, most of us felt there would be a reduction of military activity. What Governor Harriman suggested happened was an increase in our search-and-destroy efforts in South Vietnam, by which we replaced cessation of bombing in the North with increased bombing in the South. So, most regrettably, I think, we initiated increased military operations in South Vietnam, and that is contrary to what most Americans understood would be the situation when the President made that speech.

Mr. KOCH. Mr. Speaker, will the gentleman yield?

Mr. RYAN. I yield to the gentleman from New York (Mr. KOCH).

Mr. KOCH. Mr. Speaker, I commend the gentleman from New York and I subscribe to the remarks he has made thus far, and I would add the following comment.

I think this Congress must take an independent course of action. It cannot wait for the President to do what he said he would do; namely, end the war in Vietnam.

Though the Congress does not make foreign policy, we can seriously affect it by our power to provide or withhold the billions of dollars that the military wants for the further prosecution of the war.

When military appropriations are requested, we have the right to know how much money is specifically earmarked for the further prosecution of the Vietnam war. If this is done, I will oppose the appropriation of those amounts so earmarked. If such information is not provided, I will oppose the total appropriation.

I will not vote a single dollar for more killing—not a single dollar.

I thank the gentleman.

Mr. RYAN. I thank the gentleman. I agree that Congress must assert its role. Congress has acquiesced in this war by voting funds for it during the past 4 years. If Congress simply cuts off the funds for the war, then the executive branch will have to pursue a different policy.

Mr. RYAN. Mr. Speaker, I now yield to the distinguished gentlewoman from New York (Mrs. CHISHOLM).

Mrs. CHISHOLM. I thank the gentleman.

Mr. Speaker, on the same day President Nixon announced he had decided the United States will not be safe unless we start to build a defense system against missiles, the Headstart program in the District of Columbia was cut back for the lack of money.

As a teacher, and as a woman, I do not think I will ever understand what kind of values can be involved in spending $9 billion—and more, I am sure—on elaborate, unnecessary, and impractical weapons when several thousand disadvantaged children in the Nation's Capital get nothing.

When the new administration took office, I was one of the many Americans who hoped it would mean that our country would benefit from the fresh perspectives, the new ideas, the different priorities of a leader who had no part in its mistakes of the past. Mr. Nixon had said things like this:

If our cities are to be livable for the next generation, we can delay no longer in launching new approaches to the problems that beset them and to the tensions that tear them apart.

And he said:

When you cut expenditures for education, what you are doing is short-changing the American future.

But frankly, I have never cared too much what people say. What I am interested in is what they do. We have waited to see what the new administration is going to do. The pattern now is becoming clear.

Apparently launching those new programs can be delayed for a while, after all. It seems we have to get some missiles launched first.

Recently the new Secretary of Commerce spelled it out. The Secretary, Mr. Stans, told a reporter that the new administration is "pretty well agreed it must take time out from major social objectives" until it can stop inflation.

The new Secretary of Health, Education, and Welfare, Robert Finch, came to the Hill to tell the House Education and Labor Committee that he thinks we should spend more on education, particularly in city schools. But, he said, unfortunately we cannot "afford" to, until we have reached some kind of honorable solution to the Vietnam war. I was glad to read that the distinguished Member from Oregon (Mrs. GREEN) asked Mr. Finch this:

With the crisis we have in education, and the crisis in our cities, can we wait to settle the war? Shouldn't it be the other way around? Unless we can meet the crisis in education, we really can't afford the war.

Secretary of Defense Melvin Laird came to Capitol Hill, too. His mission was to sell the anti-ballistic-missile insanity to the Senate. He was asked what the new administration is doing about the war. To hear him, one would have thought it was 1968, that the former Secretary of State was defending the former policies, that nothing had ever happened—a President had never decided not to run because he knew the Nation would reject him, in despair over this tragic war we have blundered into. Mr. Laird talked of being prepared to spend at least 2 more years in Vietnam.

Two more years, 2 more years of hunger for Americans, of death for our best young men, of children here at home suffering the life-long handicap of not having a good education when they are young. Two more years of high taxes, collected to feed the cancerous growth of a Defense Department budget that now consumes two-thirds of our Federal income.

Two more years of too little being done to fight our greatest enemies, poverty, prejudice, and neglect here in our own country. Two more years of fantastic waste in the Defense Department and of penny pinching on social programs. Our country cannot survive 2 more years, or 4, of these kinds of policies. It must stop—this year—now.

Now I am not a pacifist. I am, deeply, unalterably, opposed to this war in Vietnam. Apart from all the other considerations, and they are many, the main fact is that we cannot squander there the lives, the money, the energy that we need desperately here, in our cities, in our schools.

I wonder whether we cannot reverse our whole approach to spending. For years, we have given the military, the defense industry, a blank check. New weapons' systems are dreamed up, billions are spent, and many times they are found to be impractical, inefficient, unsatisfactory, even worthless. What do we do then? We spend more money on them. But with social programs, what do we do? Take the Job Corps. Its failures have been mercilessly exposed and criticized. If it had been a military research and development project, they would have been covered up or explained away, and Congress would have been ready to pour more billions after those that had been wasted on it.

The case of Pride, Inc., is interesting. This vigorous, successful black organization, here in Washington, conceived and built by young inner-city men, has been ruthlessly attacked by its enemies in the Government, in this Congress. At least six auditors from the General Accounting Office were put to work investigating Pride. They worked 7 months and spent more than $100,000. They uncovered a fraud. It was something less than $2,100. Meanwhile millions of dollars—billions of dollars, in fact—were being spent by the Department of Defense, and how many auditors and investigators were checking into their negotiated contracts? Five.

We Americans have come to feel that it is our mission to make the world free. We believe that we are the good guys, everywhere, in Vietnam, in Latin America, wherever we go. We believe we are the good guys at home, too. When the Kerner Commission told white America what black America has always known, that prejudice and hatred built the Nation's slums, maintains them, and profits by them, white America would not believe it. But it is true. Unless we start to fight, and defeat, the enemies of poverty and racism in our own country and make our talk of equality and opportunity ring true, we are exposed as hypocrites in the eyes of the world when we talk about making other people free.

I am deeply disappointed at the clear evidence that the No. 1 priority of the new administration is to buy more and more and more weapons of war, to return to the era of the cold war, to ignore the war we must fight here—the war that is not optional. There is only one way, I believe, to turn these policies around. The Congress can respond to the mandate that the American people have clearly expressed. They have said, "End this war. Stop the waste. Stop the killing. Do something for our own people first." We must find the money to "launch the new approaches," as Mr. Nixon said. We must force the administration to rethink its distorted, unreal scale of priorities. Our children, our jobless men, our deprived, rejected, and starving fellow citizens must come first.

For this reason, I intend to vote "No" on every money bill that comes to the floor of this House that provides any funds for the Department of Defense. Any bill whatsoever, until the time comes when our values and priorities have been turned right-side up again, until the monstrous waste and the shocking profits in the defense budget have been eliminated and our country starts to use its strength, its tremendous resources, for people and peace, not for profits and war.

It was Calvin Coolidge I believe who made the comment that "the Business of America is Business." We are now spending $80 billion a year on defense—that is two-thirds of every tax dollar. At this time, gentlemen, the business of America is war and it is time for a change.

Mr. RYAN. I want to thank the distinguished gentlelady from New York for her very stirring remarks. Her contribution is very valuable to this debate. She has brought deep understanding and compassion to the House which has strengthened our cause.

Mr. PODELL. Mr. Speaker, will the gentleman yield?

Mr. RYAN. I yield to my colleague, the gentleman from New York (Mr. PODELL).

Mr. PODELL. Mr. Speaker, I would like to thank the gentleman for giving me the opportunity to join with him in what I consider a very important issue, or the most important issue today facing the American people. I would like to commend the gentleman for bringing this to the attention of the American

public and to associate myself with his remarks.

Mr. Speaker, I am growing increasingly apprehensive over the Nixon administration's stand and activities on Vietnam and our involvement there. We hear of proposals by military people to bomb in Cambodia. We hear murmurings of hardening positions from the military. The pace of the war and attendant casualties have risen in an ever-ascending curve in recent weeks. I know that the President wishes peace. Nor do I question his good will. It is the methods and progression of events that cause my disquiet.

In spite of the fact that secret discussions are progressing, the casualty lists inexorably continue to appear in our papers, and the evening news reports continue to present the depressing sadness of the tragedy that is Vietnam.

During the campaign, Mr. Nixon said that "the best policy is to walk softly and carry a big stick." Perhaps so. But it seems that this big stick is not preventing American casualties.

In October, President Nixon said that he wanted a generous peace which won't destroy either North Vietnam or South Vietnam. It is my hope that with this thought in mind, we are acting accordingly in the secret discussions, aiming at a reasonable middle ground which will allow the United States to begin to phase out its presence there.

I also look with increasing impatience for signs that the armed forces of South Vietnam are carrying increasing portions of the defense of their own country. Certainly, this is one avenue of improvement we have every reason to believe the administration is pursuing.

I look with increasing impatience to the day we start bringing our boys home.

Mr. Nixon said at the National Republican Convention that Vietnam "was a war for people, not for territory." I yearn for a day when this will be a conflict strictly between the people of Vietnam and perhaps a coalition government that can settle the conflict there, and pray the administration is keeping this thought in mind during these talks. For the sake of seeing the beginning of the end of America's intervention in this iternecine struggle, I am willing to restrain impatience for the immediate present. But I simply offer these figures to my colleagues, to the people, and to the secret negotiators and to the administration. From election day to today, approximately 4,200 Americans have been killed in Vietnam. Wounded for the same period are approximately over 25,000.

Since President Nixon was inaugurated until now, there have been approximately 2,600 Americans killed in action. The figure for the wounded is approximately 15,000 for this same period.

These are sobering statistics indeed.

I recall very well President Nixon in his campaign stated that he has a plan for the ending of the war. I only suggest to the President that in view of the acceleration of these casualty figures I believe it is time to divulge the plan now.

For now I shall say no more, except to hold up these figures prominently to President Nixon, and remind him that many are remembering the campaign slogan about finding that new solution to Vietnam. They are also willing to wait the short-term outcome of these secret talks—but no longer. The voices of the generals of this country have been heard for far too long. The voice of the citizenry awaits its turn.

Mr. RYAN. I thank the gentleman, and I appreciate the contribution he has made.

Mr. BINGHAM. Mr. Speaker, will the gentleman yield?

Mr. RYAN. I will be glad to yield to the gentleman from New York, Mr. BINGHAM.

Mr. BINGHAM. Mr. Speaker, nearly a year has now passed since the Vietnam watershed of 1968—the critical moment in American history when the United States admitted that military victory in Vietnam was not attainable at an acceptable cost and opted for negotiation as the only feasible path toward settlement. At the time of President Johnson's speech last March 31, the way seemed open to move seriously toward peace. Bombing of North Vietnam was curtailed. Talks began shortly afterward in Paris. But as spring and summer passed, men continued to die on the battlefield and hope for an end to conflict dimmed. Then, in the fall, bombing of North Vietnam was totally halted and the Paris talks were broadened. New hopes were raised. Now, these, too, have faded.

Since last March, nearly 12,000 Americans have died in battle, along with countless thousands of Vietnamese soldiers and civilians on both sides of the war. Every day during the past month, an average of 50 American soldiers have fallen. It behooves us to ask, Mr. Speaker, what is being accomplished by this continuing carnage. The patience of the American people, limited at best, is wearing dangerously thin. A recent Gallup poll graphically demonstrated American war weariness. Over three-fourths of those who expressed a view as to what the United States should do next in Vietnam felt we should either "go all out," "pull out," or end the war "as soon as possible." Alarmingly, the largest percentage—nearly one-third of all respondents—favored greatly escalating the war, a course which past experience has shown cannot bring about the victory it is intended to achieve.

Clearly, we cannot tolerate continuation of the appalling waste of human life that characterizes the scene in Vietnam. Nor can we simply continue the stately gavotte that passes for negotiations in Paris. Escalation is a dead end. What, then, should be our choice?

As I have previously stated in this Chamber and elsewhere, Mr. Speaker, we must make up our minds that the ultimate settlement in Vietnam will be political, not military. Once we fully accept this premise, we can more readily accept the scaling-down of American forces, and of military operations generally, which is its immediate corollary. This has always been a struggle without firmly fixed lines, in which the nominal control of a hundred villages more or less will have little if any effect on the final settlement. The monthly returns from the Hamlet Evaluation Survey, for example, neatly cataloging "our" villages and "their" villages in hopes of showing an encouraging trend, are an exercise in self-delusion. This is an amorphous war, not given to facile quantification. Any of my colleagues who are inclined to take seriously these measures of "progress" would do well to ponder a recent report warning that the entire militia—half the armed force responsive to Saigon—might defect to the enemy if the National Liberation Front appeared likely to enter the government. Under these circumstances, how solid are "our" villages really likely to be?

At some point, whether tomorrow or next year or 5 years hence, American troops will leave Vietnam. The situation they leave behind will presumably be one which has been worked out by the Vietnamese themselves—Saigon, the NLF, and all the other groups who together probably represent a majority of the South Vietnamese people. If lives are to be spared, the process must begin promptly—and the fighting must be reduced or stopped while it is underway.

How can we move in this direction? An encouraging note has been sounded by President Thieu. His invitation to the NLF to meet in private talks suggests an initial recognition by the Saigon government that political settlement is inevitable, and that the NLF must be part of such a settlement. Until now, Saigon has been the greatest barrier to introducing political questions into the negotiating process. It is not surprising that this should be so. While the war continues, the present regime in Saigon has excellent prospects of retaining power. The Thieu-Ky government is probably the best one that the United States could find for the purpose of single-mindedly prosecuting the war. With the American support which results from this convergence of interests, they are relatively immune to internal challenge. Their principal opponents are either on the other side of the war or in their own jails. Any political negotiation must inevitably give those opponents new legitimacy and, eventually, at least a share in the power they now wield alone.

Nevertheless, it is clearly better for the Saigon government to negotiate under an American umbrella than to risk being left totally exposed if American war weariness were to dictate a rapid withdrawal from Vietnam. And it may well be just such fear of a change in the American national mood that prompted this limited first step by President Thieu. The invitation to the NLF will not be followed up by serious negotiations envisaging an eventual sharing of power, however, unless American pressure on Saigon is exerted in this direction. To date, we have all too often encouraged the South Vietnamese to take a hard line, for this has suited the convenience of our military commanders and matched the basic American preference for a "clean" military solution. Now, however, we must ourselves accept the full implications of the watershed decision of 1968 and move wholeheartedly toward

political settlement—and we must not permit Saigon to slow the pace, much less to exercise a veto.

Several immediate steps have been suggested before, Mr. Speaker, but warrant reiteration because they still point us in the necessary direction. First, the President should announce a schedule for initial withdrawals of American troops. Only as the protective umbrella actually begins to shrink will the Saigon government be given a real incentive for serious political negotiation. Withdrawals would thus combine a political benefit with the immediate prospect of reduced American casualties. Second, we should discontinue search-and-destroy operations or at least limit American participation in such operations to those directly concerned with the protection of American installations. Other than the past 4 weeks of the North Vietnamese-Vietcong counteroffensive, the distressingly high American losses in recent months were reportedly due in large part to stepped-up offensive operations by our forces. Since such operations cannot destroy the enemy nor seize and hold territory as a means of strengthening the South Vietnamese negotiating position, no rational purpose is served by permitting them to continue as before.

As a third step, we should propose an immediate cease-fire. This goes beyond the suggested withdrawals and limited offensive operations but like them is fully justified by the essential irrelevance of military actions in determining the future of South Vietnam. Military operations have become almost a reflex action—the opposing armies fight because they are there and because that is what opposing armies are supposed to do. The North Vietnamese and Vietcong seemingly came closer than did we to recognizing the lack of purpose in further fighting when they scaled down their own operations, and withdrew substantial forces beyond the borders, during the fall of 1968. Not surprisingly, they responded last month with a fresh offensive to prove their continuing military vitality when we failed to respond in kind to their tentative move toward disengagement. Since military operations are basically irrelevant, however, we should now take the further step of proposing a cease-fire as the only effective means for halting the death and destruction which now prevail in Vietnam.

Mr. BURTON of California. Mr. Speaker, will the gentleman yield?

Mr. RYAN. I yield to the gentleman from California.

Mr. BURTON of California. Did I correctly understand the gentleman from New York (Mr. BINGHAM) to state that last fall the North Vietnamese deescalated their troop involvement in the south and, if so, would the gentleman restate that so I may understand it more clearly? In the restatement, will the gentleman indicate what response and mutual deescalation, if any, took place either on the side of the ARVN forces or the U.S. forces?

Mr. BINGHAM. It is my understanding that the North Vietnamese did withdraw a substantial number of troops last fall, that there was a slowing down of military activities on their part, and that this was not met by a corresponding deescalation on our side. But, on the contrary, we stepped up our bombing operations. We intensified the level of our activities, as is shown by the casualty figures, and this, by the way, was referred to not long ago in a column written by James Wechsler of the New York Post in which he quoted Averell Harriman to that effect. That quotation has since been confirmed. So I think it is fair to characterize, as I did, the recent North Vietnamese offensive as a counteroffensive.

Mr. BURTON of California. I commend the gentleman for underscoring this very important development which has been all but obscured from the American people, and I for one am most grateful to the gentleman from New York for bringing this matter to the attention of myself and my colleagues.

Mr. BINGHAM. I thank the gentleman.

Mr. EDWARDS of California. Mr. Speaker, will the gentleman yield?

Mr. RYAN. I yield to the gentleman from California.

Mr. EDWARDS of California. On this very important point brought up by the gentleman from New York (Mr. RYAN), and commented on by the gentleman from California (Mr. BURTON), I asked the Library of Congress about the tonnage of bombs that have been dropped in Vietnam since the beginning of the war. They checked with the Pentagon and advised me that more bombs, the highest tonnage of bombs in the entire Vietnam war, was dropped in January 1969. And I might point out as an aside that all of these bombs were dropped on South Vietnam. So the only conclusion that one can arrive at is that there has been a huge escalation insofar as bombing is concerned in South Vietnam since the bombing halt.

Mr. BINGHAM. I thank the gentleman.

A cease-fire is, of course, peculiarly difficult to apply in a guerrilla war. Certainly, any cease-fire must include, at least in principle, an end to terrorist attacks as well as to larger scale military operations. It is an open question at best whether the other side would agree to such a restriction on their operations. Indeed, it is doubtful that they could afford to accept this kind of restriction, in view of the problems they would face in keeping a guerrilla force together under conditions of inactivity. But there is surely no reason why we should not at least propose a cease-fire. It would demonstrate our interest in stopping the needless killing now taking place, and, if accepted, would also create more favorable conditions for such programs as land reform and institution building which are the real keys to relative influence of the various factions in a final settlement.

Finally, Mr. Speaker, we should add further weight to our insistence that Saigon negotiate the key political questions both promptly and meaningfully by insisting that the current repressive domestic policies of the South Vietnamese Government be abandoned. Unless the non-Communist opponents of the present regime are free to undertake political activity, the NLF will emerge from any settlement as the best organized political force in the country. Saigon, with its eyes firmly fixed on war, is doing all the wrong things in terms of preparing for peace. And these pragmatic considerations apart, it is certainly inappropriate, to say the least, for the United States to offer so enthusiastic an embrace to an ally which is behaving in so blatantly undemocratic and dictatorial fashion.

In addition, we should make clear to Saigon that talking with the NLF in Paris, while denying it a future political role in Vietnam, is not a realistic posture. For the NLF, with its established infrastructure and long history in South Vietnam, must inevitably play some part in the future of the country. To refuse this, as Saigon persists in doing, is to refuse the route of political settlement—and this is a course we cannot afford to tolerate.

Mr. Speaker, these proposed actions flow naturally from the basic decision taken a year ago to pursue a Vietnam settlement through negotiation rather than through interminable and costly warfare. They are actions which, indeed, should have been taken as an immediate consequence of that basic decision. The delay has already cost this country nearly 12,000 dead. There is no reason, and no excuse, for delaying any further.

Mr. Speaker, I thank the gentleman for yielding and for taking this time.

Mr. RYAN. Mr. Speaker, I thank the gentlemen from New York for their remarks.

Let me summarize briefly, Mr. Speaker, the three points which I think are basic to moving the Paris peace negotiations off dead center and bringing about a prompt settlement of the Vietnam conflict.

First. Congress must refuse to appropriate any additional funds for prosecution of the war in order to make it clear to the administration that this war must end.

Second. There must be immediate recognition on the part of the President, and a statement to that effect, that the United States is willing to accept a coalition government in South Vietnam, including participation of the NLF.

Third. The immediate withdrawal of 100,000 U.S. troops from South Vietnam as evidence that the United States does not intend to maintain a continued military presence and also to encourage the Saigon government to broaden itself in preparation for serious deliberations with the NLF.

At this point, Mr. Speaker, I yield to the gentleman from California (Mr. BURTON).

Mr. BURTON. Mr. Speaker, I commend the gentleman from New York (Mr. RYAN) for the leadership he has given us this afternoon in this very important discussion.

As the gentleman from New York knows, he and I have been two of the half dozen or so Members of the House who have opposed every single one of the supplemental appropriations reflecting the escalation of the most unhappy war in Vietnam. It was about 4 years ago this coming May, when we had the first supplemental appropriation sought by the then Democratic administration, that a number of us pointed out during the course of that discussion, that the war in Vietnam was essentially an indigenous conflict and that it would not be resolved until such time as the Nation Liberation Front would be involved meaningfully in the discussions. We said then that the Saigon government should be a participant in those discussions with the NLF.

I noted in reading the papers this morning that it has been announced that the Saigon government has finally openly admitted this course of action must be followed. I wonder if there is not some similarity between the response, or the leaking of the response, of the Saigon government late yesterday, immediately prior to the special order, and the releasing of information by the Defense Department just prior to the special order we had with reference to the mutiny trials at the Presidio of San Francisco.

Just 2 or 3 hours prior to the beginning of that discussion and debate the executive branch sought to take some of the sting out of the criticism that was to take place on the floor.

The gentleman from New York would agree, I am sure, that the executive department—and all too many of our colleagues in the Congress—made a very grave mistake when we began bombing the north in 1965 or 1966. It was this escalation of the war, this carrying of the military effort to the north, this widening the scope of the effort, which Americanized the conflict. In my judgment, the conflict has been, and still is, essentially a civil war.

We have sent over tens and tens of thousands of troops. Every time the situation did not reflect any particular improvement, the military experts would tell us, "Just give us a little more arms and a little more in the way of troops and we can bring this situation into focus." Time after time, month after month, year after year these military experts have been in error.

Our Democratic administration in the past, but for the events of March 31 and thereafter last year, all too often heeded the advice of these so-called military experts.

I am sure the gentleman from New York would agree with me that a number of us had hoped that the new administration, viewing the election results of the primaries, particularly of the Democratic primaries throughout the country, evolving around the candidacies of Senator McCarthy and Senator Kennedy, would have gotten the message. The message becomes even clearer when coupled with the fact that they won the election, due in no small measure to the decision of a considerable number of persons concerned about the American involvement in Vietnam that they either not support the Democratic candidate or they support a new administration that would hopefully provide us with a fresh look at this matter. A number of us had hoped this administration would, in fact, take a fresh look at this question. Being essentially unfettered, because it was not in power at the time the judgment was made, it might therefore hopefully bring a rational solution to and rational extrication from the American involvement in Southeast Asia.

I, for one, did not hold out much hope in this regard, but some hope I did have. I must confess the decision of this administration on the antiballistic missile system, coupled with the statement of the new Secretary of Defense, Mr. Laird, here within the last week, has pretty well disabused me of any optimism that this administration has any magic formula or is going to take any meaningful look at the American position in Southeast Asia.

I think the administration is making a very serious mistake. I think they are going to find that so many problems confronting American society cannot be and will not be resolved in any measure so long as we are involved in an effort costing us directly out of the National Treasury some $30 billion or $36 billion or $40 billion a year.

I fear time is passing, time we had hoped would be used by this new administration to bring this very ugly war to an end.

I fear very profoundly that once again the military experts have won the battle in the policy councils of the Executive. I fear that this new administration, just as our previous Democratic administration, has been hoodwinked by the military experts.

Our distinguished colleague from New York (Mr. Bingham) noted that last November the North Vietnamese withdrew substantial numbers of their troops from the southern part of the demilitarized zone back across to the north.

This withdrawal was not met by reciprocal deescalation of the military effort either on behalf of the South Vietnamese Army or the American military presence. The American military experts have told us that this withdrawal was not a sign, as many of us viewed it, of the fact that the north was sincerely interested in deescalating the conflict but, rather, the military told us that it was merely because of the enormous pressure of the American military presence on the north that they had to take this action.

In this connection, Mr. Speaker, when the Vietcong or the North Vietnamese Army do not engage in the shelling of cities or in massive or meaningful military offensives, our military says this is because we are so strong. I would prefer to think that on a number of these occasions this was an effort being made by the NLF through the Vietcong to invite a reciprocal deescalation on our part.

On the other hand, when these armies of the Vietcong or the North Vietnamese engage in major actions like the Tet offensive, then our military experts tell us, "You see, you cannot trust them. They say they want to deescalate and yet they proceed to escalate."

The long and short of all of this is that the American people want this war to end. The military experts have hoodwinked, in my view, the Executive under the previous administration and I fear are now doing it again. I must state that our American policy, I think, is dead wrong in Vietnam. I hope that none of our colleagues will pay heed to the so-called military experts who were wrong from the inception of this conflict about our ability to suppress this civil war. Who have been wrong throughout the course of the involvement. Who will be just as wrong today if they think there is a possibility that this matter can be resolved in any way but by a meaningful, negotiated settlement with the parties indigenously involved in this very unhappy situation.

Mr. RYAN. Mr. Speaker, the war in Vietnam and the military approach to foreign policy are being repudiated by thousands of citizens. Today, members of Women Strike for Peace are in Washington to protest the war and to urge the President and Congress to bring it to a prompt end. Mrs. Bella Abzug, chairman, National Political Action Committee, Women Strike for Peace, estimates that some 1,200 women are participating in this outpouring of concern.

Mrs. Abzug said:

> We have given this day and made this journey to Washington to remind Congress and the President that the American electorate, especially the women, have rejected this immoral war. We demand that President Nixon move toward a political settlement and announce plans for the withdrawal of America from Vietnam. We will fill the gallery of Congress to demand that Congress use its power over appropriations to bring about peace by diverting the billions from the Vietnam war and the ABM missile race to the critical needs of the black, the poor, the hungry in our cities and throughout the land.

Mr. Speaker, Americans in increasing numbers are marching across the country for peace. It is imperative that the President and Congress respond to this call.

Mr. Speaker, I want to thank all of my colleagues who participated in this very important discussion this afternoon. Let us hope that our discussion will make clear to President Nixon and his administration that the Nation cannot afford to wait any longer.

Mr. HELSTOSKI. Mr. Speaker, as the United States enters the fifth year as a combatant in Vietnam, I have come to the conclusion that the Nixon administration must immediately make a choice between continuing the tragic and immoral course of the past or charting out a new policy designed to get the United States out of the Vietnam quagmire. The Vietnam war is now the longest conflict in American history. It has now surpassed both World War II and the Civil War in length of time, and I find it distressing to compare the lofty ideals and goals of these two struggles with the ignoble aims of our Vietnam policy. This is no war to free the slaves and preserve the Union. It is no war to defeat Nazi

and Fascist aggressors and liberate millions of oppressed peoples. Rather, it is a war designed to maintain in power a group of generals in Saigon with questionable motivation, who for years have exploited their own people. If the militarist in Saigon had any popular support at all, the United States would never have had to send troops into South Vietnam in the first place. History will decree that no action ever squandered so many of its human and material resources in so unworthy a cause.

Before the United States became bogged down in the quicksand of the Vietnam conflict, it was interesting to note how administration officials and the Congress could heatedly argue and debate over spending an additional $1, $2, or $3 billion on the needs of America, particularly to help the Nation's poor and underprivileged. Yet, within 2 years after the first American combat troops landed in South Vietnam, the administration was proposing and Congress was appropriating with scarcely a whisper of disagreement some $20 billion per year for the war. Vietnam war spending today is running close to $35 billion a year. I am appalled when I think of this money being spent thousands of miles away from home in what is literally a dot on the map to support someone like Nguyen Cao Ky, who once said that Hitler was his idol. If the executive branch and Congress had been as free with the purse string in waging the war on poverty as they have been in waging the immoral war in Vietnam, the year 1970 might have gone down in history as the year in which the bounty of America reached all of its citizens. And, again, it is so senseless to be contemplating a new cycle of military spending in the form of the antiballistic missile. If Congress approves this project, and I hope it turns it down completely, it will once again turn its back on the real needs of the Nation in favor of another scheme of the military-industrial complex designed to perpetuate its dominant position in American life.

It has never been more necessary for an American President to chart a new direction for the United States than it is for President Nixon to do so now. It is all very well to be cool and guarded in press conferences, to issuing warnings only once, to evince concern, to appear in control and build public support. But at some point the administration is going to have to choose, and it appears to me that the time has arrived. The President must first begin by disengaging the United States from Vietnam totally and permanently, leaving the Vietnamese people to settle their own internal affairs. It must be made clear that the United States has no desire to be engaged in an internal conflict of this type. The administration must alone draw a firm line against new, multibillion-dollar military projects such as the ABM. Finally, both the administration and the Congress must show the same zeal in attacking problems of America's needs as they have shown in throwing billions away in places like Vietnam.

America's vast problems can be solved but only if we, as a people, determine a new path for the United States. At the end of this path should stand the elimination of human suffering at home—and not the decadent and immoral pursuit of power politics abroad. The Nixon administration won the November election by promising a new team and a new approach to the vital issues of the day. The time has come for the administration to deliver on its promise. The American people will settle for nothing less. The future of our country depends on this promise.

The time is at hand for an immediate and permanent cease-fire in Vietnam. Let us stop the killing, the wounding and the physical destruction in Vietnam. This should be our uppermost objective and the highest priority of action for America.

Mr. OLSEN. Mr. Speaker, in the last several years I have registered my misgivings and my personal suggestions on Vietnam policies to high ranking individuals in the administration, including the President, and I have joined in introducing legislation in the Congress which called for greater effort on the part of our Government to place this issue before the United Nations.

I have never issued public statements approving or endorsing the conduct of the war unless I sincerely believed specific action on the part of our Government had been in the interest of the peaceful goal all of us seek.

It is my firm conviction that I have a responsibility to support the people's President in matters of foreign policy. I believe any disagreement should be—as it has been with me—a matter between me and the President and not between me and the press. In matters of foreign policy it cannot be my administration, your administration, or their administration. It is our administration, elected to represent us by a majority of our citizens.

Now we have a new administration. For myself, I pledge complete support to President Nixon in the conduct of foreign affairs. I will inform the President of my views and recommendations with full realization that he is the only man in this Nation with full access to all of the intelligence and other information on the situation in Vietnam and elsewhere. The final decision is his and I will accept it.

In regard to the Vietnamese situation, here are the recommendations which I am making to President Nixon. For the most part, I share the position of Senator EDWARD M. KENNEDY, of Massachusetts.

We accepted the responsibility of assisting South Vietnam in its effort to defend itself. But we cannot be South Vietnam. We cannot govern South Vietnam. We cannot accept full responsibility for the war. Our commitment must be limited. The outcome of that struggle depends now, as it always has, on the courage, determination, and ability of the people of the South.

There have been many disappointments in our relations with the people and government of South Vietnam. We had hoped that we could help them to help themselves build a nation and a government that could attract the support of its own people and achieve a political victory over the Vietcong.

Time and again our hopes seemed to be dashed by the apparent incompetence and corruption of our South Vietnam ally—a government, as Senator KENNEDY said, that "has consistently proved incapable or unwilling to meet the needs of its own people, a government that has demanded ever more money, ever more American lives to be poured into the swamp of their failure."

Our Nation began taking steps some time ago to persuade the South Vietnamese to take eventual complete control of the war. We have helped and we can continue to help, but I believe it is imperative that we establish immediately a timetable for our withdrawal from South Vietnam. Although I continue to believe we have a responsibility to be of assistance, I think our responsibility is equally great to insist that South Vietnam remove itself from reliance upon us.

It would not be right to abandon them. I do not, therefore, call for immediate withdrawal, but for a systematic, orderly reduction in our participation and an increase in South Vietnam's own commitment to itself. We must begin now.

Further, I encourage the President to do anything feasible that might enhance the chances of success in the Paris peace talks including extension of the bombing halt. Of course, every precaution must be taken to protect the lives and safety of American boys whose only protection is provided by the cover of bombing.

Finally, after establishing a systematic timetable for the deescalation of our participation in the war, I believe we must follow it.

To those who ask, "Will this fulfill our commitment?" or "Would this be an honorable way out?" I respond "Yes."

Never before in history has one nation done for another what we have done for South Vietnam. It seems to me that with our generous contribution of resources—human, monetary, and material—South Vietnam should have triumphed long ago if it had a government with the desire or ability to meet the needs of its people.

I do not think our limited commitment included or implied a commitment to take brinksmanship risks which could lead to a confrontation between the world's great powers in a third world war. Our commitment is to maintain peace, to withstand aggression, and to assist in preventing a lighted fuse for reaching the powder keg.

The new administration, I am sure, is taking a fresh look at our involvement and our commitment in Vietnam. It must review what has been done and, using the facts available to it, decide a future course. It cannot and will not be guided completely by past decisions, good or bad.

I have summarized for you the direction I hope our Nation will take in Vietnam. I submitted these proposals to President Johnson, and I will submit them to President Nixon. The President will have my support because he is the people's President and I have confidence

in his ability to steer this Nation toward lasting peace.

Let us begin now to end this conflict with action rather than words.

Mr. GREEN of Pennsylvania. Mr. Speaker, there is no need for me to elaborate in detail on the statements made today concerning Vietnam. Enough has been said on this floor—indeed, enough has been said in recent years—to impress upon us all the necessity for ending this tragic war.

Today, I want to associate myself with the desire for peace of the American people and the demand for peace being made here on this floor.

The events of the past few days once again give us hope that concrete steps toward a settlement will be forthcoming in the not too distant future.

President Thieu's stated willingness to meet privately with the national liberation front is encouraging.

Even more interesting is President Nixon's comment to the National Association of Broadcasters yesterday that "a few months from now, I think you will look back and say what we did was right."

I deeply hope that the President will be right and that is why I want to express my own support of the efforts being made by the administration to negotiate a settlement.

The experience of the past has taught us that peace in Vietnam is an elusive goal.

Diplomacy—whether public or private—is a difficult art, but I hope that the administration will employ every diplomatic means at its disposal to bring about a cease fire and a negotiated settlement.

At the same time, I think it is our responsibility here in Congress to remind the President and his advisors that business as usual will not bring the desired results. The policy of alternating military pressure with diplomatic initiatives has been the story of the past but it has, unfortunately, been a story without an ending.

It will not do to stop the bombing of the North while, at the same time, the volume of bombs dropped in South Vietnam and Laos is greater than it was when the North was being bombed.

It is somewhat inconsistent of the Saigon Government to express a willingness to negotiate privately while they have increased their demands for more American military support.

We cannot accept a policy which one day tells us that the troops will be coming home, only to say the next day that such a proposal is unrealistic.

We cannot pretend today that the South Vietnamese Army can take a fuller share of the military burden only to have our experts come up to Capitol Hill and deny that possibility.

We cannot seek peace in Paris and, at the same time, seek a wider war in Cambodia.

These are the type of inconsistencies which have marked the policies and pitfalls of the past.

But we are not here to regret the past. We are here to express a sense of urgency, to make responsible suggestions and to express our support of the administration's diplomatic efforts.

I hope that the President can end this war—speedily and honorably—so that we can get on with the urgent domestic priorities and responsibilities facing us as a nation.

Mr. EILBERG. Mr. Speaker, the war in Vietnam has been with us so long it is difficult to remember when there was peace. It began hard on the heels of another war in Asia. And that war in Korea broke the short peace on the timeclock of history which followed the Second World War.

Through this whole period there has been the silent, chilling war of nerves, the war that we kept cold because the alternative was too terrible to consider. Perhaps we have forgotten the ways of peace. Perhaps war has been so much with us in the nearly 30 years since Pearl Harbor that we would be uncomfortable were we forced to live in peace.

But finally we must ask if this price we pay for the familiar, the comfortable, is too high. Indeed, if we cannot adjust to peace, if a world truly at peace would make us feel ill at ease, then we are living on borrowed time.

This seems to me, finally, to be the case in Vietnam. We are there on borrowed time, and we have borrowed time too long from the important task of facing up, finally and ultimately, to the question of war or peace.

The deception is easy. It, of course, is not ever really considered a matter of war and peace, but a practical, hardheaded matter of national self-interest, loyalty to friends, defense of the North American Continent. These are easy issues to deal with. They lend themselves to hardheaded practical answers, which we are good at. We approach Vietnam on that basis all the time now because we know, given this approach, the issue of war and peace need never really be faced.

But great men, and I number Lyndon Johnson among them, have chosen this approach only to learn too quickly that this really does not work. We must finally face up to the war, its horrible reality, its corruption of American life, its divisive nature in the land itself, the dead and the bleeding, the young widows and the mothers old before their time.

This was indeed the mandate that was given to Richard M. Nixon. He promised—or was it only a dark hint—a new approach to the war and to the peace that must follow.

Must we disabuse ourselves of that conceit?

There was a feeling on the land that with the Paris talks there would be peace. Oh, maybe not tomorrow, not next month, but certainly next year or was it the year after.

This has been the tone for months and the American people, despite the bitterness, the mourning, the new graves, waited patiently with trust, and more importantly, with hope.

I say to President Nixon that we are a patient people and we will wait—but how long must we wait? I ask are we going to kill more so that fewer will die? That is the algebra of field commanders, of generals who escalate.

We have been asked to defend the house of a friend. Whether he was a true friend or not is a question we no longer ask. All we know is that he asked for help and we gave him help. But what is to be done now? We have neglected our own house, while shoring up his. We have given of our blood and strength while defending his house against marauders. We have been so zealous in our defense of his home, we have come to know it as our home too and we seem more zealous in its defense than he does. We have been gone for years to Troy and now long for home, where trouble and unrest threaten.

I caution President Nixon. He will not be a leader with a fresh opportunity for long. I do not say abandon Paris. Stay in Paris. Make them sit with us for long hours around the table. Paris may help. Take chances in Paris rather than risking lives in the Iron Triangle. I encourage President Nixon to explore private talks and unexplored avenues in Southeast Asia or anywhere else. I do caution him against old errors, old solutions which solved nothing.

This is not a bipartisan issue. The 33,000 dead do not array themselves on an aisle. They were Americans. The war must end. There is other work to be done and we must be around to do it. And the time is short.

Mr. ROSENTHAL. Mr. Speaker, 1 year ago next Monday an incumbent American President renounced renomination because the war in Vietnam had shattered his role as party and national leader.

Today we watch his successor closely, seeking assurance that the lessons of Vietnam animate President Nixon's search for peace.

Those lessons are—

An exhausting, cruel, and tragic war was fought for the empty delusion that American arms could impose conformity to our political ideas. We should expect other strange ideas in other strange countries. What shall we do?

Our military leaders, who promised a military victory time after time, have led us instead to a political catastrophe. We should weigh their advice more carefully in the future.

We have paid over 30,000 American lives and $150 billion in this vain war effort. Comparable sacrifices for genuine domestic needs elude us.

We have been told that we should give the new administration 100 days in office before criticizing its conduct. I would wait forever to criticize our present policy in Vietnam if I thought such forbearance would end the war one day sooner. But the new administration gropes, with little apparent difference from its predecessor, toward an illusory military victory.

Peace will not come at the Paris conference table any more than it will come in the jungle fighting in Vietnam. Peace will come when we Americans begin to withdraw our forces—which are the only foreign troops in Vietnam—let Vietnamese political processes achieve the equilibrium which arms could not impose.

OUR INVOLVEMENT IN THE VIETNAM WAR

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. BROWN) is recognized for 1 hour.

Mr. BIAGGI. Mr. Speaker, will the gentleman yield?

Mr. BROWN of California. I yield to the gentleman from New York.

Mr. BIAGGI. Mr. Speaker, I would like to take this occasion to thank the gentleman from California for providing me this opportunity to speak on the issue of our involvement in the Vietnam war.

Mr. Speaker, I directed an inquiry to the President of the United States as follows:

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: The war in Vietnam has divided and troubled the American people as has no other war of the 20th Century. Many of our people regard the war as necessary and just, but many others are doubtful and troubled. Some are unconvinced that the Saigon Government is worth saving; some fear that the United States has inadvertently taken over the role of the old European colonial powers; some simply cannot understand what vital interests are served by sending American soldiers to fight and die in a civil war almost 10,000 miles away from their own country.

During the first three weeks of the current North Vietnamese and Viet Cong offensive, 1,140 American soldiers were killed, or just 219 fewer than died in the first three weeks of the devastating 1968 TET offensive.

Present realities require a revision of priorities in American policy. It is true that we cannot undo the past, but the assessment of past errors is absolutely indispensable to efforts to correct them and to avoiding their repetition.

Mistakes are not liquidated without a price being paid. No responsible critic of the war advocates a disorderly withdrawal of American forces and the abandonment of South Vietnam to the Viet Cong, but many point to the need for a peace short of absolute victory—on either side, for a peace involving some mutual concessions. A concession, however, is not a humiliation and may indeed be turned to one's own advantage, as General De Gaulle demonstrated by giving independence to Algeria and as Khrushchev demonstrated by proclaiming himself a peacemaker while yielding to the American ultimatum in the Cuban Missile Crisis.

It seems to me that the concessions we must make are necessary as an act of common sense; they are also honorable in a tragic situation.

I believe, therefore, that the key to peace is mutual disengagement through political arrangement for the neutralization of Southeast Asia.

It is my belief that the United States should pledge the eventual removal of American military forces from Vietnam in an all out effort to achieve meaningful results from the current negotiations.

The date and conditions for the removal of American military forces from Vietnam could be set forth in an international agreement defining the status of a neutralized South Vietnam and establishing certain international guarantees.

A forthright pledge to remove American forces is of great importance for the persuasiveness of peace initiatives because of the well-known Chinese and North Vietnamese fear that, despite assurances to the contrary, the United States wishes to maintain permanent military bases in South Vietnam.

If tangible evidence of progress is not derived from current peace talks within a reasonable time—perhaps a period of 60 days—it is suggested that, in addition to the current participants, the following countries should be represented in peace negotiations: The Soviet Union, China, France, Great Britain, Japan, India and Pakistan, and the countries of the Southeast Asian mainland: Cambodia, Laos, Thailand, Burma and Malaysia. The larger nations—that is, the United States, China, Soviet Union, France, Great Britain, Japan, India and Pakistan could be expected to act as guarantors of a final settlement.

These are alternatives that I have considered most carefully; alternatives that I believe could stimulate meaningful negotiations and result in an honorable peace. If, on the other hand, there are other alternatives under advisement which can also offer the prospect of an honorable peace in Vietnam in the foreseeable future, I, as a Member of Congress, would appreciate the knowledge of their status and whatever other particulars could be afforded me.

Respectfully yours,

MARIO BIAGGI,
Member of Congress.

Mr. Speaker, I would like to commend the gentleman from California and my colleague from New York for providing this forum for the Members of Congress to discuss this most prominent issue in the world today, as it relates to all of us.

Mr. WOLFF. Mr. Speaker, will the gentleman yield?

Mr. BROWN of California. I will be happy to yield to the gentleman from New York.

Mr. WOLFF. Mr. Speaker, I thank the gentleman from California for yielding to me.

Mr. Speaker, today we are engaged in a long-overdue discussion of the single most important issue facing our Nation—the continuing war in Vietnam. This war has dragged on for so long that it threatens to become a permanent part of our existence, or nonexistence, as the case may be. This war continues to be an excessive moral, physical, and monetary drain on the resources and lives of all Americans.

A satisfactory conclusion to the war must be found, and it must be found promptly. There are too many demands here at home for the men and money we are pouring into Vietnam. Instead of perpetuating a stalemated war, the United States must take the necessary steps to secure the negotiated settlement that will finally end the carnage in Vietnam and bring about lasting peace.

Those of us in Congress who have in the past criticized American policy vis-a-vis the war in Vietnam find it ironic that our recommendations of 2, 3, and even 4 years ago are finally bearing fruit today. A cessation of the bombing of North Vietnam did bring a beginning toward peace negotiations and did not jeopardize the safety of our servicemen. Yesterday President Thieu publicly acknowledged a basic fact of life: the South Vietnamese Government and National Liberation Front will have to enter into private bilateral talks to ultimately bring an end to the war.

President's Thieu's announcement is, of course, most welcome. I applaud his frankness and hope this will expedite the negotiations. An appropriate response by the National Liberation Front would pave the way for a cease-fire and ultimately for a final peace agreement.

Mr. Speaker, I could well go on at length about the military and political problems of the situation in Vietnam. But this is ground we have traveled across time and again and my colleagues are admirably discussing these issues today.

I should, therefore, like to direct my attention to an ancillary problem that will, in the final analysis, be as crucial to the future of South Vietnam as the fighting and the Paris negotiations.

I have reference, Mr. Speaker, to the failure of the South Vietnamese Government to establish the proper base for a free and democratic society and the directly related problem of continuing corruption and graft throughout South Vietnam. As long as these problems remain unresolved it will be impossible for South Vietnam to establish a viable social, political, and economic order. And without that foundation for a strong government no amount of military successes or diplomatic coups will provide South Vietnam with the basis for a viable government.

The most glaring and inexplicable example of how the basic principles of democracy are not being adhered to is the case of Truong Dinh Dzu, once a leading candidate for the Presidency of South Vietnam, and now a civilian prisoner of the military, sentenced to 5 years at hard labor in a closed, secretive military trial that completely ignored his fundamental rights.

Mr. Dzu, it is alleged, made treasonous statements against the South Vietnamese Government. When I was in Vietnam last December I visited with Mr. Dzu's family and returned to the United States, not with any knowledge of his guilt or innocence, but with the definite knowledge that Mr. Dzu was denied the most fundamental rights of a free society. It is imperative that he be granted a new, fair trial and I believe the United States should make clear to South Vietnam our unhappiness with the Dzu case.

It is most ironic that, according to news reports, the statements for which Mr. Dzu has been incarcerated directly parallel President Thieu's recent comments on the desirability of direct, private talks between the Republic of Vietnam and the National Liberation Front.

As long as Mr. Dzu remains a political prisoner without fulfillment of a just demand for a fair trial there is serious reason to question whether South Vietnam will ever adhere to a democratic order. But, as a case in point, Mr. Dzu's imprisonment raises a more tragic and telling question: What, Mr. Speaker, have 30,000 American men died for? It must never be said that we have fought a war and given 30,000 American lives to substitute one "ism" for another.

And an equally important situation exists in Vietnam in the matter of uncontrolled, unpoliced graft and corruption. This problem moves vertically and horizontally through South Vietnam including private citizens, military personnel, and Government officials. And not only are the South Vietnamese guilty of laxity on this matter; the allied nations, including the United States, are also seriously implicated.

Recently the State Department notified me that on the basis of information I provided to the Department after my most recent visit to Vietnam that a major crackdown will be conducted against

American civilians who engage in the insidious practice of currency manipulation. This problem, like the general problem of the commodity black market, involves American, South Vietnamese, and allied civilian and military personnel.

The South Vietnamese must act and not delay any longer in implementing a greatly needed crackdown against war profiteering and corruption.

Not only are there substantial black markets in currency and goods, there is also the perpetual problem of diversion of commodities and military supplies shipped to Vietnam by the United States.

This war profiteering in its many ramifications aggravates a prior problem of graft and corruption in all levels of the South Vietnamese Government from the small village through the provinces to Saigon.

The values that obtain today in Vietnam are simply not conducive to the establishment of a lasting, free and independent nation. This is the unhappy prospect after 30,000 American lives have been lost and more than $100 billion spent.

It is especially necessary, therefore, that the United States and our allies take the following steps without further delay: Decrease the level of military activity, escalate the intensity of negotiations, and dramatically overhaul the entire approach to civic action, pacification, and civil order in Vietnam.

To do anything less would guarantee the continuation of a war that is as costly, in lives and dollars, as it is unproductive.

Finally, Mr. Speaker, I call today upon the South Vietnamese Government to announce publicly at the Paris talks its willingness to include all South Vietnamese in free elections as part of any solution to the Vietnam war.

This does not mean imposing a government on South Vietnam, but it does mean the full exercise of the democratic process.

Anything less than full participation of all political factions would not be democratic. The goals of self-determination and democracy that we are committed to in Vietnam require that all the South Vietnamese participate in the electoral process regardless of political beliefs.

I am confident that free elections would affirm the South Vietnamese desire for a true democracy and reject Communist control of the country.

Mr. BROWN of California. The gentleman's suggestions are indeed excellent and I certainly want to commend them to the attention of the Members of the House.

Mr. BRASCO. Mr. Speaker, will the gentleman yield?

Mr. BROWN of California. I yield to the gentleman.

Mr. BRASCO. Mr. Speaker, it is no coincidence that March 1969 has brought forth a new upsurge of concern over the war in Vietnam; for this month marks the start of the 5th year in which the United States has participated in the role of a direct combatant. The Vietnam conflict is now the second longest war in American history, ranking behind only our Revolutionary War in length of time. And the end is still not in sight.

Therefore, the new concern expressed over Vietnam comes at a most appropriate moment. Americans are weary of battle reports and mounting casualty rates. Many feel that our undue concentration on Vietnam has caused the United States to neglect its interests in other parts of the world, thus inviting new troubles in the 1970's. Americans have also concluded to a greater and greater extent that the United States has squandered too many of its material and human resources into this conflict and that it could have better employed them to solve our multitude of domestic problems. There is a growing belief that the returns on our nearly $30 billion per year investment in Vietnam have been meager indeed, especially when one considers the vast possibilities for utilizing these funds in the United States to alleviate such social ills as poverty and the decay of the cities.

I share many of these misgivings. It has become more and more apparent to me that the United States cannot achieve its other objectives at home and around the world by continuing its present course in South Vietnam.

In Paris, we face the unhappy prospect that the negotiations will drag on for many months while the casualty rates rise. Since the bombing halt last November no significant progress has been made. I believe that the road to getting the Paris negotiations on the move lies in the United States taking a firm position with respect to our role in Vietnam.

Previously many of my colleagues discussed what that stand should be, and certainly I do not intend to disagree with them. However, I believe personally that the most significant and meaningful stand that the United States could take with respect to the negotiations is to reaffirm the principles as outlined in the 1954 Geneva accords. I think it is important to note that the violations of these accords is what led to resumption of the fighting in that war torn area.

Basically the principles of the 1954 Geneva accords which America should support are: an immediate cease-fire, and mutual withdrawal of United States and North Vietnamese troops from South Vietnam, the establishment of international machinery under the United Nations and/or neutral nations agreeable to both North and South Vietnam to supervise the troop withdrawals and supervise national elections to resolve the political question and unify Vietnam.

The United States must then firmly and unequivocally state in public its intentions to abide by the results of any such election. The United States and the American people should not find this key to a political settlement in Vietnam overly troublesome, since we have already affirmed the principle of one man, one vote. I think that while we advocate this position we must realistically, in the absence of any progress, work toward disengagement on another level, and that is building up the ability of the South Vietnam Armed Forces to take over the combat burden from the U.S. troops.

To this end the Nixon administration must give the highest priority to improving the effectiveness of South Vietnamese fighting forces and develop a specific plan to phase-out all of the U.S. combat troops in South Vietnam. Regardless of what one may think of the Vietnam war, we have commitments in Southeast Asia. The task of the 1970's will be to preserve the freedom of Southeast Asia while avoiding another quagmire like that of Vietnam. To that extent I think it would be helpful if we, in anticipation of the conclusion of this war, would provide for a program of economic development to that area, coupled with an opening of recognition of mainland China with a view toward the resumption of diplomatic relations with them.

The voice of the American people has been heard long and loud in dissent to the war in Vietnam, and I think that what they are saying is that we in America must be the example not merely of peace, because we will not fight, but peace because peace is the healing and elevating influence of the world and strife is not. There is such a thing as a nation being so right that it need not convince others by force that it is right. We are basically saying we do not wish our Government to abandon its interests in promoting freedom throughout the world, but we would rather do it at the negotiating table than on the battlefield.

Mr. BROWN of California. I wish to thank the gentleman for his excellent contribution. I am glad to yield to the gentleman from New York (Mr. OTTINGER).

Mr. OTTINGER. Mr. Speaker, I thank the gentleman from California (Mr. BROWN) and my colleague from New York (Mr. RYAN) and the other gentleman from California (Mr. EDWARDS) for providing this opportunity for many of us in the House to express our views with respect to the war in Vietnam.

Our efforts in the past, I think, had some marked results in changing attitudes in the country and starting to reverse the policies of the previous administration. I am hopeful that the new administration will be responsive.

There is no question about it, it is time to end the war in Vietnam. Measured from the first combat death, this is the longest war in our history. It will soon be the fourth bloodiest. It is already the second costliest. If we add to the $100 billion, the cost of a divided nation, of an alienated generation, of a nation diverted from critical domestic needs, of a country torn by self-doubt, this is surely the most devastating war for our national spirit in our whole history.

To what end? Whether we make the compromises necessary to terminate the war now, or 2 years from now, or 4 years from now, the settlement is unlikely to be any better. In the meantime, the costs and dislocations of the war will escalate in every aspect.

What is the new administration's response to the demands from all over the country that our policies be changed? What is the secret plan that the President promised, but withheld for fear of jeopardizing foreign relations, before his term began? Perhaps it will unfold at secret talks in Paris. I hope so.

But today we have only the evidence of deeds. That evidence consists of continued increase in search and destroy missions, continued increase of deadly fire on the towns and villages of South Vietnam, the apparent total capitulation of the Secretary of Defense to the machinations of the military-industrial complex, and utter silence in the face of dictatorial tactics by the South Vietnamese Government in censoring the press and jailing its opposition for merely talking of peace.

All this suggests that the "new" policy is simply more of the same.

I think we are strong enough and honest enough to recognize when we have made mistakes. I think, however hard the decision may be, a commitment at least for once to try genuine deescalation and genuine political negotiation based on the realities in South Vietnam is long overdue. It is certainly better than continued reliance on military solutions that prove so elusive and take the lives of hundreds of Americans every week.

We have just received the very discouraging disclosure that the American military command has asked President Nixon to approve plans to attack military bases in Cambodia—a request which is apparently receiving serious consideration at the White House.

This is further evidence that we are embarked on the same tragic merry-go-round which has characterized our involvement in Vietnam for the past 5 years, which prolonged and widened the war there; which disrupted our own economy, divided our Nation, alienated our youth, and diverted us from critical domestic needs: a policy of military action and response which can only lead to further escalation of the war and its terrible tolls.

It would seem each time political developments offer an opportunity to achieve a breakthrough toward peace, military counterpressure makes such a breakthrough impossible. So we find American deaths in Vietnam approaching the figure for the Korean conflict; the President denying any prospect of a reduction of U.S. forces in Vietnam; and the Secretary of Defense calling on Congress to provide more money to feed the fires of this war.

Can we, as Members of this Congress, simply sit by and silently accept the message that there is no prospect of withdrawing our troops; that there is no political initiative to be made to achieve peace; and that all of the discredited objectives of our past policies in Vietnam must remain intact today?

Are we really to pretend that nothing happened last year? That there was no election? That there was no mandate for change? That there is no new administration, no demand that this new administration deliver our Nation from the war that has so devastated the American spirit?

It is to the President's credit that he did not respond to recent Vietcong actions by renewing the attack on North Vietnam. But maintaining the status quo, if that is what we are doing in South Vietnam, is not sufficient. A cessation of the bombing of North Vietnam proved necessary to at least get the combatants to the bargaining table, but an intensification of ground action, and especially a broadening of the war to Cambodia, may well preclude any further progress.

Why is it that we must accompany every gesture for peace with a contradictory military spasm that implies a wider war?

Yes, we stopped the bombing, and we went to Paris, but at the same time we vastly increased our offensive actions in South Vietnam. The North Vietnamese made a gesture toward peace by withdrawing a sizable number of their troops, and instead of responding with a reduction of our own forces to achieve a mutual deescalation, which is the path many of our own experts in the Defense Department say is the way this war might be ended, we did just the reverse.

A change in Presidential personality and style is no substitute for a change in policy. The unrest and divisiveness in our Nation will not simply disappear because administration statements have been toned down and dissenters are no longer called "nervous Nellies."

It is time the new administration made clear its objectives in Vietnam. If those objectives are the same as those of the previous administration—an unachievable military victory and a total political defeat of the National Liberation Front, despite the realities of the NLF's influence in South Vietnam—Congress and the American people must know it.

If the President's objectives are more realistic, the entire world should know it, for such a policy change could create a climate in which meaningful concessions from the other side would be made.

If the war is to end during this administration, the President is going to have to arouse the American people from the long dream of our omnipotence and all-righteousness in Vietnam. He will have to admit the mistakes of the policies of the past and articulate sound, new policies for the future.

We have a responsibility to the American people to make the President see the urgent need for new directions and new initiatives in Vietnam, for a realistic strategy to end this tragic $100 billion war.

Perhaps progress will be made in secret talks hinted at in Paris. We all profoundly hope so. But it certainly will not be achieved without basic changes in our policies and objectives which the American public must be made to understand if they are going to accept them.

Let us resolve that our discussion here today is just a start. The time is now.

Mr. BROWN of California. I thank the gentleman very much for his contribution.

Mr. KASTENMEIER. Mr. Speaker, will the gentleman from California yield?

Mr. BROWN of California. I am happy to yield to the gentleman from Wisconsin.

Mr. KASTENMEIER. Mr. Speaker, I am very pleased to join the gentleman from California this afternoon in his comments about Vietnam.

I should like to say at the outset, I am in my 11th year of service in the House of Representatives.

The gentleman from California (Mr. BROWN), in my estimation, is without a peer in his fearless, unremitting pursuit of world peace and particularly the question of peace in Southeast Asia. This is another reason why I am proud this afternoon to associate my remarks with his.

Mr. Speaker, there is little I can say about the Vietnam war which has not been said before and said with much eloquence and deep conviction. For, after all, the war is not a new one. Vietnamese have been fighting and dying for almost 30 years, and we have been burying our own dead since 1961. Despite the bloodshed and the destruction in Vietnam, and despite the real price we are paying here in America by the rending of our own social fabric, there is still scant assurance that the end is in sight. The new administration's opportunity for bold action is waning, and with it, our hopes for a deescalation of the violence, and at least a reduction, if not an end, to the killing.

Mr. Speaker, we continue to fight a war we cannot win—not for lack of valor on the part of our servicemen, certainly not for lack of funds provided by this Congress, but for lack of political courage. It is the easy way out to continue to see military victory around the corner, or to be more in vogue, at the end of the tunnel; it is the easy way out to accuse the other side of actions we ourselves blithely engage in and conveniently overlook; it is the easy way out to stake our national prestige on the outcome of an internal conflict in a distant land, and to insinuate that critics of the war lack faith in America.

Mr. Speaker, we are once again on the escalation merry-go-round. It is now common knowledge that the bombing halt over North Vietnam has been offset by increased bombing elsewhere, inferentially in the south, and ominously in Laos. The announced reductions in battalion-size U.S.-initiated actions in recent months has been more than offset by increased small unit actions by our forces. But these hard facts are too conveniently ignored by our own Government. The latest Tet offensive attacks by the enemy have been described by Ambassador Lodge as not being a response to any recent Allied initiatives. They were instead, Ambassador Lodge insisted, the "long-heralded winter-spring campaign of 1969." But how can we be certain of this assumption beyond a reasonable doubt? A sharp increase in the frequency of American-initiated contacts since last November 1 has been clearly documented by our own military command. Such a knowledgeable figure as Governor Harriman is reported to have described the current enemy attacks as essentially a response to American actions, rather than a deliberate move to affect the peace talks. Not only is there doubt as to who is responding to whom, but we have not been told the exact nature of the understanding with North Vietnam which preceded our bombing halt.

Mr. Speaker, the new administration must decide whether it has sufficient courage to take over the conduct of the war from our professional military men, who, while admitting they do not like

the war, claim it is the only war they have—and indeed they seem to be making the most of it. When will we admit that our actions, since the bombing halt began, have not been particularly reassuring to the North Vietnamese that we desire peace? Have we been able to show by our deeds that we indeed are seeking a political settlement of the war, rather than a military victory?

Mr. Speaker, the time has come for our Government to be honest with itself, and to realize that there is a special kind of price to be paid for peace in Vietnam. It is not the price we would usually be called upon to pay in blood and treasure, but a price to be paid in false pride. Our Nation's greatness will in no better way be demonstrated, and our national interest will be no better served than by admitting to ourselves that we have made a mistake. Once we have done this, it should not be beyond our ingenuity to devise a means of extricating ourselves from what has become an untenable position. Instead of creating consternation among our allies, as has been forecast by those who would continue the war, this course of action should reassure our friends that we have not become the prisoners of our own rhetoric and self-righteousness, and that we will seek nonviolent solutions to world problems while continuing to adhere to our own basic principles.

Mr. Speaker, our Nation's real strength lies in its dedication to the value of human life and the dignity of man. These noble aspirations are ill served by our current role in Vietnam. The problem is enormous—but it will not be solved by applying the tried and proven wrong policies of the past. A start must be made somewhere, and we are certainly in a better position to be magnanimous than the other side. At worst, we may be rebuffed, but we must be certain this time, beyond any doubt, that our deeds match our words. We owe this effort to ourselves, the world, our 33,000 dead, and to the young, here and in Vietnam, who will inherit the future we are preparing for them. Hopefully, they will be able to live in a less violent world.

Mr. BROWN of California. Mr. Speaker, I thank the gentleman for his very kind remarks and welcome his contribution to this discussion.

I should like to point out that although this discussion has appeared to be rather one-sided this afternoon, coming entirely from the Democratic side of the aisle, there was in yesterday's RECORD a contribution by two of our distinguished Republican colleagues which I think is worthy of note. The distinguished gentleman from Illinois (Mr. FINDLEY) and the distinguished gentleman from Kentucky (Mr. CARTER) used the opportunity to discuss at length their own antipathy to the course of the war in Vietnam and to express their hope that we might be on the verge of a change in the policy which this country has been following. It should also be noted, I think, that the gentleman from Illinois (Mr. FINDLEY) inserted in the RECORD yesterday the names and addresses of all of the 33,000-plus casualties that we have experienced to date in the war in Vietnam. I think this was a worthy service in itself, because it points out to all of us in the most forceful possible way the impact that this war is having in terms of the deaths of some of America's finest young men.

So, Mr. Speaker, I want to express my hope that this debate will not be construed as partisan in its nature or as an effort necessarily to attack the present President because he is of the opposite party. I think it is well known that many of us who are participating in this debate were just as strong in our opposition to these policies when they were the product of a Democratic administration, and I think we will continue to be equally strong in our efforts under a Republican administration.

Mr. BURTON of California. Mr. Speaker, will the gentleman yield?

Mr. BROWN of California. I am happy to yield to the gentleman from California.

Mr. BURTON of California. Mr. Speaker, first of all, I would like to commend my distinguished colleague, the gentleman from California (Mr. BROWN), for his leadership not only today but through the entire course and period that the war has been going on.

I would like to make a note for the benefit of those who have just joined us that Congressman KOCH, of New York, informed me that there had been some temporary difficulty for some of those wanting to hear this debate. We brought this matter to the attention of our distinguished majority leader, Mr. ALBERT, and discussed the matter with Speaker MCCORMACK, who indicated that he had been unaware that people were having to wait any undue length of time to hear the debate and he urged and ordered the Sergeant at Arms to open up the doors.

I might state preliminary when this special order was first set that we had no idea how many hundreds or thousands of people might want to come in from all over the country to hear it. As a consequence, there was some understanding that there would be an effort made to limit each group to 50 and require each group of 50 after listening to the debate for a while to move out so that others might hear it. It was not anticipated at that time, as we have experienced for the last half hour at least, that there would be some empty spaces in the balcony. And, for that reason, the Speaker, the distinguished gentleman from Massachusetts; and the majority leader, the distinguished gentleman from Oklahoma (Mr. ALBERT), when this was brought to their attention made sure that the Sergeant at Arms made these seats available.

I would like to note also, if I may, as my distinguished colleague from California is well aware, that earlier our colleague, the distinguished gentleman from New York, WILLIAM FITTS RYAN, held the floor for approximately 1 hour.

We have been debating or discussing this matter for something on the order of an hour and 50 minutes or 2 hours. Also, there are a good number of our colleagues who have already expressed their opposition to the war and there are still a few of our colleagues who will seek recognition for the purpose of discussing this situation. Therefore, for that reason I yield back the time which the gentleman from California has so generously yielded to me.

Mr. BROWN of California. I thank the gentleman from California (Mr. BURTON) for his explanation of the situation and I appreciate indeed the contribution which he also made to the debate a little bit earlier.

I was trying to make it clear that while the proceedings this afternoon are not exactly in the nature of a debate and there is not an adversary present, that, nevertheless, the kind of views that are being expressed here are representative of a larger and larger number of Members of Congress who serve in the House of Representatives from both the Republican and Democratic side of the aisle.

Mr. Speaker, it is my opinion that none of us wish to be in the position of attempting to pressure a new President at an early stage as he takes office and attempts to grapple with these extremely difficult problems. All of us are willing to be fair and be generous in terms of allowing an opportunity for policies to be developed. But I think at the same time all of us want to make it clear—and it is my opinion that the American people want to have it made clear—that we do not wish to see the continuation of certain policies, continuation of the same kind of military escalation, the same kind of intervention, resulting from certain foreign policies which have brought this country to the position in which it finds itself today.

I wish to make it clear that for my part—and I think this is true of most of my colleagues—this attitude does not stem from a lack of concern for America's security or for America's defense. All too frequently we find some who say that those of us who are critical of the Vietnam war are not concerned about American security and American defense. But, in fact, just the opposite is true. We are the most deeply concerned about America's security and America's defense.

We feel that if history demonstrates anything above all else, it is that a policy of unrestricted military intervention—or a semi-imperialist desire to have our presence felt around the world, that we should be able to exercise our control in every dispute or every difficulty that may arise in any part of the world—does more to undermine America's security than any other possible action that this country could take.

I think all of us who have studied intently the present policies and the present situation in Vietnam believe that at the root of this involvement lies a concern with the desire to continually expand America's power, to continually serve as safeguardian of the world.

I believe, and I think most of my colleagues agree with me, that no country in the world, no great imperialistic power in Rome, in Greece, in Britain, or in France, has ever been able to make this kind of policy stick. Hence, one essential aspect of ending the war in Vietnam is to look closely at the kind of

policies which have resulted in that involvement.

There have been a number of excellent articles written on this overall subject recently, and I would like to commend them to the attention of my colleagues.

The distinguished former Commandant of the Marine Corps, General Shoup, for example, in the current issue of Atlantic Monthly, has an excellent article on the way in which our militaristic policies—the very existence of the largest military force in the world—has led us into situations such as Vietnam from which we cannot extricate ourselves. I place the article in the RECORD at this point:

THE NEW AMERICAN MILITARISM

(By Gen. David M. Shoup)

(NOTE.—Its roots are in the experience of World War II. The burgeoning military establishment and associated industries fuel it. Anti-Communism provides the climate which nurtures it. "It" is a "new American militarism." General Shoup, a hero of the Battle of Tarawa in 1943, who rose to become Commandant of the United States Marine Corps for four years until his retirement in December, 1963, doesn't like it. He has written this essay in collaboration with another retired Marine officer, Colonel James A. Donovan.)

America has become a militaristic and aggressive nation. Our massive and swift invasion of the Dominican Republic in 1965, concurrent with the rapid buildup of U.S. military power in Vietnam, constituted an impressive demonstration of America's readiness to execute military contingency plans and to seek military solutions to problems of political disorder and potential Communist threats in the areas of our interest.

This "military task force" type of diplomacy is in the tradition of our more primitive, pre-World War II "gunboat diplomacy," in which we landed small forces of Marines to protect American lives and property from the perils of native bandits and revolutionaries. In those days the U.S. Navy and its Marine landing forces were our chief means, short of war, for showing the flag, exercising American power, and protecting U.S. interests abroad. The Navy, enjoying the freedom of the seas, was a visible and effective representative of the nation's sovereign power. The Marines could be employed ashore "on such other duties as the President might direct" without congressional approval or a declaration of war. The U.S. Army was not then used so freely because it was rarely ready for expeditionary service without some degree of mobilization, and its use overseas normally required a declaration of emergency or war. Now, however, we have numerous contingency plans involving large joint Air Force-Army-Navy-Marine task forces to defend U.S. interests and to safeguard our allies wherever and whenever we suspect Communist aggression. We maintain more than 1,517,000 Americans in uniform overseas in 119 countries. We have 8 treaties to help defend 48 nations if they ask us to—or if we choose to intervene in their affairs. We have an immense and expensive military establishment, fueled by a gigantic defense industry, and millions of proud, patriotic, and frequently bellicose and militaristic citizens. How did this militarist culture evolve? How did this militarism steer us into the tragic military and political morass of Vietnam?

Prior to World War II, American attitudes were typically isolationist, pacifist, and generally antimilitary. The regular peacetime military establishment enjoyed small prestige and limited influence upon national affairs. The public knew little about the armed forces, and only a few thousand men were attracted to military service and careers. In 1940 there were but 428,000 officers and enlisted men in the Army and Navy. The scale of the war, and the world's power relationships which resulted, created the American military giant. Today the active armed forces contain over 3.4 million men and women, with an additional 1.6 million ready reserves and National Guardsmen.

America's vastly expanded world role after World War II hinged upon military power. The voice and views of the professional military people became increasingly prominent. During the postwar period, distinguished military leaders from the war years filled many top positions in government. Generals Marshall, Eisenhower, MacArthur, Taylor, Ridgway, LeMay, and others were not only popular heroes but respected opinion-makers It was a time of international readjustment; military minds offered the benefits of firm views and problem-solving experience to the management of the nation's affairs. Military procedures—including the general staff system, briefings, estimates of the situation, and the organizational and operational techniques of the highly schooled, confident military professionals—spread throughout American culture.

World War II had been a long war. Millions of young American men had matured, been educated, and gained rank and stature during their years in uniform. In spite of themselves, many returned to civilian life as indoctrinated, combat-experienced military professionals. They were veterans, and for better or worse would never be the same again. America will never be the same either. We are now a nation of veterans. To the 14.9 million veterans of World War II, Korea added another 5.7 million five years later, and ever since, the large peacetime military establishment has been training and releasing draftees, enlistees, and short-term reservists by the hundreds of thousands each year. In 1968 the total living veterans of U.S. military service numbered over 23 million, or about 20 percent of the adult population.

Today most middle-aged men, most business, government, civic, and professional leaders, have served some time in uniform. Whether they liked it or not, their military training and experience have affected them, for the creeds and attitudes of the armed forces are powerful medicine, and can become habit-forming. The military codes include all the virtues and beliefs used to motivate men of high principle: patriotism, duty and service to country, honor among fellowmen, courage in the face of danger, loyalty to organization and leaders, self-sacrifice for comrades, leadership, discipline, and physical fitness. For many veterans the military's efforts to train and indoctrinate them may well be the most impressive and influential experience they have ever had—especially so for the young and less educated.

In addition, each of the armed forces has its own special doctrinal beliefs and well-catalogued customs, traditions, rituals, and folklore upon which it strives to build a fiercely loyal military character and esprit de corps. All ranks are taught that their unit and their branch of the military service are the most elite, important, efficient, or effective in the military establishment. By believing in the superiority and importance of their own service they also provide themselves a degree of personal status, pride, and self-confidence.

As they get older, many veterans seem to romanticize and exaggerate their own military experience and loyalties. The policies, attitudes, and positions of the powerful veterans' organizations such as the American Legion, Veterans of Foreign Wars, and AMVETS, totaling over 4 million men, frequently reflect this pugnacious and chauvinistic tendency. Their memberships generally favor military solutions to world problems in the pattern of their own earlier experience, and often assert that their military service and sacrifice should be repeated by the younger generations.

Closely related to the attitudes and influence of America's millions of veterans is the vast and powerful compelx of the defense industries, which have been described in detail many times in the eight years since General Eisenhower first warned of the military-industrial power complex in his farewell address as President. The relationship between the defense industry and the military establishment is closer than many citizens realize. Together they form a powerful public opinion lobby. The several military service associations provide both a forum and a meeting ground for the military and its industries. The associations also provide each of the armed services with a means of fostering their respective roles, objectives, and propaganda.

Each of the four services has its own association, and there are also additional military function associations, for ordnance, management, defense industry, and defense transportation, to name some of the more prominent. The Air Force Association and the Association of the U.S. Army are the largest, best organized, and most effective of the service associations. The Navy League, typical of the "silent service" traditions, is not as well coordinated in its public relations efforts, and the small Marine Corps Association is not even in the same arena with the other contenders, the Marine Association's main activity being the publication of a semi-official monthly magazine. Actually, the service associations' respective magazines, with an estimated combined circulation of over 270,000, are the primary medium serving the several associations' purposes.

Air Force and Space Digest, to cite one example, is the magazine of the Air Force Association and the unofficial mouthpiece of the U.S. Air Force doctrine, "party line," and propaganda. It frequently promotes Air Force policy that has been officially frustrated or suppressed within the Department of Defense. It beats the tub for strength through aerospace power, interprets diplomatic, strategic, and tactical problems in terms of air power, stresses the requirements for quantities of every type of aircraft, and frequently perpetuates the extravagant fictions about the effectiveness of bombing. This, of course, is well coordinated with and supported by the multibillion-dollar aerospace industry, which thrives upon the boundless desires of the Air Force. They reciprocate with lavish and expensive ads in every issue of *Air Force.* Over 96,000 members of the Air Force Association receive the magazine. Members include active, reserve, retired personnel, and veterans of the U.S. Air Force. Additional thousands of copies go to people engaged in the defense industry. The thick mixture of advertising, propaganda, and Air Force doctrine continuously repeated in this publication provides its readers and writers with a form of intellectual hypnosis, and they are prone to believe their own propaganda because they read it in *Air Force.*

The American people have also become more and more accustomed to militarism, to uniforms, to the cult of the gun, and to the violence of combat. Whole generations have been brought up on war news and wartime propaganda; the few years of peace since 1939 have seen a steady stream of war novels, war movies, comic strips, and television programs with war or military settings. To many Americans, military training, expeditionary service, and warfare are merely extensions of the entertainment and games of childhood. Even the weaponry and hardware they use at war are similar to the highly realistic toys of their youth. Soldiering loses appeal for some of the relatively few who experience the blood, terror, and filth of battle; for many, however, including far too many senior pro-

fessional officers, war and combat are an exciting adventure, a competitive game, and an escape from the dull routines of peacetime.

It is this influential nucleus of aggressive, ambitious professional military leaders who are the root of America's evolving militarism. There are over 410,000 commissioned officers on active duty in the four armed services. Of these, well over half are junior ranking reserve officers on temporary active duty. Of the 150,000 or so regular career officers, only a portion are senior ranking colonels, generals, and admirals, but it is they who constitute the elite core of the military establishment. It is these few thousand top-ranking professionals who command and manage the armed forces and plan and formulate military policy and opinion. How is it, then, that in spite of civilian controls and the national desire for peace, this small group of men exert so much martial influence upon the government and life of the American people?

The military will disclaim any excess of power or influence on their part. They will point to their small numbers, low pay, and subordination to civilian masters as proof of their modest status and innocence. Nevertheless, the professional military, as a group, is probably one of the best organized and most influential of the various segments of the American scene. Three wars and six major contingencies since 1940 have forced the American people to become abnormally aware of the armed forces and their leaders. In turn the military services have produced an unending supply of distinguished, capable, articulate, and effective leaders. The sheer skill, energy, and dedication of America's military officers make them dominant in almost every government or civic organization they may inhabit, from the federal Cabinet to the local PTA

The hard core of high-ranking professionals are, first of all, mostly service academy graduates: they had to be physically and intellectually above average among their peers just to gain entrance to an academy. Thereafter for the rest of their careers they are exposed to constant competition for selection and promotion. Attrition is high, and only the most capable survive to reach the elite senior ranks. Few other professions have such rigorous selection systems; as a result, the top military leaders are top-caliber men.

Not many industries, institutions, or civilian branches of government have the resources, techniques, or experience in training leaders such as are now employed by the armed forces in their excellent and elaborate school systems. Military leaders are taught to command large organizations and to plan big operations. They learn the techniques of influencing others. Their education is not, however, liberal or cultural. It stresses the tactics, doctrines, traditions, and codes of the military trade. It produces technicians and disciples, not philosophers.

The men who rise to the top of the military hierarchy have usually demonstrated their effectiveness as leaders, planners, and organization managers. They have perhaps performed heroically in combat, but most of all they have demonstrated their loyalty as proponents of their own service's doctrine and their dedication to the defense establishment. The paramount sense of duty to follow orders is at the root of the military professional's performance. As a result the military often operate more efficiently and effectively in the arena of defense policy planning than do their civilian counterparts in the State Department. The military planners have their doctrinal beliefs, their loyalties, their discipline—and their typical desire to compete and win. The civilians in government can scarcely play the same policy-planning game.

In general the military are better organized, they work harder, they think straighter, and they keep their eyes on the objective, which is to be instantly ready to solve the problem through military action while ensuring that their respective service gets its proper mission, role, and recognition in the operation. In an emergency the military usually have a ready plan; if not, their numerous doctrinal manuals provide firm guidelines for action. Politicians, civilian appointees, and diplomats do not normally have the same confidence about how to react to threats and violence as do the military.

The motivations behind these endeavors are difficult for civilians to understand. For example, military professionals cannot measure the success of their individual efforts in terms of personal financial gain. The armed forces are not profit-making organizations, and the rewards for excellence in the military profession are acquired in less tangible forms. Thus it is that promotion and the responsibilities of higher command, with the related fringe benefits of quarters, servants, privileges, and prestige, motivate most career officers. Promotions and choice job opportunities are attained by constantly performing well, conforming to the expected patterns, and pleasing the senior officers. Promotions and awards also frequently result from heroic and distinguished performance in combat, and it takes a war to become a military hero. Civilians can scarcely understand or even believe that many ambitious military professionals truly yearn for wars and the opportunities for glory and distinction afforded only in combat. A career of peacetime duty is a dull and frustrating prospect for the normal regular officer to contemplate.

The professional military leaders of the U.S. Armed Forces have some additional motivations which influence their readiness to involve their country in military ventures. Unlike some of the civilian policy-makers, the military has not been obsessed with the threat of Communism per se. Most military people know very little about Communism either as a doctrine or as a form of government. But they have been given reason enough to presume that it is bad and represents the force of evil. When they can identify "Communist aggression," however, the matter then becomes of direct concern to the armed forces. Aggressors are the enemy in the war games, the "bad guys," the "Reds." Defeating aggression is a gigantic combat-area competition rather than a crusade to save the world from Communism. In the military view, all "Communist aggression" is certain to be interpreted as a threat to the United States.

The armed forces' role in performing its part of the national security policy—in addition to defense against actual direct attack on the United States and to maintaining the strategic atomic deterrent forces—is to be prepared to employ its *General Purpose Forces* in support of our collective security policy and the related treaties and alliances. To do this it deploys certain forces to forward zones in the Unified Commands, and maintains an up-to-date file of scores of detailed contingency plans which have been thrashed out and approved by the Joint Chiefs of Staff. Important features of these are the movement or deployment schedules of task forces assigned to each plan. The various details of these plans continue to create intense rivalries between the Navy-Marine sealift forces and the Army-Air Force team of air-mobility proponents. At the senior command levels parochial pride in service, personal ambitions, and old Army-Navy game rivalry stemming back to academy loyalties can influence strategic planning far more than most civilians would care to believe. The game is to be ready for deployment sooner than the other elements of the joint task force and to be so disposed as to be the first to fight." The danger presented by this practice is that readiness and deployment speed become ends in themselves. This was clearly revealed in the massive and rapid intervention in the Dominican Republic in 1965 when the contingency plans and interservice rivalry appeared to supersede diplomacy. Before the world realized what was happening, the momentum and velocity of the military plans propelled almost 20,000 U.S. soldiers and Marines into the small turbulent republic in an impressive race to test the respective mobility of the Army and the Marines, and to attain overall command of U.S. Forces Dom. Rep." Only a fraction of the force deployed was needed or justified. A small 1935-model Marine landing force could probably have handled the situation. But the Army airlifted much of the 82nd Airborne Division to the scene, including a lieutenant general, and took charge of the operation.

Simultaneously, in Vietnam during 1965 the four services were racing to build up combat strength in that hapless country. This effort was ostensibly to save South Vietnam from Viet Cong and North Vietnamese aggression. It should also be noted that it was motivated in part by the same old interservice rivalry to demonstrate respective importance and combat effectiveness.

The punitive air strikes immediately following the Tonkin Gulf incident in late 1964 revealed the readiness of naval air forces to bomb North Vietnam. (It now appears that the Navy actually had attack plans ready even before the alleged incident took place!) So by early 1965 the Navy carrier people and the Air Force initiated a contest of comparative strikes, sorties, tonnages dropped, "Killed by Air" claims, and target grabbing which continued up to the 1968 bombing pause. Much of the reporting on air action has consisted of misleading data or propaganda to serve Air Force and Navy purposes. In fact, it became increasingly apparent that the U.S. bombing effort in both North and South Vietnam has been one of the most wasteful and expensive hoaxes ever to be put over on the American people. Tactical and close air support of ground operations is essential, but air power use in general has to a large degree been a contest for the operations planners, "fine experience" for young pilots, and opportunity for career officers.

The highly trained professional and aggressive career officers of the Army and Marine Corps played a similar game. Prior to the decision to send combat units to South Vietnam in early 1965, both services were striving to increase their involvement. The Army already had over 16,000 military aid personnel serving in South Vietnam in the military adviser role, in training missions, logistic services, supporting helicopter companies, and in Special Forces teams. This investment of men and matériel justified a requirement for additional U.S. combat units to provide local security and to help protect our growing commitment of aid to the South Vietnam regime.

There were also top-ranking Army officers who wanted to project Army ground combat units into the Vietnam struggle for a variety of other reasons; to test plans and new equipment, to test the new air-mobile theories and tactics, to try the tactics and techniques of counterinsurgency, and to gain combat experience for young officers and noncommissioned officers. It also appeared to be a case of the military's duty to stop "Communist aggression" in Vietnam.

The marines had somewhat similar motivations, the least of which was any real concern about the political or social problems of the Vietnamese people. In early 1965 there was a shooting war going on and the Marines were being left out of it, contrary to all their traditions. The Army's military advisory people were hogging American participation—except for a Marine Corps transport helicopter squadron at Danang which was helping the Army of the Republic of Vietnam. For several years young Marine officers had been going to South Vietnam from the 3rd Marine Division on Okinawa for

short tours of "on-the-job training" with the small South Vietnam Marine Corps. There was a growing concern, however, among some senior Marines that the Corps should get involved on a larger scale and be the "first to fight" in keeping with the Corps' traditions. This would help justify the Corps' continued existence, which many Marines seem to consider to be in constant jeopardy.

The Corps had also spent several years exploring the theories of counterinsurgency and as early as 1961 had developed an elaborate lecture-demonstration called Operation Cormorant, for school and Marine Corps promotion purposes, which depicted the Marines conducting a large-scale amphibious operation on the coast of Vietnam and thereby helping resolve a hypothetical aggressor-insurgency problem. As always it was important to Marine planners and doctrinaires to apply an amphibious operation to the Vietnam situation and provide justification for this special Marine functional responsibility. So Marine planners were seeking an acceptable excuse to thrust a landing force over the beaches of Vietnam when the Viet Cong attacked the U.S. Army Special Forces camp at Pleiku in February, 1965. It was considered unacceptable aggression, and the President was thereby prompted to put U.S. ground combat units into the war. Elements of the 3rd Marine Division at Okinawa were already aboard ship and eager to go, for the Marines also intended to get to Vietnam before their neighbor on Okinawa, the Army's 173rd Airborne Brigade, arrived. (Actually the initial Marine unit to deploy was an airlifted antiaircraft missile battalion which arrived to protect the Danang air base.) With these initial deployments the Army-Marine race to build forces in Vietnam began in earnest and did not slow down until both became overextended, overcommitted, and depleted at home.

For years up to 1964 the chiefs of the armed services, of whom the author was then one, deemed it unnecessary and unwise for U.S. forces to become involved in any ground war in Southeast Asia. In 1964 there were changes in the composition of the Joint Chiefs of Staff, and in a matter of a few months the Johnson Administration, encouraged by the aggressive military, hastened into what has become the quagmire of Vietnam. The intention at the time was that the war effort be kept small and "limited." But as the momentum and involvement built up, the military leaders rationalized a case that this was not a limited-objective exercise, but was a proper war in defense of the United States against "Communist aggression" and in honor of our area commitments.

The battle successes and heroic exploits of America's fine young fighting men have added to the military's traditions which extol service, bravery, and sacrifice, and so it has somehow become unpatriotic to question our military strategy and tactics or the motives of military leaders. Actually, however, the military commanders have directed the war in Vietnam, they have managed the details of its conduct; and more than most civilian officials, the top military planners were initially ready to become involved in Vietnam combat and have the opportunity to practice their trade. It has been popular to blame the civilian administration for the conduct and failures of the war rather than to question the motives of the military. But some of the generals and admirals are by no means without responsibility for the Vietnam miscalculations.

Some of the credibility difficulties experienced by the Johnson Administration over its war situation reports and Vietnam policy can also be blamed in part upon the military advisers. By its very nature most military activity falls under various degrees of security classification. Much that the military plans or does must be kept from the enemy. Thus the military is indoctrinated to be secretive, devious, and misleading in its plans and operations. It does not, however, always confine its security restrictions to purely military operations. Each of the services and all of the major commands practice techniques of controlling the news and the release of self-serving propaganda: in "the interests of national defense," to make the service look good, to cover up mistakes, to build up and publicize a distinguished military personality, or to win a round in the continuous gamesmanship of the interservice contest. If the Johnson Administration suffered from lack of credibility in its reporting of the war, the truth would reveal that much of the hocus-pocus stemmed from schemers in the military services, both at home and abroad.

Our militaristic culture was born of the necessities of World War II, nurtured by the Korean War, and became an accepted aspect of American life during the years of cold war emergencies and real or imagined threats from the Communist bloc. Both the philosophy and the institutions of militarism grew during these years because of the momentum of their own dynamism, the vigor of their ideas, their large size and scope, and because of the dedicated concentration of the emergent military leaders upon their doctrinal objectives. The dynamism of the defense establishment and its culture is also inspired and stimulated by vast amounts of money, by the new creations of military research and matériel development, and by the concepts of the Defense Department-supported "think factories." These latter are extravagantly funded civilian organizations of scientists, analysts, and retired military strategists who feed new militaristic philosophies into the Defense Department to help broaden the views of the single service doctrinaires, to create fresh policies and new requirements for ever larger, more expensive defense forces.

Somewhat like a religion, the basic appeals of anti-Communism, national defense, and patriotism provide the foundation for a powerful creed upon which the defense establishment can build, grow, and justify its cost. More so than many large bureaucratic organizations, the defense establishment now devotes a large share of its efforts to self-perpetuation, to justifying its organizations, to preaching its doctrines and to self-maintenance and management. Warfare becomes an extension of war games and field test. War justifies the existence of the establishment, provides experience for the military novice and challenges for the senior officer. Wars and emergencies put the military and their leaders on the front pages and give status and prestige to the professionals. Wars add to the military traditions, the self-nourishment of heroic deeds, and provide a new crop of military leaders who become the rededicated disciples of the code of service and military action. Being recognized public figures in a nation always seeking folk heroes, the military leaders have been largely exempt from the criticism experienced by the more plebeian politician. Flag officers are considered "experts," and their views are often accepted by press and Congress as the gospel. In turn, the distinguished military leader feels obliged not only to perpetuate loyally the doctrine of his service but to comply with the stereotyped military characteristics by being tough, aggressive, and firm in his resistance to Communist aggression and his belief in the military solutions to world problems. Standing closely behind these leaders, encouraging and prompting them, are the rich and powerful defense industries. Standing in front, adorned with service caps, ribbons, and lapel emblems, is a nation of veterans—patriotic, belligerent, romantic, and well intentioned, finding a certain sublimation and excitement in their country's latest military venture. Militarism in America is in full bloom and promises a future of vigorous self-pollination—unless the blight of Vietnam reveals that militarism is more a poisonous weed than a glorious blossom.

(NOTE.—The opinions contained herein are the private ones of the author and are not to be construed as official or reflecting the views of the Navy Department or the naval service at large.)

Mr. Speaker, another article appeared in last month's issue of Harper's—by Arthur Schlessinger, if I recall correctly—entitled "The End of the Age of Superpowers," in which it is pointed out that we have become a warrier nation, a nation concerned with militarism; that this militarism has become the dominant ethic of our society, and that it was the major factor which was leading us into the kind of difficulties that now face us all around the world.

On the long run, this kind of a development in America is bound to bring the United States into defeat and decay. It is bound to destroy our possibilities, our hopes of ever achieving the great strength which we all want to see for this country. It is this kind of concern we have—this kind of attitude toward American security. We desire to see America great because she has established her own greatness as a just power, as a power able to solve her own internal problems, and as a power concerned with liberty and freedom around the world; but not as a power concerned with enforcing by military means her own conception of what is good for a country.

These are the kinds of motives, the kinds of attitudes towards American security which motivate most of us who are opposed to the war in Vietnam.

Mr. Speaker, I could say a great deal more about this concept of security we find today—and I will not belabor it at great length—but we find today that the greatest demands upon the American budget—and this has been pointed out by many of the other speakers—are coming from our Department of Defense. We find that uniformly in the past requests for appropriations by the Department of Defense have been not only accepted by the Congress; they have even been added to. The militarists cannot seem to ask for enough money, even though they are now taking from a half to two-thirds of the total American Federal tax dollar.

This, of course, has happened because here in the Congress most of the leadership has believed that American security and American defense could be bought by a proliferation of additional hardware. But that is not true. It is impossible to buy defense against the kind of threats that exist in the world today by adding to the already bulging stockpile of nuclear weapons.

There is, of course, defense against conditions created by mass poverty, by mass hopelessness around the world and in our own country. However, there is no defense, in terms of bombs, against the power of ideas which seek to restructure the conditions of mankind. These things cannot be defended against by the expenditures now made by the Department of Defense.

If we do not recognize these concepts, then surely our security will become less and less strong in the years to come.

Unfortunately, what motivates a great part of the support by Congress for these huge military expenditures and what motivates the Department of Defense to a great degree to ask for these allocations is not really a concern for the defense of this country—even in military terms.

I do not think there is any rational Member of this body who thinks that any other country in the world is about to attack us. They did not attack us when we were a second or third or tenth rate power. There is very little logic in assuming that this great country, minding its own business, is likely to be attacked by any other power in the world.

Instead, what those people who seek high military appropriations want—and I think most of the time they perhaps do not even recognize themselves what they want—is to be able to continue down this road that America has been going on for the last generation—of putting a million or 1,500,000 troops overseas—of circling the globe with our Navy—of having bases in hundreds of locations around the world—of having our Air Force traverse all the skies of the world—and of being able to say that at any place in the world the end and the political goal which we seek will and must be obtained simply because of the fact that we have the power to obtain it.

Mr. Speaker, that is not a defense of America. That is a role of militarism around the world.

Mr. BURTON of California. Mr. Speaker, will the gentleman yield?

Mr. BROWN of California. I yield to the gentleman.

Mr. BURTON of California. I gather from the gentleman's statement that he has the same mistrust as I do with reference to the opinion of the so-called military experts—the experts who told us in February 1965, that if the Air Force were only unleashed that we would bomb the Northern Viets, the Vietcong, to the conference table; the experts who told the executive leadership and the congressional leadership of this country that only if we would increase our troop involvement, which at that time amounted to some 30,000 men—up to a quarter of a million men that we would prevail militarily; the military expertise that has been wrong time after time in their evaluation of this problem in Southeast Asia.

I wonder if the gentleman from California would comment just a little as to his view on just how much reliance the American people and the American political leadership should place on the opinions of our so-called military experts.

Mr. BROWN of California. I would be happy to do that. But let me say to the gentleman that what I am saying is not intended in any way to derogate the loyalty and patriotism or the honest desire of military experts to serve this country. It is only that they make their judgment within the framework that has only one value—the value of force. But today judgments can no longer be made on the basis of this one single value, even though there are other powers—other than the United States—which still feel this to be true that goals can be achieved in the world by simple utilization of superior military power, and that superior military strength is all that it takes.

American military men are not unique in feeling that this is true. There are persons with a similar point of view in every country, including countries that we conceive of as being our enemies, and it is this attitude—both in the U.S. military and around the world—which must be reversed today. The concept of war involving nuclear weapons is no longer absolutely impossible to contemplate. War under these terms is obsolete today. This kind of war would mean destruction of the human race. Yet, instead of recognizing that simple and elementary fact and proceeding to establish conditions under which such war becomes less probable, we move in exactly the opposite direction and proceed with policies which make inevitable such a war within our lifetime.

I do not wish to elaborate at any undue length on this subject. I think it is important to recognize that it is my concern—our concern—for American security and for a realistic defense of America which prompts the kinds of expressions we have been making about the war in Vietnam, the anti-ballistic-missile system, the role of the military, and the extensions of American power around the world.

It is not a desire to have America show a lack of concern for defense or security, or to have America play a second- or a third-rate role in the world. America is and probably will be for many years the world's greatest power and should act as the world's greatest power.

But that does not mean that America should take upon itself to give answers to problems of every other country in the world.

By way of conclusion, I merely wish to say that it pleased me a great deal to have two Members of Congress arise earlier today and indicate in connection with their concern about Vietnam that they were not going to vote for war any more, and that they were going to refuse to approve any additional appropriations for the war in Vietnam. I wish to commend those two Members for their statements, and I wish to associate myself with them.

I have never voted for any money for the Vietnam War. I wish to go even further. I feel that under the present circumstances I cannot vote for any military appropriations which are part and parcel of the policy of American imperialism around the world. I can no longer support, nor will I vote for, additional taxes on the American people to uphold this kind of policy, and hence I will vote against continuation of the 10 percent tax surcharge, an issue which will come before the House shortly.

I can no longer vote to allow this country to borrow money for militaristic purposes. Hence I shall vote against any further increasing of the debt ceiling or against any bills which would make it easier to borrow money to carry on our adventurism. And, much as I hate to say so, I can no longer support a foreign aid program which is primarily the instrument of a bilateral policy aimed at carrying out American security policies in the underdeveloped world.

So what I intend to do—and what I hope my colleagues will join me in doing—is to use the power granted to us by the Constitution to make clear our stand on these vital issues. If they do so, if they speak up as they should, I think that this great body will again assume the prerogatives which it was intended to assume under the Constitution. I look forward to that day.

Mr. Speaker, I note the presence in the Chamber of the distinguished Speaker, the gentleman from Massachusetts. I am happy to have him here, and certainly hope that he will participate if he feels in the mood to do so.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. BROWN of California. I am happy to yield to our distinguished Speaker.

Mr. McCORMACK. I would not want the RECORD to show that I was silent, in view of what the gentleman said in reference to my presence in the Chamber. I came to the floor in an effort to be constructive. I would like the RECORD to show that I have cooperated in every way possible with the gentleman's special order today, particularly in arranging for the attendance of the ladies in the gallery. But I wish also to point out that my effort does not indicate my approval of the gentleman's statements.

Mr. BROWN of California. I thank the Speaker. The reputation for fairness and generosity of our distinguished Speaker, even with those with whom he differs, is very outstanding. We are, of course, very grateful to the Speaker for it.

Mr. CHARLES H. WILSON. Mr. Speaker, I would first like to commend my colleagues for having the wisdom and concern to reserve this important period for debate on our continuing involvement in Vietnam, probably the most critical issue facing this country today. It is certainly the responsibility of the Congress, as a full and equal partner in our balanced federal system of government, to consider and debate both domestic and foreign issues. With the Nixon administration now apparently conducting a full-scale review of Vietnam policy, I think it is very much in the national interest for us to offer our thoughts and our counsel in this effort to seek sensible goals and objectives. As a Member of Congress, I have given countless hours of thought and study to the questions surrounding our commitment in Vietnam; like many Americans who are looking searchingly at this issue, I have encountered much that is doubtful and little that is certain. I think the time is at hand for an honest appraisal of the situation and a frank discussion of our alternatives at this point.

In terms of human life we are bearing a tragic burden; in terms of economics we are bearing a dangerous burden. While the peace talks continue in Paris, our casualty rates are again reaching record levels; while our cities and our poor go begging, war spending is continuing at record rates.

Before and during last year's campaign, the general consensus of Ameri-

can opinion indicated rather strongly that patience with this war is wearing thin, and that our priorities are seriously inverted—that we have allowed what was intended to be a limited war with limited objectives to become an intolerably open-ended drain on our human and economic resources. I submit that we have no justification for allowing those conclusions to be ignored or forgotten while this Nation drifts toward foreign or domestic disaster. Instead, we must examine our commitment and our objectives in order to determine a reasoned set of goals and expectations.

I am unequivocally opposed to any further escalation of this war. Again and again we have escalated and again and again the enemy has matched us, man for man, weapon for weapon. The conflict is clearly a stalemate, with neither side able to declare victory or willing to accept defeat.

The lessons which the United States has learned in Vietnam have been bitter ones. The kind of allout military victory which we have achieved in past wars is not possible in this new guerrilla warfare except, possibly, through near-total destruction of Vietnam, both North and South. This is not our objective. We have also learned that even the mightiest nation in the world cannot expect to extend itself halfway around the world and easily thwart the plans of a small, relatively weak people. These lessons, unpleasant as they are, ought not to be wasted or rationalized; they should serve as an impetus for an objective reassessment of the situation leading to the quickest possible end of our involvement.

As a member of the House Committee on Armed Services, I have consistently advocated full military preparedness and the strongest possible support of our troops wherever they serve. I do not, however, agree with those who view a desire for peace in Vietnam as being in conflict with these principles; full support of our troops certainly must include acting to bring them home.

In 1962, President Kennedy stated that though we could aid, support, and train South Vietnamese forces to protect their nation, it is still their war, and it must be fought by them and won by them. I think our experience in this war bears our late President out. The time has come for us to initiate a major shifting of responsibility from United States to South Vietnamese forces. Much was said recently about reducing our present combat force in South Vietnam, but it does not seem to be coming to pass. Though the President and the Secretary of Defense did talk earlier about significant troop withdrawals, they are now on record as saying there is no possibility of reducing troop levels now or in the immediate future. We have been told that the Army of South Vietnam has made a great deal of progress, but it is apparently not adequate to permit any changes in the number of American troops currently in combat. When will the progress be adequate? How soon will we be able to actually de-Americanize this war and allow South Vietnamese to determine South Vietnamese destiny? This is now the longest war in our history. I am deeply concerned that a continuing and excessive fear of any Viet Cong threat in South Vietnam could solidify the foundations for an indefinite, costly commitment of men and materiel; in other words, a long, open-ended Asian land war against which we have been repeatedly warned for years by many leading Americans.

It is clear that the civilian and military ruling class of South Vietnam are not anxious to compromise with the enemy or witness a reduction in the level of our involvement. While billions of dollars continue to flow into South Vietnam, reports of corruption and war profiteering continue to flow out. The Thieu-Ky regime is a product of the American commitment, and that commitment is apparently the only force which can sustain that regime. Therefore, can we rightly claim that what we have accomplished in Vietnam is the creation of a stable, independent, and popularly supported government, or are we, in fact, really an occupying force sustaining a regime which will exist only as long as our force remains?

I am well aware that the forces of North Vietnam continue to be strong and determined; such a threat obviously does not disappear overnight. Nevertheless, I believe that the most rapid possible disengagement of American troops, with the Army of South Vietnam taking over the largest possible share of the fighting, should now be our primary objective. If the South Vietnamese are honestly intent upon defending their nation, the time is at hand for them to shoulder the responsibilities and assume the burdens.

President Thieu's recent offer to hold private unconditional talks with the National Liberation Front is, however, a hopeful sign. This conflict must ultimately be settled through negotiation, not escalation, and private talks with little fanfare or publicity are likely to be the real source of progress in Paris, rather than the larger, more open talks involving all parties. A logical objective for us to pursue would be simultaneous progress in both secret and official talks in Paris and in a program of military disengagement in South Vietnam. It is also worth noting that President Thieu now appears to accept the belief that escalation is not the answer, as he has now stated that, in his opinion, a resumption of the bombing of the North will not constitute an appropriate response to the enemy offensive in the South.

To those who continually insist that we are in too deep to turn back, I suggest the analogy of the cardplayer who, having bet the limit, decides to remain in the game despite the fact that he has already gone too far; he cannot retrieve his losses, but rather than accept reality, he digs in deeper, thinking he can reverse his fate. I am persuaded that our present dilemma in Vietnam is of a similar nature. To dig in deeper would be a tragic mistake. Other obligations, especially with regard to our domestic crises, are simply too urgent to permit such a massive war commitment to be prolonged or enlarged.

We are now at a crossroads; this is the time to initiate a prompt and decisive timetable for this disengagement. I fear the only alternative is to become hopelessly mired in the quicksand that is the endless squandering of our previous human and economic resources. To conclude that such a costly burden is in the best national interest of the United States would be a disasterous misjudgment.

Mrs. MINK. Mr. Speaker, the Vietnam war continues as the most urgent and pressing problem facing our country. That it must be ended and soon, there can be no doubt. The real question is the willingness of the American people to accept the realities of this war, and to acknowledge that indeed the political issues must be left to the people of South Vietnam to resolve by themselves. This is what President Johnson said when he reiterated so often the right of self-determination as belonging to the South Vietnamese. It appears still to be the position of the new Nixon administration. This I feel is the crux of the problem as well as the heart of the solution.

I am greatly encouraged to hear that despite all indications of a military escalation following the Tet observances, that private talks are now endorsed by both our Government and the Thieu-Ky Saigon regime. If indeed the military aspects can be resolved by the United States and North Vietnam, then it will fall upon the leaders of the NLF and the South Vietnamese Government to resolve the internal political issues concerning the future governance of South Vietnam. This is the prospect for peace that promises the greatest hope so that we shall be able as a nation to return to the real priorities of this century.

The peace conference in Paris must succeed. The military pressures within our country to escalate the war must be subdued. Instead we must use all our efforts to persuade our policymakers that indeed the people of this country are prepared to accept terms of settlement which will bring an end to our military commitment, by stages if necessary, and which will reserve to the people of South Vietnam the responsibility for determining the form and content of their future government. Once this determination is agreed upon, then I would hope that the United Nations would be called upon to preserve the stability of the settlement which has been achieved.

The formula for peace in Vietnam seems so obvious to me. I hope that it is as equally obvious to our new administration.

Mr. CONYERS. Mr. Speaker, in the year since former President Johnson's speech urging a prompt settlement of the war, and particularly in the 4 months since the bombing halt on Hanoi, our involvement in Vietnam has become more entrenched. The speech and the bombing halt seemingly deceived a lot of Americans—they thought the war would soon be over, and they have proceeded accordingly to halt the protests, stop the debate, and wait for the troops to come home.

The intent of this special order today is to alert the country to the continuing escalation of the war in Vietnam. For, while we had our backs turned on the war, the situation has deteriorated; more American boys have died; we have increased rather than decreased the number of battalion-sized operations by American and South Vietnamese troops; and we have allowed the Paris Peace Talks to dwindle to mere rumors of "possible peace in the unforeseeable future." I want to congratulate the various peace groups in the country, such as the Women's Strike for Peace, which have kept the vigil over the interminable war in Southeast Asia and have urged Congress to reopen the debate.

The war must be ended as soon as possible because so many things hinge on its settlement. We are pouring money, manpower, and lives into a hole that keeps getting larger; it can never be filled. The crisis in our cities demands attention before it, too, becomes totally unmanageable. We cannot seek "peace and democracy," if indeed, that is what we seek in Vietnam, while we allow the conditions which spawn tragedy in the cities to go unremedied. We must reassess our priorities, now—negotiate a settlement in Vietnam, and withdraw American troops as soon as possible, or we chart a perilous course for America which will cost us dearly in human suffering. We must obtain peace in Vietnam so that we can maintain peace in the United States.

Mr. Speaker, it is obvious, that we will never "win" the war in Vietnam, the enemy clearly is not on the run and is prepared to fight for another 10 or 20 years if we do not decide to come home. A negotiated peace among all the parties to the war will not create a loss of face for the United States. In fact, turning our attention and treasury away from Vietnam and back to our domestic crisis will probably increase our prestige among all those at home and abroad who are still trying to figure out what we were doing in Vietnam in the first place. No one respects a man who gambles away his assets while his children are starving.

GENERAL LEAVE TO EXTEND

Mr. BROWN of California. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the subject of my special order.

The SPEAKER pro tempore (Mr. PATTEN). Is there objection to the request of the gentleman from California?

There was no objection.

THE WAR IN VIETNAM

The SPEAKER pro tempore. Under a previous order of the House, the Chair recognizes the gentleman from California (Mr. EDWARDS) for 60 minutes.

Mr. RYAN. Mr. Speaker, will the gentleman yield briefly?

Mr. EDWARDS of California. I yield to the gentleman from New York (Mr. RYAN).

Mr. RYAN. Mr. Speaker, if I may, in noting the presence of the distinguished Speaker on the floor, I want to express my appreciation to him for having made the caucus room available to me today so that the ladies from Women Strike for Peace may gather there. I know that they also appreciate the courtesy which the Speaker extended.

Mr. CAREY. Mr. Speaker, will the gentleman yield?

Mr. EDWARDS of California. It is a pleasure to yield to the gentleman from New York (Mr. CAREY).

Mr. CAREY. Mr. Speaker, I thank the gentleman from California for yielding.

Perhaps my presence on the floor is not as markedly evident as that of the Speaker, but I would like to suggest that when a colonel of infantry in World War II, who has done his share of killing and sending others into the horrors of war, joins in this debate as a friend of the man in the well and one who admires him for speaking out and speaking out now, I hope it will be noticed to some extent.

Justice Frankfurter said one time: Wisdom is a virtue which comes so seldom that even when it comes late, it should not be rejected.

I have gained considerable wisdom over the past couple of years. I went along with the designs and the desires of our military people and I supported my party and my President—I had hoped for the best.

During the course of my study of this conflict, I found we must do more than study and wait and support. And if a small collection of Members go into the well today to suggest to the State Department and to the Defense Department and to the administration that we have had enough of waiting and that peace is too precious to wait for in silence, then I am closer to the number engaging in this dialog than I have ever been before.

I have studied day by day the reports of the military in behalf of our forces and read the daily bulletins. I read that the B–52's are still striking day by day and province by province. I read that we are moving away from the old concept of search and destroy, but we are still engaging in what they call sweep and clear, or search and clear.

This may not mean much to the layman, but to me as an infantryman it means day-by-day offensive military operations.

I know belligerence begets belligerence, and at a time when we are discussing compatibility and exchange of ideas in Paris, I would hope that a restraint could intrude itself upon the military in their day-by-day operations in the theater of combat. I have not seen this in a sufficient degree yet.

I am constrained to object when the commander in chief of the Pacific, Admiral McCain, sets forth in no uncertain terms a statement of belligerence in behalf of my Government in the February Reader's Digest. I suspect Ho Chi Minh reads the Reader's Digest, or has it read for him, and when he finds out we mean to fight to the finish, and the peace talks should produce not just a peace, but some sort of determination of victory for our side, I think that probably has and will cost us more American lives, because the North Vietnamese were moved to fight harder and to fight in response.

I do not think the peace policy of our country should be formed in the Reader's Digest. I would hope that would not happen.

I would hope that what the Secretary of Defense has learned from his recent visit to the theater of operations in Vietnam could just as well educate us as it educates him, and that his communication of knowledge would not be confined to the Armed Services Committee. Perhaps it would be fitting for him and for the Secretary of State to visit with us in this Chamber in executive session and tell us what their plans are toward peace and their plans toward the reduction in hostilities that they have in mind for us in the months to come. I would like to know.

I am not entitled to be privy to the high councils of our Nation in the search for peace, but I must respond to the people who have told me that mothers and fathers do not want to go any further with the war. I must respond to them.

What I know now disturbs me as I assess our recent operations in the field.

I read the calendar. I saw that there were ultimate preparations made to respond to the projected Tet offensive. I am wondering if some of our preparations did not add to the intensity and the ferocity of the enemy Tet offensive. Perhaps our preparations begot the offensive to some degree.

These are military operations which are beyond the knowledge of a Member of the House. I wonder how long we can allow these operations to be beyond the knowledge of a Member of the House if we are truly to represent all our people in the search for peace.

As I study the calendar I see we did respond in February to a degree to try to secure some reduction of hostilities. In the words of the last Secretary of Defense, Clark Clifford, I was told we were trying to bring about disengagement. I thought disengagement made sense. We tried it on a unit-by-unit basis, to pull our troops back and to pull them away, hoping the enemy would do the same. In some cases I was informed they did the same in response to our initiatives and casualties fell.

If this was possible under Secretary Clifford's policy, why is it not still possible today? Can we not engage in disengagement in that theater while we talk at Paris? These should be a parity of effort, so that we say what we mean in Saigon and we say what we mean in Paris, and do what we mean in Saigon as we say what we mean in Paris.

Mr. Speaker, at this time I ask unanimous consent to enter into the RECORD an article which appeared in yesterday's New York Post, written by Clayton Fritchey, entitled "Of War and Words," where our actions and our words are in diametric contrast.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

The article is as follows:

OF WAR AND WORDS

(By Clayton Fritchey)

WASHINGTON.—Through the courtesy of official spokesmen, on the one hand, and the American press, on the other, this column brings you a special report on the progress of the Vietnam war:

"We have the enemy licked now . . . He cannot even mount another major offensive."—Adm. John McCain, U.S. commander-in-chief, Pacific, in the February issue of Reader's Digest.

SAIGON, March 6.—U.S. military forces in South Vietnam suffered 453 battle deaths during the first week of the Communists' current offensive. Not since last May have more Americans been killed in combat in one week. (Washington Post.)

SAIGON, February 27.—On Feb. 6 President Thieu said some U.S. combat units could begin leaving this year. Today he offered this clarification: one and possibly two U.S. divisions could leave South Vietnam during the last six months of 1969. (news dispatch)

WASHINGTON. March 14.—President Nixon said today there was no prospect for reduction of American military forces in South Vietnam in the foreseeable future because of the current enemy offensive. (New York Times)

SAIGON, January 3.—It is a large measure of agreement among military men that Viet Cong attacks these days show poor planning, poor execution and poor tactical leadership. (New York Times)

SAIGON, February 26.—More than 1000 Viet Cong and North Vietnamese pushed to within 15 miles of Saigon today, seized a group of refugee villages in Bien Hoa and fought their way to the edge of the busiest American air base in South Vietnam on the fourth day of the enemy offensive. (Washington Star)

SAIGON, January 31.—Premier Huong declared tonight that his government's goal is to control 100 per cent of South Vietnam's population at the end of 1969. (Washington Post)

SAIGON, February 4.—Viet Cong terrorism increased nearly 30 percent in South Vietnam last month, allied officials reported this evening. (New York Times)

WASHINGTON, March 19.—Defense Secretary Melvin Laird said today that he was accelerating the program to prepare South Vietnamese troops to replace some American soldiers . . . in Congressional testimony last May 28 former Defense Secretary Clark Clifford said that the South Vietnamese "are ready to bear an increasing burden and thereby enable us to level off and in due time reduce our contribution." (New York Times)

SAIGON, December 5.—South Vietnamese army desertions have climbed sharply in the last six months, allied military sources said today. (Washington Post)

"The enemy seems to be approaching a point of desperation," Gen. William C. Westmoreland, Army Chief of Staff, told reporters last year. (As reported in The Progressive)

SAIGON, February 25.—American casualties rose steadily today as the Viet Cong's new offensive continued for a third day. (Washington Post)

WASHINGTON, February 26.—Chairman John C. Stennis (D-Miss.) of the Senate Armed Service Committee yesterday asked the Pentagon to provide Congress with facts—no "rosy pictures"—on the Vietnam war: "We've gone along for years with the same rosy, rosy picture."

Mr. CAREY. I think to our friends and allies and to our so-called enemy alike, we had better begin saying what we mean, and that we mean peace, and that this be portrayed in actions consonant with the search for peace.

If I were a Vietnamese or a Vietcong living in Kontum Province or one of the other outlying Provinces 25 miles or more from Saigon, and I saw a B–52, with eight engines, drop its bombload on my neighborhood, whether under the military control of the Vietcong or not, I simply would not know and understand the bombing had stopped. It would not do me any good to know that the Americans are not bombing near Hanoi any longer or above the DMZ, because they are still bombing my hamlet, my village, my area.

As I study the calendar, again I say to my friend in the well, Mr. Speaker, the greatest day in the history of the world in the making of peace, the rebirth of man, is just ahead of us. Easter is coming, and Passover. And all men will commune with themselves and with their neighbors on what we have done to bring about the peace.

Perhaps this is a time for us to urge upon the Chief Executive of the United States and the administration now in power and upon the Secretary of State that there is here a chance for a new initiative.

If it is right to respond to the Vietcong, to the North Vietnamese and South Vietnamese, in order to suspend hostilities for the Tet holiday, and we are in doubt about who caused the offensive and who carried away the day, can we not, as Christians and Jews alike, celebrating Easter and Passover, call upon the world in the days of Easter and Passover to come, to reduce the hostilities now and forever, once and for all, with a ceasefire, a suspension of all bombing, and a disengagement of forces without delay, beginning during the week to come, Holy Week and Easter Week?

No one could mistake our meaning. No secret talks are needed, simply the appeal to conscience in the world.

I say again, if I have been late in coming to your numbers and adding to your words I will have to live with this for the rest of my life, with my family, with my children, and my countrymen, but there are too few here today to hear what you are saying and to join in what you are doing.

I am pleased at least on the minority side we do have Members present—not as many as there are on this side.

However, numbers are not important any more excepting the numbers that we hear day after day in terms of casualty reports from the other side of the world. There will always be another side of the world, Mr. Speaker, if we can take and continue to take joy or consolation or horror from the fact that we have outnumbered them in killing 10 to 1, that they have lost 300,000 and we have lost 30,000. The day of the body count must end. Every human being in this world is entitled to another day of life. We gain nothing when we point to a victory against our so-called enemy. The world wants to hear only that we have stopped killing and that we have done our utmost to use our power for peace.

Mr. Speaker, I thank the gentleman in the well for giving me this opportunity to say in this day and hour that I hope, I pray, and I aspire that your numbers will grow and that your words will be heard, because until they are heard I fear for my children and for the children of this world because the elders did not stay and listen.

Mr. EDWARDS of California. Mr. Speaker, I thank the gentleman from New York (Mr. CAREY) for his moving contribution.

I now yield to the gentleman from New York (Mr. LOWENSTEIN).

Mr. LOWENSTEIN. Mr. Speaker, I appreciate the courtesy of the gentleman from California in yielding, and appreciate this opportunity to comment today on events that crowd in on all of us.

We have come a year since the startling week when a shaken America lost Martin Luther King, Jr., and heard an incumbent President announce his decision to retire. What a year it has been.

We round now into another year with frustration and impatience abroad in the land; with fundamental problems unattended; with the national malaise poised, as it were, in midair; with the confidence of the people in their ability to affect the direction of their Government wobbling; with some men talking intermittently in Paris and others dying uninterruptedly in Vietnam.

Some have asked why those of us who are opposed to the war have seemed so quiet during the opening months of the new administration. Some have been quiet because of the patience traditional among Americans toward new Presidents as they assume office. Some have been quiet because in a national mood of expectancy and hope, noise might fall on ears determinedly deaf. Some have been quiet in response to President Nixon's suggestion in his inaugural address that affirmative virtue might in fact reside in a period of relative silence.

But if many have been quiet, none have become quiescent. And the quiet has come not because the American people will accept a decision to continue the war, but because they expect a decision to discontinue it.

Why then do some of us speak now, when clearly it would be unfair to expect a new President to bring peace overnight where there has been war for over a quarter of a century.

And indeed, the dilemma is a difficult one. For if we speak now, some will say our voices may undermine the negotiations and thus delay peace itself. And some may even say that we betray a lack of faith in the good will or the high purpose of the new President.

Yet, if we remain silent in the aftermath of recent remarks by the Secretary of Defense and in the backwash of developments in Vietnam, we may by that silence be helping to seal decisions by the administration based on miscalculations of the public mood. Should such

decisions lead to a repetition of the errors of the last years of the Johnson administration, we would all be ensnared in the spiral of calamities that must then befall America.

So there is a responsibility to speak now, to do what we can to make visible the fears and hopes of that vast number of Americans who participated in the events that led to the collective national decision to reverse course in Vietnam and to get on with the business at home.

And we speak in a spirit not of accusation against the President nor of attack against his motives, but rather in support of what we hope and believe from his inaugural address and from many of his comments since then, are in fact his goals, too.

We hope he will accept our suggestions and the public energies that will be displayed in furtherance of these suggestions as part of the effort to make it easier for him to do what he wants to do, to lead where he wants to lead, to make America what he wants America to be. For we know that President Nixon is a man who craves peace for his country and for the world as deeply as anyone; but we know that President Johnson before him was such a man also, and we know how far from peace his course wandered.

Thus the Johnson administration found itself caught in what became an endless circle of disaster—a disaster that became inexorable once policies were adopted that were based on logic that was as unyielding as it was faulty in its premises. Thus, the Johnson administration, in what must stand as a classic example of a syllogism in reverse proceeded with flawless logic from tragic error to tragic error, unwilling or unable to reexamine original defective premises on which the whole structure of its Vietnamese policy first foundered, tottered, and then collapsed. We speak now in the hope that the new administration is engaged in the kind of determined reexamination of those premises—premises about the nature of the war, about the requirements of national security, about the arrangement of national priorities, about the way in which America should face her obligations as a world power.

It seems inconceivable at this juncture that any such fundamental reexamination would not conclude that the purpose of negotiations about Vietnam must now be limited to three goals:

First. To make possible the orderly withdrawal of American troops.

Second. To provide protection for South Vietnamese who would rather relocate themselves than stay on after American troops have withdrawn.

Third. To allow time for the transition in both South Vietnam and the United States—time during which the present Government of South Vietnam could take over the war if it should decide to do so or could enter into negotiations for an acceptable settlement if it should choose to do that.

I would suggest that these goals are consistent with the original purposes of the American intervention in Vietnam and are in fact negotiable now.

If these are not the goals now being sought by our negotiators in Paris, we must face again the consequences of an endless unwinnable and disastrous war, disastrous to the American people even as to the Vietnamese. But if these are the goals, the American people, even in their impatience to have done with war, will not begrudge the time necessary to achieve them.

Too much is happening to feel secure that these are in fact the goals. American offensive activities on the ground in South Vietnam have increased since the halt in the bombing of the north, and Admiral McCain, the commander in chief of the Pacific Fleet, and others equally eminent, have told us that this is necessary to secure a better bargaining position.

The Secretary of Defense has told us that he does not think there is a possibility "for any American troop withdrawal in any significant numbers," even as Admiral McCain assures us:

> We have the enemy licked now; he is beaten.

So once again the familiar contrapuntal ambivalences of pronouncements of imminent success and predictions of long-range difficulties begin to rain upon the American people in the same disquieting pattern that led the Johnson administration from national consensus into credibility gap and eventually into discredited chasms where it was abandoned by the American people.

And so, with anniversaries pressing on the calendar, with young men dying in greater numbers than a year ago, and with confusion about the meaning of events and statements that threaten to drown out the President's own words, it becomes our obligation to discuss the situation and report the facts as we find them:

First. The cost of the war, still running at more than $30 billion a year, still preempts the resources and energies of the Nation.

Second. The revolt of young people smolders in the mainstream and erupts with increasing irrationality and bitterness at the edges.

Third. The erosion of American influence in a world community faced with the great problems of Central Europe, the Middle East, Latin America, and Africa, continues, with sad consequences to the best interests of the American people and of countless other people elsewhere.

Fourth. The decline of the United Nations as an effective force for peace and social justice proceeds unchecked toward a point perilously close to no return, at the very moment when men concerned with survival itself should be harnessing their best energies to deal with the massive problems presented by new advances in technology and weaponry, by the population explosion, by the opportunities and challenges of outer space, and by the horrors of the widening gap between those who have and those who have not, all over the world.

Fifth. More than 11,000 American servicemen are now dead who were alive at this time a year ago. A thousand more die each month so that this week, the total of American deaths in Vietnam will surpass the total of American deaths in Korea, and this year will surpass the total in World War I.

And all these facts, these leaden reminders that weigh on the hearts of so many men and women who love this country, are made ever more unacceptable by the additional circumstance that our people have in two presidential elections voted as clearly as our system made possible for change to policies in the direction of peace; and by the horrifying awareness that no additional number of killed or maimed Americans can in fact contribute to the national security or protect the national interest, or advance the national purpose.

So before thousands more are dead and thousands more are in exile or in jail, and before millions more have joined those who doubt the meaning of the electoral process itself; and before another anniversary has come round with another commission to report that we are not embarked on the great national agenda laid forth by the Kerner Commission, and before another administration finds itself trapped into inevitable error by choosing continually between false options and then defending false options with inconsistent and sometimes dishonest explanations; and before the very fabric of the unity of this Nation unravels in an acid sea of hate, and self-doubt, and self-recrimination, we address as urgently as words can manage this plea to the President to begin the implementation of the reversed course which will help to buy the time necessary to finish the reversing of course.

Soon we in the Congress will be asked again for the funds to continue prosecution of the war and then, as before, Members of Congress will face the most unacceptable of alternatives: for they will be told that to refuse to appropriate money to protect our fighting men is to consign to death yet more of those Americans least deserving to die—those Americans who in carrying out the orders of their Government have displayed a valor and a loyalty to country that in the face of the difficulties and uncertainties of the situation which they have been placed in must rank with the highest such response of our history.

Yet valor and loyalty do not make wrong things right, or senseless policies sensible, or hopeless pursuits hopeful. So there will be those who feel that to vote money for the further prosecution of the war is not to protect lives but indeed to make more certain that more lives will be pointlessly lost.

It is the imminence of this decision and the existence of stalemate and escalation in Paris and Vietnam that leads me then to urge upon the President the following steps:

First, the United States should begin at the earliest possible moment to withdraw with all deliberate speed as large a part of our Armed Forces in South Vietnam as would be consistent with the continued safety of those men who remain behind.

Second, this Government should make clear to those whom we have supported and opposed alike that it is our intention to continue to withdraw American

troops from South Vietnam until none shall remain, providing only that during this continuing withdrawal the Government of North Vietnam and the Vietcong will participate in good faith efforts to resolve by negotiation the negotiable questions mentioned above.

Third, the United States should reiterate its willingness to assist in the relocation of people who do not wish to remain in South Vietnam under new circumstances that must arise in any peace settlement and to assist through international agencies in the reconstruction of the land devastated by so many years of war.

I am convinced on the record of the past year that should these steps be taken by the President now, the effect would be to facilitate negotiations rather than to hinder them, to remove roadblocks between the American people and the most nearly satisfactory resolution of their most difficult dilemma, and to shorten the tragedy already too long in progress.

Should the President take these steps, it would signal at last the determination of the American people to let the Vietnamese people settle their own affairs, and would in fact "strengthen the bargaining position" of our negotiators in seeking on both sides the quickest possible end to war and the least painful transition to reconstruction.

Once these steps were taken and the American purpose were clear, there would be new unity in support of those who are negotiating, new hope for healing of the spirit of the land, an irrefutable rebuttal to those who have denied the efficacy of the democratic process and who would tear it down on the pretext that it has become irrelevant.

The money necessary for the protection of the lives of those Americans still in the combat area would then be voted without the haunting sense that each dollar proclaimed as protection might in fact increase the likelihood of destruction.

And above all, the President could get on with the pressing national business so long deferred and already so difficult to address. The recitation of this national agenda has become almost a national litany, repeated as if repetition somehow will remove the need for action.

The reform of electoral and legislative process; the reform of the tax structure; the end of compulsory military duty; the development of programs to end hunger and malnutrition and to place a floor below which no American need live; the building of adequate houses; the development of mass transport systems; construction of schools and the paying of livable wages to teachers and other public servants; the checking of the poisoning of the environment so we may again breath the air, drink the water, and enjoy the beaches of this fair land; the ordering of our relationships with other nations in the tradition of the good neighbor; the reconstruction of the United Nations so that it can begin again the painful task of building world order where the words peace and justice will not ring as cynical reminders of lost dreams; and, above all, the beginning of the healing of the national spirit, the beginning of the accomplishment of the revolution in attitudes and values that, accomplished in a spirit of national reconciliation, can alone make America what America must be if she is not to become the greatest monument to the failure of self-government in the history of the human race.

It is almost 1 year ago today that Senator Robert Kennedy, speaking in Kansas said:

> But I am concerned . . . that the course we are following at the present time is deeply wrong. . . . I am concerned that, at the end of it all, there will only be more Americans killed, more of our treasure spilled out, and because of the bitterness and hatred on every side of this war, more hundreds of thousands of Vietnamese slaughtered; so that they may say, as Tacitus said of Rome: "They made a desert and called it peace," I don't think that's satisfactory for the United States of America. I do not think that is what the American spirit is really about. I do not think that is what this country stands for.

We are standing here in this House today in the absence of Dr. King and Senator Kennedy, with the memory what it was they told us to do and with the determination that what they wanted done will be done even with the greater difficulties that attend doing it in their absence.

It is because nothing less than the course of the history of this great land and its favored people is at stake at this moment of anniversary and rededication, of despair and opportunity, that we address ourselves so urgently and prayerfully to the President.

We attend his response, patiently, but in the hope that he shall not confuse patience with acquiescence in too long continuing a silence.

Mr. COHELAN. Mr. Speaker, will the gentleman yield?

Mr. EDWARDS of California. I yield to the gentleman.

Mr. COHELAN. Mr. Speaker, I would like to take this opportunity to congratulate the gentleman and to commend him for his very thoughtful statement.

Mr. Speaker, I firmly believe that it is of the utmost urgency that the fighting in Vietnam be brought to a halt soon. I am hopeful that this discussion on the floor of the House today will have the effect of adding to the sense of urgency attached by the White House to achieving such a prompt cessation of hostilities.

Accordingly, I would like to thank my colleagues, Mr. RYAN, Mr. BROWN of California, Mr. BURTON of California, Mr. CONYERS, and Mr. EDWARDS of California for arranging this special order.

Mr. Speaker, for almost a year the war in Vietnam has been practically a dormant issue. On March 31, 1968, then President Johnson announced a partial halt in the bombing of North Vietnam and said further that he would not seek another term as President. Within a few days the North Vietnamese had agreed to negotiations. And, in an instant, the differences between hawks and doves were blurred—no longer were doves those who favored a halt to the bombing and a negotiated settlement and the hawks those who did not. In fact, since last March the only real discernible difference between hawks and doves has been the degree of willingness to tolerate continued death and enormous expense in Vietnam.

But because public positions have become less clear and public interest has appeared to wane, I do not believe it is correct to say that the American people attach any less importance to a cessation of hostilities.

The American people are fed up and embarrassed by the war. Moreover, they are even guilty, anxious, and tired just thinking about the war.

Vietnam has retreated from the front page. Most people have ceased to read the casualty reports and the battle accounts in the newspapers. The television news is less replete with film footage on the progress of the war.

How many people have lulled and sedated themselves to the issue, wishing only that it would go away?

As I sense the mood, the American people basically do not like the war. They are not convinced of its necessity, and they feel it is not worth the high taxes and inflation and death it has caused. But, most Americans, too, are stoic—almost as if the war were beyond their control. Protests and demonstrations are not their thing, and besides they seem not to work. And so it is, I think, that the American people have resigned themselves with a hope and prayer—a hope that their leaders will lead them out of the war, and back to the work of making American life a joyful, significant pioneer experience—a fulfillment of the Whitman vision and the American dream.

At this point what is needed is for this popular distaste for the war to be translated into a greater sense of urgency on the part of the new administration. The public does not condone a honeymoon of harmony but inaction on the Vietnam question. I would hope that this discussion today will help translate this popular sentiment into that greater sense of urgency.

Mr. Speaker, I will not take the time of the House to suggest any strategic proposals for a solution. And while I seek to convey a sense of urgency, I do not intend to limit the public options available to the President. Only if time passes without sufficient progress, will it be appropriate to force specific suggestions upon the President's attention.

For the moment, then, I will content myself with one very significant procedural suggestion.

In my view the first step toward any solution in Vietnam is for the new administration to define its objectives in Vietnam. In this Congress can be of help.

It will not be possible to adequately assess any proposal, or to make any offer or counteroffer, unless and until we know what at a very minimum we are seeking in Vietnam.

This does not mean that it will be necessary to make public these conditions of a minimum acceptable compromise, but it does mean that within the administration it is essential that a minimum position be worked out.

Moreover, it will be necessary to decide what objectives in addition to these minimum conditions we would like to negotiate, and in turn to decide the relative priority to be attached to each of these additional marginal objectives. With these goals well in hand it will then be possible to make new and imaginative steps toward a negotiated peace, and to discard those past positions which bear no real connection with our minimum intentions.

In the formulation of these minimum and additional goals, I believe it will be necessary to assess long-range American policies in Asia—to put into perspective and real terms the roles of the United States, our present allies and our present adversaries. We will have to ask whether a particular approach to Vietnam negates another approach to the problems of Japan, or the Philippines, or Korea. We will have to ask whether a particular type of involvement in Vietnam will necessitate a similar continued involvement in other countries. In short, we will have to consider the Vietnamese questions in the whole fabric of Asian Pacific relations over the long term.

In the formulation of these goals, too, we will have to weigh the merits of solutions calling for a continued American involvement against those which would allow a larger involvement with domestic problems. We will have to measure the need for our resources in Vietnam against the needs for them in other parts of the world and at home. In sum, we will have to put Vietnam solutions into the context of competing demands on severely limited fiscal and manpower resources.

It will also be necessary to evaluate the situation on the ground in Vietnam today to formulate these minimum goals. This will mean not only evaluating the military situation, but evaluating the toll of more fighting on the morale of the Vietnamese people and the prospects of reconstruction of the Vietnamese nation. It will mean evaluating the possibility of imposing a solution on the competing groups or merely withdrawing ourselves and allowing the forces then existing to shape a solution. It will mean choosing ultimately between solutions more or less likely to yield pro-American regimes. But hopefully too, it will mean evaluating the costs of solutions which are relatively more likely to yield pro-American regimes against the backdrop of their costs in dollars and lives at home, and in loss of respectful public opinion at home and in the world.

Mr. Speaker, I think we can find an acceptable solution in Vietnam if we make these evaluations, and in the process release ourselves from goals and strategies unrelated to prompt cessation of hostilities at minimum cost. I most respectfully urge the new President and his administration to carry out these evaluations and to seek these new avenues. The alternative is continued war, and perhaps as our patience wanes, a very great risk of further escalation in this already overheated conflagration.

Moreover, Mr. Speaker, I am confident that after this evaluation we will find that—as President Kennedy reminded us years ago—this is a Vietnamese war, and it will be won or lost by the Vietnamese. Our continued military presence can only sap the national spirit of the Vietnamese and allow a certain air of unreality to permeate the thinking of certain Vietnamese. The Vietnamese will be able to find a solution to this Vietnamese problem—and a continued American involvement may make it more difficult, rather than less difficult, to achieve this Vietnamese solution.

Despite the fact that the findings on reevaluation of our Vietnam objectives may be much different from our present and past objectives, I strongly commend the exercise to the new administration and to my colleagues here in the Congress.

Mr. MIKVA. Mr. Speaker, will the gentleman yield?

Mr. EDWARDS of California. I yield to the gentleman from Illinois.

Mr. MIKVA. Mr. Speaker, I commend the gentleman now in the well, the gentleman from California (Mr. EDWARDS), as well as the gentleman from New York (Mr. LOWENSTEIN), and others of our colleagues who have partaken in this discussion today.

The country ought to be grateful to the gentleman from Michigan (Mr. CONYERS), the three gentlemen from California (Mr. BROWN, Mr. BURTON, and Mr. EDWARDS), and the gentleman from New York (Mr. RYAN) for providing an opportunity for this body to look at America's agony—the war in Vietnam. There are some who say that any discussion of the war by members of Congress is not met because the President is entitled to 100 days free of criticism. On the possibility that there is indeed something magic about 100 days—as opposed to 173 days—I would agree. Indeed, if the purpose of discussing Vietnam is to criticize President Nixon or criticism in general, I would agree whatever the time limit. Too many people in public life have suffered too much anguish from criticism for the sake of criticism about the war in Vietnam. If there is anyone who believes that any occupant of the White House can be comfortable while the war in Vietnam continues, my words cannot reach him nor are they intended to.

I assume that President Nixon, like his predecessor and like all of the other candidates for President, before and after the national nominating conventions earnestly desires to see a termination of our part in the war in Vietnam.

The purpose of this discussion rather is to remind ourselves and the people we represent that the burden is not only on the Chief Executive; that burden under our system must be shared by the legislative branch as well. Just as former President Johnson pointed to the Gulf of Tonkin resolution as the authorization for our military activities in Vietnam, so the Congress continues to possess the awesome power to continue, modify or terminate our participation in the hostilities.

It has been argued that while the negotiations pend at Paris, any public discussion of strategies or fall-back positions is impolitic, if not downright treasonable. Those arguers forget that the great strength and weakness for democracy is that ultimate decisions are made by the people. I am not suggesting that this body or the other body deliver ultimatums either to our negotiators or their negotiators as to when a formula for peace must be reached ere some other alternative course of action is taken.

I am saying that every Member of Congress bears a joint and several responsibility for deciding, with or without the administration, the war and peace posture of this country as it relates to Vietnam. That decision cannot be delegated, not even to our negotiators at Paris, let alone to the negotiators for South Vietnam, let alone to the negotiators for the Vietcong or North Vietnam. Put another way, is there any doubt that at some point the best interests of this country, and indeed the world, would be served best by terminating our participation in the hostilities even if some other team of negotiators, allied or enemy, did not agree? I would remind the members of this body that former President Johnson stated over and over again that if the South Vietnamese Government ever told us to get out, we would get out. That pledge was not conditioned on any reciprocal action on the part of the North Vietnamese.

If our continued participation in the hostilities was then, and presumably is now, conditioned only on the will of the South Vietnamese Government, should it not be conditioned similarly on the will of the people of the United States? Is there not some point when our capacity to continue fighting in this war, either because of will or wherewithal, is just as relevant a consideration as the desires of the South Vietnamese Government—or the tractability of the North Vietnamese negotiators at Paris?

As the branch which authorizes the size of our Armed Forces, as the branch which allocates the wherewithal of this country, as the branch which states the broad policy aspirations, which the President seeks to execute, Congress cannot escape the responsibility for its decisions. No one will be around to justify or interpret the decision or lack of decision by this Congress either of which may cause the greatest recorded democracy to crumble into chaos. We must ask ourselves, and re-ask ourselves, what is our breaking point?

When is the plight of our cities and our schools so great that we must devote the money and manpower now seeking to save Saigon to seek to save Chicago instead or New York, or Detroit? When does the tension and hostility between the young and the not-so-young, the black and the white, the have-nots, and the haves, become so great that we must devote our wherewithal to easing that tension and hostility rather than finding a modus vivendi between North Vietnamese and South Vietnamese? When does the alienation of our youth become an anxiety so acute that we must turn all our attention to the tears in this society—even at the expense of terminating our involvement in Vietnam less than grace-

fully. The French left Vietnam less than gracefully; they left Algeria less than gracefully; who is so great a seer as to say they did not act from a desperate concern for the life of France as a country?

Those decisions—as to when and how, and whether—unfortunately are not the exclusive agony of the President; whether a President of 60 days, 90 days, or 5 years. So long as Congress retains the power that it unquestionably has, we similarly retain the responsibility. No one understanding our system can reject the proposition that Congress is more than a repository of advisory impotency. If the country's existence is indeed threatened by the Vietnamese venture, who says we are powerless? And if it is not so threatened, than why are the signs so ominous? Why do we now have a huge command center at the Pentagon for communication and deployment use for riots and disorders? Why does every large city in the country, including the District of Columbia, seek more policemen, more riot equipment, and express more concern about law and order? Why do most of the colleges and many of the high schools have one brush with disaster after another? Has the whole younger generation gone mad? Do we really think that all of the campus disorders are caused by a small group of revolutionaries operating with Cuban gold or Moscow gold? Or are the young people trying to tell us something? Are they trying to give us perhaps the last clear chance to restore domestic tranquillity by devoting the great wealth and strength of this country to that prior item? There are courses that this Congress will follow and decisions that it will make. If and when it votes on a resolution—such as the one introduced by the gentleman from Pennsylvania (Mr. MOORHEAD) that it is the sense of Congress that we should commence phasing out the use of American troops in Vietnam—this Congress will act. If and when this Congress decides to appropriate such sums to carry on our participation in the Vietnamese hostilities as it deems proper, it will have acted. If and when it decides that the continuation of our involvement in Vietnam must be weighed against the possibility that we may not survive ourselves, it will have acted. No one denies the primacy of the President's responsibilities in terminating our involvement in the Vietnamese hostilities. That primacy however, does not permit Congress to cop out altogether. When all is said and done, our misery is less than the President's only because we have the company of 534 Members with whom to share that misery.

The people are no less anxious to end American involvement in the Vietnamese war than they were in the prior administration. Most people, as voters, were of the opinion that they expressed that anxiety when they elected the present administration and the present Congress. I know of few candidates who did not express themselves as sharing the people's anxiety. What better place to express a continued commitment to that anxiety than in this House—"Where the people shall govern"?

Mr. EDWARDS of California. Mr. Speaker, President Johnson won the 1964 election by more than a 15-million-vote majority. Yet 3 years and a few months later he found the country hopelessly divided under his leadership and he withdrew as a candidate for reelection.

I hope that President Nixon understands what happened to Mr. Johnson. It is important for his welfare and that of the people of the United States and of the world. Mr. Johnson entangled us in a land war in the morass of Asia—a war that cannot be won—a war where we supported one side in a civil war, a civil war that was none of our business.

Mr. Nixon won the 1968 election because the social, economic, and moral life of the United States was devastated by this cruel war in a small, poor, Asian country, a nation most Americans had never heard of before. Nearly 30,000 young Americans were dead by election day, 184,000 wounded. The dollar was under attack; inflation had sapped its buying power. Outrageous Federal taxes had sucked dry the reservoirs of capital needed by business and local governments to meet urgent needs in education, housing, transit, jobs, and environment. Solemn commitments to redress the grievances of black citizens had not been honored. The young people of America, dismayed by the draft, the war, and the threat of nuclear holocaust, were in various stages of unrest and revolt.

We trust that Mr. Nixon understands the roots of his minuscule victory over Mr. Humphrey. He won because Mr. Humphrey was looked upon by the American people as a coauthor of the Vietnam policy. Mr. Nixon did not win because of public dislike of medicare, Federal aid to education, the OEO or the Democratic civil rights bills. He won because of the Asian war.

Mr. Nixon's credentials as a peace President are shaky. His past record is hawkish. In 1954 he wanted American troops in Vietnam to replace the withdrawing French. In 1964 he advocated carrying the war into the North. In last year's presidential campaign he wanted the war pushed harder.

But in the campaign he promised peace. He said he had a plan that could settle the war. The Republicans could not fairly be charged with the war, escalated to its present furious level by a Democratic President and Congress. And Mr. Nixon was elected because of his promise of peace and because he was the other choice.

It is now time for Mr. Nixon to produce the peace in Vietnam he promised. Any further delay in proceeding to the settlement is unacceptable as well as immoral. Last week 351 Americans were killed in Vietnam, the week before 336. Over 10,000 Americans have died in Vietnam since the peace talks started 10 months ago. At the present rate 8,000 more Americans will die in the next 6 months.

A further delay in achieving peace might be tolerable if the formula for settlement had not been spelled out—over and over again—by distinguished Senators, such as the late Senator Robert F. Kennedy and Senator EUGENE J. MCCARTHY, experts in Asian affairs, and other men and women knowledgeable on Southeast Asian affairs.

The formula has to do with the present government in Saigon—the Saigon government wants a military victory so that it can maintain itself in power. For the Saigon regime only military victory can assure its continuance because it has little popular support and governs by terror.

Senator MCGOVERN said it best on March 17:

> We are trying to win on the battlefield and in Paris what the Saigon government long ago lost beyond all recall; the allegiance of its own people and the control of its own land.
>
> There is no more time for "considering military options," no more time for "improving the bargaining position." In the name of decency and commonsense, there must be no further continuation of the present war policy, however, disguised in rhetoric or more hollow predictions of victory yet to come.
>
> At this important crossroads for our Nation, I would hope that America could reap the bright promise of the President's inaugural address; and that in the spirit of that excellent speech, Mr. Nixon will reject the counsels of war and move to end the killing, and turn American energies back to the solution of our own problems and the search for a more decent world.

The voices of the American military are once more telling their old, and sad story—"Escalate the war a little bit more, bomb Cambodia, start another offensive, resume bombing of North Vietnam, and we will win."

The truth is clear. Escalation will not win any victories in Vietnam. Instead, it will increase the total of the dead, American and Vietnamese. Today, we have more troops in Vietnam than we had in Korea, and we have suffered as many or more casualties, but we have no victory, not even a stalemate. The truth is American military forces cannot win a victory in Vietnam, except by either killing every Vietnamese, or placing one guard over every Vietnamese.

Mr. Nixon, the unholy record of Vietnam is clear.

The only option left is peace.

Mr. BURTON of California. Mr. Speaker, will the gentleman yield?

Mr. EDWARDS of California. I yield to the distinguished gentleman from California. (Mr. BURTON).

Mr. BURTON of California. I would like to express my own profound admiration and thanks to my distinguished colleague from California (Mr. EDWARDS), not only for his leadership today in helping bring this dialog to those here in the Chamber and throughout the country, but much more importantly, for his leadership over the past 4 years in this hitherto somewhat lonely effort to arrest and change the direction of our country's policy in Southeast Asia.

His record has been one of courage and principle, his numbers have been added to in recent months, but there are many more of our colleagues—I am sure he will agree with me—whom we need before this battle can be won on this floor.

We are grateful to those who have recently joined our ranks, and we are even more grateful to those in the country—who with their letterwriting and communications have expressed their con-

cern that this war be ended and ended now. I am sure the gentleman shares with me my gratitude to all those concerned citizens in the land who have been so very helpful in this very, very important effort to achieve peace.

Mr. EDWARDS of California. Mr. Speaker, I thank the gentleman from California (Mr. BURTON). I cannot add words that will say it any better.

I do hope this dialog we have had today with so many Members of the House of Representatives from every part of the United States participating, will have its effect throughout the land, and the Congress—the Senate and the House of Representatives—will be overwhelmed with messages from the people of the United States instructing us to do everything possible to bring peace—not next year, but this year, immediately.

Mr. Speaker, I yield at this time to the gentleman from New York (Mr. RYAN).

Mr. RYAN. Mr. Speaker, I take this opportunity to commend the gentleman in the well, the gentleman from California (Mr. EDWARDS), for his very splendid statement this afternoon and for his abiding concern with peace and the question of Vietnam. The need to reassess past assumptions has been clear to the gentleman for some time, and he has constantly and forthrightly brought before the House his deep concern about the course of our foreign policy.

In these endeavors he has also been joined by two other distinguished Representatives from the State of California with whom I have been privileged to associate myself this afternoon, the gentleman from California, Mr. GEORGE BROWN, and the gentleman from California, Mr. PHILLIP BURTON. These three distinguished Californians have been in the forefront of the battle to bring about a change in our policy toward Vietnam and have voted with me against appropriations for this war.

We were pleased that our colleague from California (Mr. BURTON) was selected last August at the Democratic National Convention to manage and lead the floor fight for the minority plank on Vietnam. He performed an excellent service in crystallizing for the American public the issues and in leading that fight.

Although the minority plank was not adopted by that convention, it is clear that the American people have overwhelmingly supported that plank and want an end to the war.

THE WAR IN VIETNAM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. BURTON), is recognized for 1 hour.

Mr. BURTON of California. Mr. Speaker, we have concluded the presentation we wanted to make today. Therefore, I yield back the balance of my time.

THE DANGER OF ARAB TERRORISM IN THE MIDDLE EAST

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. FISH) is recognized for 60 minutes.

Mr. FISH. Mr. Speaker, the U.S. Government now appears to be moving toward "Big Four" talks with the Soviet Union, France, and England in pursuit of peace in the Middle East. President Nixon recently met with Israel Foreign Minister Abba Eban on this problem. And early next month, the President will see King Hussein of Jordan, who is coming to Washington as the official guest of this country.

I am confident that these initatives taken by our Government to effect a settlement in the Middle East are based upon the soundest premises. I know the President is carefully assessing the problem and feel confident that we will not find ourselves in the position of being trapped into imposing a dictated four-power peace in the Middle East, when I am aware that many of my colleagues in Congress believe that peace in that area can only come from direct Arab-Israel negotiations.

Yet, even as these Mideast moves are taken, as a freshman Member of Congress, I am puzzled by certain policies initiated during the last administration—policies which I feel have borne no fruit. One such policy that is difficult for me to understand is our lack of response to terrorist actions and guerrilla warfare waged against Israel from bases in neighboring Arab States, especially the kingdom of Jordan. Sporadic Arab terrorism against Israel, of course, has existed for decades. This was true both before and after the establishment of the independent State of Israel. It was true both before and after the 1967 war. Terrorism is not a result of the 1956 or 1967 Arab-Israeli wars, but was one of the underlying causes of them.

The significant fact though, is that these terrorist activities have escalated in recent months, and have taken on new dimensions and gained new status since the 1967 6-day war. There is increasing evidence of new purpose, new direction, and new importance of terrorism in the Middle East. An activity that was largely sporadic, seems now to be assuming the proportions of purposeful policy.

Gen. Moshe Dayan, Israel Minister of Defense, has recently offered evidence to indicate a considerable number of Arab guerrillas have been trained in Communist China, and are now operating in Jordan as cadre elements. Techniques of the Vietcong are reportedly being used in underground terrorist warfare directed against Israel from Jordanian territory. There has been evidence that even Cuba is involved.

From June 6, 1967, to December 31, 1968, the time that an apparent new policy and direction of Arab terrorist activity was taking form, 1,288 acts of sabotage and border incidents occurred, in which Israel suffered 282 killed and 1,095 wounded.

On November 23, 1968, a time bomb killed 12 shoppers and wounded 60 other civilians in Jerusalem. On February 21, 1969, terrorists again exploded a bomb in a crowded Jerusalem supermarket killing two and wounding 33. On March 6, 1969, a terrorist bomb exploded in a Hebrew University cafeteria injuring 29.

A clear pattern to disrupt Israel's airline, El Al, is also apparently developing. The fleet of eight airplanes have been brought under increasing attack: a hijacking in Algeria, a machinegunning in Athens, and a machinegun and bomb attack in Zurich. This is only a rough outline of the occurrences of the past few months, but form a significant pattern.

In this same time there is increasing evidence to make it appear that terrorists have sought and found a privileged sanctuary in Jordan. This has occurred while Jordan is being supplied with U.S. military assistance, including Patton tanks, antiaircraft weapons, field artillery, mortars, communications equipment, radar, and jet aircraft. It has occurred at the same time that Jordanian Air Force pilots are being trained at U.S. bases under a military assistance program initiated during the last administration.

So we see a situation that even while Jordan is receiving the benefit of American weapons and training, Arab terrorist organizations operating from Jordanian territory, such as the "El-Fatah" and various other so-called national liberation fronts, are receiving arms and training from the Soviet Union and Communist China. The obvious conclusion is that either King Hussein is willingly permitting the terrorists to operate on his soil, or he has become so weak that he has no alternative than to permit such abuses. In any event, the terrorists of Jordan have virtually become a state within a state.

We see consistent terrorist violations of the cease fire agreement. We are told that they are operating independently of the Arab States or States from which their attacks are launched. We are assured by terrorist leaders that no cease fire agreement is valid, as they maintain that Israel has no right to exist.

Mr. Speaker, this is the picture that raises some vital questions that perplexes me. What will be the value of the projected Four Power talks if terrorists do not consider themselves bound by any agreement which recognizes Israel's right to exist as a nation. I raise this question as it has been amply demonstrated that the terrorists influence the Arab governments, but where is it evident that the Arab governments either can or will influence Arab terrorists?

I question also the wisdom of training Jordanian military personnel at U.S. bases, at the same time we are training Israeli military personnel, especially pilots, in this country. I question the wisdom of a policy of selling both Israel and Jordan identical weapons.

I raise these questions as the facts indicate clearly that Jordan is part of a unified military command linking it with Egypt and Syria, nations whose military establishments are trained, equipped, and advised by the Soviet military establishment. The fact that the regime of King Hussein is so shaky that there is the strong possibility of our technical manuals and classified equipment becoming immediately available to pro-Soviet Arab officers and their Russian advisers, should also be given consideration. We are helping to arm Israel

through the sale of Phantom jets and the training of some personnel because of the obviously mounting Soviet threat in the eastern Mediterranean. We know that Moscow, both directly and through heavy support of the Arab States, is exerting not only an ever increasing pressure on Israel, but upon the entire Middle East. Should we then assist in this Soviet thrust with our arms and our training?

The United States should unequivocally condemn Arab terrorist harassment of Israel as inimical to peaceful, direct Arab-Israel negotiations, and as a threat to world peace. The world community which holds Israel responsible for acts of retaliation against this well organized Arab terrorism, should likewise hold Arab governments fully accountable for terrorist activities that are launched from bases in their countries.

Unless Arab violence can be effectively brought to an end by the Arab governments, the United States should view Israel retaliatory acts as justifiable and necessary responses to the condoned, organized harassment of her people and property.

Also, unless King Hussein can be shown to be taking effective steps to deal with terrorist groups which now flourish in his country, it would seem well to terminate the present program of military assistance with Jordan. For to arm both sides under the present situation is self-defeating. As to condemn one side for retaliating without condemning the other for terrorism is detrimental to world peace.

Mr. GILBERT. Mr. Speaker, the situation in the Middle East is complex, but I believe that the responsibility of the United States there is clear. I believe we must pursue a policy of reducing tensions with the Soviet Union, so that we can take the Middle East out of the cold war. In this way alone, it seems to me, will the Arab States be persuaded to negotiate a meaningful peace. We must not seek to impose a settlement in that region, because it would be both unjust and transitory. No outside force can dictate the terms of relations between nations and expect them to endure. Meanwhile, we must see that the balance of power is not tipped in a fashion which would persuade the Arab states that they could win a war with Israel. We must, in other words, match Russian arms shipments, especially in modern aircraft. If we fail to prevent another outburst of hostilities, Mr. Speaker, I fear that the superpowers will inevitably become involved and that global disaster will ensue.

Mr. KOCH. Mr. Speaker, it is almost 21 years since the State of Israel came into being. Twenty-one years since the ram's horn sounded on the radios of the world proclaiming Israel's independence, while the Jews of the world wept and celebrated. It seemed then as if a corner had been turned in the long history of Jewish suffering at the hands of the Western nations.

Then the armies of seven Arab nations attacked the new state, with the avowed purpose of totally destroying her. And once again, the world stood by and watched the Jews fight alone. Those men and women who only 3 years before had left the death camps of Europe were once again facing annihilation. This time, however, they also had the visible support of the world's Jews, which could be translated into money and weapons and volunteers. And this time there was no annihilation.

Twenty-one years have passed, and one must wonder: Was a corner turned, after all, on that historic day back in May 1948. Or must Israel become just another chapter in the Jews' long struggle to survive?

We look around at the world as it is today and we must wonder if all sanity has been lost.

We see the Security Council—including as it does the Russians, the French, the Arabs and the Asians—going through the motions of dealing justly with the Middle East. Going through the motions, I say, because no resolution condemning the Arabs is justified enough to even be submitted.

We see half the nations of the world falling all over each other to villify and harass Israel at every opportunity, while blindly supporting and encouraging the Arabs. And we see the other half of the world bending over backward to appear objective or neutral or evenhanded.

We see the world's statesmen rush to excoriate Israel each time she employs her armed forces to combat the Arab terror. And we see the same statesmen hang back in total silence while the Arab madness reaches out of the Middle East to strike in Rome and Athens and Zurich and, yes, even in Los Angeles.

We hear the Soviets and the Arabs, echoed by the black nationalists and the mindless radicals of this country, call the Israelis "neo-Nazis" and compare the Arab refugees to the Jews of Europe as victims of a "Nazi-like genocide."

The Israelis are neo-Nazis? The Arab refugees are victims of Israel's Nazi-like genocide? I first heard those words with a kind of sick shock. And then I heard those words said again, and repeated, and then printed in the newspapers. And I asked myself: How is it the world can listen to those words and neither laugh nor cry nor roar with anger?

Is there no lie too big, no outrage too great, for the world to swallow when it is directed against the Jews, against Israel?

All the world is free to examine the strength and the depth of Israel's democratic society. And what is she surrounded with? For the most part, feudal monarchies and the military dictatorships. Nations where political prisoners are jailed without trials, executed in secret and hanged in the public squares. Where secret plots, political assassinations and bloody coups are a fact of life. Where the bullet-riddled body of a deposed, elected leader can be exhibited on television. Where the news media spews out vicious and obscene lies against neighboring states and all the countries of the west. Not only against Israel, but against fellow Arabs, too.

At this very moment, Israel's future may hang in the balance while representatives of the four powers confer. Two of them—Russia and France—are totally dedicated to the Arab cause. Britain is, at best, indifferent. And what is the U.S. position?

If Israel was not Israel, but was instead some small Asian country, friendly to the United States, surrounded by countries which had been armed to the teeth by the Soviet Union, could we doubt then what the American position would be?

Suppose a neighboring government to the United States harbored terrorists who set off bombs in department stores and shopping centers, who machine-gunned American airliners in London and Paris, who planted land mines on roads traveled by suburban schoolbuses, and sent mortar shells across the borders into our farms. Suppose such a neighboring government permitted all this, and her prime minister praised the terrorists on national television, gave them weapons and money and all sorts of honors. Can any of us doubt then what the American position would be?

In view of all this, why has not Israel received more vigorous support from the democracies of the West? Why is it she stands virtually alone? Why has the most outrageous Arab propaganda fallen upon so many receptive ears?

We must insist that President Nixon keep his campaign promise and see to it that Israel maintains military superiority to the combined Arab nations, her only guarantee against annihilation.

We must insist that Arab governments be held responsible by the U.N. and the free world for the actions of the Arab terrorists.

We must insist that no outside powers impose a settlement on the Middle East which would, in fact, be a capitulation to and appeasement of the Arab nations, that any settlement be negotiated between and assented to by both parties.

We must never forget the Biblical injunction:

If I forget thee o Jerusalem, let my right hand forget its cunning.

Mr. PODELL. Mr. Speaker, the French capon acts as guide dog for the Russian bear. Of late I have been greatly saddened to see the United States succumb to French blandishments regarding major powers talks over the Middle East. France is not a major ally of the United States any longer. She works against major American interests at all times, as evidence of recent years amply shows.

France under De Gaulle is now acting in the best interests of the Soviet Union, slavishly obeying Kremlin orders in order to snap up a crumb from the tables of the mighty. Now she seeks a Czechoslovakia-style settlement at Israel's expense through four-power talks. She seeks to pull Arab chestnuts out of the fire of military disaster. France is seeking to set up a situation Russia can take advantage of for her own and Arab benefit at United States and Israel expense.

France seeks respectability by association with the mighty, not because she actually deserves consideration because of great military strength, moral force, or a powerful economy. The Gallic rooster is merely a barnyard relic, afflicted with

military mange and drooping international feathers.

How many divisions does France have in being? How many thermonuclear warheads and strike forces for delivering them does she possess? Shredded in 1870, drained in 1918, flattened in 1940, and forced to run like a whipped dog from Vietnam, France has as much of a military reputation as a herring has fur. Her economy is weak. Her empire has vanished. All she now possesses are delusions of grandeur and a vindictive leader who seeks to ruin America, enshrine 19th-century realpolitik, and destroy Israel so Russia may dominate the Middle East.

The only powers who should negotiate are the United States and the Soviet Union. France is less than a cipher. Fortunately, the Israelis are already forthrightly telling all parties involved they will not for one instant be dictated to by such a gathering. They know better than to trust in the fruits of such bargainings. If Czechoslovakia was awarded a posthumous Peace Prize in 1938, Israel does not seek to match this dubious distinction in 1969.

As for France, I can only think with pity of the shades of her past glory, when a Frenchman would never stoop to crawl on his knees to the Russians.

Heroes of Valmy would blush with shame. The Imperial Guard which held the Charleroi Road until Napolean could flee would down their bearskins in rage. Paris' defenders in the siege would not recognize their posterity. Those men buried in the Trench of the Bayonets at Verdun would only gaze in stupefaction and horror at recent policies of present day France. But Pierre Laval would gleefully understand today's French Government, recognizing them for what they are.

I do not want to see Americans seated at the same table with the De Gaulle regime, discussing the fate of the Middle East. France has no right to be there. Not by might. Not by right. Not by courtesy.

Let America look to her conscience. Let the Israelis look to their weapons. As for France, as Jim Fiske once said:

Naught is lost save honor.

One thing is certain, however. The price of a modern Judas has gone up. De Gaulle will surely get more than 30 pieces of silver. Perhaps 31.

Mr. DERWINSKI. Mr. Speaker, I have noted with great interest the statement on Arab terrorism by Congressman HAMILTON FISH and feel that it is a valuable contribution to the formulation of policy in a very important situation.

As a member of the Committee on Foreign Affairs, I have carefully observed the evolution of the current dilemma. Congressman FISH is correct in focusing attention on the role of Arab terrorists and the service these extremists are performing to the nihilistic Communist cause. Indeed, I feel that the proposed "Big Four" conference of our country with the Soviet Union, France, and Great Britain is jeopardized not only by Soviet and French bias favoring the Arab cause, but by the rise of the Arab terrorist movement. Even if the Soviet Union, the French, the sovereign Arab States, and the State of Israel agreed on a settlement, it could be vetoed by the terrorists who proclaim themselves the only qualified spokesmen for the people of Palestine.

During the forthcoming visit of King Hussein to Washington, it is essential that we establish the extent of Communist supply of weapons to guerrillas and terrorists based in Jordan, the degree of Jordanian Government collaboration with such underground forces of so-called national liberation, and determine whether continued American arms shipments to the Jordanian Army, a force collaborating with Cuban-trained, Peking-trained terrorists, is indicated.

I urge a careful review of Congressman FISH's proposals in light of the foregoing observations and those of the executive department of our Government. The time has obviously come that some assessment must be made by our State Department of the insidious role of the Arab terrorist front.

Mr. MCKNEALLY. Mr. Speaker, there are renewed reports that the United States is taking the lead in imposing a four-power settlement for the Arab-Israel crisis. I need not remind you that this flies in the face of the Western World's stanchest ally in the Mideast—Israel. The Israelis want, and deserve, the dignity of coming face to face with their longtime tormentors. What kind of lasting settlement can we expect without the protagonists themselves coming to terms, among themselves? There are also indications that this settlement is to be worked out within the framework of the United Nations. The United Nations, through its Secretary General U Thant, has shown us how much objectivity we can expect from that organization. U Thant seems more concerned with Israel retaliation that he is with Arab terrorist provocations.

Finally, I would like to point out the inroads communism is making in the area. One of the Arab terrorist groups has finally surfaced as openly Marxist. This is the same group which claims what they call credit for attacking civilian-bearing El Al airlines.

As a matter of interest to the Members of this House, I am leaving for Israel on the 3d of April to see at first hand the situation as it exists and discuss the situation with Israel leaders.

Mr. BIAGGI. Mr. Speaker, the people of the Arab world are largely illiterate, wracked by disease and poverty, without the education and organization to enrich their harsh desert land. For decades, even the wealth of their oil fields has gone into palaces and Cadillacs, and above all into the armaments and trappings of war. For decades, irresponsible leaders have turned their people's frustration outward—toward the West, and to that tiny outpost of Western culture and ideals which is the State of Israel.

Israel has been fighting for her very existence too long. Only her arms and courage have allowed this tiny nation, with less than the population of New York City's Queens County, to defeat the armies of nations with total populations of tens of millions.

This gallant democracy, this nation of survivors from history's greatest example of man's capacity for senseless cruelty to his fellow man, cannot be allowed to succumb to the threats and assaults of her neighbors. And while this period of danger continues—until lasting peace settlement is achieved—we must maintain our vigilance in her behalf.

Since the creation of the State of Israel in 1948, the Middle East has been the setting for three bloody wars linked by border skirmishes and verbal threats. These conflicts have been both the flame and the fuel of an intense level of hatred in the area.

The loathing and hatred between Arab and Jew is an all-consuming thing. Why has such mutual hostilities developed?

As many of us know, the story goes back nearly 2,000 years to the expulsion of the Jews from Palestine by the Romans in the year 70 A.D. This Diaspora marked the birth of a dream harbored by Jews throughout the world that someday they would be able to return as a people to the promised land. At last, in 1917, their chance came. Britain consented to establish a Jewish homeland in Palestine.

However, the Jews who immigrated to Palestine in the 1920's and 1930's, to buy land and to create a new state, were regarded as unwanted outsiders by many of the Arabs, who had been living in this barren land since the days of Christ. Under the yoke of foreign oppressors themselves for centuries, these Arabs dreamed too of an independent Palestine. Increasingly, growing Arab nationalism and Zionism clashed, often violently.

After World War II, under mounting pressure, the British proposed dividing Palestine into two states, one Arab and one Jewish. The Arabs protested that they wanted nothing less than one Palestine under Arab control. It might be true, they argued, that the Jews had been persecuted terribly in Europe. But then let Europe bear the cost of solving its own conscience, not the Arab world.

Without first reconciling these grave differences, the United Nations adopted the British partition plan, and in May 1948, Israel formally became a state. Outraged, the Arab armies attacked the new nation, vowing to drive the Jews into the sea. But, Israel, even in its infancy, had much more spirit, zest, determination, and discipline than the Arabs. They were tougher inwardly and outwardly than the Arabs.

Israel did win the 1948 war, but peace in the Middle East was not realized. The Arab nations steadfastly refused to sign a peace treaty for this would have amounted to an unpalatable concession—recognition of the State of Israel. Instead, they declared they would not rest until our Jewish brethern were destroyed.

In less than a decade, the Middle East was ablaze again.

Following Egyptian President Nasser's nationalism of the Suez Canal in 1956 at which time he barred the passage of all Israeli ships, and his blockade of the

Gulf of Aqaba—Israel's only remaining outlet to the East—Britain, France, and Israel together invaded Egypt.

Within a matter of days, Israel had routed Nasser's Army and driven across the Sinai Peninsula to the Suez. But again victory did not result in a peace treaty. A cease fire was arranged which called for Israel to withdraw her armies, and the situation remained as explosive as before.

Since then, the Egyptian Army has grown in power—and continues to grow in power. Unified Arab command has forced Jordan to double the size of its Army. Sophisticated weapons—jets, guided missiles, and submarines—continue to flow in from the Soviet bloc.

These arms are a threat to peace. They waste valuable development capital; they threaten the only near Eastern state with traditions of democracy.

The irresponsible and dangerous nature of the course chosen by Israel's enemies is becoming more clear to the world every day. And our commitment to Israel must be equally clear; it must be a total one. We owe our Jewish brethren nothing less.

Mr. FARBSTEIN. Mr. Speaker, I rise today to voice my deep concern and outrage at the increasing level of terrorist attacks against the people and the State of Israel. These attacks indiscriminately made against civilian and noncivilian alike, are repugnant to any civilized human being. It seems almost impossible to comprehend the depths to which these killers and assassins have plunged. The blowing up of school buses full of young children or the exploding of bombs in a university are acts that only can be characterized as subhuman.

The responsibility for the murders committed by these packs of savages lies not only with the terrorists and their sympathizers—for they make up only a small percentage of the population of the Arab States—but with those that give them aid and shelter. These are the officials of the Arab countries that surround Israel who let themselves be caught up in the demagoguery of the terrorist leaders. The spilling of Jewish blood seems to have greater priority for them than the economic and social development of their countries. It is they that fan the flames of the Middle East crisis by refusing to stand up against the terrorist. I suspect if they did, the power of the terrorist band in their countries would subside.

Backed up by Russian and American arms, the Arab States are beginning to harass Israel with increasing frequency along its borders. They delude themselves into believing that they can one day exterminate the people and State of Israel as Hitler's Gestapo attempted to do 30 years ago. If they attempt this, their dream will turn into a nightmare.

These acts of terrorism must stop. If they do not, the situation in the Middle East will reach crisis proportions even beyond the current level. The Arab States must be induced to control the terrorists within their borders and to prohibit them from carrying out their missions of murder and destruction.

It is the duty of every civilized human being, no matter what his nationality, to see that these murders are terminated.

There is much that the United States can do to help leaders of the Arab countries face up to the terrorist marauders within their borders. One mechanism is to provide an economic incentive. To this end, I have today introduced legislation to amend the Foreign Assistance Act of 1961 to prohibit the furnishing of assistance to countries in which individuals are receiving training as members of the so-called Palestine Liberation Army.

Mr. HALPERN. Mr. Speaker, I wish to commend my distinguished colleague, the able gentleman from New York. (Mr. FISH), for his presentation on the grave danger created by the unrelenting use of terrorism by Arab extremists.

It is especially appropriate that the gentleman has raised this question today. We have just received the sad news of the death in a Zurich hospital of a young Israeli commercial airlines pilot, shot from ambush by Arab terrorists when his El Al airliner was attacked on the ground at a Swiss airport last month. This cowardly attack represents the first instance in which a pilot has died of wounds inflicted by terrorist hijackers in this series of attacks by Arabs and pro-Castro Cuban fanatics.

A touch of irony is added by the receipt of additional news that the Chief of Staff of the Cuban Communist Army was wounded by Israel forces when he accompanied an Arab guerrilla raid into Israel. The Cubans apparently are training and assisting the so-called Palestine Liberation Organization.

I am in total agreement with the gentleman that our Government should review the provision of arms to the State of Jordan in the light of the obvious collaboration of the Jordanian Government with the terrorists. A first order of business during the forthcoming visit to Washington by King Hussein of Jordan would be to clarify this question of collaboration with terrorism. It appears to me that evidence is already compelling to the point that arms shipments to Jordan should be discontinued.

I wish to take this opportunity to call the attention of this Congress to a report by Milton Friedman, a veteran White House correspondent, on the role of Communist China in the Arab terrorist movements. The report was published worldwide in the newspapers served by the Jewish Telegraphic Agency.

In the light of the obvious links between the Communists and the Arab terrorists, I feel that King Hussein must either stand up against the terrorists or face the immediate cancellation of American arms shipments.

Accordingly, I include Mr. Friedman's report for the information of all Members:

AID ARAB TERRORISTS: MAO EMERGING AS NEW FORCE BEHIND MIDEAST CONFLICTS

(By Milton Friedman)

WASHINGTON.—China's chairman Mao has incited and aided the Arab terrorist movement to such an extent that Washington officials are now newly assessing the Chinese role in the Middle East.

The Chairman wants much more than the liquidation of Israel. He hopes to embroil the United States and the Soviet Union in a fatal confrontation over the "Palestine Liberation" issue.

Chairman Mao's new line, as voiced by Radio Peking, is that Washington and Moscow, by discussing Middle East solutions, have actually entered "a criminal intrigue to establish American-Soviet hegemony in the Middle East by way of liquidating the Palestine question, stamping out the Palestine (Arab) peoples' armed struggle, and forcing the Arab nations to compromise with and surrender to the Israeli aggressors.

Aiming to perpetuate bloodshed between Israel and the Arabs, Chairman Mao has termed any pursuit of peace by Arab regimes or Washington as "counter-revoluntionary political bargaining with the Soviet revisionists." Any political solution is rejected. The struggle must go on, until Israel is wiped out, he maintains.

The Chairman's thinking is that endless violence in the Middle East can be exploited by Peking. Moscow can be accused of "revisionism" and treachery if any accommodation is made with Israel. It is hoped this will force the Russians to identify with the terrorism and the rage Peking seeks to foment among the Arab masses. Such identification with Arab extremism may bring the Russians into an armed confrontation with Israel and the United States, he believes.

Peking's emerging line coincides with the disclosure that Communist China is arming, training, and instigating Arab terrorists. Hundreds have been to China and many are there now. Attacks on civilian airliners, bombing of supermarkets and universities, mining of roads—the strategy of terror perfected in Saigon—is designed, Mao-style, to convert Israel into "another Vietnam."

U.S. intelligence has substantiated Israel Defense Minister Moshe Dayan's recent charge that Arab terrorists are being trained and equipped in China. A pipeline has thus been established to transport terrorism from the Far East to the Middle East.

The growing Chinese involvement is one reason for President Nixon's desire to seek speedily a Middle East settlement. It is also a factor in Russian policy. But Moscow has yet to translate this into a settlement that Israel could accept. The Kremlin hopes to exploit what it sees as hysteria to avoid another Vietnam by getting Washington to impose unilateral pressure on Israel to withdraw from occupied territory without a genuine peace.

Peking's main assault, however, is not on the rulers of the Kremlin but against President Nixon. "Nixon's words and deeds indicate that U.S. imperialism will continue to go all out to foster Israel and back the criminal policy of the Zionist aggressors," he declares. The sale of Phantom jets to Israel "shows that U.S. imperialism will never change its ambition to use Israel as a tool for aggression and expansion in the Middle East."

In Peking's assessment, the President is manipulated by such persons as Sen. Jacob K. Javits, New York Republican. Sen. Javits is described by the Chinese as "a representative of the Jewish capitalist class."

Peking has asserted in its broadcasts that the Arab people have seen through Israel and recognize it as a U.S. base that must be destroyed. The Arab terrorist movement, El Fatah, is being quoted in the Chinese capitol as believing that "the policy of the United States is worked out by plutocrats and concerns of capitalism and imperialism."

The Radio voice of El Fatah, "Saut al-Asifah," is rebroadcast by Peking with an assertion that "whatever tricks the new U.S. Administration may play, it can never subdue the Palestinian people who are determined to carry their armed struggle through to the end."

China welcomed the condemnation of

Nixon by an important Iraqi newspaper, "An-Nu." The newspaper called on Arabs "to carry through to the end the struggle against Zionism."

Peking asserted confidently that, in seeking Arab favor, "no matter what tricks and sly measures Nixon might resort to, he can never save U.S. imperialism from defeat." In the Middle East, said Peking, Nixon "and Soviet revisionism have been colluding and struggling with each other with the purpose of redividing it and enslaving the Arab people."

Soviet "social-imperialism" has "stepped up its infiltration and expansion" into Arab states, said Peking. France hopes for "an imperialist return to the Middle East," as does Britain, according to Peking. So much for the Big Four.

Great changes are seen in Peking with "the daily awakening of the Arab people and the further development of the national liberation movement, particularly the surging of the Palestinian people's armed struggle . . . The Arab people are now rising up to master their own destiny."

GENERAL LEAVE

Mr. FISH. Mr. Speaker, I ask unanimous consent that all Members be given permission to revise and extend their remarks and include extraneous matter in connection with my special order today.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

SOUTH AFRICAN AIRWAYS SERVICE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. DIGGS) is recognized for 60 minutes.

GENERAL LEAVE TO EXTEND

Mr. DIGGS. Mr. Speaker, I ask unanimous consent that all Members may be permitted to revise and extend their remarks and include extraneous matter on the subject of my special order.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. DIGGS. Mr. Speaker, the inaugural flight of South African Airways to the United States has arrived today, March 26. We oppose this extension of the South African apartheid system to this country. We oppose this extension for several reasons.

First, this new relation with South Africa is inconsistent with our relationships with the black, independent states of Africa. This inconsistency is well known to African states.

Just recently, in the pages of the Nationalist newspaper in Tanzania, the editor wrote:

> In the final analysis it is not only insincere but also criminal on their part to continue soliciting the goodwill and friendship of the Africans while at the same time they continue to hob-nob with the enemies of Africa.

He continued:

> If the American government had any regard for the conscience of the Africans and the suffering of their brothers in South Africa, it would not, in the first place, have continued to consolidate its relations with the fascists of South Africa.

These sentiments expressed by one of the leading newspapers in independent Africa echoed the sentiments of a recent resolution by the Council of Ministers of the Organization of African Unity. This resolution stated:

> The Council of Ministers has been informed of the air transport agreement concluded between the Pretoria regime and the government of the United States. The Council condemns this agreement, and deplores the uncooperative attitude on the part of the United States Government, which is contrary to United Nations resolutions, and to the assurances repeatedly given by the United States itself that it is only some U.S. private companies that still maintain economic and trade relations with South Africa. The Council addresses an urgent appeal to the United States Government to reconsider this agreement.

These sentiments are representative of the indignation felt by the governments of the African nations at the callous way in which our Government tries to play both sides of the street in Africa, or both sides of the color curtain.

The action by the Civil Aeronautics Board in granting South African Airways a permit was in clear defiance of a resolution passed by the U.N. General Assembly in 1962 which requested member states to act against apartheid and the measures specified included one which read:

> To refuse landing and passage facilities to all aircraft belonging to the Government of South Africa and companies registered under South African laws.

But it is not only our Government which is trying to play a two-faced role in Africa. It is also American commercial airlines which practice the same callous maneuvers. Pan American Airways, for instance, flies to a number of West African states and then uses the facilities in those West African states to fly on to Johannesburg. I am sure it will not be very long before they are faced with a choice between abandoning their South African trade in order to maintain their operations in West Africa. What is particularly ironic about Pan American's action is that while they have applied for an additional route to Johannesburg through Rio, they have also promoted one of their black employees to a high-level executive position to direct the development of black American travel through the use of Pan American facilities. How in good conscience can they advertise for the travel dollars of black Americans at the same time that they are planning to expand their service to South Africa, services that will not be available to black Americans. Black stewardesses, flying for Pan American in West Africa, have also been removed from the aircraft before it proceeds to South Africa.

Trans World Airways and Braniff are also playing this game. TWA has applied to the CAB for rights to fly to South Africa as an extension of its current route to Nairobi. They, too, are trying to play both sides of the color curtain in Africa.

Braniff, meantime, has applied for rights to travel to South Africa via Brazil. Does Braniff, too, mean to affront black Americans?

I am appalled by this callous disregard by both the American Government and three American airlines of the feelings of independent Africans and Americans of conscience, both white and black.

The second reason that we oppose this extension of the apartheid system to the United States is because of the manner in which it was carried out. It is certainly bad judgment and bad government when an official agency of the United States, the Civil Aeronautics Board, can unilaterally act to extend our relationship with South Africa. The Board, in its own words, found:

> It is in the public interest to issue a foreign air carrier permit to South African Airways, authorizing it, for an indefinite period, to engage in foreign air transportation . . . between a point . . . in the Republic of South Africa . . . and the terminal point New York.

This was their recommendation to the President who then issued the enabling order on November 7, 1968.

The American Committee on Africa has asked the President to now reconsider this order and to ask the CAB to reopen hearings on whether or not such granting of these facilities is in the public interest. The replies to the American Committee on Africa by the White House maintain that the President has no power to reopen the case before the CAB. The CAB, on the other hand, has indicated that "the matter is now under study."

I do not feel that the grant of these facilities to South African Airways is in the public interest. I know from personal experience that these facilities will be available only on a racially discriminatory basis. I do not believe that the bilateral air agreement, initiated in 1947, before the advent of the apartheid system, is conclusive evidence of the public interest. I support the request of the American Committee on Africa that they be allowed to testify on behalf of the public interest before the CAB. If this request is not granted, I will consider it necessary to examine this whole affair through the Subcommittee on Africa of which I am the chairman.

Indeed, it is time that the hearings on American-South Africa relations begun by my distinguished predecessor, Barratt O'Hara, be continued.

The third reason why I oppose the extension of apartheid by South Africa to our shores is because of the grave insult it represents to my fellow black Americans. Normally, I consider myself the representative of all my constituents, both black and white. But in this matter I feel a particular responsibility to voice the outrage of black Americans over this action.

The foreign policy of the United States should be a non-racial one. It should be a foreign policy which Americans of all races and creeds can find moral justification. This, and any, action which extends and expands the relationships between our country and the Government of South Africa are not sections in which we can find any justification. The inequities of the South African sys-

tem toward its nonwhite majority are well known. How then can we regard this latest action as any other than a callous insult by our foreign policymakers to the black citizens?

Already black Americans are sorely vexed by the inability of the establishment to respond to their very real needs and feelings. Black Americans can only regard the extension of racially discriminatory facilities to John F. Kennedy International Airport as a retrogressive step against the achievement of full human rights in this country.

The fourth reason which causes me to speak out against the latest racial injustice is that it disregards the growing prospects of a Vietnam situation in southern Africa. Already the prospects of a racial and ideological war in southern Africa loom large. The liberation struggle in southern Africa has begun. Freedom fighters representing the nonwhite majority are already on the offensive in Mozambique, Angola, Rhodesia and parts of South Africa. We should be supporting their struggle for freedom. Instead we find ourselves increasingly engaged on the wrong side. This extension of rights to South African Airways is just another accelerating step toward engagement on the wrong side of human justice and liberty.

This engagement with the suppressive regimes of southern Africa if it continues, will find us heavily involved on the wrong side in yet another country. We are not so naive to believe the development of American economic interest in South Africa does not carry with it the implied possibility of action to "safeguard" these interests at some date in the future. If that happens, then the just struggle for liberty and self-determination will take on unattractive overtones of race and ideology.

We cannot be comfortable with the knowledge that this new link with South Africa through the extension of South African Airways has just begun. The implications of this new engagement cannot be disregarded.

Mr. DERWINSKI. Mr. Speaker, will the gentleman yield?

Mr. DIGGS. I yield to the gentleman from Illinois.

Mr. DERWINSKI. I appreciate the gentleman's interest in the subject, and also appreciate his alerting the members of the African Subcommittee to the fact that he would address the House.

I am sure the gentleman would not mind my making perhaps an observation just to keep the record clear.

Obviously the U.S. Government is not alone in granting air rights to the South African airline. I guess they do have an excessive area they serve; Australia, among others. They will be stopping in Brazil, I understand, on the flight up to New York.

It would seem we are following, rather than leading a trend of recognition—that is, through the CAB—of their service.

Is that not at least an accurate analysis?

Mr. DIGGS. Well, we need not follow the precedents of other countries with respect to granting of this airline permit, if that is the gentleman's point. I can think of a lot of precedents that we have followed in the wake of policies of other countries from which I wish we could extricate ourselves. The situation discussed in the previous order, on our policy in Vietnam, is a classic example.

Mr. DERWINSKI. Again, if the gentleman will permit me, the thing which disturbs me is the fact that the CAB has a complicated enough procedure in and of itself. If it is to weigh our domestic political considerations or the domestic political complications in another land, this would place an intolerable burden on the technical problems which are in and of themselves quite great.

For example, I happen to be one of the Members who take a dim view of the Soviet airline flying into New York City, for reasons of the domestic policy of the Soviet Union.

Yet the CAB granted that permission over a year ago, and now the Soviets fly into New York. I think we are at the stage where we are faced with the facts of life. If in this particular case the South African airlines meet the technical criteria, I imagine on that basis the certificate was properly issued. This is an observation that I believe should be considered.

If the gentleman will permit me to say so, I was intrigued when the gentleman did advise us of his interest in this subject and pointed out the special concern he had that the South African Airways was completely owned by the Government of South Africa. Out of idle curiosity I did check all of the foreign airlines which have been granted permits to serve the United States and found something like 75 percent are entirely Government owned. So from a technical standpoint, at least, this fits the pattern. The lack of private enterprise investment is really not a major concern. I want to emphasize that I appreciate the gentleman's interest and his position and his responsibility in heading up our Subcommittee on Africa. I appreciate that he is always interested in having us probe these matters with as much objectivity as possible.

I thank the gentleman.

Mr. Speaker, I would like to submit the following list of the airlines I mentioned:

Percentage of ownership by foreign governments of airlines which have been granted permits to service the United States

[In percent]

Argentina	100.00
Australia	100.00
Austria	79.58
Belgium (another 35 percent owned by Government in Congo)	65.00
Canada	100.00
Chile	100.00
Colombia	62.00
Costa Rica	33.33
Scandinavia (Norway, Sweden, and Denmark)	50.00
Dominican Republic	100.00
Finland	73.00
France	98.55
Germany	74.83
Guatemala	100.00
Honduras	19.00
India	100.00
Ireland	100.00
Israel	50.00
Italy	90.00
Jamaica	60.00
Japan	58.00
Mexico:	
Aeronaves	100.00
CMA	9.00
Netherlands	50.50
Netherlands Antilles	90.00
New Zealand	100.00
Nicaragua	10.00
Nigeria	100.00
Portugal	48.00
South Africa	100.00
Spain	100.00
Switzerland	30.00
Trinidad and Tobago	100.00
Union Africain et Malagache (12 African governments own a 6 percent share each)	72.00
United Kingdom	100.00
U.S.S.R.	100.00
Venezuela	55.00

Mr. DIGGS. Permit me to clarify my reference to the South African Government's ownership of the airline in question. It means that all policies controlling that airline, many of which are based on blatant racial discrimination, represent official South African Government policy. It is not a private enterprise over which the South African Government has no control.

Mr. Speaker, I yield back the balance of my time.

Mr. CULVER. Mr. Speaker, I wish to associate myself with the remarks of the distinguished chairman of the Subcommittee on Africa, and to commend him for bringing to the attention of the House the matter of the South African Airways service to New York, which was inaugurated today.

As a member of the subcommittee, I am pleased that Chairman DIGGS has indicated his intention to conduct a subcommittee investigation of the matter, if the CAB refuses to reopen the case.

I too am deeply disturbed about the implications of this decision in terms of our relations with other African states, and in the context of our own internal racial problems.

The United Nations General Assembly, in a 1962 resolution against apartheid in South Africa, specifically called upon the members of the United Nations "to refuse landing and passage facilities to all aircraft belonging to the Government of South Africa and companies registered under South African laws." The CAB decision directly defies that resolution.

The South African Airways is a department in the South African Government's Railways and Harbours Administration, and thus is not only bound to follow the discriminatory policies of that Government, but is actually an integral part of it.

In my judgment, the U.S. Government should not expand official contact with the South African Government at this time, but should instead be reexamining those contacts which already exist.

In addition to these foreign policy implications, I am also concerned about the manner in which the decision was made by the Civil Aeronautics Board, and

question whether the public interest received adequate consideration.

It is my understanding that the testimony received on the proposed agreement was limited primarily, if not exclusively, to witnesses of airlines with direct private interest in extension of such service. On the basis of that investigation, the CAB unilaterally determined such service to be in the public interest, and submitted its recommendations to the President, who in turn issued an enabling order.

Since that time, representatives of the American Committee on Africa, the National Student Association, the United Automobile Workers, and the Board of Christian Social Concerns of the United Methodist Church all have indicated their opposition to the order, and requested that the case be reopened to provide them an opportunity to present evidence as to why such service is not in the public interest.

President Nixon has already set a precedent for such action, in his reconsideration of the extended transpacific service, which was originally approved at the same time as the South African service.

I urge the Civil Aeronautics Board to reopen this case and am hopeful that the decision will be reversed in the best public interest.

Mr. ROSENTHAL. Mr. Speaker, there are several things disturbing about the authorization to South African Airways to initiate flights from South Africa to the United States.

The most disturbing is the way in which it reflects the growing engagement of our country with South Africa. It is often said that our relationships with South Africa are normal, and that in their normality we are neutral as to the internal affairs of the South African state. But "normal" relationships, as witnessed by the almost automatic award by the CAB of a landing permit to South African Airways, bring us closer and closer to acquiescence in the system of government in South Africa.

The administrative inertia set up by our agreements with South Africa compound the inevitable commercial pressure toward further engagement with South Africa. In the Department of Commerce, the Department of the Treasury, the Department of State, the Department of Agriculture, and in the Department of Defense, our "normal" bureaucracy clears the way for a closer engagement with South African society and the South African Government.

In March 1968, for example, our Department of Commerce produced a report "Selling in the Republic of South Africa." This 16-page pamphlet facilitates the flow of American economic investment in South Africa. The American taxpayer, therefore, thus underwrites the continuation of a process of deeper engagement with South Africa.

An additional matter of concern with the award of a landing permit to South African Airways is the fact that this move by the South African Government—which owns the airline—marks the beginning of a new propaganda offensive in the United States. South Africa is seeking to clean up its name in international circles.

The South African Government is appealing to American tourists to visit South Africa in a very high-powered and high-financed public relations campaign. The South African advertisements are a cover up for racism. They are inviting only white Americans to use the facilities of South African Airways and to use the facilities in South Africa.

Not only will the average visitor, who will be mainly interested in the vacation aspects of his trip, be shown only the good side of South Africa, but he will come back and remark to others in his community as to how well he was treated by the white South Africans.

Since South Africa is a police state, these visitors will not see or hear the other side when they get there. Transit camps and black relocation areas are hidden in barren country far from the main centers. All nonwhite areas are off limits without an official permit. Not only will the U.S. tourist be unable to make inquiry to black South Africans about the social system in South Africa, but such inquiries, if made, would endanger the black South African, for they would be in violation of the laws of South Africa.

Even if a trip to South Africa does not mean conversion to a belief in its racialistic system, it does mean aid and comfort to the white South Africans instead of aid and comfort to the depressed black South Africans and to the freedom fighters who are now launching an offensive against the terrorism and suppression of the system.

There are other indications of the extent to which South Africa is prepared to go in its propaganda campaign. A recent issue of the South African Digest announced that the South African Tourist Corp. is about to launch its biggest overseas advertisement campaign in the United States. They plan to send a letter and brochure in a direct mailing to 250,000 Americans, 25 percent of which will be presidents of multimillion-dollar corporations and 40 percent of which earn more than $40,000.

This is in addition to the almost $2 million which has been budgeted by South African Airways for publicity related activities. South African Airways has engaged a Madison Avenue advertising agency, Harry W. Graff, Inc. Already enticing advertisements are appearing in the pages of Holiday magazine, Newsweek and the Sunday New York Times.

It is also worth noting the activities of the American-African Affairs Association. This group, which claims tax deductibility status, has, in fact, dedicated itself to the distribution of materials favorable to the racist regimes of southern Africa. In their recent report, they have indicated that they plan to expand their activities in the United States. Their budget for 1968 is about $108,000, an increase of 40 percent from their 1968 budget. Their budget for publications is $67,000, an increase of 80 percent over last year's.

This new propaganda offensive in the United States coincides with the new offensive of South Africa in southern Africa. I attach an article from the Tanzania Nationalist, which discusses the attempt of South Africa to create a coprosperity sphere in southern Africa.

Americans should be aware that the arrival of South African Airways in New York is only the beginning. It represents only part of the effort of South Africa to win friends for its vicious system of apartheid.

The article from the Tanzania Nationalist follows:

SOUTHERN AFRICAN COMMON MARKET

The white bloc in South Africa, consisting of the industrialists, financiers, farmers, landbarons, and intellectuals may differ amongst themselves on how best to keep down the 15 million oppressed. They continue arguing on this in their clubs and over copious cups of tea. But today there is one important area of agreement where Vorster sees eye to eye with the "progressive" Oppenheimer and that is the need for the establishment of a common market for Southern Africa.

This concept in its modern form originated in the fertile brain of the late Dr. Verwoerd, the architect of apartheid in its most brutal and vicious form. At first the Oppenheimers and the liberal establishment resisted the idea, not because they objected to it on principle, but with Verwoerd's apartheid policy having gained South Africa the well merited title of "The Polecat of the World" there was little chance of any state joining it voluntarily.

The common market pursued by the Pretoria planners since Verwoerd's death is visualized as consisting of South Africa, Rhodesia, Mozambique, Angola, Botswana, Namibia, Malawi and Zambia. This vast territory two million miles in extent world embrace 45 million people. The guiding principle governing the relationship of states in this common market would be based on political independence and economic interdependence. There would be no interference in the internal affairs of each state and they see believers in apartheid. (They prefer to call it separate development) working side by side with African states happily for mutual benefit. In fact, Vorster in his New Year's message forecast an era of unprecedented prosperity of black and white states of Southern Africa if they came together to fight "Communist terrorism."

The Pretoria planners argue rather eloquently that South Africa is linked with the rest of Southern Africa not only through trade but in other ways. Zambia for instance is connected by road and rail via Rhodesia. A gas pipe line through more than a thousand miles from Mozambique to the Transvaal. The giant Caborra scheme aimed at supplying electricity will strengthen the links further. The three ex-High Commission territories now independent use the South African currency. A road is being constructed from Cape Town to Luanda in Angola.

NEW ERA

These Pretoria planners while not blinking an eyelid at the brutal and inhuman exploitation of the millions in their own country, enthusiastically point out that with the formation of the common market a new era would dawn for all. There would be joint exploitation of international rivers, joint efforts at water and soil conservation and joint efforts at eradicating stock disease. There is certainly no shortage of "joint efforts", all of which are just paper blueprints.

In this scheme, there is little attempt to hide that it will be South Africa which will be the leader and pacesetter. Said Vorster arrogantly in only November 1968 at a rally in Nigel: "We are of Africa; we understand Africa and nothing is going to prevent us from becoming leaders of Africa in every field." The first step in this grandiose plan is to see that the Southern African common market becomes a reality.

Before we examine the implications of the Southern African market which will include

almost a third of Africa, let us examine the mini common market that has been in existence for sixty eight years between South Africa and the three ex-High Commission territories now Botswana, Lesotho and Swaziland.

There is no need to emphasize that the people in those three territories had nothing to do with this. This customs union was foisted on to the three territories by British imperialism when it handed over political control to the whites of South Africa in 1910.

Its essential features have not altered to this day. The four aspects of this agreement are:

1. The maintenance of a common external customs tariff.

2. Free interchange for manufactured products of South Africa and the territories.

3. Payment by South Africa to the territories of a share of the total pool of customs revenue.

4. Conformity by the territories to the relevant tariff laws of South Africa.

In 1967, South Africa collected K300 million in customs and duties. Its share was 98.6% of the total. To put it differently it retained K296.1 million and gave the three states together K3.9 million. Of this Lesotho got K1.48 million; Swaziland K1.21 million and Botswana had to be content with K1. million.

The sheer inequality and the daylight robbery can only be gauged if we examine the estimated budgets of the four territories in the period 1967/68.

South Africa: estimated revenue K1438. million; Botswana K14.00 million; Lesotho K6.3 million and Swaziland K7.0 million.

This rich state can measure its revenue in terms of over a thousand million Kwacha, grabbed a lion's share and dropped a few crumbs to the three countries. This then is Vorster's idea of unprecedented prosperity for "Black" states.

The customs union envisages a free exchange of manufactured goods between South Africa and the three countries. It does not include primary products. But the three territories have no industry to speak of. The British government saw to that. Lesotho for instance had its first industry when a quarry was established with South African capital. In fact this provision had only one aim and that was to benefit South Africa for it allowed South African manufactured goods free entry in these three countries.

LION SHARE

But this free entry of South African goods came at a time when South Africa was developing its own secondary industry and therefore imposed tariffs on all foreign goods to protect this industry. What this in effect meant was that Botswana for instance was prevented from buying a blanket from Britain for K1.10 and paying K1.50 to South African manufacturers for a similar one.

The protection of secondary industry weighed heavily against the South African primary producers like the farmers. The result was that the South African government granted heavy subsidies to its local farmers. But these subsidies did not apply to the farmers in the three territories. Thus the latter had to pay 50n extra on a 100 lb. of flour and K1.25 on every 100 lb. of sugar.

And as far as the South African manufacturers were concerned they benefit for they were protected by a duty of 25% on clothing and soap; 30% on boots and shoes, and 20% on hardware and furniture. But the people in the territories lost correspondingly for the goods landed at a higher price, without the governments benefiting.

To illustrate what this means, let us take an example. In 1966, Botswana imported K12 million worth of goods from South Africa representing 65% of the total in that year. Her exports were negligible. If what she in fact has been paying to subsidise the South African manufacturers she imposed a duty of 25% then on that alone she would receive revenue to the tune of K3. million. This is treble the amount of what she is at present getting from South Africa.

The imposition of this tax would make no difference to the standard of living for that is what she is paying now to buy South African manufactured goods. Her export to South Africa would not be subjected similarly for these are small, for Botswana has a large unfavourable trade with her powerful neighbour. It is not that Botswana, a leading cattle country has nothing to export to South Africa. Rather Botswana has been prevented from entering the highly profitable and lucrative market of selling her beef by the imposition of stiff quotas. This is being done to protect South Africa's own farmers.

The Pretoria "visionaries" are loud in their protestations that in the common market all relations would be conducted on a basis of equality. But what is the position in actual practice? In a common market, there is to be free movement of labour between the territories. But the citizens of the three newly independent states have learnt the hard way that independence has not altered one iota of South Africa's attitude to them. They are treated in the same way as the Vorster treats the oppressed blacks in South Africa. They are subjected to the rigours of the pass laws. Group areas Acts and Job Reservations. They are subject to the same humiliations and indignities as their 15 million black brethren who are still unfree.

No one could rightfully accuse Sir Seretse Khama of being an enemy of Vorster. He has stressed again and again that his relation with South Africa is good. But even he has complained. "If we go into South Africa officially, we do not know there is such a thing as apartheid—we are treated in the same way as we treat all people in Botswana. But if a non-diplomat crosses the border, he is immediately hit by discrimination. The "non-diplomats" Sir Seretse is referring to are the 50,000 Botswana who are driven to work in Vorster's South Africa.

This mini common market has been ruinous to the territories. Not only were they unable to develop their own secondary industry, but they were subject to legalised plunder for over sixty eight years. They have been bled white by the iniquitous customs agreement of 1910. Vorster rushed to grant Malawi a loan of K8 million. To the world at large he gave the impression that he was the blood donor. But that is not so for it is the three territories who are the true donors, for he has given to Malawi funds which he has appropriated from the three territories.

MINI MARKET

The Vorsters believe that the emergent African states attitude to economics is the same as in the mercantilist era where cattle, sheep and land were bartered for a few beads and trinkets. They believe the intricacies of high finance are beyond the comprehension of the African states. They believe that with a few concessions here and there to the governments they would keep quiet. But in this they are mistaken.

The three governments have seen through this agreement and they want a revision. But the Vorsters so keen to peddle the idea of a southern common market are in no haste despite repeated requests. Said Sir Seretse Khama in opening the third session of the National Assembly in Gaberones: "Botswana, Lesotho and Swaziland are not finding it easy to negotiate a more favourable customs agreement with South Africa. In view of the frequently desire for friendly co-operation by South African government, I am hopeful for an imminent and successful conclusion to the present negotiations in the spirit of good neighbourliness . . ." And turning to Africa he added "In the meantime, Botswana will continue to explore means of improving trade relations with other African countries."

In two important respects, Southern Africa is tied to the apron strongs of the Vorsters and Oppenheimers. These are through capital and labour. Although no precise figures are available for each country, it is well known that giant monopolies like the Anglo-American, Rembrandt, General Mining and other institutions like the Netherlands Bank, SANTAM have subsidiaries or branches in these territories. In Botswana these would be prospecting for diamonds and coal. In Angola and Mozambique, it is for oil. Some of the large capital projects like the Kunene Oxbow, and the Giant Caborra Bassa Dam are being backed with South African finance. Lesotho's first industrial enterprise, a quarry has been established with South African capital. In Swaziland one third of the country's agricultural exports are from South African farmers operating there.

Zambia has about K100 million invested mainly in the copper mines. In Rhodesia such has been the massive penetration of South African capital that the people in high places refer to Rhodesia's and South Africa's economies as being complementary which is another way of saying that this country has become the satellite of South Africa. And Smith has been told that should he settle with Wilson, then he could expect another "bonus" of over K100 million just waiting to be invested. Over K200 million is lying idle in South Africa and the financiers are reluctant to invest because the climate is not proper.

CHEAP LABOR

It was British imperialism that tied the various Southern African territories to the South African mining economy. This was over seventy years ago and they had to supply cheap labour to the then and now the largest industry in Africa. This employs over half a million workers ranking it in the same category as the auto industry in the USA. The tie was based on recruited system of labour and the worker was sent back to territories once there was no use for him.

Recruitment was developed into a fine art WANELA (Witwatersrand Recruiting Organisation) not reluctant to use aircraft to transport the thousands of workers from the most inaccessible places to the mines. In 1965, it was estimated that South Africa used 497,000 workers from outside of the territories of which 294,000 were recruited. A partial breakup of the latter figures show where the labour was recruited.

Lesotho: 61,000; Botswana: 20,000; Malawi: 30,000; Mozambique: 102,000 and Swaziland: 12,000.

These are figures of recruited labour only. Lesotho for instance with a population of 700,000 (1965) sent out 180,000 to work in South Africa. Malawi has over 80,000 of its citizens there, while Sir Seretse Khama has estimated that 50,000 of his citizens are in South Africa. Zambia on the attainment of independence stopped this recruitment to the anger of WANELA.

Today South Africa is proud when it is described as "the only industrial complex, south of Milan. It already produces 3.5 million tons of steel, uses 57% of the continent's electricity. It also boasts that its group industrial production is 80% of the entire continent. And there is no shortage of money in the large finance houses in South Africa. Oppenheimer who was not able to find a mere K20 million to expand the copper mining in Zambia and therefore had to borrow from Japan on unfavourable terms is building a mammoth complex of steel plants worth K117 million in the Transvaal. The financiers have plenty of capital to export.

This surplus capital has been generated due to an ingenious system of exploitation unparalleled anywhere in the world. Should

this be used anywhere else in the world, there would have been a scandal long ago. But it was possible in South Africa for the exploited people were black and those who benefited were the white financiers.

British imperialism evolved this system in the era of Rhodes and all the successive South African governments have continued with this outrage known as the migratory labour system.

It is well known that it is the labour power of the workers that create any wealth in society. But for the labour power to be generated continuously the worker has to be fed, housed and clothed. His wage is intended to cover that. But since it has to be continuous over generations this wage is intended to cover food, clothing and housing for the children and wife as well. It is on this that the minimum wage is calculated. Wives and children are included because they will provide the labour force of the future when the worker is himself too old to work.

MINIMUM WAGE

But the South African migratory system gets out of that in the most cunning way. They provide food clothing and shelter as long as he is in employment, and exclude his wife and children from their calculation, for they are hundreds of miles away. Under the migratory system the wives and children are left in the reserves or in the territories. Here they may have a patch of ground and a few animals if they are lucky. With that they have to feed for themselves. The worker on the completion of the contract joins them for a few weeks when economic considerations force him back to the land.

In practical terms this is how it works out. A white miner on the average gets K 140 a month. This is what the Oppenheimers regard as a minimum wage to feed, house and clothe himself and his family. But an African miner only gets K 14 a month. This is what the Oppenheimers think an African needs to clothe, feed and house himself. The apologists try to explain the difference by saying that the one is skilled and the other unskilled. That is not true for it is the blacks who do the skilled jobs in the mines.

In any event the ratio between the skilled and unskilled workers is that the latter gets 80% of the former in mines in Australia, Canada and America. Thus from the capitalists own standards, the Oppenheimers are guilty of the worst possible cheating known to modern history. They are guilty of pinching from the mouths of black children and their mothers. They take what belong to the worker's wives and children and pocket these in the form of higher dividends and increased profits. From the proceeds of this legalised robbery, they hand out a few thousands to various cultural, scientific and artistic bodies in order to worm their way as patrons of these.

The South African state legalises this robbery in a hundred ways, by not only enforcing this migratory system, but heaping law upon law specifically designed at controlling and suppressing him. Apart from the taxes, it shares in the exploitation in another way.

The task of a modern state is to see to it that those who produce the wealth in society are provided with certain basic essentials, necessary for their existence and development. Thus in all modern societies, provision is made in the budgets for the establishment of schools, hospitals, clinics, roads and other means of communications. But there is no such provision in the South African budget for the 497,000 migrant workers and their families. It is the territories to provide for all that for the worker and his family. When the children are grown up, that is when they are in a position to contribute to society by their own labour, South Africa now steps in and snatches them.

They are put to work to create the wealth for South Africa. They remain there as long as they have the labour powers to create the wealth. Once they are sick, from the miners pthisis, or become too old to work, then they are dumped back to the territories. In other societies these workers get a pension, but then South Africa does not regard them as those who should get pensions. In any event it is the territories responsibility. They have to look after him till he dies.

The South African state makes the best of both worlds. It squeezes labour from about half a million workers without accepting one iota of responsibility. It appropriates the surplus which the worker generates while it gives to others the responsibility of care at a time when he cannot contribute to the society.

One of the reasons why the economies of these countries are not developed is precisely because the able bodied men who would produce the wealth in society are in South Africa.

STEP LADDER

The money which the South African state saves is really money that belongs to the territories. If it gives aid to Malawi, it is in fact giving what really belongs to the territories. It is appropriation of such surplus that South Africa from being a mere semi-colony has become one of the developed nations of the world. If it has climbed high then its step ladder has been the backs and shoulders of the African people.

It is this relationship which it wants to entrench in the Southern African common market. South Africa wants the black worker in the most productive years of his life, while before and after that is when young and old, the territories will be responsible. In this way, South Africa will become richer and richer while its "partners in the common market" will become poorer and poorer. In this way, South Africa hopes to dominate Africa, and at the same time become one of the richest countries in the world.

One obstacle that stands in the way of Vorster and his financiers schemes is ZAMBIA. Unlike some of the leaders of African states who have publicly stated their desire to join such a community," Zambia has made it clear that it will have none of it. This is despite the fact that departing imperialism had tied her economy to that of the south.

Zambia being landlocked had to rely on the south both for her imports and exports. Zambia began to look for alternative routes and when Smith illegally seized power in Rhodesia, Zambia realized how right it was in its original suggestion for Smith had blackmailed her on a number of measures. It was that Dr. Kaunda had in mind when accepting the principle of the construction of the TANZAM railway he said: "All we want to see is TANZAM railway being built so that we are never again dependent on the route to the south." Zambia thus looked to the North to Tanzania and the other East African states for co-operation and large regional unity.

The Pretorian planners cannot view the direction that Zambia is pursuing with alarm and hatred. It threatens their grandiose schemes and to reduce them to mere bubbles.

Firstly, on the attainment of independence, Zambia stopped WANELA, that recruiting organization from the Chamber of mines from operating in her territory. It rightly regarded it as an insult to the dignity of the young nation. But more was involved. In taking this action, Zambia was saying that it was possible for Zambians to live a life free from insult, discrimination, and degradation. WANELA's road was one where the workers would be doomed to lead a life of unskilled workers with a miserable wage. The new way that Zambia showed was that although there would be initial difficulty, it would be one where they could rise to the highest in Zambia society.

Now what worries WANELA and the others is not the number of those recruited, for in the overall picture these were small and hence could easily be replaced. But it was the principle of it. If Zambia could cut this tie forged by imperialism and get away with it, then other states who believed that they would become bankrupt if they stopped labour would also follow suit. If this came about, the whole edifice on which this system of exploitation had been built would indeed be in serious jeopardy. It would seriously affect the long term strategy of dominating Africa.

Secondly, Zambia is the only country whose resources are such that if and when completely harnessed could be a real competitor to South Africa. At present South Africa's revenue for her 18 million people is about K 1400 million (1968); Zambia with her 4 million stands at K 300 million, which is almost the same in relation to the population. In comparison, the total amount for Botswana, Lesotho and Swaziland is under K 30 million.

REAL COMPETITOR

Today, despite South Africa's outward prosperity, there is increased poverty not only for the blacks which is well known, but also for the whites. The Tomlinson Committee's Report recently (not to be confused with the Tomlinson Commission's report) stated that half of the South Africa's farmers are bankrupt. Amongst other things, one of the chief factors has been the high cost of land. In this respect Zambia's agricultural policy is superior to that of South Africa, for it is based in co-operatives with state ownership of land.

Thirdly, Zambia through her deeds has shown what an independent African state can do if it has the resources. At present there are 70,000 Africans in secondary and high schools in South Africa. This is Vorster's boast of what he has done for the Africans. But this is almost after over sixty years of rule for over 13 million people. Zambia with less than a third of the population has 40,000 in this category within four years. It shows that Zambia is really interested, while in South Africa education growth has been deliberately stunted.

However, the biggest crime in their eyes is that Zambia has gone ahead with Tanzania and China to build the railway line. This was unpardonable in their eyes, for they have let China in the area which was regarded as the British sphere of influence.

TIE UP

It is for this reason that their strategy is one destruction of Zambia as a nation state. They would much prefer to change the government constitutionally through Mr. Nkumbula and hence alter its course. But failing that other means will be resorted to one of them being secession.

In this plan for a Southern African common market, the Vorsters have the backing of imperialism. It is not only that Britain and America have investments 70% of the total investments in South Africa, but also for military reasons. Vorster has been alloted the role to act as the policeman to safeguard their interests in Central, East and Southern Africa.

To the west, South Africa's strategic importance has been highlighted by the closure of the Suez Canal and the decision of Britain to withdraw her forces East of Suez. This leaves a vacuum in the western global strategy and it is here that South Africa is expected to fill the breach.

There is the Simonstown Agreement between Britain and South Africa to patrol the East and South Coast of Africa. Selwyn Lloyd, the architect of the agreement was royally received in his recent visit to South Africa. The Vorsters are banking on a conservative party victory to give full force to this agreement. Further, there is also a project defence

pact between France, Portugal and South Africa to guard the East and South Coast of Africa using France's naval base at Madagascar. The west knows too well that South Africa in Simonstown has a dry dock that is capable of handling heavy guided missile cruisers, while the one in Cape Town can service aircraft carriers and super tankers of 90,000 tons.

The aim of the Pretoria planners of the Southern Africa market is but a reflection of the needs of the South African white bourgeoisie. The common market will help to consolidate the system migratory labour, while at the same time it would be stable area of investment and a large hinterland to dump its manufactured goods. In this association, it will be South Africa which will play a dominant role, while the African states would be treated as very, very poor relations. The relationship which exists between it now and the three ex-High Commission territories is what it wishes to incorporate to the rest of Southern Africa. But this can only mean progressive enrichment of South Africa and the progressive impoverishment of the rest.

But the Pretoria planners and the financiers whose interests they serve in no uncertain terms, are mistaken. For one thing Zambia through Dr. Kaunda stated that there could be no compromise on principles. Vorster cannot come to a conference table after having wiped his boots on the necks of the 15 million oppressed people.

BURNING DESIRE

They also ignore the burning desire of the oppressed people of Mozambique, Angola, Rhodesia, Namibia and South Africa to be free. Armed struggles have already been launched in these areas and in the two territories of Mozambique and Angola large areas have been liberated. All these are dealing death blows to their grandiose schemes.

This does not mean that a Southern African community will not arise in the future. It will and must arise. But it will be when S. Africa will be rid of the minority regimes and where new governments will arise based on the popular will of all the people irrespective of race, colour and creed.

In such a community, the nations will gather as equals, and discuss and plan as equals. That will be a really genuine Southern African community which will serve the interest of the inhabitants of their territories.

Mr. MORSE. Mr. Speaker, I am glad to be able to join my colleague and chairman of the Foreign Affairs African Subcommittee today in support of his call for a reopening of the case of the permit granted last year by the Civil Aeronautics Board to South African Airways to fly into New York. It is the most direct route between South Africa and the United States permitted to date, and I am deeply concerned that its authorization has diminished our dedication to justice in the eyes of black Africans and black Americans alike.

Although the right of South Africa to fly into the United States was established by a reciprocity protocol under an agreement between the two Governments in 1947—a year before apartheid became the national policy of the Republic of South Africa—no route was defined. Since then this policy of injustice has become common knowledge, yet in 1968 the Johnson administration agreed to amend the 1947 agreement and define a specific air route for South Africa. This was the time for a review of the basic agreement, in light of the situation in South Africa. Yet on November 7, 1968, the certification of a Johannesburg-New York air route was issued to South African Airways.

The permit to South African Airways has far greater implications than a mere commercial bid for business by an airline. It involves an action that can easily be interpreted by sensitive observers not only in Africa but also in the United States as official "sanction" of the system of apartheid which prevails in all institutions under the direct control of the Government of South Africa. South African Airways is administered by the Minister of Transport as a subdivision of the South African Government. Given the nature of the segregated and discriminatory conditions which exist in South Africa, the extensive advertising campaign being waged for American tourism is a bid for white tourism.

This policy of discrimination is in direct contradiction to the goals we have espoused and the progress that has been made by the civil rights legislation passed by the Congress. It is, in addition, in direct contradiction to our efforts in the foreign policy area to strengthen our relationship with the African nations. In the then Vice President Nixon's report on his trip to Africa in 1957 he said:

The understanding of the principles for which we stand as a nation is a tremendous asset to us in this area. The maintenance of (our) . . . prestige . . . will depend upon whether the people of the Continent continue to understand our dedication to the principles of independence (and) equality . . . to which they are so deeply devoted.

I certainly agree that progress to eliminate discrimination in the United States is vital to our good relations with Africa. Just as important, however, is that the need to demonstrate the sincerity of the principles we espouse extends beyond our efforts at home. We must also oppose discrimination in Africa itself, and a reexamination of permit to South African Airways would be an important step in this direction.

Section 402(b) of the Federal Aviation Act requires that a permit be granted if "such transportation will be in the public interest." As I have suggested, there is considerable doubt that the South African Airway route is truly in the public interest. Although the law requires furthermore, a public hearing when a permit such as that granted to South African Airways is under consideration, the general public learned of this action only after it had been completed. The public has, I feel, a direct stake in the basic issues involved in the granting of this permit and should be afforded every opportunity to give full and careful consideration to the case and to make itself heard.

Mr. CONYERS. Mr. Speaker, I want to commend my colleague and fellow Detroiter, CHARLES C. DIGGS, for his leadership in this special order to protest the initiation of direct flights from South Africa to New York. His speech today is a small addition to his already outstanding record as chairman of the Subcommittee on Africa of the House Foreign Affairs Committee. His constituents and black Americans across the country greatly appreciate his action in bringing this very serious matter to the floor of the House of Representatives.

My colleague has eloquently stated our opposition to the granting of facilities at the John F. Kennedy International Airport, or any American airport. I join him and the American Committee on Africa in requesting that the Civil Aeronautics Board reconsider its decision to permit South African Airways the right to land at Kennedy Airport. Of all the places in the world with which the United States does not need a direct link, South Africa is undoubtedly the most undesirable. The Civil Aeronautics Board has certainly gone far beyond its authority as an agency of the United States in issuing a foreign air carrier permit to South African Airways—a firm which bears the name of, and is based in a country which we have severely condemned for its policy of apartheid. I have not found during my service in the Congress that the CAB has the right to make foreign policy.

The utter lack of consideration for the African nations with which we are friends is obvious. Some of these countries are in imminent danger of infringement of their territorial rights by South Africa and are no doubt appalled by this gesture of friendship toward South Africa. Direct flights between South Africa and the United States can only serve to heighten tensions in that area and to impair our own diplomatic relations with the African nations who abhor South Africa and everything it symbolizes.

I cannot express the frustration and disgust I have for the ludicrous idea of permitting anything that smacks of South African apartheid into the United States. Do we not have enough racial problems in the United States without seeking to create others? No black man is welcome in South Africa—are we going to see separate ticket counters instituted for white Americans who want to travel to South Africa and black Americans who want to go elsewhere? Or perhaps separate waiting rooms? It is bad enough that there are American airlines who fly to South Africa at all. I would hope that the Civil Aeronautics Board would not only rescind the permit to South African Airways and to Pan American Airways for flights to South Africa, but that it would not even consider issuing such rights to any other airline which operates in the United States, whether domestic or foreign.

I certainly hope that the CAB will hold public hearings on this matter and reconsider the issuance of this permit to South African Airways, so that the matter will not require a full-scale congressional investigation. I am gratified, however, to know that the distinguished chairman of the African Subcommittee of the House Foreign Affairs Committee has offered to the American Committee on Africa and all other aggrieved persons the recourse of an investigation by his subcommittee should the CAB fail to act in the public interest.

March 26 is, indeed, a dreadful day for America, especially for black America as it marks a beginning of a tie between our country and one which stands against

everything in which we believe. My opposition to these flights will not end until I know that the last South African Airway flight from New York has left and that no more shall come.

MOORHEAD AND 33 MEMBERS OF CONGRESS ASK FOR VIETNAM MILITARY REDUCTION

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Pennsylvania (Mr. MOORHEAD), is recognized for 10 minutes.

Mr. MOORHEAD. Mr. Speaker, almost exactly 1 year ago—on March 11, 1968—when there were press stories to the effect that the military was requesting an additional 206,000 troops in Vietnam, several of our colleagues joined me in cosponsoring a resolution that provided:

Resolved, That it is the sense of Congress that the United States should not increase its military involvement in Vietnam.

I believe that our resolution made a contribution to the decision against further escalation of the war in Vietnam. Less than 3 weeks later the decision to restrict the bombing was announced and the initial steps were taken which led to the opening of the Paris peace talks.

The peace talks have been in progress for 10 months and Mr. Nixon has been in office for 2 months; yet the level of the war and, more importantly, the level of American participation in it continues unchanged.

Mr. Speaker, the time has again come for Congress to make its influence felt on the war in Vietnam. The time has come, Mr. Speaker, for the Congress to express to the administration the desire of the American people to begin the process of deescalation of the American military effort.

Accordingly, on behalf of myself and 33 cosponsors I am today introducing another very brief resolution which provides:

Resolved, That it is the sense of Congress that the United States should begin to reduce its military involvement in Vietnam.

I invite all Members who believe that the time has come to begin the deescalation of our military involvement in Vietnam to join with me in introducing similar resolutions.

The following Members cosponsored Mr. MOORHEAD'S concurrent resolution: JONATHAN B. BINGHAM, GEORGE E. BROWN, JOHN CONYERS, JR., JOHN H. DENT, DON EDWARDS, LEONARD FARBSTEIN, JOSEPH M. GAYDOS, JACOB H. GILBERT, SEYMOUR HALPERN, AUGUSTUS F. HAWKINS, KEN HECHLER, HAROLD T. JOHNSON, ROBERT W. KASTENMEIER, EDWARD I. KOCH, ROBERT L. LEGGETT, PAUL N. MCCLOSKEY, ABNER J. MIKVA, JOSEPH G. MINISH, PATSY T. MINK, JOHN E. MOSS, BERTRAM PODELL, THOMAS M. REES, HENRY S. REUSS, PETER W. RODINO, BENJAMIN S. ROSENTHAL, EDWARD R. ROYBAL, WILLIAM F. RYAN, JAMES H. SCHEUER, FRANK THOMPSON, JR., JOSEPH P. VIGORITO, JEROME R. WALDIE, CHARLES H. WILSON, and GUS YATRON.

Mr. RODINO. Mr. Speaker, I am pleased to join my distinguished colleague, the gentleman from Pennsylvania (Mr. MOORHEAD) in cosponsoring his resolution expressing the sense of Congress that the United States should make every effort to bring a reduction of our military involvement in Vietnam.

Obviously, because of the current situation where we are undertaking three offensive actions to forestall a threatened massive attack by the North Vietnamese, we recognize that immediate implementation of our objective is difficult. Military necessities and the need to protect our valiant servicemen fighting there now preclude precipitous withdrawal of troops.

But I most strongly believe that we must begin to bring home our U.S. and allied military forces as rapidly as possible. We all hope, I know, that the Paris negotiations—both the formal meetings and the private talks—will result in a settlement. In the meantime, however, we should not hesitate to begin a reduction of our military commitment to the maximum extent feasible without jeopardizing our young men now engaged in combat in the cause of freedom and independence for South Vietnam.

Mr. MINISH. Mr. Speaker, I rise in support of the resolution introduced by our distinguished colleague from Pennsylvania which I hope will win prompt approval. It is right and proper at this time that Congress express its support of ending the Vietnam conflict by negotiation, not escalation.

A year ago this month I wrote the President and stood here in the House to urge that our Nation take the initiative in seeking a speedy resolution to the war which held the threat of steady expansion with no end in sight. Much has changed and yet little has changed in the long, tortuous months since then. The battles continue with their grim toll of suffering and death to our gallant young men and the helpless people of Vietnam. It is obvious that victory belongs to neither side, that the war is not winnable by either side. Clearly it is time to bring to the Paris talks the intensity of purpose, the sense of urgency for peace with which mankind always pursues military effort. The stakes are too high for us not to seize boldly this moment to work out a compromise settlement in Paris. Let us approve this resolution as an indication of the earnest desire of the American people for a genuinely negotiated settlement at Paris without protracted haggling and hairsplitting.

Over and above all men must learn in this nuclear age to substitute the rule of force with the rule of law. It has been truly said that what people can get in terms of a rule of law would contribute more to their security than what they have stockpiled in the form of nuclear weapons.

Mr. GILBERT. Mr. Speaker, when the Nixon administration took office, we looked to it for new initiatives to end the war in Vietnam. The President was unburdened by old commitments and imprudent allegiances. His newness gave him momentum. But more than 2 months have passed and it is difficult to discern a change in policy, either in Paris or on the battlefield. Some 300 of our young men are dying every week. Surely the casualties alone are ample reason for rushing this war to an end. I cannot conceal, Mr. Speaker, my growing disappointment with the administration's failure to achieve peace. I think it is now time that Congress suspend its silence, lest the new government overlook our concern or mistake the nature of the mandate it received last December. Peace is the first order of business of our Government. It must not be delayed.

Mr. Speaker, I have joined a number of my colleagues who feel the same way I do in sponsoring a resolution that it is the sense of Congress that the United States should begin to reduce its military involvement in Vietnam. Almost exactly a year ago, I cosponsored a resolution in Congress "that the United States should not increase its military involvement in Vietnam." I believe our resolution then made some contribution to the decision against further escalation. The time has come for Congress to again make its influence felt on the war in Vietnam. We must turn our efforts toward ending the war and to giving priority to the crises in our cities—to the needs of the poor, the hungry, and minority groups at home. I repeat, peace should be the first order of business of our Government.

SOME PERSPECTIVE ON "RIGHTS"—OUR RIGHTS COMPARED WITH OTHER'S RIGHTS

The SPEAKER pro tempore. Under previous order of the House, the gentleman from California (Mr. TALCOTT), is recognized for 5 minutes.

Mr. TALCOTT. Mr. Speaker, I am appalled by the cavalier and uncaring attitude which some of our comfortable, affluent free citizens have assumed relative to the "freedoms" and "rights" of other human beings on our little planet.

I once understood that early Americans fiercely fought for certain individual freedoms and rights—albeit for themselves.

I once understood that our Nation fought and sacrificed the cream of her men and resources in several wars to defend and preserve certain individual rights and freedoms, for others—the French, the Belgians, the English, the Greeks, the Turks, the Filipinos, the Koreans, and others.

Once these freedoms and rights were as important as life and death to ourselves, our families, our countrymen, and others. Certainly if they were important to us, they were important to others.

Today there are individuals and groups of persons who know so little about a society devoid of those personal freedoms and individual rights and assume unconcernedly that they do not appreciate their rights and freedoms. These people take them for granted—or naively assume that they will remain inviolate forever.

There is also a cabal of malcontents and misfits who rant and rave and threaten to bring huge campuses or cities to a standstill because some fancied privilege must be slightly impinged in an ordered society.

There is a coterie of people who are so cozy and satisfied with their cherished

rights and freedom that they are not interested in helping others to secure comparable freedom or to preserve their rights because it would cost them something or interrupt their comfortable way of life.

I do not pretend to know all about an existence without freedoms or the best means to safeguard and preserve any particular rights. However, I speak with some experience and study. I spent 14 months under a totalitarian dictatorship—in a Nazi prison camp—where my individual rights and freedoms were severely restricted, although not nearly so completely curtailed as in Russia, China, or North Vietnam today. We may hate war with a vengeance; but we would hate even more the abolition of individual freedoms, if we only knew.

We, in the United States, probably enjoy more personal freedoms and individual rights than any other citizenry in recorded history. Just to mention a few—freedom of speech, which is so free that one can libel public officials, utter outrageous obscenities in public, or send vulgar pornography through the U.S. mails with impunity. Freedom of assembly—so free that large groups are often permitted to crowd others from public streets and buildings, even from private business property. Freedom of travel—so free that we can go anywhere without a single question asked or a single credential required. The right of privacy—no one can enter our home or touch our person, or tap our telephone, or inspect our bank account or tax returns, without our consent. The right to own and bear arms for the protection of one's self, family and property. The right of "habeas corpus"—a fundamental right "to have the body produced"—to require the presentation of a person for inspection or inquiry whether he be jailed, hospitalized or institutionalized; to ascertain where a deceased person is buried.

Freedom of the press—so free that reporters and photographers can report the minutest detail of our defenses—troop strength and condition at Khe Sanh—for not only their own profit but for enemy edification. The right of equal opportunity in education, public accommodations, jobs, voting, and office holding. The right to pursue a business of one's choice. Freedom from having militia quartered in one's home or business. Freedom from search and seizure of one's person, home or property. Freedom of religion—to practice and express one's personal religious convictions and to attend the church of one's choice—so free that one can criticize, even condemn, another's religious convictions with impunity. Political freedom—so free that anyone can advocate and practice any political philosophy he chooses. The right to vote by secret ballot. The right to seek and hold public office; the right to publicly criticize public officials—from unpaid irrigation district directors to the President. The right to petition the Government for redress of grievances. The right to sue our own Government. Freedom to marry whomever we please—and the right to rear our children in almost any manner we desire. The right to work or not to work. The right to own property and to sell or exchange it at our own prerogative. The right to inherit property and the right to give it away. Freedom from arrest without a warrant or good cause. The right of reasonable bail and freedom from self-incrimination. Freedom from conviction without due process of law. The right to a speedy trial by a jury of one's peers. The right to be confronted by one's accuser and the right to call witnesses in one's defense. The right to equal protection of the laws regardless of sex, political party, religious persuasion, race, economic or social status, national origin, or age. Freedom from imprisonment for debt or political activity.

No other nation or citizenry has ever enjoyed so many rights or freedoms—or even a substantial portion of them.

It seems preposterous that anyone would do anything to destroy the system that has guaranteed these innumerable rights for so long. But many persons are doing just that—some intentionally, some unknowingly. Some who insist that all our rights and freedoms be preserved for their own benefit are absolutely unwilling to lift a little finger to insure these rights for others.

Students, for instance, have often asserted their "right to protest" and "academic freedom" to the extent of vulgarities, the interruption of the study of others, and the destruction of property simply because university officials denied absurd and outrageous demands.

Even the slightest imagined infringement of one right or one freedom brings howls from the mass media, massive demonstrations, sheets of petitions.

It seems strangely and terribly incongruous that the very people who are so quick to protest and demonstrate about the least impingement of one of their innumerable rights here, are the least concerned about the total, complete annihilation of every one of these individual rights and personal freedoms in the Communist countries of Russia, China, and Cuba, and North Vietnam.

In North Vietnam a citizen does not possess or enjoy a single one of the rights, freedoms, or privileges that we take for granted. No privacy—they can expect a knock on the door at any hour of the day or night—or more likely, governmental intrusion without even a knock. No right of assembly or petition; no freedom of speech or press. No one can travel 10 miles without close inspection and thorough verification of credentials. If a friend or relative disappears in a Communist country, there is no right or possibility that his body or burial place can be viewed or located. Jury trials and bail are unknown. Only the Communist elite could own property and this can be confiscated without notice. Even one's children are likely to be removed from the home. It is not simply a matter of a few rights being abolished; most freedoms which we have long enjoyed were never known; none are exercisable. Even if some semblance of a right is temporarily acknowledged or permitted, no right or freedom is secure. No right or freedom is guaranteed by written constitution or the consent of the governed.

It is little wonder that most human beings would rather fight than exist under a system without even the most elemental individual freedom or personal right. In fact, what would there be to live for without the freedoms and rights which we take for granted—or which we expect our fellow citizens to preserve and defend for us.

Persons who have once known personal freedoms, individual rights and liberty, and then lost them, are likely to fight to the death to regain them whenever the opportunity presents itself—the Indonesians, the Hungarians, the Israelis. How can we become so exercised when one of our myriad rights is impinged, yet be so totally uncaring when all rights and freedoms of others are being completely destroyed?

If all of our rights and freedoms were being totally obliterated, would we solicit or welcome assistance?

I believe each of us should take a little time to contemplate the condition of our own personal existence if we were forced to live under the conditions now existing under a Communist regime—Russia, China, North Vietnam, or Czechoslovakia. Such a situation is almost impossible for us to imagine—but I believe you would rebel, you would seek assistance, and you would be eternally grateful for any aid. Ask yourself if you would want to be in the vanguard for assisting other human beings who are existing under terror and oppression without any of our personal liberties, individual freedoms and inalienable rights.

Before we abandon other people or nations who are struggling for the most basic of the many rights we enjoy, should we not consider what we would expect of them if our situations were reversed? Or should we perish such a thought?

SAGINAW, MICH., ALL-AMERICA CITY FOR 1969

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Michigan (Mr. HARVEY) is recognized for 5 minutes.

Mr. HARVEY. Mr. Speaker, along with at least 10 other Members of this body, this is an exceedingly proud moment for me. It is with the greatest of pride to bring to the attention of the U.S. House of Representatives the selection of the city of Saginaw, Mich., as an All-America City for 1969. Only 11 cities are chosen each year by the National Municipal League and Look magazine to receive this distinguished nationwide honor.

I could not be prouder of my "hometown" and its 100,000 citizens who brought this tremendous honor to our community. Like many communities, Saginaw has had its difficulties, its differences, and its turmoil in recent years. Some old matters still must be resolved, others must be improved, and new situations must be confronted and conquered.

But, like thousands of others, Saginaw is trying and it was primarily for a complete community effort in bettering and easing race relations that it was one of the cities selected.

No one claims that Saginaw is a utopia. Not just yet. But Saginaw may well achieve that impossible dream in later years, because it already possesses the

most important ingredients—good, solid people.

In behalf of all Saginawians, I would also like to take this opportunity to "tip our hat" to the other 10 winners: Edinburg, Tex.; Savannah, Ga.; Snyder, Tex.; Jacksonville, Fla.; San Diego, Calif.; Cottage Grove, Oreg.; Fairbanks, Alaska; Danville, Ky.; Charlotte, N.C.; and New Albany, Ind.

CULVER PROPOSES TAX REFORM TO BENEFIT LOW- AND MODERATE-INCOME TAXPAYERS

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Iowa (Mr. CULVER) is recognized for 10 minutes.

Mr. CULVER. Mr. Speaker, today I have introduced legislation which will reduce the tax burdens on those individuals least able to pay taxes at the present level and still provide a decent living for their families—the low- and moderate-income taxpayer.

This legislation would increase the minimum standard deduction from $200 plus $100 for each exemption to $600—$300 for a married person filing separately—plus $100 for each exemption. Because the present ceiling of $1,000—$500 for a married person filing separately—will be retained, the costs in lost revenue of this bill will be limited. Furthermore, the ceiling will insure that low- and moderate-income taxpayers—not those whose incomes place them in high brackets—will be the sole beneficiaries of this measure. Finally, the increased minimum standard deduction will enable many low-income taxpayers to shift from the complex itemizing procedure to the simple standard deduction procedure.

Under existing law taxable income is computed by subtracting a taxpayer's allowable deductions and personal exemptions from adjusted gross income. As an alternative to itemizing his allowable deductions, a taxpayer may elect to claim a standard deduction equal to 10 percent of his adjusted gross income up to a maximum of $1,000. A separate minimum standard deduction provides that in all events an electing taxpayer is entitled to a minimum deduction of $200 plus an additional $100 for each exemption claimed subject to a ceiling of $1,000. It is this latter provision that the legislation would alter by increasing the amount of deduction to $600 plus $100 for each exemption.

The Department of the Treasury has indicated that increasing the minimum standard deduction in this manner "represents the most equitable and efficient method available of directing tax relief to persons in the lowest income ranges." And in my judgment, that relief is urgently needed. Over 2 million families with incomes considered below the poverty level by one agency of the Federal Government are nevertheless taxed on those incomes by another Federal agency. With unanimous consent I place at this point in the RECORD table 1 which was prepared by the Treasury and which shows this result:

TABLE 1.—BEGINNING TAX LEVELS AND POVERTY LEVELS

	Exemption and minimum standard deduction	Poverty income levels 1969[1]	Estimated number of poor family units (thousands)	
			Total	Presently taxable
Family size:				
1	$900	$1,735	4,620	1,150
2	1,600	2,240	2,600	620
3	2,300	2,755	880	150
4	3,000	3,535	640	120
5	3,700	4,165	520	50
6	4,400	4,675	430	40
7 or more[2]	5,800	5,755	940	50
Total family units			10,630	2,180

[1] Assumed to be 6 percent above the HEW nonfarm poverty levels for 1966.
[2] Averages 8 per family.

The proposed increase in the minimum standard deduction would relieve this situation. It would reduce the income tax payments for individuals with moderate incomes above the poverty level; and it would completely exempt from tax the majority of those persons below the poverty level who now pay some income tax.

Some 28 million taxpayers, of which almost two-thirds have incomes of less than $5,000, would benefit from the proposed changes—about 2.6 million of these individuals becoming completely nontaxable. In terms of family units, nearly 2.2 million families out of about 11 million poor families are taxed under the present law. Under this legislation, tax relief of around $1 billion would result in 1¼ million families becoming nontaxable and about 1 million more families receiving tax relief although they would continue to pay some taxes. With unanimous consent I place in the RECORD at this point tables 2 and 3 prepared by the Treasury which show these effects.

TABLE 2.—EFFECT OF CHANGES IN THE STANDARD DEDUCTION UNDER THE PROPOSAL ON PERSONS BELOW THE POVERTY LINE, CALENDAR YEAR 1969

Family size	Exemptions and minimum standard deduction allowed		Poverty income levels, 1969[1]	Estimated number of poor persons (in thousands)[2]			
	Present law	Proposal		Total	Number of poor now taxable	Number made nontaxable	Number helped, but still taxable
1	$900	$1,300	$1,735	4,620	1,150	550	600
2	1,600	2,000	2,240	5,200	1,220	790	430
3	2,300	2,700	2,755	2,640	460	400	60
4	3,000	3,400	3,535	2,550	490	360	130
5	3,700	4,000	4,165	2,620	270	220	50
6	4,400	4,600	4,675	2,590	250	180	70
7 or more[3]	5,800	5,800	5,755	7,600	450	50	400
Total				27,820	4,290	2,550	1,740
Total family units				10,630	2,180	1,250	940

[1] 1969 poverty levels are assumed to be 6 percent above the HEW nonfarm level for 1966. This conforms to the method by which the number of poor was projected.
[2] Includes both adults and children.
[3] Averages about 8 persons per family.

TABLE 3.—EFFECT OF INCREASING THE PRESENT $200 PLUS $100 MINIMUM STANDARD DEDUCTION TO $600 PLUS $100 WITH $1,000 CEILING

[Dollar amounts in millions; number of returns in thousands]

AGI (in thousands of dollars)	Present law tax	Tax decrease	Tax decrease as percent of present law tax	Number of returns with tax decrease	Number of returns made nontaxable	Number of returns shifting to standard deduction
0 to 3	$1,159	$415	35.8	9,760	2,025	870
3 to 5	3,177	420	13.2	7,870	320	1,120
5 to 7	5,439	200	3.7	5,940	15	980
7 to 10	13,925	95	.7	4,330		400
10 to 15	18,916					
15 to 20	7,550					
20 to 50	12,795					
50 to 100	6,326					
100 and over	6,202					
Total	75,490	1,130	1.5	27,900	2,360	3,370

Note: Details may not add to totals because of rounding.

Mr. Speaker, the Department of the Treasury has cited a need for this type of legislation in its report of February 5, 1969, entitled "Tax Reform Studies and Proposals." With unanimous consent I include at this point in the RECORD excerpts from a Technical Explanation prepared by the Treasury which explains the proposal. A text of the bill is also included:

TECHNICAL EXPLANATION

Under existing law each taxpayer may, as an alternative to itemizing his personal expense deductions, elect to claim a standard deduction equal to 10 percent of his adjusted gross income subject to a $1,000 ceiling. For electing taxpayers the law presently provides a minimum standard deduction of $200 plus $100 for each exemption subject to a ceiling of $1,000.

Under the proposal the minimum standard deduction available to electing taxpayers would be increased from $200 plus $100 for each exemption, to $600 plus $100 for each exemption. Thus, a single person would have a minimum standard deduction of $700, a married couple $800, a married couple with two dependents $1,000.

A $1,000 CEILING

The provision of existing law which limits the minimum standard deduction to $1,000 would be retained. Thus a married taxpayer with two dependents would be entitled to a minimum standard deduction of $1,000 and the amount of deduction could not exceed

this amount even if the particular taxpayer had more than three dependents. A married taxpayer with two dependents who did not itemize his deductions would be using the minimum standard deduction unless his income exceeded $7,142. . . .

MARRIED TAXPAYERS FILING SEPARATE RETURNS

For a married taxpayer filing a separate return, the minimum standard deduction would be $300 (rather than $600) plus $100 for each exemption and would be subject to a $500 ceiling (rather than a $1,000 ceiling).

As under existing law, if a taxpayer is married and files a separate return, he may not use the general standard deduction if his spouse itemized deductions and may not use the minimum standard deduction if his spouse either itemizes deductions or uses the general standard deduction. If a taxpayer's general standard deduction is greater than the minimum standard, he may nevertheless elect to use the minimum standard if his spouse's minimum standard deduction is greater than the general standard deduction.

DEPENDENTS OF OTHER TAXPAYERS

Under the proposal the minimum standard deduction may not be used by taxpayers who are claimed as dependents by other taxpayers.

Under existing law a taxpayer is entitled to a $600 dependency exemption for each of certain specified relatives who receive more than half of their support from the taxpayer and have less than $600 of gross income.

An exception to the gross income limitation is made in the case of children of the taxpayer who are under 19 or students. As a consequence, under existing law children of the taxpayer may have gross income in excess of $600 as to which they may claim their own $600 personal exemption and also claim the minimum standard deduction even though they are supported by a parent who also claims them as a dependent for tax purposes.

The minimum standard deduction is intended to aid taxpayers and their families in the lowest income ranges. There is no justification for permitting that deduction to taxpayers who, while nominally in the lower income ranges, are in fact receiving in addition to their own income more than half of their support from parents. For example, were the proposed minimum standard deduction extended to such persons, a wealthy parent would be able to create $1,300 of tax-free income annually for each child by transferring property yielding that amount to each child.

Under the proposal a dependent would still be permitted to claim a $600 exemption against his own income even though the person supporting him also claimed a $600 exemption, but the dependent would not be permitted to use the minimum standard deduction as an alternative to the general standard deduction.

PERSONS OVER AGE 65

Persons over age 65 will be entitled to the same minimum standard deduction as persons under age 65. . . .

EFFECTIVE DATE

The recommended changes in the minimum standard deduction would be applicable to tax years beginning after December 31, 1969.

H.R. 9523

A bill to amend the Internal Revenue Code of 1954 to liberalize the minimum standard deduction

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 141(c)(2) of the Internal Revenue Code of 1954 (relating to minimum standard deduction) is amended—

(1) by striking out "$200" each place it appears and inserting in lieu thereof "$600"; and

(2) by striking out "$100" and inserting in lieu thereof "$300".

(b) Section 141 of the Internal Revenue Code of 1954 (relating to standard deduction) is amended by adding at the end thereof the following new subsection:

"(e) Dependents of Other Taxpayers.—Notwithstanding subsection (a), the minimum standard deduction shall not apply in the case of a return of an individual, if a deduction with respect to such individual is allowed under section 151(e) to any other taxpayer for any period which overlaps in whole or in part the taxable year of such individual."

SEC. 2. The amendments made by the first section of this Act shall apply to taxable years beginning after December 31, 1969.

OKLAHOMA'S WINNINGEST COACH

(Mr. ALBERT asked and was given permission to extend his remarks at this point in the RECORD and to include an article.)

Mr. ALBERT. Mr. Speaker, on Saturday, March 15, 1969, the Byng, Okla., girls' basketball team, coached by Mrs. Bertha Frank Teague, won the Oklahoma class A championship. It was the eighth State title won by one of Mrs. Teague's teams, making her the winningest coach in the history of Oklahoma basketball. During her 43 years of coaching at Byng High School, her teams have won 1,217 games and lost only 88. In addition to the eight State championships, her teams have won seven runnerup trophies and many other titles.

An article by Ernest Thompson in the Ada, Okla., Sunday News for March 16, 1968, describes Mrs. Teague's career. I am happy to commend it to my colleagues who, I am sure, will join me in saluting Mrs. Teague:

BYNG-O: BERTHA BOWS OUT

(By Ernest Thompson)

When one speaks of Bertha Frank Teague's record as a basketball coach, the supply of superlatives suddenly runs out.

She has been praised and eulogized by congressmen, college coaches, national magazines, U.S. Senators, metropolitan sportswriters, state athletic directors and just plain folks.

Saturday afternoon, as Mrs. Teague ended more than four decades as girls' coach at Byng High School, she received her last hurrah before a huge crowd at the Fairgrounds Arena in Oklahoma City.

Gov. Dewey Bartlett declared it "Bertha Frank Teague Day" across Oklahoma.

The State House of Representatives and Senate passed resolutions praising her.

Her girls team had put a storybook finish on the saga of Mrs. Teague by winning, once again, the state championship.

And, in an unprecedented move, a special ceremony was staged on the court following the championship game.

Never, in the history of Oklahoma high school athletics, has such an accolade been accorded an individual.

So, what's it all about?

It goes something like this:

Mrs. Teague coached 43 years at Byng High School.

She won 1,217 games.

She lost only 88.

She took eight state championships and seven runnerup trophies.

She appeared in the state tournament a record 22 times.

She won a national A.A.U. championship.

She won 40 district tournaments and 22 regional meets plus uncounted invitational tourneys.

She won 98 games in a row in the 1930s—still a record.

She founded the first girls' coaching clinic in the Southwest.

She launched the Oklahoma Girls' Basketball Coaches Association and was its first and only president to this date.

She authored what is believed to be the only book devoted entirely to girls' basketball (Basketball for Girls, Ronald Press, New York).

She is the only woman ever nominated for the National Helms Foundation Basketball Hall of Fame.

She is, in fact, the winningest coach in the history of Oklahoma basketball.

That covers a part of the story.

It all began back in 1927 when Mrs. Teague moved to Byng.

A native of Missouri (Carthage), she graduated from Amity, Ark., High School. After teaching stints at Delight, Ark., and Cairo, Okla., she married Jess E. Teague in Arkadelphia, Ark., in 1926.

They came to Byng—he as superintendent of schools (a post he held for 39 years) and she as first-grade teacher (a position she was to keep 40 years).

As a sideline, she also began to coach basketball. In those days, Byng School was a tiny place, inhabited by about 220 kids. Few could foresee then the fabulous record in basketball Bertha Frank Teague would amass, or the incredible growth of the school to more than five times its size in 1927.

Things didn't really get going until 1936. That's when Byng won its first championship in girls' basketball. Many more were to come.

"I just got interested in it, that's all," Mrs. Teague says today. "I didn't really set out to coach 40 years of girls' basketball. It was sort of a sideline at first. But, I guess you can say I sort of fell in love with the sport and I learned how much good could be done for young women in interscholastic basketball. Besides, I'm competitive by nature and it was (and still is) fun."

It is said that winning is not the main thing in athletics, but few question that it's more fun to win than lose. Mrs. Teague has been having a lot of fun for 43 years.

After that first state championship in '36, Mrs. Teague's teams launched a string of records that made the school nationally famous in athletics. Even now, three decades later, longtime sports fans remember "those Byng gals back in the late '30s."

What happened was that Byng won three consecutive state championships and an unprecedented 93 games in a row in 1936–37–38.

Not only that, but in 1938, Mrs. Teague decided to go into the big time. She took her high school team to Wichita, Kans., to compete in the national A.A.U. girls' tournament.

A.A.U. women's sports were big things in those days. One just didn't have the effrontery to enter a high school team against all-star aggregations from across the United States.

Bertha Teague did. And she won . . . against industrial teams, college teams, state all-stars. In the final game, her club whipped the highly touted champion California All-Stars, 34-15. Nobody in the A.A.U. tournament laughed again.

Since that time, the name of Teague and "girls' basketball" have become synonymous.

Her reputation has grown to such proportions that Bill Mokray, information director of the Boston Celtics, famed pro basketball team, was moved to write a letter favoring her election to the National Hall of Fame.

Said Mokray, "No woman has ever been elected . . . but her reputation is such nationally that in any discussion of high school girls' basketball, one inevitably gets around to Bertha Frank Teague and her superb record."

She has also been nominated for the Naismith Basketball Hall of Fame.

Austin Core, head of the sports department of Look Magazine, says simply, in his letter of recommendation to the Naismith Hall: "—I feel sure no coach in the United States can boast a record such as that of Mrs. Teague."

Carl Albert, majority leader in the U.S. House of Representatives, said: "She is highly esteemed as a leader in women's sports activities and as an outstanding humanitarian in her community and state."

Ray Soldan, assistant sports editor of The Daily Oklahoman, wrote: "I can think of no other coach, man or woman, other than Coach Henry Iba, who is as deserving of national honors."

Dr. Rhea Williams, who heads the Texas Athletic Association, noted: "Mrs. Teague is the most respected and honored girls' coach in the nation. I have never met a more remarkable individual."

Tributes also came from Lee K. Anderson, former czar of prep athletics in Oklahoma; Congressman Tom Steed; Sen. Henry Bellmon; State Rep. Lonnie Abbott; Gov. Bartlett; Lt. Gov. George Nigh; State Sen. George Miller, and many others.

How does Mrs. Teague feel about quitting what is not only her life's vocation, but, indeed, her "life" itself?

"Of course, I really don't want to quit," she says. "But, there comes a time in everybody's life when they must retire from the scene. I think it is better now than later. I will be leaving some good players for a young coach. That's better than quitting after you've run through a good bunch of material and then leaving your successor with players who may not be quite as good."

As for her 43 teams at Byng, Mrs. Teague, quite naturally, is not anxious to make comparisons.

Asked to do so, she exclaims, throwing up her hands: "Oh, law, that's the hardest question I was ever asked.

"Back in the old days, of course, we had different rules and different styles of play. Usually, we had a 'star' on the team—more often than not a tall post forward. Today, all these girls can hit the basket and they can handle the ball. Nobody's a star. They're all fine athletes."

How about individual players?

Mrs. Teague again hesitates. She mentions the stars of long ago, girls who won the A.A.U. and 98 games in a row—girls such as Emma Lela Fulkerson, Lorene Daniels, Evelyn Casey, Alma Landrith, Nora and Dora Muncrief, Marguerite Eppler.

Casey still holds many state records. Daniels was a professional player and coach later with the All-American Red Heads. Landrith was the only freshman player in the history of the state tournament to make all-state as a freshman. Eppler is still regarded as probably the finest guard ever turned out in Oklahoma.

About the "later days," Mrs. Teague is also hesitant to pick out individuals, but some names keep cropping up. Names such as Christine Linker, now Pontotoc County tag agent, who led Byng to undefeated seasons in 1951 and 1952.

"Christine was probably the best all-around girl basketball player I've ever seen," Mrs. Teague says. "Even Abe Saperstein (founder and coach of the famed Harlem Globetrotters and the All-American Red Heads) was interested in her. He offered to train her in basketball, tennis, golf . . . anything she wanted to try."

Also mentioned is Bettie Taylor, who holds the state scoring record and paced Byng to championships only a few years ago. Offensively, Mrs. Teague says, she's never had a better one, not even the prolific Rebecca Kaiser.

Aside from the high school team, Mrs. Teague has also coached grade school and junior high teams. Add to the 13,000 games she's coached in high school about 3,000 more for the lower grades and you come up with another astounding figure.

And, Mrs. Teague has also had time for her family, community and church.

Her daughter, Geneva (now Mrs. Ted Billey, Oklahoma City), played on her mother's teams in the early 1950s.

She has been an active member of the New Bethel Baptist Church since it was built in the 1930s.

She is also a member of the Ada Kiwanians and Pi Kappa Delta sorority.

When she's not coaching, Mrs. Teague may be found in Des Moines, Cleveland, Columbus, Chicago—just about anywhere a girls' rules meeting is scheduled. Some say she has practically rewritten the rulebooks.

Listening to her talk now, it hardly seems like she intends to sit around and twiddle her thumbs when she retires.

She and her husband, who retired in 1965 as the first and only superintendent Byng had up to that time, will probably do a bit of traveling.

And, don't be surprised if Mr. Teague often finds himself at a few state girls' basketball tournaments or at a national rules meeting.

Habits are hard to break, especially after 43 years.

CIVIL RIGHTS IN REVERSE

(Mr. EDWARDS of California asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. EDWARDS of California. Mr. Speaker, civil rights programs, ordered by the Congress, are in trouble.

Both in the areas of the title VI school desegregation program and in the field of equal employment, the Nixon administration is failing to meet necessary standards.

Sunday, March 16, the Washington Post carried what I believe is a very significant article on the school desegregation program. It is not a happy story. The final sentence tells the tale: "The desegregation program is in trouble."

And why is the program in trouble? There are several reasons, not the least of which is that in the 2 short months of the Nixon administration, the program has been administered so as to seriously cripple it. Until 2 months ago the program was picking up momentum and it was on verge of achieving substantial progress. HEW reported a 6-percent increase in school desegregation in 11 Southern States during the past year. We could expect more progress, if the program received the kind of support it deserves from the administration.

Sadly, the area of school desegregation is not the only area in which the administration is failing to carry out the goals of the Congress.

The New Republic in its March 22 issue spells out the failures in the area of equal employment opportunities. It tells the sad story of David Packard, Deputy Secretary of Defense, and his private and extra legal agreement with textile firms.

Mr. Speaker, I place the Sunday Washington Post article by Mr. Peter Milius and the March 22 article in the New Republic by Mr. Barney Sellers at this point in the RECORD:

[From the Washington (D.C.) Post, Mar. 16, 1969]

INTEGRATION RESISTANCE RISES

(By Peter Milius)

Outright Southern defiance of the Federal school desegregation guidelines has increased markedly in recent months.

More Southern school districts than ever before are flatly refusing to file acceptable desegregation plans.

Ironically, the new wave of defiance comes at a time when there are also more Southern districts than ever before complying with the guidelines; the five-year-old desegregation program is rather clearly at a crossroads.

The renewed Southern resistance is due in part to changes last year in Federal enforcement tactics.

Civil rights officials are now moving into the most recalcitrant Southern school districts, often those with Negro majorities, and are insisting on prompt and complete instead of gradual and partial desegregation.

There are thus more showdowns now than before.

At the same time, the Nixon Administration has shown signs of wavering on desegregation.

Some of the President's campaign statements last fall led Southerners to think he would let them off the hook if elected. The President has since taken a firmer position. But Health, Education and Welfare Secretary Robert H. Finch's public statements on enforcement since the inauguration have dismayed some Southerners but have also been ambiguous enough to keep alive the Southern hope and the political support that lies behind it.

A high Federal civil rights official said last week that "there has definitely been a slowdown in voluntary compliance."

Last June there were 412 school districts that had refused to file acceptable desegregation plans and had either had their Federal funds cut off or were somewhere in the enforcement process that can lead to a cutoff.

Last week that figure had risen to 582 districts, an increase of 41 per cent.

Last spring HEW sent letters to about 320 districts, asking for complete desegregation plans. It got back acceptable plans from all but about 60.

Last fall, as the presidential campaign was beginning, the Department sent similar requests to another 350 districts, the last and stubbornest on its list of holdouts. About 220 have refused to comply.

EARLIER PLANS WITHDRAWN

More ominous, in the judgment of some civil rights officials, is the fact that some districts—a small but increasing number in Texas, Arkansas, South Carolina and other states—are withdrawing desegregation plans they filed earlier.

"The outcome," one official said last week, "is that Finch is going to have to cut off funds to a lot more districts than if he'd made clear what the districts have to do."

Finch has withheld or cut off funds to eight unbending districts since taking office two months ago.

RELAXATION SEEN

But Finch also, in a recent rambling, widely-read interview in U.S. News and World Report, said he is having the desegregation guidelines reviewed, that the salient issue is discrimination rather than segregation—a remark particularly heartening to Southern ers clinging to freedom-of-choice—and that he is more concerned about the quality of schools than their racial makeup.

In the same vein, under pressure from key Southerners in Congress and some members of the White House staff, particularly Harry S. Dent, former administrative assistant to Sen. Strom Thurmond (R-S.C.), Finch

has made himself and his immediate staff directly accessible to Southern delegations here to protest their treatment at the hands of regular HEW enforcement officials.

RIGHTS HEAD QUITS

Ruby G. Martin, former director of HEW's Office of Civil Rights, refused reappointment and an increase in pay under the Nixon Administration, mainly because she felt high-level vacillation had undercut the office and robbed it of its effectiveness.

She said last week that the desegregation program has been set back one or two years no matter what Finch says or does next.

An Office of Civil Rights official noted several days ago that "they haven't made us buy any bad plans yet."

"But Ruby's right," the official added. "Those statements have set us back tremendously. . . . They're just killing us down South. Everybody believes there's going to be a change. As a result, they don't even want to talk to the people in our regional offices. They want to come to Washington. The problem is they can get away with it."

CHANGE IN TONE

Finch has said several times that he intends to uphold the law, that he is not going to back off from present target dates—complete desegregation by this September in most cases, next September at the very latest—and that the only real change he has in mind is in the desegregation program's tone.

A member of his staff noted last week that "there was nothing in that U.S. News interview directly contrary to the law."

Letters coming in to HEW suggest that the South may have read it otherwise. A Mississippi woman wrote "I'm glad to read you think segregation is legal." An Arkansas superintendent who was ready to desegregate said that the interview cost him three like-minded school board members. They were beaten in an election last week by three freedom-of-choice advocates.

MAIL IS BITTER

But most of Finch's mail from the South so far has been the other way, bitter and even vituperative letters of complaint about the cutoffs he has ordered.

The increased Southern definance comes at a time when civil rights officials are starting to carry the guidelines into the North and the Nation's colleges, steps which may precipitate fresh opposition. There is also noticeable opposition for the first time from Negroes, those who have given up on desegregation and want now to go their own way. The desegregation program is in trouble.

"It's the pressure," one well-placed official said last week. "From Thurmond, from Tower (Texas Sen. John G. Tower, Republican), from all the Southern Republican state chairmen, from Dent in the White House.

"These people feel they stuck their necks out in the campaign. It paid off for Nixon. Now they want to see something indicating there has been a change.

"Finch is a political person, and all the political pressure's coming from one side now."

PACKARD'S DEAL WITH THE TEXTILE BIG THREE

(By Barney Sellers)

By May 1, three of the nation's largest textile mills will report to David Packard, Deputy Secretary of Defense, on their progress in meeting his fair employment standards. The reports will be filed as part of undisclosed, verbal agreements between Packard and the firms' chief executives to meet documented charges by the Department that the textile mills discriminate. In return for their efforts, Packard has awarded the firms—Dan River Mills, Burlington Industries, and J. P. Stevens—$14 million in Defense contracts. When the reports are received only Packard will know whether they meet the original "terms." His cryptic announcement approving the new contracts abruptly killed a two year, multi-agency attempt to enforce the government's long neglected power over discriminating contractors and set a poor precedent for future enforcement action.

There are 7,000 textile mills in the country, located mainly on the East Coast and principally in North Carolina, South Carolina, and Georgia. Though the industry has been traditionally competitive, with small, family-owned firms the rule, recent mergers and acquisitions have resulted in a decreasing reliance on labor-intensive methods and increasing mechanized production in large plants. While there are almost one million textile workers, many female, the work force is declining and dropped by about 15,000 last year. Labor relations in the industry have been marked by management's virulent anti-union policy, which continues to this day, and racial exclusion, which has been broken minimally within recent years. Today, about a tenth of textile jobs are unionized. In the past two decades Dan River, Burlington and J. P. Stevens have been found guilty of violating federal labor practice legislation. Since 1966, the NLRB has found J. P. Stevens guilty of illegal labor acts six times. Four of these findings have been upheld by federal courts and in 1968 the Supreme Court affirmed findings of "massive" violations of the National Labor Relations Act, including firing, demoting, threatening, unlawfully interrogating and spying on employees.

Since 1960 the growth of new Southern industry has created a tight labor market for the mills as white workers have moved to higher paying jobs in other industries. As a result, the mills have been forced to raise wages and break the near-total exclusion of blacks. Ironically, the token breaking of the race line has given management new problems: young black workers, inspired by the organized successes of the civil rights movement, have concluded their main hope for improved working conditions rests with union growth; picketing by black female production workers has received national attention.

In January 1967, the Equal Employment Opportunity Commission launched its first industry-wide fair employment project. The textile industry was chosen because it is a major provider of jobs in the Southeast; it uses workers with a wide variety of skills; it traditionally serves as an industrial entry point for unskilled persons; and because it has had a pattern of discriminatory employment. As part of the effort, the Office of Federal Contract Compliance, which has authority for overseeing the government's contractor fair employment program, agreed to help organize field visits to eight major mills and to develop programs for change where they would be needed.

In January 1968, OFCC and the Defense Department—which is assigned review responsibility for the textile firms—agreed to visit a limited number of the largest textile mills in the South. The agreement reportedly was for Defense to visit the plants, document discrimination where it existed and consult OFCC prior to making final agreements.

Dan River Mills was picked as the model for the plants and a visit to five facilities was made in January 1968. The main problems found included a very low utilization of black female production workers (even in counties with a one-third black population); virtual exclusion of Negro women from clerical jobs; assignment of black males to low paying, low status jobs; and segregation of facilities, including company-owned housing. In one plant, for example, blacks working for twenty years were in lower paying positions than white employees hired in 1967. A similar pattern was found in 6 other South Carolina plants, where only 5 Negroes were working in almost 700 advanced job spots. (Discriminatory treatment at an Alabama Dan River plant was also exposed in a Civil Rights Commission hearing in April 1968.)

After that field review, Defense made its findings known to the plants and a long series of calls, letters and conferences began in order to work out an acceptable plan. In 1968, Dan River was given more than six extensions of time to develop an adequate plan for change—in government terminology an "affirmative action" plan—even though the basic issues never really changed: how would the company act to redress the present effects of past discrimination, and when would it do it?

The company refused to meet these two key issues. It would not act to correct past injustices by giving black workers a compensatory chance for promotions or pay raises over white workers; it refused to propose time goals. Government officials who argued that present effects of past discrimination must be affirmatively removed relied on two federal district court cases decided last year, the essence of which was stated in a decision involving a paper union and the Crown Zellerbach Company of Bogalusa, Louisiana:

"Where a seniority system has the effect of perpetuating discrimination and concentrating . . . the effects of past discrimination against Negro employees into the *present* placement of Negroes in inferior positions for promotions and other purposes, that present result is prohibited . . . and must be replaced with another system."

The principle of this case, applying to actions by both unions and employers, was affirmed in mid-January 1969 by the Fifth Circuit Court of Appeals and clearly supports efforts to overcome entrenched segregation and discrimination. The details of the discussions with Dan River were known to both OFCC, who reportedly urged that negotiations be dropped and sanctions started, and the highest Defense officials. The talks dragged on and were bucked back and forth in Defense until just past the 1968 elections, when a final meeting was held four days before the end of the Democratic incumbency. The company was required to reply to the government's proposals with a final response—one week after the new Administration was to take office. The final ingredient in the slowly escalating case was notice from the Defense Supply Agency—the Defense organ in charge of contractor employment—that the Department was due to award $16 million worth of cloth contracts for uniforms, and the three low bidders were Dan River, J. P. Stevens, and Burlington. (During the one-year period of negotiation in 1968, Defense awarded almost 70 contracts worth $77.5 million to the three firms.) DSA pointed out that maintenance of principle in this case might cost the agency $800,000 if the low-bidders were bypassed. It was up to the new Under Secretary of Defense, Mr. Packard, to decide.

Shortly after submission of the company proposal, essentially the same plan that had been discussed for over 12 months, the textile firms turned on the heat. Senator Strom Thurmond (R., S.C.), contacted the White House to get Defense officials in his office to discuss the case. Senator John Stennis (D., Miss.), Chairman of the Senate Armed Services Committee, wrote to the Secretary's office complaining about the military need for the service uniforms and the "unreasonable" fair employment demands. L. Mendel Rivers of South Carolina, Stennis' counterpart in the House also indicated his displeasure. And finally, former Secretary of the Army Robert Stevens, now president of J. P. Stevens, visited several former colleagues in Defense. Senators Javits and Brooke, almost alone among the Republicans, urged Defense to take a firm position.

Packard's office announced a decision would be made on February 10, and Defense later indicated to civil rights groups, which

were preparing to muster support in Congress, that the decision would be delayed even further. On February 7 Packard's office announced the matter had been settled.

As a result of a session with the chief executive officers of the three firms, the Deputy Secretary "received assurances" the law would be met. No written agreement was made, even though one is required by federal regulations. No representatives of any government agency formerly involved in the case—including civil rights staff—were present. No subsequent information concerning the talks, other than the Secretary's press statement that he would give "personal attention" to the case, was released—even within the Defense Department. OFCC and the Secretary of Labor belatedly asked for copies of the "agreement." Though none was delivered, the arrangement was subsequently approved by Secretary of Labor Shultz. Labor and Defense announced that "to insure" company commitments would be kept, they would develop a quarterly report for the mills which would contain specific questions to be answered.

The tragedy of the case—the first major enforcement effort for Defense—is that it was unnecessarily bungled. Civil rights supporters in and out of government saw the issue as the Administration's test in employment enforcement and likened its importance to Secretary Finch's pending school desegregation decisions at HEW. The Defense decision made clear the new Administration's willingness to continue past government enforcement policies that allow more than a score of federal agencies to decide unilaterally when and how the law shall be enforced for minorities. There is even some indication now that Defense procurement officials are preparing to press for scuttling of pre-award compliance reviews.

More important, the decision's handling may reinstate personal law enforcement in civil rights—the government approach to civil rights enforcement wherein decisions are not made routinely and fairly, but through interventions by high political appointees. The danger of the personal approach are amply demonstrated in the past trials of Commissioner Harold Howe, who spent most of his time at the Office of Education denying he was an "integration czar." Decisions concerning law enforcement in civil rights, as in other areas, should be routinized through regular due process wherever possible.

Finally, Packard relied upon the good word of "fellow" executives in the industry. One need not distrust their personal honesty, but clearly, their economic interests (anti-union) and hiring policies (racist) argue against their ability or willingness to actively recruit, hire and promote blacks. Packard was dealing with the lives of thousands of present and potential minority employees who have traditionally been without support from these firms and who must rely upon the fair working of government due process to protect their rights. Who but David Packard will be able to judge the appropriateness of industry steps toward fair employment? And by what standards will those steps be measured? Gentlemen's agreements are no longer sufficient.

Further, Mr. Speaker I place the following letters, on the same subjects, sent by the Democratic Study Group to President Nixon be printed at this point in the RECORD:

DEMOCRATIC STUDY GROUP,
U.S. HOUSE OF REPRESENTATIVES,
Washington, D.C., February 1, 1969.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: We are disturbed to learn that Secretary of Health, Education and Welfare Finch has deviated from the procedures previously established to carry out Title VI of the Civil Rights Act of 1964 which prohibits the use of federal tax revenues for programs which discriminate on the basis of color or race.

Effective and consistent enforcement of Title VI is essential if we are to end discrimination in America. Yet five school systems in Mississippi and North and South Carolina which have not complied with federal law requiring desegregation of schools have been afforded special treatment. These five districts, with which the Department of Health, Education, and Welfare had been negotiating for two years, had already exhausted the hearing and appeal procedures within the Department and had been adjudged not in compliance with the Civil Rights Act. These school districts were notified on December 29, 1968 that procedures had been started which would result in a cutoff of federal funds on January 29.

While the order terminating federal assistance has been permitted to take effect, the school districts in question have been notified by Secretary Finch that if they come into compliance within 60 days they will receive the funds retroactively. In the meantime, the funds will be held in trust by the respective states. The Secretary's action is unprecedented and unwarranted since such fund cutoffs occur only after lengthy negotiations, thorough review of the facts, and persistent refusal by local school officials to obey the law.

Secretary Finch has declared that this action is being taken because he has not had time to review the facts of the cases. He implied that the new procedure is not a permanent deviation from established procedure. Nonetheless, his decision is regrettable because it will lead many school districts which are not in compliance to believe that the HEW guidelines will be relaxed.

This danger is heightened by several statements of Senator Strom Thurmond, who was closely identified with your campaign, suggesting that the Nixon Administration will not require full and effective compliance with federal desegregation requirements. An example is the enclosed copy of a news report from the December 19, 1968 issue of the Columbia, South Carolina newspaper, *The State,* in which Senator Thurmond is quoted as telling Southern school administrators to ignore HEW demands and "wait for a better deal" under the Nixon Administration. Senator Thurmond also expressed approval of Secretary Finch's action this week.

We therefore think it imperative, Mr. President, that you make it clear that Title VI of the Civil Rights Act and HEW's guidelines for its implementation will continue to be firmly enforced, and that your Administration does not intend to establish a "better deal" for those who refuse to obey the law of the land.

Otherwise, there is great danger that the action of Secretary Finch and the statements of Senator Thurmond will stimulate further footdragging and evasion on the part of school districts which still discriminate against children on the basis of race. Also, as indicated by the enclosed editorial from *The Atlanta Journal* of January 30, vacillation on the part of the federal government would undermine the efforts of those Southern school officials who have attempted to obey the law.

Respectfully,

DONALD M. FRASER,
JOHN BRADEMAS,
JAMES C. CORMAN,
Members of Congress.

DEMOCRATIC STUDY GROUP,
U.S. HOUSE OF REPRESENTATIVES,
Washington, D.C., March 5, 1969.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: We are writing to you again about the matter of civil rights enforcement. We are concerned that Deputy Secretary of Defense Packard's disregard of regulations established to carry out Executive Order 11246, which bans the award of federal contracts to companies which engage in discriminatory employment practices, may signal a serious breakdown in federal civil rights enforcement efforts.

Executive Order 11246, together with the rules and regulations promulgated thereunder, is designed to assure that the federal government will not subsidize companies which practice employment discrimination. The Executive Order directs that the Office of Federal Contract Complaince, Department of Labor, shall have supervisory responsibility over enforcement of the Order and will coordinate the efforts of the various federal contracting agencies.

In the past month, defense contracts totaling $14 million were awarded to three textile firms—Dan River Mills, Burlington Industries and J. P. Stevens & Co.—despite the fact that investigations by the Defense Supply Agency revealed that all three companies discriminate in hiring, promotion and other practices. OFCC regulations of May 28, 1968, specifically provide that once a contractor is found deficient in civil rights compliance, "it must make a specific commitment, *in writing,* to correct any such deficiencies. The commitment must include the action to be taken and the dates for completion." (Sec. 60–1:20)

Compliance with this regulation is sorely lacking. On February 8, 1969, despite finds of deficiency, contracts totaling $9.4 million were granted the three non-complying companies. Further, contracts totaling $4.5 million were announced on February 19 and 20. In each case, the requirement of written assurances was ignored. Deputy Secretary Packard claims to have received oral assurances that the companies would henceforth comply with the Executive Order. Such a procedure is not totally inadequate, but is a gross violation of the OFCC regulation cited above. In addition, despite its responsibilities in this area, the OFCC was not even consulted regarding the decision to award these contracts.

Such actions seriously undermine federal civil rights enforcement efforts. As we pointed out in our letter of February 1, expressing concern at relaxation of Title VI school desegration procedures, any letup in enforcement of civil rights inevitably leads those who would disobey the law to believe they can do so with impunity.

We therefore think it imperative, Mr. President, that you make it clear to all federal contracting agencies and the business community that Executive Order 11246 will be firmly enforced. Such action is necessary in order to correct any misimpression that may have occurred due to Deputy Secretary Packard's action in awarding the contracts without proper written assurances of compliance with the Executive Order.

Further, we understand that the Department of Defense may award several million dollars in additional contracts to the same three companies, as well as contracts to four of five other textile companies whose employment policies are now under review by the Department of Defense. We urge that these contracts not be awarded unless and until such time as the companies involved meet all legal requirements not to engage in discriminatory employment practices. Any other course of action would completely disrupt orderly governmental procedures and would give notice that federal laws against discrimination may be flaunted with abandon.

We understand that Dan River Mills, Burlington Industries and J. P. Stevens & Co. will be required to file periodic reports of their progress in eliminating discriminatory practices. Until such time as those reports are filed and evaluated by the Department of

Defense and the OFCC, further contract awards to these companies would be reprehensible. In addition, contracts should not be granted those companies now under investigation until it is found that they do, in fact, comply with federal law.

Sincerely,

DONALD M. FRASER,
Chairman.
JAMES C. CORMAN,
Secretary-Chief Whip.
JOHN BRADEMAS,
Vice Chairman.
DON EDWARDS,
Chairman, Task Force on Civil Rights.

THE 1968 DEAL WITH HANOI IS OFF

(Mr. STRATTON asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. STRATTON. Mr. Speaker, some weeks ago I took the well of this House to express my concern that if we did not respond promptly to Hanoi's obvious violations of the 1968 bombing halt agreement, the mutual concessions which that agreement represented would have in fact disappeared. I said then too, that if we could not count on Hanoi to carry its share of a partial deescalation of the Vietnam fighting—where we stop doing certain specified things, and they stop doing certain specified things—how can we possibly expect them to live up to any full-scale peace agreement?

Not many persons have stood up since then, Mr. Speaker, I regret to say, to echo that sentiment. But I was glad to see this morning that one distinguished commentator, Mr. Joseph Alsop, made precisely the same point in his column in today's Washington Post.

Because the point is one that goes to the very heart of the validity of an agreement with Hanoi, it deserves to be carefully considered by all who want a genuine—as opposed to a phony—peace in Vietnam.

I recommend the Alsop column to your attention, as follows:

THE 1968 UNDERSTANDING WITH HANOI HAS BECOME A DEAD LETTER

(By Joseph Alsop)

It is easy to guess the main topic of President Nixon's talks with Ambassador Ellsworth Bunker and Gen. Andrew Goodpaster. The all-important understanding with Hanoi, which permitted President Johnson to end all bombing of North Vietnam last October, has now become a complete dead letter.

To be sure, the South Vietnamese delegates still attend the meaningless meetings in Paris. But the military clauses of the Johnson understanding, which had very great meaning, are now being as flagrantly violated by Hanoi as the accord on Laos, which Averell Harriman negotiated in 1962.

Walt W. Rostow has correctly said that the greatest American error was the failure to respond, both vigorously and promptly, to Hanoi's instantaneous violation of all the most important clauses of Gov. Harriman's 1962 accord. These were the clauses by which Hanoi solemnly promised to withdraw all North Vietnamese troops from Laos, and never to use Laos as a troop-transit route to South Vietnam.

President Nixon must now face a similar problem, but in much more acute form. The Johnson understanding, apparently reached with the Soviets as intermediaries, had two important military features. In return for the final cessation of the bombing, Hanoi was to refrain from two crucial kinds of activity.

First, there was to be no shelling or rocketing of the major cities of South Vietnam.

Second, the ludicrously misnamed Demilitarized Zone, on the border between North and South Vietnam, was not to be used for any military purpose, as agreed by Hanoi in 1954.

As might have been foreseen from Hanoi's way of keeping the promises so hopefully accepted by Gov. Harriman, the understanding that ended the bombing began to be violated not very long after the bombs ceased falling. The first probes—and that is really the right word—took the form of rocket and other attacks on various cities, finally including Saigon itself.

Though viciously cruel to some unlucky civilians among the cities' populations, these attacks on the cities have had little more military effect than Chinese firecrackers. Their sole purpose, so far as one can judge, has been to make headlines in certain American newspapers with strong Chicken Little tendencies. Because they had no military effect, these first violations were perhaps unwisely ignored.

What is happening now is altogether different, however. Reports have already appeared of ten or more North Vietnamese regiments massing above the DMZ using the rebuilt bases and restored communications which are owed to the final bombing halt.

In fact, however, the DMZ clause of the Johnson understanding is not just threatened with violations, as these reports suggest. It has instead been violated during the past fortnight in the customary flagrant, big-scale manner. In other words, whole North Vietnamese regiments have been crossing the DMZ, to operate in the two most northerly provinces of South Vietnam.

This is a very serious matter indeed. Because of the DMZ clause in the Johnson understanding, Gen. Creighton Abrams was able to reduce his forces in Quangtri and Thuatien provinces to the 3d Marine Division and the 173d Airborne Division, plus the excellent 1st South Vietnamese Division. With much reduced forces, great progress was nonetheless being made in rooting out the whole enemy structure in Quangtri and Thuatien.

All progress will of course come to an end, and acute dangers will of course arise, if entire enemy divisions begin transiting the DMZ in happy impunity, and in gross disregard of the understanding with President Johnson. This has, as noted above, begun to happen already.

It has the most vivid military significance, moreover. If it continues, for instance, it could force Gen. Abrams to go back to the fire brigade-like use of his forces to which Gen. William C. Westmoreland was too often driven by hard necessity.

Hanoi's motive for shifting the threat to Northern I Corps is pretty certainly the sanguinary failure, at least to date, of the first main thrust of the "winter-spring campaign" on the approaches to Saigon in III Corps. Once again, as in mid-December, there is hard evidence of the bitterest recriminations between the Communist high command, COSVN, and the enemy's divisional and regimental commanders in III Corps. These latter enraged COSVN by their reluctance to hurl their bomb-decimated units into suicidal ground battles.

That does not change the DMZ's challenge to the President, however. Either he must blandly ignore the total violation of the Johnson understanding, thereby incurring very grave military risks, or he must authorize Gen. Abrams to respond to the challenge in a suitably harsh manner, "at a time and place of his own choosing."

SOME BALANCED THOUGHTS ON THE ABM

(Mr. STRATTON asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. STRATTON. Mr. Speaker, there has been so much nonsense spoken on the subject of the ABM in recent weeks, some of it on this floor, and a good deal more of it in the other body, that it is refreshing to see in print a direct, simple statement of what is really the basic issue involved.

Such a statement appeared in Mr. Joseph Alsop's column of March 24 in the Washington Post. To add light rather than heat to the discussion of this vital issue, I hereby include the full text of the excellent Alsop piece:

ABM FOES ARE ASKING NATION TO GAMBLE WITH ITS FUTURE

(By Joseph Alsop)

The vice of the anti-ABM crusaders can be very simply stated. They are really talking about a subject of which they know nothing whatever: Namely, what the Soviets may do if they can believe they enjoy decisive strategic-nuclear superiority.

Secretary of Defense Melvin Laird and Deputy Secretary David Packard have now testified that the costly Soviet weapons programs are clearly aimed to gain that kind of superiority. This has nothing to do, moreover, with the numbers of nuclear warheads in the U.S. and Soviet arsenals, a subject that the crusaders endlessly babble about.

The Soviets are spending their billions on weapons intended to destroy our *delivery systems.* And if the delivery systems can be destroyed by surprise attack, our thousands of warheads will of course be worse than useless.

As already pointed out in this space, moreover, the seemingly defensive ABMs that the Soviets are already deploying must be regarded, at least in part, as the other half of the above equation. No surprise attack can be counted upon to destroy all of our different delivery systems. But it can so enormously reduce the weight of the counterattack that an ABM defense will be rendered effective and useful.

These, then, are the real terms of the problems, which has one further, purely psychological, factor. American deterrence depends, in brief, not on what Dr. Jerome Weisner believes, but on what the Soviet defense planners believe. And these are not civilian scientists; they are the Soviet marshals, all of whom strongly resemble Gen. Curtis LeMay cubed.

Their types of expenditure, especially on "counterforce weapons," quite obviously reveal what the Soviet marshals believe they can achieve over time. So you come back to the problem of what the Soviets may do if they think, even if wrongly, that they enjoy decisive superiority.

No one at all can know with certainty the answer to this question, simply because until now, thank God, the Soviets never have enjoyed anything remotely resembling superiority. You can only say that the Soviets have been sharply responsive, in at least two great crises, to the strategic-nuclear superiority enjoyed by the U.S.

For first time, and perhaps the most interesting, was immediately after the death of Stalin. The aging paranoid had spent untold sums on the early versions of the MIG fighter, although these planes were actually incapable of laying a machine gun, so to say, on the American strategic bombers of that period. Obviously, the marshals did not dare to tell the truth to the terrible old man.

With Stalin gone, however, the truth was at last told to the no doubt horrified Politburo. The result was the most important tension-relaxing move the Soviets have ever made. Austria, in fact, almost certainly owes its freedom and unity to the poor performance characteristics of those early MIGs, which at that time left the Soviet Union naked as a jaybird in the event of U.S. nuclear attack.

The Cuban missile-crisis was of course the second test above-mentioned. In 1962, the U.S. margin of strategic-nuclear superiority was still on the order of five to one. In his authoritative work "Power in the Kremlin," Michel Tatu leaves no room for doubt that the aim of the secret deployment of medium-range missiles in Cuba was to change this margin, so unfavorable to the Soviets.

Tatu leaves no room for doubt, either, that the greatness of the U.S. margin played a major role in the outcome. In this respect, however, there is much food for disquiet in Tatu's remarkable Kremlinological pendant to the late Robert Kennedy's account of the Cuban missile crisis.

There is food for disquiet because Tatu produces such detailed and impressive evidence that it was a "damn near-run thing," as the Duke of Wellington said of Waterloo. In other words, the Kremlin leaders were deeply divided, and it was touch and go for some time before the Soviet backdown that ended the Cuban crisis.

If it was touch and go when the U.S. margin was on the order of five to one, it really is rather urgent to ask oneself how the Soviets may respond in some future crisis, after they have changed the margin to favor themselves. Mind you, moreover, it will matter not one whit whether this change in margin is real, in the sense of being recognized by Dr. Wiesner.

What the Soviets think will be all that matters. Sen. Fulbright and the rest are in fact asking President Nixon to take pretty awe-inspiring risks with the U.S. future. But that is far more normal than asking Sen. Fulbright to do his homework, by reading Tatu.

THE HIDDEN WAR

(Mr. THOMPSON of New Jersey asked and was given permission to extend his remarks at this point in the RECORD and to include an editorial.)

Mr. THOMPSON of New Jersey. Mr. Speaker, does anyone doubt that this hideous war has come full cycle? If so—if there are still doubters—I would like to recommend that my doubting colleagues read an article that appeared on the front page of the Wall Street Journal. The article described the operation of the elite "Phoenix" forces that hunt the Vietcong infrastructure in the countryside. Conceived largely by CIA men and other American planners and carried out by South Vietnamese, Operation Phoenix uses "calculated brutality applied to suspected Vietcong," and on-the-spot executions, while the participating troops indulge in the looting of homes and the "systematic destruction of village installations."

The Journal asks the question: "Because the Vietcong torture and assassinate, should the allies?"

Let us ask the question I posed before: When Americans are a party to assassination, torture, terror, and looting as a matter of military tactics can there be any doubt that this war has come full cycle and that we are truly the enemy of the country we went to defend?

I would like to associate myself with the gentleman from Pennsylvania and with the intent of his resolution. I include in the body of the RECORD the full article, "The Hidden War," that appeared in the Wall Street Journal, Tuesday, March 25, 1969:

THE HIDDEN WAR—ELITE "PHOENIX" FORCES HUNT VIETCONG CHIEFS IN AN ISOLATED VILLAGE—RAID PROMPTED BY INFORMERS FINDS MOST OF FOE GONE AND NATIVES TIGHT-LIPPED—DEMOLISHING A VC MONUMENT

(By Peter R. Kann)

DON NHON, SOUTH VIETNAM.—Was it a trap? There was reason for suspicion.

But the risk had to be taken. An unsolicited bit of information offered an opportunity to strike at the local unit of the Vietcong "infrastructure" (VCI), the clandestine political and administrative apparatus through which the enemy lays claim to control much of the Vietnamese countryside.

The affair began like this:

Two ragged Vietnamese, one short and squat, the other tall and thin, recently walked into Don Nhon, a village about 50 miles southwest of Saigon that is the capital of Don Nhon District. The pair told American officials that they wanted to talk about the VCI in their home village of Vinh Hoa, a nearby community of about 2,000 persons nestled deep in Vietcong territory along a Mekong River tributary. A Vietcong-sponsored "Liberation Committee" had been elected to govern Vinh Hoa five months previously, the informers said.

The U.S. advisers were dubious about taking military action on the basis of this intelligence. An ambush might be in the offing. Vinh Hoa was dangerous territory, several miles from the nearest government-controlled village. And the informers said they were refugees, rather than Vietcong defectors, who normally could be expected to be more eager to talk. But the two stuck to their story of overt Vietcong control in their village, and their information checked out with that in allied files.

HIGH PRIORITY

Vinh Hoa clearly was a target for "Operation Phoenix," the high-priority allied effort to root out the VCI across South Vietnam. The year-old Phoenix campaign obviously is related to the Paris negotiations. When peace comes, South Vietnam's claims to control the countryside will be strongest where the VCI cadre are fewest.

The Vietcong claim that about 1,800 governing bodies have been freely elected in "liberated areas" of South Vietnam. The U.S. dismisses most of the committee as fictions existing only on paper and claims VCI cadre are being wiped out at a rate of better than 2,300 a month. Total VCI strength is estimated at about 70,000.

Although conceived largely by CIA men and other American planners, Operation Phoenix is executed primarily by Vietnamese troops. Its methods range from after-dark assassination strikes by small killer squads to battalion-sized cordon and search efforts. A small strike clearly wasn't indicated for Vinh Hoa. The village might be heavily defended. U.S. officials finally settled on a plan for a daylight assault with helicopter transportation. The U.S. 9th Division would provide support.

HUNTING THE ENEMY

Phoenix operations are reputed to be highly sophisticated and productive affairs. The Vinh Hoa effort proved to be neither. It involved intricate—and apparently flawed—planning, largely fruitless interrogation of fearful, tight-lipped villagers, calculated brutality applied to suspected Vietcong, the execution of one suspect, looting of homes by Vietnamese troops, systematic destruction of village installations and a largely unproductive hunt for Vietcong officials who apparently had fled by sampan long before the allies arrived.

The operation highlighted agonizing questions about Phoenix and the allied methods for waging war in Vietnam. Because the Vietcong torture and assassinate, should the allies? Is there value to an operation that "sweeps" a Vietcong area and then departs, leaving no permanent allied presence? Who should be considered Vietcong? Does the VC include a farmer who happens to own ancestral rice land in a Vietcong-controlled village and pays taxes to the enemy?

The counter-infrastructure experts are the Provincial Reconnaissance Units, called "PRUs." Along with the Vietnamese, they include Cambodian and Chinese Nung mercenaries. All are recruited, trained and paid by the CIA. In two days of planning the Vinh Hoa force grew to include about 40 PRUs, about 30 Vietnamese special combat police and a handful of interrogators from the Police Special Branch, Census-Grievance men and psychological warfare cadre. The Americans taking part in the operation were two civilian PRU advisers, two civilian advisers to the special police, two young Army officers working in Don Nhon District and several radio operators. Two companies of the 9th Division, about 110 men, were to form a cordon around the village to prevent Vietcong escapes.

THE LAST MEETING

Final plans were coordinated at the Tactical Operations Center of Kien Hoa province (which includes Don Nhon) the night before the strike, with more than a dozen Americans and Vietnamese attending or within earshot. The size of the meeting troubled CIA men. They worried, justifiably as it turned out, that confusion and intelligence leaks would follow.

At 7 a.m. the next morning, the operation force is waiting for its helicopter transport at the airfield at Ben Tre, the Kien Hoa provincial capital. And waiting. It turns out that the 9th Division is having difficulty arranging its "air assets." An outpost under siege in a neighboring province has to be aided.

The civilian U.S. advisers begin to get restless and irritable: "The U.S. Army is more trouble than it's worth . . . all their maps and charts and crap . . . goddamned army must have schools that teach delay and confusion . . . never seen a 9th Division operation go off on time. . . ."

One adviser spots a plane to the west circling roughly over the area of the target village. Fluttering from it are thousands of propaganda leaflets. He explodes: "Great. Just great. The army is really good at this crap. Pick up a paper and read all about it. Read about the operation that's coming in to get you."

The PRUs and Vietnamese special combat police are wearing a wild variety of jungle fatigues, flak jackets, bush hats, berets, combat boots, tennis shoes and sandals. Some are barefoot. Initially they are sitting in orderly rows along the runway. Soon they begin dispersing about the airfield.

The PRUs invent a game. As a big C130 cargo plane comes in to land, they sit on the runway, then duck their heads as the plane's wings whip past just above them. "They're the toughest men in this war," says one adviser. "They join this outfit because they want action."

The American points to a small Vietnamese half-dozing on the grass. "That man used to be a VC. He got disillusioned with them, so they killed his family. He lit out for the bush.

Spent two years out there alone, conducting a private vendetta against Charlie. God knows how many VC he killed. Finally he came in and joined up with the PRUs. He wants to kill more VCs."

HOVERING CLOSE

Shortly after 9 a.m., two hours late, 10 helicopters arrive. The Phoenix force piles aboard and is flown for 15 minutes across flat rice land and coconut groves to the landing zone, a rice paddy less than a mile from the center of Vinh Hoa. The helicopters hover close to the ground, and the troops leap out, wading cautiously through thigh-deep mud and water toward a treeline from which they expect enemy fire.

There is no firing. At the treeline the troops are joined by the Don Nhon District U.S. advisers and the two Vietnamese informants who prompted the operation. They have been separately helicoptered to the scene. The informers, garbed in baggy U.S. Army fatigues, are to remain mystery men, for their own protection. Their heads are covered with brown cloth bags with eye and mouth holes. The two present a part comic, part frightening spectacle.

The local advisers have bad news. They say the 9th Division cordon along the southern fringe of the village didn't get into place until about 9 a.m., two hours late, leaving the Vietcong an escape route. (The 9th Division later denies any delay.) Now the informers claim not to recognize the approach being taken to the village. One American sharply questions them. Another is cursing the Vietnamese "psywar" operatives trampling along with the troops: "All we need are these goddamned guys with their leaflets. And they're wearing black pajamas. Beautiful. Now the army (the 9th Division troops) will zap 'em as VC."

LOOKING AROUND

Several of the Vietnamese special police have found an empty farmhouse, recently deserted judging by damp betel-nut stains on the floor. They are passing the time knocking holes in a water barrel. In another farmhouse, the occupant, an old lady, stares at a wall while two carefree PRUs boil eggs on her wood stove.

A lone PRU wanders along the treeline shaking his head and muttering, "VC di di, VC di di . . . (VC gone, VC gone)." The troops presently advance toward a cluster of houses nearer the village center. Spaced along the mud trails at intervals of about 10 yards are thick mud bunkers, each large enough for several men. The houses also have bunkers, inside or out. Vinh Hoa, being within an allied "free strike zone," is subject to air and artillery pounding.

No booby traps materialize. The troops arrive at a substantial farmhouse with flower beds in the front yard, a manicured hedge and pillars flanking the front entrance. It is one of many prosperous homes in Vinh Hoa—surprising, since Vietcong villages usually are poorer than government-controlled towns. Isolation from major markets, high Vietcong taxes and allied bombing are among the reasons.

Behind the house some leaf wrappings are found. "The VC must have been here," an American says. "That's what they wrap field rations in." (Leaves are used by most rural Vietnamese, VC or not, to wrap food.) The occupant of the house, an old man who stares at the interlopers through wire-rim spectacles, is shaking, through age, or fear, or both.

The aged Vietnamese is questioned briefly. "Bring him along," an American says sharply. "Let's move." Another adviser says, "That old man could be the top dog VC in this village. You never know." The old man totters along with the troops. He is released in mid-afternoon when one of the two informers claims him as an uncle.

INTERROGATION

At about 11 a.m., an American adviser and two special police turn up with three captives. "Found them hiding in a house," the American says. The informers inspect the captives and whisper, through an interpreter, that one is a Vietcong village guerrilla, the second a Vietcong "security section chief" and the third a non-Vietcong, perhaps a deserter from the South Vietnamese army.

The two identified as Vietcong are bound, and one of them, a narrow-shouldered, bent young man with protruding teeth, is leaned against a tree trunk. Several police interrogators and PRUs gather around him and fire questions. They want to know where Vietcong weapons and ammunition are hidden.

The suspect doesn't know or won't say. Soon the questions are interspersed with yanks at his hair and sharp kicks to his head, face and groin. The prisoner sags against the tree, face bloodied.

"Americans don't want to be here for any more of this," says one U.S. adviser, moving away. "It's a nasty goddamned business." He adds, "You know, it's a whole cycle of this stuff. Last week in another village near Don Nhon the VC marched five government sympathizers into the marketplace and beat their heads in with hammers. So we return it on this guy. It goes on and on."

By now the informers have gotten their bearings. They lead most of the troops along a trail to a hospital building behind a hedge of blue flowers. It is a straw-thatch structure containing eight wide plank beds separated by white plastic curtains. In one corner is a mud bunker, in another a crude case of glassware and medicine bottles, some with French and American labels. There are no patients or traces of them.

The Americans decide it is a Vietcong hospital for wounded enemy troops. "Burn it," an American adviser directs. Ignited with cigaret lighters, the hut burns readily.

VINH HOA VILLAGE

In single file, the troops wind along a trail toward the center of Vinh Hoa. Since there hasn't been any firing, the possibility of an ambush is discounted. Some of the PRUs and special police are carrying food and household articles taken from the outlying farmhouses. The "psywarriors" are strewing the trail with propaganda leaflets carried in plastic bags. Some of the PRUs have ringed their helmets with garlands of flowers. The procession takes on a festive air.

Ten minutes later the column reaches the center of the village, a small cluster of houses and shops facing a square that previously contained a covered marketplace. The marketplace has been bombed out. In the center of the square is a concrete obelisk about 10 feet high—a Vietcong memorial, say the Americans, dedicated to the enemy dead. It is one target of the Phoenix strike.

The PRUs and Vietnamese special police begin searching—and sacking—the homes. They are bored, and restless, because there has been no "action." The psywarriors' plastic bags, emptied of propaganda, are commandeered for loot ranging from clothing to chickens. "Trick or treat," say an American, not really amused. In one house, some of the Vietnamese troops are having a small celebration. They have unearthed a bottle of rice wine.

A few village residents, women, children and old men, are assembled along one side of the square. They squat on their haunches in the dust. Several male captives are bound a few yards away. Against a wall, the narrow-shouldered prisoner is rocking back and forth, a trickle of blood running down his head.

Amid whirling dust, a 9th Division helicopter lands in the square. A lean U.S. lieutenant colonel in polished boots and trim uniform steps out with aides in tow. Displaying a map marked with red grease pencil, he reports the kill totals of the support troops: "Charlie Company got three KIAs (Killed In Action), Delta Company two, we got one from my chopper. . . ." All the fatalities, he says, were armed Vietcong, carrying packs. They were shot trying to flee through the cordon. "They had low-level documents on them," the colonel reports. Presently the chopper leaves.

In the middle of the square, two Americans are strapping demolition charges around the Vietcong monument. A one-minute warning is sounded. Everyone takes cover. As the charge explodes, the monument disintegrates into chunks of brick and concrete. It is exactly noon.

THE VILLAGE CHURCH

The explosion seems to galvanize the foraging troops into action. "Don't they have anything to do but loot those houses?" an American PRU adviser shouts to a Vietnamese lieutenant. "Get the men out combing the rest of this village." Two search parties move out. A third group, mostly Americans, crosses a narrow footbridge spanning a canal to investigate a church.

Crossing the bridge, the Americans spot fresh footprints on both sides of the river connected with the canal. For the moment, they pose a mystery.

The church, a Roman Catholic structure, is bolted shut at front and rear. Just as two Americans warily advance to smash a lock, the front door opens and an elderly man in white pajamas appears, smiling as though to welcome parishioners to services. The inside of the little church is newly painted and neatly scrubbed. A row of angled bullet holes along the metal-sheet roof attests to a visit from a helicopter gunship.

In the rear are a large drum and a brass gong. An American points to them and questions the elderly church attendant.

"What are they for?"

"To call the faithful to worship."

"Did you see any people leaving the village this morning?"

"No. . . ."

"We have information on how much this church pays to the VC in taxes. How much do you say it pays?"

"Maybe the people pay 100 or 200 piasters (80 cents to $1.60)."

"The church, how much does it pay?"

"The church does not pay taxes. The church never pays taxes."

"The hell it doesn't pay," the American says. "This may be a Catholic church, but it's Charlie's Catholic church."

A TACITURN LADY

The Americans follow a path past the church to a cluster of solidly built homes. Most are empty. In one, two candles burn before a postcard picture of Christ. In another, a picture of Pope Paul sits on a small altar beside a mud bunker. One house is occupied by a woman with six children. She is interrogated.

"Did you see people crossing the river this morning?"

"No, I was in my bunker."

"Where is your husband?"

"He went to the market at Cai Mang."

"Why?"

"He always goes when the soldiers come here. . . ."

"Do you know who are the VC in this village?"

"No. We don't know VC. We are Catholic. Catholics don't know VC."

"We know that a Liberation Committee was elected here. When?"

"I just heard about it recently."

"Who is the Vietcong village chief here?"

"I don't know. . . ."

"How much tax do you pay to the VC?"

"More than 1,000 piasters." (About $8.)

"How often do Vietcong song and dance (propaganda) teams come and visit?"

"Not often."

"What do they say?"

"They say the Americans will go home soon."

"How often does your husband stand guard for the VC?"

"Every five or six days."

"How often do the women here have to make punji stakes (poisoned stakes) for the VC?"

"Once or twice a year."

"That's pretty typical," says the American, heading back across the footbridge to the village square.

DISAPPEARING ENEMY

An American adviser has figured out the footprints on both sides of the river. There are no sampans around the village. Adult males except for old men, seem almost nonexistent. The village population is estimated at 2,000, but no more than 200 persons have been seen on this day.

The American finds a youngster hiding in a farmhouse. He poses a few perfunctory questions, then suddenly demands: "At what time this morning did all the people leave here by boat?" Perhaps startled by the suddenness of the query, the boy replies, "At four o'clock."

The conclusion: Most of the village's Vietcong guerrillas, VCI cadre and Liberation Committee members have eluded the Phoenix troops. "They just had to have that big meeting last night," fumes an American adviser, recalling the last planning session for the operation. "Everyone had to get in on this * * * operation. The VC must have known all about it by midnight last night. So they blew the place. Just sailed down the river on their sampans."

But there may be something to salvage from the operation. In the square, the group of squatting villagers has grown to 50 or 60. Census-Grievance operatives examine their identification cards. Few have them; in Vietcong-controlled areas, the enemy forbids the people to carry government ID cards and often punishes those who do.

The two informers, still with bags on their heads, stand behind a nearby wall, peering at the villagers. Occasionally they point to a resident and whisper to a PRU. Those put under suspicion are pulled to their feet, bound and taken aside to the prisoner group. The others remain on their haunches staring silently into the dust.

THE MOVING FINGER

One villager "fingered" by the informers is a bowlegged woman clutching a baby. She is identified as a member of the village "women-farmer association," a Vietcong citizen-involvement organization not normally considered important enough to classify as Vietcong cadre. ("No point picking them up," a U.S. official says later in Saigon. "They're more trouble than they're worth to process and hold.")

But the woman is moved to the prisoner group, clutching the baby. Her two other children, a boy about six and a girl about 10 years old, begin to cry loudly. A PRU raises a rifle butt over their heads menacingly, and the wails subside into muffled sobs.

From behind a nearby house two shots are heard. The narrow-shouldered prisoner has been executed. His body is dumped into a bunker.

One of the psywar operatives lectures the villagers on the perils of supporting the Vietcong and outlines the benefits of backing the Saigon government. Propaganda sheets bearing a smiling portrait of President Nguyen Van Thieu are handed out.

At one side of the square an American adviser muses about the operation and what it has to do with the war: "There are 30 people sitting around a table in Paris, and they just aren't going to hack it. How can they solve this thing? The people in this village have been VC for 10 years, maybe 20. How are you going to change that? We come here on an operation, and what does it prove? We've got some crook sitting in Don Nhon picking up a salary every month because he claims to be the government village chief here. He hasn't dared to visit this village for seven years. The district chief was too chicken to come on this operation. So we come in, pick up a few Charlies and leave. The VC will be back in control here tonight. . . ."

HEADING BACK

At 3 p.m., with five prisoners in tow, the troops start hiking back to the landing zone in the rice paddy for transportation home. Near the paddy they meet two U.S. soldiers from the 9th Division cordon, leading two prisoners. Each of the captives wears a neatly printed "Detainee Card."

The taller and more talkative of the two informers is brought forward to examine the new prisoners. One is identified as a deputy Vietcong village chief, the other as a non-Vietcong. Both are placed with the other prisoners.

A deputy Vietcong village chief would be the most important captive of the day by far, the others being low-level cadre at best. "Hey, we got us a big one," says an elated American adviser, who then cautions nearby PRUs: "You keep this one alive, you hear. We want him alive."

Half an hour later the troops have been helicoptered back to their compound in Ben Tre, and the prisoners are on their way to the Police Special Branch interrogation center. Results of the operation: Eight kills, one after torture. Seven prisoners taken for interrogation. One war memorial dynamited. One hospital burned. No friendly casualties.

CULTURAL VANDALISM

(Mr. RARICK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RARICK. Mr. Speaker, every American aspires to preserve a national culture. I think this is best indicated in the grants by some tax-free foundations, through Federal subsidies and with tax-free bequests to improve the theater, making it more inviting to the average citizen.

Now it becomes apparent that the easy money is not being used to display our culture, advance the arts, or to improve the quality of the humanities but rather the programs are designed to destroy everything that is sacred, moral, and holy to the American people.

In just the past few days in New York the actors and all connected with the performance of "Che" were arrested on various charges of indecency.

In another region at New Orleans, La., the Repertory Theater, financed by $1½ million in tax dollars, has been found so repulsive to the New Orleans community that the educational chairman of the women's auxiliary of the chamber of commerce is surveying the disillusioned community toward registering a formal protest.

It is time that someone in the leadership of this country take heed to what is going on and who is promoting it before the American people rise up to perpetuate their culture for the next generation.

Until such time as the drama leadership polices its own ranks I urge that this administration cut off any further funding and that the Congress not appropriate any funds for theaters, drama and thespian arts.

Mr. Speaker, a UPI release from New York City of March 25, a copy of a circulated letter from New Orleans, and an article from the Summit, Miss., Sun for March 13, follow:

"CHE!" GETS ARRESTING REVIEW

NEW YORK.—Several policemen and a judge sat quietly through a performance of "Che!" last night.

When it was over police arrested the actors, the producer, the director, the writer, the set designer, the costume designer and the box office manager. They were charged with public lewdness, obscenity and consensual sodomy. Nine of the 10 persons involved also were charged with "unlawful dealings with a child"—a youth of 17 who was in the play.

The off-Broadway show is supposed to depict symbolically the last hours of Cuban revolutionary leader Ernesto (Che) Guevara. The on-stage "Che"—played by Larry Bercowitz—devotes much of his time to stimulating sexual intercourse with Mary Anne Shelley. Both Bercowitz and Miss Shelley played their scenes nude.

The play ends with an actor playing the president of the United States and wearing nothing but an Uncle Sam hat and a red, white and blue sash around his waist shooting Guevara.

A PARENT, NOT HYSTERICAL BUT VERY CONCERNED, PROTESTS ABOUT "PROTEST: MAN AGAINST SOCIETY"

Repertory Theatre was inaugurated to open the world of theatre to those who had rarely, if ever, had the privilege of enjoying live theatre. It was intended to preserve our cultural heritage. As such, one would expect it to be not only entertaining, but somewhat inspirational and pro-American since millions of tax dollars go to support it. (Locally, New Orleans Educational Laboratory Theatre has been federally funded with approximately one and a half millions of tax dollars.)

For several weeks now, Ibsen's *An Enemy of the People* has been shown to high school students—public, parochial, and private—in the New Orleans Area. The selection of the play itself was amazing since the theme is pessimistic, bitingly ironic, scornful of those in authority and bleakly depressing. (Not exactly the type script that would make a theatre-goer out of a non-discerning teenager.)

Before attending the production, our high school population was given *free* a book entitled *Protest: Man Against Society. An Enemy of the People* (new translation by David Scanlan commissioned by Repertory Theatre, New Orleans—footnote, page 15) is printed therein, but so are essays completely incendiary in nature, violently critical of our democratic institutions, and encouraging revolt in our youth. But it is all done with finesse. Thus, the opening selection is Matthew's gospel wherein Christ commissions his twelve to go out and preach. In crescendo fashion, the essays become anti-democratic-state, more violently critical of our American institutions, more flagrantly revolutionary, until the book concludes with recommendations for militant protest.

Who are some of the authors? Robert Williams—now living in Communist China—a close friend of Mao Tse Tung. Andre Malraux—an active participant in the communist revolutionary movement in China, Southeast Asia and the Loyalist Cause in Spain. In *Man's Fate* Malruax portrays a man who realizes he must murder in cold blood for the good of the revolutionary movement. In the book, the reader is urged to subvert, to spread the ideology that would undermine

the American system and destroy her symbols—from draft registration, the Flag and even our currency: (page 159, line 7) Mario Savio—the leader of The Free Speech Movement (filthy speech) and one of the prime movers of the riots at Berkeley—is also included, as is Jerry Rubin—a well-known hippie or yippie, and a leader in the Chicago demonstrations and riots.

In his essay *What the Revolution Is All About* or *We are Vietcong and We are Everywhere*, Mr. Rubin does not attempt to be subtle. He describes America as being on the run—he claims that sex, rebellion, drugs, youth, music, open defiance, and giving aid and comfort to the enemies of our country is a combination that is hard to beat: (page 157, 5 lines from bottom of page).

There's more, much more, shock appeal in *Protest*. Of course interspersed with the authors mentioned are some who do not advocate the accomplishment of change through violence. Even Mayor Daley is a contributor, but the overall emphasis is on change through violence and civil disobedience.

Why not read the book yourself and decide if this is what you wish our children to be reading. Remember, it's paid for by You, the tax-payer!

AUXILIARY MEMBERS: This letter was referred to me, your Education Chairman. If you feel that the Women's Auxiliary of the Chamber of Commerce should register a complaint about *Protest: Man Against Society*, please check and sign the following blank, tear off, and return to the Women's Auxiliary, Chamber of Commerce, P.O. Box 30240, New Orleans, Louisiana 70130.

MARION DURST,
Education Chairman, Women's Auxiliary.

[From the Summit (Miss.) Sun, Mar, 13, 1969]

LOOKING AHEAD: THE MORAL POLLUTERS

(By Dr. George S. Benson)

In a University of Michigan auditorium crowded with men and women students and faculty, ten members of the cast of the stage play "Dionysus in '69"—six men and four women—performed naked according to the Associated Press, during 35 minutes of the three hour play. Several hours after the performance, they were arrested for "indecent exposure". University President Robben Fleming said, following the show and the arrests, that "academic and professional people regarded the production as worthy of serious consideration." Nudity is difficult to describe as obscene, President Fleming said, and the question was "the context within which nudity occurred."

The incidents of public display of nakedness at Ann Arbor followed several similar reported incidents on college campuses—some in which men and women university students were the "actors". A group of students gave such performances at the University of Wisconsin. The University of California at Berkeley and the University of Colorado at Boulder are reported to have permitted public nudity displays. Generally speaking, University authorities have taken a "permissive" attitude toward such activities.

REVOLUTIONARY "STANDARDS"

After the murder of a co-ed at Iowa State University at Ames, a County Grand Jury investigated and subsequently issued a report warning the parents of ISU students and the people of Iowa generally of "moral pollution by faculty and paid speakers" at the university. One of the documents in the Grand Jury's report was a news clipping reporting on a big campus event—a lecture by "Dr. Albert Ellis" of the "Institute for Rational Living, New York". The lecture was sponsored by the YWCA, YMCA and the University Lectures Committee. Ellis urged the young men and women students to throw off the "old standards" of behavior and participate freely in sex "outside marriage". Those who didn't, he said, "need a psychotherapist". He advocated breaking down "taboos" and explicitly recommended that after marriage the man and wife should both participate in extra-marital sex; he recommended that "the husband and wife go out separately looking for extra marital sex." Undergraduate students and faculty crowded the university's Great Hall in Memorial Union for the lecture.

JURY REPORT ATTACKED

After the Grand Jury report, the University President W. Robert Parks attacked the Jury. "No amount of vague wording," he said ". . . can cloud the fact that the main thrust of the Grand Jury report is a demand for censorship. I need not point out", he said, "how dangerous to a free society the imposition of such controls can be—far more dangerous than permitting ideas to be heard with which we may not agree."

The foregoing facts of campus life in some Universities have been cited, and the permissiveness of some University officialdom documented, because the American people, especially the parents, need to know about the activities, the institutional attitudes, and particularly the forces working to expand the "moral pollution" and set the stage for revolution. Not enough Americans are aware of the fact that Communists are working to break down "old standards" of decency and morals as a means of creating and entrapping an army of young revolutionaries. The proof of this is voluminous and undeniable. Their participation in many college outbreaks is evident to all who investigate.

STRATEGY: POLLUTE MORALS

At a Seminar held by the Center for the Study of Democratic Institutions at Santa Barbara, California, 30 campus leaders from throughout the country discussed "Toward a Strategy of Disruption" and other revolutionary subjects. Devereaux Kennedy, Student Body President at Washington University, St. Louis, said that one of the strategies of student revolutionaries dedicated to overthrowing the United States was to establish University rules permitting men and women students to spend as much time as they wished together in dormitory bedrooms.

"If you want to get kids interested in the other kinds of issues (Ed's note: stopping the Vietnam war on Vietcong terms, overthrowing the United States), you have to show that your interests lie with them, too. And we all realize parietal hours (restricting unlimited bedroom "dating") are a big thing on campuses because kids want to get rid of them. So let's get rid of them! But let's not stop there." Then he spoke of revolution (the kind being organized by the Communists). "What I mean by revolution," he said, "is overthrowing the American government—starting up 50 Vietnams . . . black rebellions . . . giving these people guns . . . performing acts of terrorism and sabotage outside the ghetto . . ."

As parents and taxpayers, the mothers and fathers of America should awaken to what is happening to youth in many American Universities today.

MIAMI—OCEANOGRAPHIC CAPITAL OF THE WORLD

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, the selection of Miami Beach, Fla., as the site of the Marine Technology Society's fifth annual conference and exposition during June 16 to 19, 1969, is fresh evidence of the fact that the Miami area has become a center for the growing science of oceanography—truly, Miami is the oceanographic capital of the world.

Some 2,500 members of the society from maritime nations the world over will gather in Miami to discuss developments and techniques in marine technology anticipated during the next 10 years. The conference theme will be "The Decade Ahead—1970–80," and papers will be presented on such important subjects as national ocean policy, ocean law, education and training, marine science status reports, marine systems and technologies, economics and investments, review and forecast.

Since the United States has invited the nations of the world to participate in an "International Decade of Ocean Exploration," the discussions of the conference will be entirely appropriate for this monumental undertaking. Miami is indeed proud to serve as host for this outstanding conference, which points up that man's study of the ocean's depths ranks in importance with his exploration of outer space, for both are vital to his future.

For years, Miami has attracted oceanographers as a natural location and jumping-off point for their activities. Its geographical location and climatic environment are ideal for many oceanographic purposes; the climate which allows year-round research is essentially tropical, although Miami is situated 150 miles north of the Tropic of Cancer. It is one of the few North American areas from which it is possible to study, in nearby waters, living coral reefs, mangrove swamps, limestone rock formations, and other phenomena associated with tropical seas and shores. The Gulf Stream, with its almost boundless opportunities for oceanic research and study, passes almost within sight of shore.

Miami-based oceanographic research vessels can help man harvest the Continental Shelf, the vast sloping undersea area between the east coast land mass and the deep waters of the Atlantic, for food and mineral resources. Small craft and research vessels can easily reach the scientifically interesting Bahamas Banks, the Gulf of Mexico, and many Caribbean areas. Southeast Florida is also admirably located for deep sea studies in the area between West Africa, Brazil, Bermuda, and Florida, whose waters teem with a wide variety of valuable marine life.

One of the first organizations to take advantage of these natural conditions was the University of Miami, whose institute of marine sciences now ranks with such other respected marine research and educational institutions as Woods Hole Oceanographic Institute, and the Scripps Institute in California. Its outstanding faculty and facilities have helped attract other oceanography-centered organizations to Miami in increasing numbers.

Located with the institute on Miami's Virginia Key is the Tropical Atlantic Biological Laboratory, an agency of the U.S. Bureau of Fisheries. The laboratory is engaged in oceanographic biological research activities including the

study of marine food resources of the entire tropical Atlantic Ocean; the design of research programs to support and increase the efficiency of the total catch by the Nation's commercial fisheries; the acquisition of knowledge for use both in harvesting and conserving stocks of surface schooling tunas in the tropical Atlantic and adjacent seas; and the aiding of the peoples of underdeveloped nations bordering the tropical Atlantic to find better means of acquiring protein rich resources near their shores.

A third major addition to this bustling scientific community will be the Atlantic Oceanographic Laboratories—AOL—of the U.S. Department of Commerce's Environmental Science Services Administration—ESSA—which recently acquired a 12-acre site on Virginia Key adjacent to the two other facilities. Miami was selected as the best location for this laboratory after keen competition among 114 other locations ranging from Maine to the Virgin Islands.

Now occupying rental quarters in the Miami area until a permanent $2.5 million AOL building is constructed on Virginia Key are five major ESSA components: The Physical Oceanography Laboratory, the Marine Geology and Geophysic Laboratory, the Sea-Air Interaction Laboratory, the National Hurricane Research Laboratory, and the Experimental Meteorology Laboratory. Space is also to be provided in the AOL building for the southern regional office of the National Oceanographic Data Center. Housing all of these units in the same structure will immeasurably strengthen the stated national requirement for sea-air interaction studies.

The Atlantic Oceanographic Laboratories provide scientific services relating to the environment which are needed by the nearby Institute of Marine Science and the Tropical Atlantic Biological Laboratory, for their research on the ocean. In addition, the U.S. Coast and Geodetic Survey ship *Discoverer* operated for the ESSA laboratories is already stationed at nearby Dodge Island, and the Survey's ship *Researcher,* for which construction funds have been appropriated, is nearing completion and will join the *Discoverer* in Miami early next year. These ships will utilize the shore "backup" facilities of the ESSA-oceanographic complex.

Thus, when AOL is able to locate on Virginia Key—hopefully, in the near future—a scientific oceanography community will be formed whose close association will allow many opportunities for mutually advantageous exchanges. The University of Miami supports this concept to the extent that it will move its Institute of Atmospheric Sciences to the key to join the "community" once the ESSA facility is there. In fact, the university plans to erect a special building very shortly, to serve as a center for the Government laboratories as well as the university's own facilities on the key.

These developments are all accomplished or in progress. Of course, Miami's role as the oceanography capital of the world envisions even greater progress in the future. For example, the January 1969, report of the Commission on Marine Science, Engineering, and Resources recommended that a new agency be formed—a National Oceanic and Atmospheric Agency, which would combine and coordinate all of the existing Government functions and more. It would include, among other services, ESSA and the Bureau of Commercial Fisheries. If this recommendation is approved, the basic nucleus of the new Agency's field activities will already be clustered on Virginia Key.

Beyond this, Miamians visualize ultimate creation of a major oceanographic science park on Virginia Key which will be the hub of the international effort to harvest the seas. Such a park would be an outstanding asset for the scientific community. Tied in with a deep water seaport in south Dade County—and including a 25-foot-deep channel through Biscayne Bay—this park-port complex would attract a large percentage of the more than 400 national firms with sizable research staffs interested in one phase or another of oceanography, ocean engineering, or the manufacturing of equipment and supplies to support these fields.

Such a tremendous aggregation of Government, scientific, and commercial groups would provide a tremendous boost to the oceanographic field—which, unfortunately, has not received the Government support that most of us would like, in the past several years, due to the Government's fiscal difficulties.

By following through with this extraordinary plan of action, Miami can become an oceanographic capital of unprecedented scope, setting the international pattern for this increasingly important science. The many Miamians who have worked so long and hard to achieve our existing progress are continuing and strengthening their efforts to make this vision a reality.

The seas, earth's last great untapped resource, offer a bonanza of food and mineral wealth unrivaled in value and importance. Miami is proud of its status as the world capital of oceanography—the scientific key that can unlock this great treasure of the oceans.

CONGRESSIONAL REFORM—A CONTINUING NEED

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, the need for congressional reform is a continuing one. For the record, I would recite an example that occurred just today.

The Committee on House Administration this morning voted favorably on House Resolution 259, to provide funds for studies and investigations by the Committee on Public Works.

Because requests by the minority for additional staffing had not been fully met, I had intended to file minority views in a report on this resolution; however, because both the committee and the House have acted immediately, I was not given an opportunity to file minority views. Without minority views, it would be difficult and futile, if not impossible, to explain to the membership sound reasons for not approving House Resolution 259, or amending it to provide for additional and badly needed staffing.

Mr. Speaker, I hope that the needs for minority staffing on the Public Works Committee can be worked out in the future by agreement. It is regrettable, however, that when situations like this do come up, it is not possible for a member, as a matter of right, to have time to file minority views which can be considered by the membership of this House when acting on legislation such as House Resolution 259.

FOREIGN POLICY: MORE EFFECT FOR LESS EXPENSE—A COMMENTARY BY AMBASSADOR BRIGGS

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, there has been a great deal of talk in recent months about "cleaning out the State Department." Most of it has been sloughed off in the press as the irresponsible remarks by the overly simplistic or the naive suggestions of well-meaning people who do not really understand the problem.

Mr. Speaker, this may sometimes be true, but before my colleagues in the House dismiss the matter as such, I hope they will take the time to read the following article which recently appeared in the March 1969 edition of the Foreign Service Journal.

The article is entitled "Why Not Give Diplomacy Back to the Diplomats?" and was written by one of America's most knowledgeable men in the field of foreign affairs, Ambassador Ellis Briggs of Hanover, N.H.

Ellis Briggs began his career in the Foreign Service in 1925, and in 1960 attained the rank of career Ambassador. During that period he served as Ambassador to seven posts, which I believe is something of a record. They included Uruguay, Czechoslovakia, the Republic of Korea, Peru, Brazil, Greece, and Spain.

Ambassador Briggs is also the author of two books, the most recent of which was entitled "Farewell to Foggy Bottom."

Here is a man who knows intimately the problems of diplomacy and policymaking. In this articulate, well-reasoned essay, he clearly demonstrates that there is in fact a need to clean out the State Department, the simple reason being so that it will function more effectively. I heartily commend his article to the attention of my colleagues for it provides some enlightenment on why our foreign policy does not always operate in the smoothest manner and in our best interests.

The article follows:

WHY NOT GIVE DIPLOMACY BACK TO THE DIPLOMATS?

(By Ellis Briggs)

(NOTE.—Ellis O. Briggs, writer and ambassador to seven countries, was born in Watertown, Massachusetts. He is the recipient of the Medal of Freedom for meritorious service as Ambassador to Korea in 1955. His prolific pen has produced numerous magazine articles and he is the author of two books, "Shots Heard Round the World" in

1957 and "Farewell to Foggy Bottom" in 1964.)

No one dealing with the operational aspects of foreign affairs can be unaware of the problem of personnel proliferation—the dismal and frustrating drag on performance resulting from too many people. It is therefore disappointing to find that the organization which purports to represent those engaged in American diplomacy—the American Foreign Service Association, control of which was recently captured in Washington by its junior State Department echelon—fails to cope with this major problem of excess staff and superfluous people. On the contrary, the drift of the Association's activities, which they have brought to the attention of President Nixon and his principal advisers, is that "modern diplomacy" will need even more people than there are on the payroll at present.

The facts of diplomatic life support no such conclusion.

The American Foreign Service, at upwards of thirty-six hundred commissioned officers, is already at least one thousand men and women too large. At every Embassy which the writer is familiar—as Ambassador to seven countries on three continents, plus continuing study of our operations abroad—the business of the United States could have been transacted more effectively by one half, or less, of the personnel assigned to each mission.

Outside the Foreign Service, overstaffing abroad by other agencies is even more serious. These Peripheral Performers—the dispensers of foreign aid, of development, of prescriptions for "emerging societies," of magic and martial music, of propaganda, and of the Crusading Spirit—are all more proliferated than the diplomats, and their ranks are in correspondingly greater need of fumigation and retrenchment. (Former President Johnson's 1968 reduction-in-force program, albeit in the right direction, turned out to be mostly hocus-pocus: the reductions were minimal, and the repatriates remained on the payroll.)

Just as during the so-called missile crisis in Washington in 1962, only a handful of persons were involved in decisions, so in even the most important of Embassies, confronting the gravest of situations, the Ambassador needs few aides to assist him. An Ambassador is supported by his Deputy, a seasoned and senior official, and between them they do what requires to be done with the Chief of State, the Prime Minister, or the members of the Cabinet of the country to which the Ambassador is accredited. In addition the Ambassador may be advised by the Political Counselor (or by the Counselor for Economic Affairs, depending on the subject matter) and perhaps by one or two subordinate Embassy officers who possess special training or experience in the area in question. Including secretaries, stenographers and clerks, an Ambassador uses a maximum of ten people to confront a critical or emergency situation; less, of course, for normal operations.

The rest of the Embassy cast contribute little except confusion, delay, cross-purposes and unread "position papers." In short, there is not enough substantive, useful, challenging or interesting work for an American Embassy of hundreds upon hundreds of people. The consequent featherbedding is as unprofitable to the taxpayers as it is stultifying to the individuals concerned.

The presence of these gigantic staffs in foreign capitals has an ill effect in another direction. It is a source of derision and disrespect on the part of the very foreigners whose good will the United States is theoretically cultivating. They manifest their attitude by destroying with monotonous and humiliating regularity such well-meaning tokens of the conspicuous American establishment as libraries and cultural centers, and even by attacking the Embassy premises. No other country in the world maintains outside its borders a fraction of the personnel camped in successive "Little Americas," where teeming administrators seek to reproduce the suburban way of life, but often merely succeed in reducing the natives to popeyed resentment. (Evacuating these communities before a threatened political upheaval costs the United States millions of dollars—for instance in the Near East in 1967.)

In searching for reasons why these truths, which are self-evident to so many professional practitioners, seem to have escaped successive administrations since World War II, it is clear that what is lacking is agreement as to the nature of foreign affairs, and above that, an understanding of the purpose of diplomacy.

The object of diplomacy is to influence the *policy* of another country, in ways favorable to the first country. It is as uncomplicated as that. That is the same object diplomacy has sought since cavemen inhabited adjacent cliffs, and pastoral societies coveted contiguous grazing areas. It is the same purpose that diplomacy will always have; the label "modern diplomacy" is therefore a misnomer, denigrating to the past and unhelpful to the future.

This definition of diplomacy as inseparable from *policy*, can be expanded to render it more specific. Take the statement: "the object of American diplomacy is to influence in ways favorable to the United States the policy of governments important to the United States." Such a declaration is both accurate and intelligible. It encourages the establishment of the priorities essential to the orderly transaction of business, without which American resources are in danger of being frittered away. It implies that the demands of Abidjan, Tegucigalpa and Reykjavik, although not necessarily unworthy, may nevertheless be less important to the American people than the problems emanating from Moscow, Rio de Janeiro or Tokyo.

Within this true definition of diplomacy, the foreign business of the United States is not ideological warfare, nor evangelism, nor huffing and puffing to accelerate alien development, nor the preservation of a balance of power or any rigid *status quo*. The business of American diplomacy is the promotion of the national interests of the United States, and the protection of those interests, in a changing and turbulent world, from whatever menace that is capable of producing an intolerable explosion.

Diplomacy as influencing the *policy* of other governments is hardly the definition that has prevailed in recent Potomac councils. For instance, the young soothsayers of the Foreign Service Association, writing in collaboration with assorted Peripheral Performers (who perhaps cannot be expected to advocate measures tending to thin their ranks or curb their activities), appear to view diplomacy, and especially what they characterize as "modern diplomacy," as something far more gaudy and uninhibited than influencing policy. Not content with that, they desire to *transform institutions*.

Now *transforming institutions* is a different proposition altogether from *influencing policy*, and it is at that point that the paths of diplomats and reformers most frequently diverge. Influencing policy involves discipline, analysis, understanding of facts and possibilities, and comprehension of their bearing on the national interests, seen in realistic perspective. It involves attention to detail, and patience, and "the application of intelligence and tact to the conduct of official relations."

Transforming institutions, in contrast, would seek for diplomacy—"modern diplomacy," to be sure—a worldwide hunting license of infinite scope and unlimited validity, encouraging the participants to thrash about in hemisphere briar patches, brandishing megaphones and bazookas.

Under that definition of diplomacy, a case can of course be made for the retention of almost limitless performers, all allegedly assisting the hunters; for an army of beaters, making the forests echo and startling the game from habitat to Helsinki; for guides tying goats to *ceiba* trees, scattering cracked corn on the ponds, and locating saltlicks; for researchers and biologists to plot the flyways and locate the spawning areas; and even for missionaries to explain to the penguins that they would really be happier if they laid their eggs along the Amazon River, where the water is comfortably warm, instead of along the shores of McMurdo Sound, where the water is uncommonly cold.

Under that definition of diplomacy, there is no end to the legions that can be recruited. Battalions of imagemakers, flashing their mirrors; gaggles of wreakers-of-good, waving lofty intentions; regiments of attaches, measuring culverts and bridges; prides of welfare workers, one foot on the accelerator and one eye on the cookie jar.

That, in fact, is precisely what has been happening.

It is beyond the scope of this paper to trace how this came about, gradually, in the wake of World War II, sometimes over the protests of an ineffectual State Department, sometimes with its blessings. But come about it did, with results that now confront us.

The American Government has been in the transforming institutions business for nearly a quarter century. To show for it, the United States has a balance of payments problem, and microscopic return on an incalculable investment.

It is time for the American people to dedicate themselves not to "modern diplomacy" but to *effective* diplomacy, with less free-loading of international freight, and no free-wheeling by crusaders.

That does not mean abandoning compassion as a legitimate ingredient in the foreign affairs equation. It does imply that a decent regard for self-interest ought no longer to be considered discreditable and that a *quid pro quo* in the diplomatic marketplace should once again have value.

That does not mean the extermination of the Peripheral Performers, whose operations, nevertheless, should henceforth be understood as *adjuncts* of diplomacy, and no longer as controlling components. Projects to foster cultural osmosis, public relations planning (labeled propaganda when someone else does it), aid of one sort or another to selected developing lands, military assistance, credits, sharing of scientific knowledge and the paraphernalia of technology—each of those things, in given circumstances to be decided upon one country at a time—can sometimes provide fruitful though usually limited assistance in the functioning of diplomacy and in the conduct of international relations.

Thus, while peripheral activities should not all be abandoned, past experience with them, their cost and their limitations, ought to be brought into focus. And future operations should be both closely scrutinized and sharply patrolled by the Department of State. Moreover, most of the personnel concerned are not diplomats, and those who are not should be detached from the diplomatic establishment.

Tools needed to bring these things about are already at hand—two tools, forged during this decade. The first is the Presidential letter of May 29, 1961, outlining the responsibility and authority of the American Ambassador. Thus equipped, there is no reason why the voice of a determined representative abroad should be inaudible through the hum of Virginia Avenue traffic, or contradicted by the bleats of bureaucratic sheep folded in Foggy Bottom. The other is the charter of March 4, 1966, from the President to the Secretary of State. This, known as National Security Action Memorandum 341,

returns to the State Department the "overall direction, coordination, and supervision" of American Government activities overseas. NSAM 341 is a delegation of power of formidable proportions, but in the ensuing three years the State Department, its leadership mired in Asian dilemmas, failed to take advantage of this grant of White House authority.

These two existing directives constitute ample ammunition for a fresh President and Secretary of State to mount an overdue campaign against the entrenched agencies and organizations that for years have been chipping away at the State Department, invading its field, and seeking to substitute the activism of the eager beaver for the voice of experience. Today, shrinking the American diplomatic service to manageable dimensions and then returning to it the necessary attributes for achievement may not prove an easy task, but it is a job to be undertaken if diplomacy is to be of maximum value to the American people. It is a job for a new Secretary of State, unmortgaged by the mistakes of the 1950s and 60s.

There is no area of the federal government that has been the object of more solicitude on the part of uninformed kibitzers and aggressive reformers than the American Foreign Service. Most of them have operated under the banner of "modern diplomacy," discredited though that emblem may be as a result of costly, futile and interminable experiments. It may be that in the nature of his work, a diplomat finds himself unable to cultivate the kind of grassroots constituency that supports other government operations. He can boast of no lobby comparable to those beating drums for the Departments of Defense or Agriculture, for example. That does not mean that the Foreign Service must cultivate a supple spine, or that diplomats should hesitate to stand up and be counted. In fact if they do not stand up, they are likely to be counted out, and at no distant date in the future.

It is high time that diplomats do speak up, for improvements generated from within testify to the vitality of the organization, and moreover among the assets possessed by professionalism is an aroused awareness on the part of the American people of the importance of foreign affairs, properly conducted. That awareness should include simultaneous acceptance of the proposition that if an American householder has a broken-down furnace, he does not call in an astrologer, a paperhanger, or a professor-who-says-he-knows-all-the-answers. Nor does the home owner invite to his cellar a traveling circus. He summons a plumber who knows about furnaces.

It is perhaps reassuring to the general public that diplomats and plumbers have that much in common. At any rate, having tried without success practically everything else since World War II ended, it might be a good idea to try giving diplomacy back to the diplomats. There would be a saving in fuel oil, and they might even repair the furnace.

CONGRESS WANTS TO KNOW ABOUT CHEMICAL AND BIOLOGICAL WARFARE

(Mr. MATSUNAGA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MATSUNAGA. Mr. Speaker, this Congress is considering a number of major defense questions, from the merits of the ABM, the number of troops that should be kept in Vietnam, to the need to revise the draft. In each case, we have been able to obtain from the Department of Defense and the Department of State a rather thorough explanation of the public policy questions relating to these problems. Although we may not have agreed with the position taken by these Departments, there has been no lack of information about them.

This has not been the case for chemical and biological warfare, however. When some questions were raised recently concerning the safety of the chemical and biological warfare programs being carried out by the United States, the gentleman from New York (Mr. MCCARTHY) asked the U.S. Army to brief Members of Congress on the public policy and safety aspects of these programs. The questions to be answered were of the same type that we would normally ask about troop deployment in NATO, our commitment to South Vietnam, procurement of the ABM or similar military subjects.

The U.S. Army presented an interesting briefing, much of it classified for reasons not altogether satisfactory. I attended that briefing but was disappointed, as were others, for the briefing did not answer the public policy questions. It was not made clear, for example, whether or not we had adequate chemical warfare deterrent and whether or not we need such a deterrent.

Our distinguished colleague, the gentleman from New York (Mr. MCCARTHY), in his usual determination and diligence, has followed up this briefing by writing to Secretary of Defense Laird, Secretary of State Rogers, and other agency heads for their answers to a comprehensive series of public policy questions on chemical and biological warfare. Answers to these questions should help Congress and the public make an intelligent evaluation of our activities in the fields of chemical and biological warfare. I look forward with interest to the replies that the gentleman from New York (Mr. MCCARTHY) will receive.

The widespread public interest in this area is shown by the editorial that appeared in the Honolulu Star-Bulletin on March 10, 1969. I include the editorial in the RECORD for the information of my colleagues:

UNJUSTIFIABLE SECRECY

The stockholders of a corporation who found out its directors were hiding various expenditures, all for the same item, in order to deceive these same stockholders probably would find themselves a new board of directors.

This, in effect, is what is happening in Congress. The Pentagon, with the connivance of a few senior committee members, has been spreading expenditures of about $350 million a year on chemical and biological warfare weapons.

It was like salting a mine in the days of the Old West. Nobody but the people who planted them knew where the nuggets were.

Now comes a congressman, Rep. Richard D. McCarthy, D-N.Y., whose wife saw a television program on CBW, as chemical-biological warfare is called. She asked her husband what he knew about it. "Nothing," he said, and meant it.

But McCarthy went to work and found out that during the last four years the Army, with the cooperation of senior members of the Appropriations and Armed Services Committees, has managed to keep secret how much the Pentagon was spending on CBW research and production.

The funds were scattered throughout the defense budget in such a manner that it was virtually impossible for individual members of Congress to determine how much was being spent and for what. References to the over-all total were customarily censored out of the testimony given to committees.

At a hearing a Pentagon spokesman refused to disclose the amount spent, saying it was "confidential." McCarthy got around this by quoting from a Library of Congress study, which was not confidential at all, though it gave the information desired.

The reason for CBW development, said the Pentagon man, is that the Russians have enough of the stuff to kill everybody.

If we know this about the Russians, and surely they know about ours, why the secrecy?

The answer, of course, is that the Pentagon and its confidants in Congress would like to keep the matter secret from the American people, who get nervous about such things, who pay the bills and who must stand responsible if this kind of weapon is ever used.

We need more congressmen like Rep. McCarthy. Why should the military hide from us what it can't hide from the Russians?

THE BURDEN OF COLLEGE EXPENSES

(Mr. TUNNEY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. TUNNEY. Mr. Speaker, today I am introducing a bill to provide tax credits to parents and students who are burdened with the heavy expenses of college education.

There is no question that the average family trying to put its sons and daughters through college faces a terrific strain on its savings and income.

Most tax credit proposals for higher education give some relief for expenses of tuition and fees. My bill would also recognize the unavoidable charges for room and board which are a major part of most college expenses—a major part of the burden.

According to figures provided by the U.S. Department of Health, Education, and Welfare, there are now 4,975,000 full-time college students in the United States. About two-thirds of these students are in public colleges and universities, where they must pay, each year, an average of $1,122 for tuition, fees, room, and board. Students attending private institutions pay an average bill that is more than twice that amount: $2,389.

In my own State, California, students and their families must pay large amounts for 1 year at a university. At public universities like the University of California at Riverside, the annual cost, including the charges for room and board, is $1,524. At the Berkeley campus, the financial burden on students and their families is $2,031. Overall yearly expenses at private institutions, including charges for room and board, are even greater: for example, $3,000 at the University of Southern California, and $3,160 at Stanford University.

Whether their sons and daughters attend public or private institutions, American parents today are paying between $800 and $1,000 annually for each student's room and board, if the student is

not able to live at home. When this is figured into the average bill paid to a private institution, room and board is about 40 percent of the total cost; but it constitutes over 70 percent of the average financial burden imposed on students attending public colleges and universities.

In a short span of 4 years, families sending their youngsters to public institutions must, on an average, pay a $4,488 education bill for each child. The 4-year figure at a private institution is $9,556. And these expenses are increasing all the time. On a nationwide basis, it is estimated that college expenses go up an average of between 3 and 5 percent every year.

College expenses place a heavy strain on a family in a short period of time, with no relief comparable to relief that is available under present tax laws for medical expenses or casualty losses.

Many provisions in our present tax laws give tax advantages to wealthy individuals and corporations. Reporting on tax loopholes, a recent article in Newsweek magazine noted:

> The low rate on capital gains costs between $5.5 billion and $8.5 billion annually. The tax exemption on interest paid by local bonds costs $1.8 billion, the depletion allowance for oil and gas deprives the government of $1.3 billion and the real-estate tax shelter takes away an added $750 million in potential revenue.

Richard Goode, formerly a senior staff member of the Brookings Institution, who now is with the International Monetary Fund, has observed that—

> The present tax treatment of educational costs gives rise to inequities and is especially questionable at a time when the need for highly trained persons is growing. . . . For example, a person who attends engineering school is usually not allowed to deduct his educational expenditures from his earnings, whereas a taxpayer who buys a truck can recover the cost through depreciation allowances.

The 1962 investment credit tax bill and revised depreciation guidelines provided over $2 billion in tax relief for investment in machinery.

Yet the ordinary taxpayer continues to be taxed at full rates. Surely, Mr. Speaker, the best form of investment we can make is our investment in education. In sheer dollar economy, it is estimated that the college-educated wage earner will earn $200,000 more than the noncollege man, over an average life span. This would mean a long-term gain in Federal revenue of at least $40,000 for each college-educated youth. Even granting maximum credits, under this bill, of $440 a year for 4 years, the Federal Government would get back $40,000 for each $1,760 it loses in allowing credits to the student or his parent.

The tax credit method of offering relief to parents is clearly more equitable than the tax deduction method, because tax credits, unlike deductions, give uniform relief, without regard to the taxpayer's tax bracket. A credit is subtracted directly from the amount of tax paid by the taxpayer. A deduction, subtracted from total income, would grant proportionately more relief to high-income families than to low-income families, giving the largest benefits to those with the least need for assistance.

Under the deduction method, a wealthy taxpayer in the higher income bracket, who may be paying taxes that amount to 50 percent of his income, for example, could deduct a $1,400 college expenditure and save half of that amount, $700, in taxes. A parent with a much smaller income, in the 20-percent bracket, would save only $280, or 20 percent of the same deduction. Under my bill, both taxpayers would save the same amount—$390—in taxes.

Again quoting Richard Goode:

> A considerably greater part of the total tax reduction would accrue to low-income and middle-income families under a tax credit than under a deduction plan costing the Government the same amount of revenue.

I grant that tax credit legislation is not the complete answer to college expense burdens. It would give no direct assistance to the small proportion of students from families with incomes so low that they pay no income tax. It would not give full advantages to those whose tax liability is less than the amount of credit.

Ways must always be sought to help these particular students, who already are the principal beneficiaries of scholarship aid. But tax credits to taxpayers will help in this area, too. Dr. Roger A. Freeman, a senior staff member at the Hoover Institution on War, Revolution, and Peace, located at Stanford University, points this out:

> The granting of tuition credits would not only free more scholarships for students from a low-income background, it would also stimulate thousands of potential donors to offer scholarships to needy students for which they would receive credits on their income tax.

While tax credits under this bill would provide greater dollar benefit to those paying high college costs, they provide a relative greater benefit to the student in a low-tuition university or college; the less he pays, the greater percent of his cost he gets as credit.

Dr. Freeman also notes:

> Tax credits would provide assistance in a manner that avoids any argument about federal control of education and also the nagging question of church-state relations.

In other words, a relationship would exist only between the Internal Revenue Service and the individual taxpayer. Dr. Freeman adds:

> Moreover, it would provide this aid without having to expand the federal bureaucracy to administer the program.

My bill would allow the taxpayer—the parent, the student himself, or any other person who pays part or all of the student's expenses—to receive a tax credit up to a maximum of $440 for up to $2,400 in school-year expenses, including room and board. I note that this maximum credit is close to the amount, $450, recommended in the past by the American Council on Education.

Taking public and private university and college students together, the average annual expense per student, living away from home, is $1,544. Thus the average credit to be allowed under this bill would be $414 per student, the amount that would be granted to taxpayers for a $1,544 expenditure.

I recognize that the total relief to those who support students in higher education could amount, roughly, to $2 billion a year. But this investment, as I have said, would offer many returns. It should be a new commitment in the interest of education, a commitment to help families making large sacrifices for higher education. Let me emphasize that it should not be an excuse to cut back on direct Federal aid to higher education. Tax credits should be taken at their face value, as a sensible way to bring help to families burdened by college expenses, and not to the institutions themselves. Other programs help the institutions.

Help to families paying for education is needed just as much and in some cases more than the relief afforded to other taxpayers under existing tax laws. And if we can talk of investing in a multibillion-dollar program in the national defense—in dubious, costly, and often obsolete devices such as "thick" and "thin" anti-ballistic-missile systems—we can give priority to our best defense—affordable education for the young.

AUTHORIZING PROFESSIONAL PAY AND CONTINUATION BONUSES FOR JUDGE ADVOCATES IN THE UNIFORMED SERVICES

(Mr. TUNNEY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. TUNNEY. Mr. Speaker, I have today introduced legislation authorizing professional pay and continuation bonuses for judge advocates in the uniformed services.

In short, the bill provides retention incentives for attorneys in uniform at the rate of $50 per month through the grade of captain—lieutenant in the Navy; $150 per month for the grades of major and lieutenant colonel—lieutenant commander and commander in the Navy; and $200 per month for the grades of colonel or Navy captain and above. Additionally, the bill authorizes the payment of a continuation bonus payable at the rate of 2 months' basic pay for each year up to 6 years which the judge advocate agrees to remain in active service, first, beyond his obligated initial service, and second, beyond the time he becomes eligible for voluntary retirement. Under my bill the payment of the second retention bonus is not contingent upon the officer having received or having been eligible for receipt of the first bonus. I should also mention that my bill allows the service Secretaries to establish regulations for the administration of the continuation bonus program. This is designed to assure that only qualified officers who have demonstrated their worth by performance will be offered the retention bonus.

The purpose of the bill is to make legal careers in the services more attractive as the present retention rate is critically low. As a former judge advocate in the Air Force, I am personally acquainted with this personnel sieve and its ill effects upon the quality of the administration of military justice. From 1951 until 1964 the

retention rate of attorneys in the Army was only 12½ percent. As of late last fall the Navy had only 38 regular lieutenants out of 630 lawyers on board. Since 1960 the Navy has retained an average of only 12 attorneys a year. One could hardly be sanguine about the Air Force situation. Exclusive of recallees, that service over the last 13 years has retained only 14 percent of its judge advocates.

These are alarming statistics. And the problem is decidedly more real than apparent. Since 1951 with the advent of the Uniform Code of Military Justice the need for experienced attorneys in the armed services to make workable an enlightened system of justice has ever increased. From the statistics I have related it is evident that as the need grew the supply of experienced attorneys diminished. The action of the 90th Congress in passing the Military Justice Act of 1968 renewed and strengthened the commitment of the Congress and of this Nation to provide for our men in uniform a judicial system modeled fully after the present Federal court system. That action was unquestionably right. But it added a requirement for more than 700 additional military lawyers.

The true test of our resolve comes then in this Congress, not the last. It was easy and painless enough to write judicial guarantees into the law. But where are the means to make those guarantees meaningful? Where are the military judges and counsel which we guaranteed to the serviceman in the last Congress, The rights are hollow indeed if there are simply no attorneys in uniform to effect the reforms we decreed.

The bill I introduce today hopefully will provide a solution to the critical problem of lawyer retention in the armed services. In fact, my solution is the very one recommended by a Department of Defense study group in late 1968, after being specially commissioned in 1967 to study the problem. As I have indicated before, events have now overrun the the study and over 700 more uniformed lawyers than the study ever contemplated are now required.

I am sure that many of you will be surprised to learn that professional pay in the Armed Forces is now authorized for physicians, dentists, and veterinarians, but not for attorneys. Is it small wonder that the services are faced with a virtually hopeless retention problem with lawyers? The special pays for these groups of officers in other professions range in amounts from $100 to $350 monthly. My proposal for lawyers is more modest as it provides for a maximum of $200 per month professional pay. You might also be surprised to learn that physicians and dentists receive longevity pay credit for their advanced education; lawyers do not. My bill does not address this subject. Additionally, I should mention that the cost of this legislation is not large for I am speaking of a total of some 3,800 military lawyers through the entire Department of Defense at this time.

I want to make it absolutely clear that I do not disagree with the concept of professional pay for the categories of officers I have mentioned. But I want to make it equally plain that I strongly believe we must provide attorneys in uniform substantial equality with their professional brothers both because it is right and now because it is patently necessary to secure to our servicemen the judicial rights to which the Congress has determined they are entitled.

It has been my observation that Congress has generally been the instrument for leading in the effort to guarantee to every serviceman his full constitutional rights. And unless I seriously misjudge the relative interests of the branches of our Government in the area of individual rights, I rather suspect that it will also fall to the Congress to spearhead this effort to provide resources for assuring that these rights are not illusory, but real and meaningful. As is apparent, this case virtually argues itself. I am confident that this proposed legislation, supported as it is by the American Bar Association, the Judge Advocates Association, and numerous concerned organizations across the country, will also have the support of this body.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. FOLEY, for the balance of week, on account of illness in family.

Mr. SNYDER (at the request of Mr. GERALD R. FORD), on account of official business in district.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. ALBERT, for 60 minutes, on April 2, 1969.

Mr. MOORHEAD, for 10 minutes, today, and to revise and extend his remarks and include extraneous matter and all Members have 5 legislative days in which to extend their remarks.

(The following Members (at the request of Mr. HANSEN of Idaho) to revise and extend their remarks and to include extraneous matter:)

Mr. TALCOTT, for 5 minutes, today.

Mr. HARVEY, for 5 minutes, today.

(The following Members (at the request of Mr. DIGGS) and to revise and extend their remarks and include extraneous matter:)

Mr. REUSS, for 10 minutes, today.

Mr. CULVER, for 10 minutes, today.

Mr. ROONEY of Pennsylvania, for 1 hour, on March 27.

Mr. FARBSTEIN, for 30 minutes, on March 27.

Mr. MCCARTHY, for 30 minutes, on March 31.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. BENNETT in three instances and to include extraneous matter.

Mr. MATSUNAGA and to include extraneous matter.

(The following Members (at the request of Mr. HANSEN of Idaho) to extend their remarks and include extraneous matter in the Extensions of Remarks:)

Mr. FRIEDEL in two instances.

Mr. FOLEY.

BILL PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, a bill of the House of the following title:

H.R. 8438. An act to extend the time for filing final reports under the Correctional Rehabilitation Study Act of 1965 until July 31, 1969.

ADJOURNMENT

Mr. DIGGS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 45 minutes p.m.),

the House adjourned until tomorrow, Thursday, March 27, 1969, at 12 o'clock noon.

CONTRACTUAL ACTIONS, CALENDAR YEAR 1968, TO FACILITATE NATIONAL DEFENSE

The Clerk of the House of Representatives submits the following reports for printing in the CONGRESSIONAL RECORD pursuant to section 4(b) of Public Law 85–804:

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION,
Washington, D.C., March 24, 1969.

Hon. JOHN W. MCCORMACK,
Speaker of the House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: This is a report to the Congress pursuant to Section 4 of the Act of August 28, 1958 (72 Stat. 972), submitted to the Speaker of the House of Representatives pursuant to Rule XL of that House.

During Calendar Year 1968, the National Aeronautics and Space Administration utilized the authority of the above-cited statute as follows:

1. Extraordinary contractual adjustment authorized by the NASA Contract Adjustment Board.

Under date of December 27, 1968, the Board authorized the adjustment of a contract for the fabrication and delivery of earth station receivers and associated test equipment with RCA Victor Co., Limited, of Montreal, Canada. Relief was granted on the ground that the parties to the contract were mutually mistaken in failing to foresee the extent of engineering development work required to overcome state-of-the-art limitations which were not apparent when the contract was negotiated. Relief was authorized only in an amount which may fairly be regarded as representing that portion of RCA's engineering development loss which is allocable to the effort expended in actually seeking to overcome the state-of-the-art limitations. The precise amount of relief was left to be determined by the Contracting Officer through discussions with RCA. It is expected that this amount will not exceed $144,000, the amount of relief originally requested by RCA.

2. Actions under Project Stabilization Agreement applicable to construction work at Cape Kennedy, Florida.

Under date of September 26, 1962, the Administrator of NASA made a determination pursuant to the Act of August 28, 1958 (Public Law 85–804), that from and after September 26, 1962, all contracts, or amendments, or modifications thereof, for the performance of construction work at the Patrick Air Force Base, Cape Kennedy, and the John F. Kennedy Space Center, should include a clause requiring contractors and all subcontractors thereunder to abide by money provisions of a Project Stabilization Agreement, to the extent such money provisions are determined by the Government to be reasonable. The Project Stabilization Agreement referred to is an agreement negotiated by and between the Patrick Air Force Base Contractor's Association and other local and national associations of contractors, and the Brevard Building and Construction Trades Council of the Building and Construction Trades Department, AFL–CIO. The purpose of this agreement is to promote stability, efficiency, and economy of performance of contracts involving construction work at Patrick Air Force Base and the Cape Kennedy complex. The agreement was originally negotiated in 1962, and amendments were re-negotiated again on April 1, 1964 and April 1,1967.

Pursuant to this determination, two NASA contracts for construction work in the Cape Kennedy area, of a total value of $13,854,271, which were awarded during 1967, included the clause making the money provisions of the above Project Stabilization Agreement applicable. While it is possible that inclusion of the clause resulted in some increase or decrease in costs under the contracts involved in an amount not readily determinable, the purpose of the Project Stabilization Agreement is to promote the overall stability, efficiency, and economy in performance of the contracts brought under it.

3. Action under Project Stabilization Agreement applicable to construction work at the Mississippi Test Facility.

Under date of June 22, 1967, the Deputy Administrator of NASA made a determination similar to that described in Paragraph 2 above with respect to contracts and subcontracts for construction work at the Mississippi Test Facility, in implementation of a revised Project Stabilization Agreement dated July 1, 1966, which had been negotiated for that area. (The original Agreement expired on June 30, 1966.) Pursuant to this determination, one amendment to an existing contract and one contract was awarded for construction work at the Mississippi Test Facility, of a value of $850,000, which was executed in 1967, included the clause making the money provisions of the revised Project Stabilization Agreement applicable. While it is possible that inclusion of the clause resulted in some increase or decrease in costs under the contract involved in an amount not readily determinable, it is noted again that the purpose of negotiating a Project Stabilization Agreement is to promote the overall stability, efficiency, and economy in performance of the contracts brought under it.

Sincerely,

T. O. PAINE,
Acting Administrator.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

623. A letter from the Acting Comptroller General of the United States, transmitting a report of audit of financial statements of the St. Lawrence Seaway Development Corporation, calendar year 1967, Department of Transportation (H. Doc. No. 91–93); to the Committee on Government Operations and ordered to be printed.

624. A letter from the Deputy Assistant Secretary of Defense (Properties and Installations), transmitting notification of certain additional facilities projects proposed to be undertaken for the Air National Guard, pursuant to the provisions of 10 U.S.C. 2233 a(1); to the Committee on Armed Services.

625. A letter from the Secretary of Health, Education, and Welfare, transmitting a report of claims paid under the Military Personnel and Civilian Employees' Claims Act of 1964 for the period January 1–December 31, 1968, pursuant to the provisions of section 3(e) of Public Law 88–558; to the Committee on the Judiciary.

626. A letter from the Director, Administrative Office of the U.S. Courts, transmitting a draft of proposed legislation to amend section 1866 of title 28, United States Code, prescribing the manner in which summonses for jury duty may be served; to the Committee on the Judiciary.

627. A letter from the Acting Administrator, National Aeronautics and Space Administration, transmitting a report of action taken during calendar year 1968 under the authority of section 4 of the act of August 28, 1958 (Public Law 85–804) (72 Stat. 972), pursuant to the provisions of that act; to the Committee on the Judiciary.

628. A letter from the Chairman, District of Columbia City Council, transmitting the first annual report of the City Council, pursuant to the provisions of section 402(10) of Reorganization Plan No. 3 of 1967; to the Committee on the District of Columbia.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. FASCELL: Committee on Foreign Affairs. Report on the future of U.S. public diplomacy (Rept. No. 91–130). Referred to the Committee of the Whole House on the State of the Union.

Mr. HAYS: Committee on House Administration. House Resolution 214. Resolution providing for the expenses of conducting studies and investigations authorized by rule XI(8) incurred by the Committee on Government Operations, with amendment (Rept. No. 91–131). Ordered to be printed.

Mr. HAYS: Committee on House Administration. House Resolution 259. Resolution to provide funds for the expenses of the studies, investigations, and inquiries authorized by House Resolution 189 (Rept. No. 91–132). Ordered to be printed.

Mr. HAYS: Committee on House Administration. House Resolution 272. Resolution authorizing the expenditures of moneys to cover expenses of the Committee on Banking and Currency incurred pursuant to House Resolution 152, with amendment (Rept. No. 91–133). Ordered to be printed.

Mr. HAYS: Committee on House Administration. House Resolution 271. Resolution to provide funds for the expenses of the studies, investigations, and inquiries authorized by House Resolution 152, with amendment (Rept. No. 91–134). Ordered to be printed.

Mr. HAYS: Committee on House Administration. House Resolution 273. Resolution providing for the expenses incurred pursuant to House Resolution 200 (Rept. No. 91–135). Ordered to be printed.

Mr. HAYS: Committee on House Administration. House Resolution 301. Resolution authorizing expenses for conducting studies and investigations pursuant to House Resolution 268 (Rept. No. 91–136). Ordered to be printed.

Mr. HAYS: Committee on House Administration. House Resolution 315. Resolution providing funds for the Committee on House Administration without amendment (Rept. No. 91–137). Ordered to be printed.

Mr. HAYS: Committee on House Administration. House Resolution 320. Resolution providing funds for the Committee on Interstate and Foreign Commerce (Rept. No. 91–138). Ordered to be printed.

Mr. GARMATZ: Committee on Merchant Marine and Fisheries. H.R. 8794. A bill to amend the Marine Resources and Engineering Development Act of 1966 to continue the National Council on Marine Resources and Engineering Development, and for other purposes (Rept. No. 91–139). Referred to the Committee of the Whole House on the State of the Union.

Mr. BOLLING: Committee on Rules. House Resolution 340. Resolution providing for the consideration of H.R. 4148. A bill to amend the Federal Water Pollution Control Act, as amended, and for other purposes (Rept. No. 91–140). Referred to the House Calendar.

Mr. RIVERS: Committee on Armed Services. H.R. 9328. A bill to amend title 37, United States Code, to provide special pay to naval officers, qualified in submarines, who have the current technical qualification for duty in connection with supervision, operation, and maintenance of naval nuclear propulsion plants, who agree to remain in active submarine service for one period of 4 years beyond any other obligated active service,

and for other purposes without amendment (Rept. No. 91–141). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. FEIGHAN (for himself, Mr. CELLER, Mr. ADAMS, Mr. ADDABBO, Mr. ANDERSON of California, Mr. BARRETT, Mr. BINGHAM, Mr. BROWN of California, Mr. BURTON of California, Mr. DELANEY, Mr. DENT, Mr. DONOHUE, Mr. DULSKI, Mr. EDWARDS of California, Mr. HALPERN, Mr. HAWKINS, Mr. MANN, Mr. MILLER of California, Mr. POLLOCK, Mr. REID of New York, Mr. ROYBAL, Mr. SCHEUER, Mr. THOMPSON of New Jersey, Mr. TIERNAN, and Mr. CHARLES H. WILSON):

H.R. 9505. A bill to amend the Immigration and Nationality Act; to the Committee on the Judiciary.

By Mr. ADDABBO:

H.R. 9506. A bill to amend the act entitled "An Act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon", approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

By Mr. ASHLEY:

H.R. 9507. A bill to amend the Military Selective Service Act of 1967 to provide for a fair and random system of selecting persons for induction into military service, to provide for the uniform application of selective service policies, to raise the incidence of volunteers in military service, and for other purposes; to the Committee on Armed Services.

By Mr. BARING:

H.R. 9508. A bill to authorize the Secretary of the Interior to make disposition of geothermal steam and associated geothermal resources, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. BEALL of Maryland:

H.R. 9509. A bill to amend title II of the Social Security Act to increase the amount of outside earnings permitted each year without any deductions from benefits thereunder; to the Committee on Ways and Means.

By Mr. BETTS:

H.R. 9510. A bill to improve the accounting systems used by agencies and departments, to reduce waste and inefficiency in the use of Government funds, and for other purposes; to the Committee on Government Operations.

By Mr. BROWN of California:

H.R. 9511. A bill to provide for an Assistant Secretary of State for Food and Population, an Assistant Administrator for Population in the Agency for International Development, and a National Council on Food and Population, and to amend the provisions of the Foreign Assistance Act of 1961 and the Agricultural Trade Development and Assistance Act of 1954 related to family planning and population control programs; to the Committee on Foreign Affairs.

By Mr. BROYHILL of Virginia:

H.R. 9512. A bill to include air traffic controllers within the provisions of section 8336 (c) of title 5, United States Code, relating to the retirement of certain Government employees; to the Committee on Post Office and Civil Service.

By Mr. BUSH (for himself, Mr. COLLINS, Mr. CABELL, Mr. PATMAN, and Mr. PRICE of Texas):

H.R. 9513. A bill to amend the Submerged Lands Act to establish the coastline of certain States as being, for the purposes of that act, the coastline as it existed at the time of entrance into the Union; to the Committee on the Judiciary.

By Mr. CAREY:

H.R. 9514. A bill to amend the Internal Revenue Code of 1954 to provide a basic $5,000 exemption from income tax for amounts received as annuities, pensions, or other retirement benefits; to the Committee on Ways and Means.

By Mr. CLARK:

H.R. 9515. A bill to amend the act entitled "An Act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon," approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

By Mr. DON H. CLAUSEN:

H.R. 9516. A bill to amend title 10 of the United States Code to establish an equitable survivors' annuity plan for the uniformed services; to the Committee on Armed Services.

H.R. 9517. A bill to amend title II of the Social Security Act to provide benefits for certain disabled widows without regard to their age, to increase the outside earnings permitted without loss of benefits, to provide for cost-of-living increases in benefits, and to pay benefits despite marriage or remarriage if it occurs after attainment of age 55, and to amend the Internal Revenue Code of 1954 to restore the provisions permitting the deduction, without regard to the 3- and 1-percent floors, of medical expenses incurred for the care of individuals 65 years of age and over; to the Committee on Ways and Means.

H.R. 9518. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. CLEVELAND:

H.R. 9519. A bill to amend the Internal Revenue Code of 1954 to allow a deduction from gross income for expenses incurred in connection with the adoption of a child by the taxpayer; to the Committee on Ways and Means.

By Mr. CONTE:

H.R. 9520. A bill to provide for uniform and equitable treatment of persons displaced from their homes, businesses, or farms by Federal and federally assisted programs and to establish uniform and equitable land acquisition policies for Federal and federally assisted programs; to the Committee on Public Works.

By Mr. CORMAN:

H.R. 9521. A bill to regulate trade in drugs and devices by prohibiting the dispensing of drugs or devices by medical practitioners and their participation in profits from the dispensing of such products, except under certain circumstances, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. CRAMER:

H.R. 9522. A bill to amend the Federal Food, Drug, and Cosmetic Act to include a definition of food supplements, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. CULVER:

H.R. 9523. A bill to amend the Internal Revenue Code of 1954 to liberalize the minimum standard deduction; to the Committee on Ways and Means.

By Mr. DENT:

H.R. 9524. A bill to amend the act entitled "An Act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon", approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

H.R. 9525. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. DOWDY:

H.R. 9526. A bill to amend the District of Columbia Unemployment Compensation Act to provide that employer contributions do not have to be made under that act with respect to service performed in the employ of certain public international organizations; to the Committee on the District of Columbia.

H.R. 9527. A bill to authorize the Commissioner of the District of Columbia to utilize volunteers for active police duty; to the Committee on the District of Columbia.

H.R. 9528. A bill to require students and teachers in the District of Columbia public schools to wear protective devices for their eyes while engaged in certain activities in those schools; to the Committee on the District of Columbia.

H.R. 9529. A bill to amend title 13, United States Code, to limit the categories of questions required to be answered under penalty of law in the decennial censuses of population, unemployment, and housing, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. EILBERG:

H.R. 9530. A bill to enable citizens of the United States who change their residences to vote in presidential elections, and for other purposes; to the Committee on House Administration.

By Mr. ESHLEMAN:

H.R. 9531. A bill to amend chapter 44 of title 18, United States Code, with respect to the sale or delivery of ammunition; to the Committee on the Judiciary.

By Mr. FASCELL:

H.R. 9532. A bill to alleviate certain hardships to employees in the administration of the Federal Employees' Compensation Act, and for other purposes; to the Committee on Education and Labor.

By Mr. FISH:

H.R. 9533. A bill to authorize the U.S. Commissioner of Education to make grants to elementary and secondary schools and other educational institutions for the conduct of special educational programs and activities concerning the use of drugs, and for other related educational purposes; to the Committee on Education and Labor.

By Mr. FULTON of Pennsylvania:

H.R. 9534. A bill to amend the act entitled "An Act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon", approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

H.R. 9535. A bill to amend the Railroad Retirement Act of 1937 to provide a full annuity for any individual (without regard to his age) who has completed 30 years of railroad service; to the Committee on Interstate and Foreign Commerce.

By Mr. FULTON of Tennessee:

H.R. 9536. A bill to provide for improved employee-management relations in the postal service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. GONZALEZ:

H.R. 9537. A bill to amend the act entitled "An act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon," approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

H.R. 9538. A bill to amend the Internal Revenue Code of 1954 to provide that the first $5,000 received as civil service retirement annuity from the United States or any agency thereof shall be excluded from gross income; to the Committee on Ways and Means.

H.R. 9539. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. GREEN of Pennsylvania:

H.R. 9540. A bill to amend the Internal Revenue Code of 1954 to include certain joint hospital laundry ventures among the cooperative hospital service organizations en-

titled to tax exemption thereunder; to the Committee on Ways and Means.

By Mr. GUDE:

H.R. 9541. A bill to make permanent the temporary provisions of law under which assistance is provided for the construction and operation of schools in federally impacted areas; to the Committee on Education and Labor.

By Mr. HALPERN:

H.R. 9542. A bill to authorize the construction of a Federal building in Queens County, Long Island, N.Y.; to the Committee on Public Works.

By Mr. HANNA:

H.R. 9543. A bill to add a new title XII to the National Defense Education Act of 1958; to the Committee on Education and Labor.

By Mr. HATHAWAY:

H.R. 9544. A bill to set forth a congressional statement on a national educational policy and to direct the Secretary of Health, Education, and Welfare to initiate a comprehensive study on the formulation of a plan to implement such policy; to the Committee on Education and Labor.

H.R. 9545. A bill to designate certain lands in the Moosehorn National Wildlife Refuge in Maine as "wilderness"; to the Committee on Interior and Insular Affairs.

By Mr. JOHNSON of California:

H.R. 9546. A bill to amend section 4 of the Anadromous Fish Conservation Act of October 30, 1965; to the Committee on Merchant Marine and Fisheries.

By Mr. McCLURE:

H.R. 9547. A bill to authorize the Secretary of the Interior to proceed with a supplementary loan to the King Hill Irrigation District, Idaho; to the Committee on Interior and Insular Affairs.

By Mr. McMILLAN:

H.R. 9548. A bill to amend section 15–503 of the District of Columbia Code with respect to exemptions from attachment and certain other process in the case of persons not residing in the District of Columbia; to the Committee on the District of Columbia.

H.R. 9549. A bill to amend the act entitled "An Act to regulate the practice of podiatry in the District of Columbia," approved May 23, 1918, as amended; to the Committee on the District of Columbia.

H.R. 9550. A bill to amend section 10 of the District of Columbia Traffic Act, 1925, as amended, so as to require reports of collisions in which motor vehicles are involved; to the Committee on the District of Columbia.

H.R. 9551. A bill to amend the act of July 11, 1947, to authorize members of the District of Columbia Fire Department, the U.S. Park Police force, and the White House Police force to participate in the Metropolitan Police Department Band, and for other purposes; to the Committee on the District of Columbia.

H.R. 9552. A bill for the incorporation of the Merchant Marine War Veterans Association; to the Committee on the District of Columbia.

By Mr. McMILLAN (by request):

H.R. 9553. A bill to amend the District of Columbia Minimum Wage Act to authorize the computation of overtime compensation for hospital employees on the basis of a 14-day work period; to the Committee on the District of Columbia.

By Mr. MacGREGOR:

H.R. 9554. A bill to amend the Immigration and Nationality Act to facilitate the entry of certain nonimmigrants into the United States; to the Committee on the Judiciary.

By Mr. MATSUNAGA:

H.R. 9555. A bill to amend title 39, United States Code, to provide additional free letter mail and air transportation mailing privileges for certain members of the U.S. Armed Forces, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. MILLER of Ohio:

H.R. 9556. A bill to provide for the renewal and extension of certain sections of the Appalachian Regional Development Act of 1965; to the Committee on Public Works.

By Mr. MOORHEAD:

H.R. 9557. A bill to amend the Federal Power Act to further promote the reliability, abundance, economy, and efficiency of bulk electric power supplies through regional and interregional coordination, to encourage the installation and use of improved extra-high-voltage facilities, to preserve the environment and conserve natural resources, to establish the National Council on the Environment, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. NIX:

H.R. 9558. A bill to amend the act entitled "An act to promote the safety of employees and travelers upon the railroads by limiting the hours of service of employees thereon," approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

By Mr. O'NEILL of Massachusetts:

H.R. 9559. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. PHILBIN:

H.R. 9560. A bill to authorize the acquisition and maintenance of the Goddard rocket launching site in accordance with the act of August 25, 1916, as amended and supplemented; to the Committee on Interior and Insular Affairs.

H.R. 9561. A bill to promote public knowledge of progress and achievement in astronautics and related sciences through the designation of a special day in honor of Dr. Robert Hutchings Goddard, the father of modern rockets, missiles, and astronautics; to the Committee on the Judiciary.

By Mr. PODELL:

H.R. 9562. A bill to amend part B of title XVIII of the Social Security Act to include drugs which require a doctor's prescription, and which are prescribed by their generic names, among the medical expenses with respect to which payment may be made under the program of supplementary medical insurance benefits for the aged; to the Committee on Ways and Means.

By Mr. PODELL (for himself and Mr. LOWENSTEIN):

H.R. 9563. A bill to repeal percentage depletion for oil and gas; to the Committee on Ways and Means.

By Mr. RIVERS:

H.R. 9564. A bill to remove the restrictions on the grades of the director and assistant directors of the Marine Corps Band; to the Committee on Armed Services.

By Mr. ROSENTHAL:

H.R. 9565. A bill to amend section 837, title 18, United States Code, to prohibit certain acts involving the use of incendiary devices, and for other purposes; to the Committee on the Judiciary.

By Mr. STAGGERS:

H.R. 9566. A bill to amend the Communications Act of 1934 to prohibit deceptive practices in news broadcasts, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. TUNNEY:

H.R. 9567. A bill to amend title 37, United States Code, to provide for the procurement and retention of judge advocates and law specialist officers for the Armed Forces; to the Committee on Armed Services.

H.R. 9568. A bill to amend the Internal Revenue Code of 1954 to allow a credit against income tax to individuals for certain expenses incurred in providing higher education; to the Committee on Ways and Means.

By Mr. ULLMAN:

H.R. 9569. A bill to amend section 809(c)(1) of the Internal Revenue Code of 1954 to treat retrospective rate credits as return premiums; to the Committee on Ways and Means.

By Mr. UTT:

H.R. 9570. A bill to establish the Interagency Committee on Mexican-American Affairs, and for other purposes; to the Committee on Foreign Affairs.

By Mr. WAGGONNER:

H.R. 9571. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. WIDNALL:

H.R. 9572. A bill to provide Federal assistance for special projects to demonstrate the effectiveness of programs to provide emergency care for heart attack victims by trained persons in specially equipped ambulances; to the Committee on Interstate and Foreign Commerce.

By Mr. ZION:

H.R. 9573. A bill to provide for the establishment of a national cemetery at or near the Lincoln Boyhood National Memorial; to the Committee on Veterans' Affairs.

By Mr. CARTER:

H.R. 9574. A bill to amend the Uniform Time Act to allow an option in the adoption of advanced time in certain cases; to the Committee on Interstate and Foreign Commerce.

By Mr. FARBSTEIN:

H.R. 9575. A bill to amend the Foreign Assistance Act of 1961 to prohibit the furnishing of assistance to countries in which individuals are receiving training as members of the so-called Palestine Liberation Army; to the Committee on Foreign Affairs.

By Mr. FREY:

H.R. 9576. A bill to amend title II of the Social Security Act to increase the amount of outside earnings permitted each year without any deductions from benefits thereunder; to the Committee on Ways and Means.

H.R. 9577. A bill to amend title II of the Social Security Act to provide for cost-of-living increases in the benefits payable thereunder; to the Committee on Ways and Means.

By Mr. NICHOLS:

H.R. 9578. A bill to amend section 4356 of title 39, United States Code, relating to certain mailings of State departments of agriculture; to the Committee on Post Office and Civil Service.

By Mr. POLLOCK:

H.R. 9579.—A bill to provide for the sharing with the State and local governments of a portion of the tax revenues received by the United States; to the Committee on Ways and Means.

By Mr. RUTH:

H.R. 9580. A bill to provide for orderly trade in textile articles; to the Committee on Ways and Means.

By Mr. ST. ONGE:

H.R. 9581. A bill to amend the act entitled "An act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon", approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

H.R. 9582. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. STAGGERS:

H.R. 9583. A bill to amend the Communications Act of 1934 to foster and promote broadcasting in the public interest and to prevent conglomerate organizations from impairing regulation of broadcasting in the public interest; to the Committee on Interstate and Foreign Commerce.

By Mr. WATTS:

H.R. 9584. A bill to establish a National Commission on Libraries and Information

Science, and for other purposes; to the Committee on Education and Labor.

By Mr. WOLD:

H.R. 9585. A bill to provide for the conveyance to the city of Cheyenne, Wyo., of certain real property of the United States heretofore donated to the United States by such city; to the Committee on Government Operations.

By Mr EVINS of Tennessee:

H.R. 9586. A bill for the establishment of a Commission to study and promulgate a national policy respecting dispersal of population and industry; to the Committee on Ways and Means.

By Mr. BYRNE of Pennsylvania:

H.J. Res. 600. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. GRAY:

H.J. Res. 601. Joint resolution authorizing the President to proclaim February of each year as "American History Month"; to the Committee on the Judiciary.

By Mr. KING:

H.J. Res. 602. Joint resolution to declare the policy of the United States with respect to its territorial sea; to the Committee on Foreign Affairs.

By Mr. ROONEY of Pennsylvania:

H.J. Res. 603. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. WHALLEY:

H.J. Res. 604. Joint resolution to declare the policy of the United States with respect to its territorial sea; to the Committee on Foreign Affairs.

By Mr. EDWARDS of Alabama:

H.J. Res. 605. Joint resolution, reciprocity in U.S. territorial waters; to the Committee on Foreign Affairs.

By Mr. RIEGLE:

H.J. Res. 606. Joint resolution to declare the policy of the United States with respect to its territorial sea; to the Committee on Foreign Affairs.

By Mr. BINGHAM (for himself, Mr. ASHLEY, Mr. BROWN of California, Mr. BURTON of California Mr. EDWARDS of California, Mr. HALPERN, Mr. KASTENMEIER, Mr. KOCH, Mr. MIKVA, Mr. MOORHEAD, Mr. PODELL, Mr. RYAN, and Mr. SCHEUER):

H. Con. Res. 184. Concurrent resolution proposing a multilateral treaty to bar all military installations from the sea bed; to the Committee on Foreign Affairs.

By Mr. CLARK:

H. Con. Res. 185. Concurrent resolution expressing the sense of the Congress that efforts should be made to invite Spain to membership in the North Atlantic Treaty Organization; to the Committee on Foreign Affairs.

By Mr. MOORHEAD (for himself, Mr. BINGHAM, Mr. BROWN of California, Mr. CONYERS, Mr. DENT, Mr. EDWARDS of California, Mr. FARBSTEIN, Mr. GAYDOS, Mr. GILBERT, Mr. HALPERN, Mr. HAWKINS, Mr. HECHLER of West Virginia, Mr. JOHNSON of California, Mr. KASTENMEIER, Mr. KOCH, Mr. LEGGETT, and Mr. MCCLOSKEY):

H. Con. Res. 186. Concurrent resolution expressing the sense of the Congress that the United States should begin to reduce its military involvement in Vietnam; to the Committee on Foreign Affairs.

By Mr. MOORHEAD (for himself, Mr. MIKVA, Mr. MINISH, Mrs. MINK, Mr. MOSS, Mr. PODELL, Mr. REES, Mr. REUSS, Mr. RODINO, Mr. ROSENTHAL, Mr. ROYBAL, Mr. RYAN, Mr. SCHEUER, Mr. THOMPSON of New Jersey, Mr. VIGORITO, Mr. CHARLES H. WILSON, Mr. WALDIE, and Mr. YATRON):

H. Con. Res. 187. Concurrent resolution expressing the sense of the Congress that the United States should begin to reduce its military involvement in Vietnam; to the Committee on Foreign Affairs.

By Mr. BROWN of California:

H. Res. 341. Resolution to provide for an International Conference on Problems of Human Environment; to the Committee on Foreign Affairs.

H. Res. 342. Resolution to abolish the Committee on Internal Security and enlarge the jurisdiction of the Committee on the Judiciary; to the Committee on Rules.

H. Res. 343. Resolution creating a special committee to conduct an investigation and study into the legal, political, and diplomatic status of lands which were the subject of grants from the King of Spain and from the Government of Mexico prior to the acquisition of the American Southwest as a result of the Treaty of Guadalupe-Hidalgo concluding the Mexican-American War in 1848; to the Committee on Rules.

By Mr. DUNCAN:

H. Res. 344. Resolution expressing the sense of the House of Representatives with respect to establishing an all-volunteer military force; to the Committee on Armed Services.

By Mr. NIX:

H. Res. 345. Resolution to abolish the Committee on Internal Security and enlarge the jurisdiction of the Committee on the Judiciary, to the Committee on Rules.

By Mr. PATMAN:

H. Res. 346. Resolution authorizing the printing of additional copies of the "Report of the Joint Economic Committee"; to the Committee on House Administration.

By Mr. PERKINS (for himself, Mr. DENT, and Mr. ERLENBORN):

H. Res. 347. Resolution to authorize the General Subcommittee on Labor of the Committee on Education and Labor to conduct an investigation and study of production of foreign-made goods competing with domestically produced goods and of new developments in coal mine safety and health practices in Great Britain; to the Committee on Rules.

MEMORIALS

Under clause 4 of rule XXII,

93. Mr. ULLMAN and Mrs. GREEN of Oregon presented a memorial of the Legislative Assembly of the State of Oregon, memorializing the Secretary of Agriculture and the Secretary of the Interior to refrain from implementing the recently proposed increase in fees of grazing on public land because the agricultural sector of this Nation's economy is undergoing a period of recession, and the increase would have such detrimental economic impact on the livestock industry that the entire profit margin in many livestock operations would be removed, which was referred to the Committee on Interior and Insular Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO (by request):

H.R. 9587. A bill for the relief of James J. Carpenter; to the Committee on the Judiciary.

By Mr. BROYHILL of Virginia (by request):

H.R. 9588. A bill for the relief of John Acerbi; to the Committee on the Judiciary.

By Mr. CAREY:

H.R. 9589. A bill for the relief of Giuseppe De Blasi and his wife, Grazia De Blasi; to the Committee on the Judiciary.

By Mr. CORMAN:

H.R. 9590. A bill to confer jurisdiction on the U.S. Court of Claims to reopen and continue case No. 66–55; to the Committee on the Judiciary.

By Mr. GONZALEZ:

H.R. 9591. A bill for the relief of Elgie L. Tabor; to the Committee on the Judiciary.

By Mr. HATHAWAY:

H.R. 9592. A bill for the relief of Ferdinando Muscas and his wife, Christina Muscas; to the Committee on the Judiciary.

By Mr. McFALL:

H.R. 9593. A bill to confer jurisdiction on the U.S. Court of Claims to reopen and continue case No. 66–55; to the Committee on the Judiciary.

By Mr. MACGREGOR:

H.R. 9594. A bill for the relief of Iraj Rigi; to the Committee on the Judiciary.

By Mr. O'KONSKI:

H.R. 9595. A bill to confer jurisdiction on the U.S. Court of Claims to reopen and continue case No. 66–55; to the Committee on the Judiciary.

By Mr. RHODES:

H.R. 9596. A bill for the relief of Guisappa Guarino; to the Committee on the Judiciary.

By Mr. ROYBAL:

H.R. 9597. A bill for the relief of Rafael Martinez-Garcia; to the Committee on the Judiciary.

By Mr. ST. ONGE:

H.R. 9598. A bill for the relief of Sea Oil & General Corp., of New York, N.Y.; to the Committee on the Judiciary.

H. Res. 348. Resolution to refer the bill H.R. 9598 entitled "A bill for the relief of Sea Oil and General Corporation, of New York, New York" to the Chief Commissioner of the Court of Claims pursuant to sections 1492 and 2509 of title 28, United States Code; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

TIME TO STOP THE NONSENSE ON CAMPUS

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, March 26, 1969

Mr. CHURCH. Mr. President, throughout our Nation thousands of concerned citizens have gazed in wonderment at the brazen destruction of property and thoughtless disruption of the learning processes on our Nation's college campuses.

Few, if any, of our people question the right to dissent and to make grievances known through peaceful means. But the right to dissent does not include the right to destroy. The case for change confers no privilege to invoke anarchy, for if there is to be reasoned change, orderly processes must be preserved.

I am happy to say that in my own State, school administrators, faculty, and students have thus far succeeded in reaching mutually satisfactory solutions to campus problems. Needless to say, I hope this atmosphere of cooperation continues.

The Washington Post on March 17 published an editorial entitled "Time To

Stop the Nonsense on Campus." It is a cogent article placing in perspective the problems which confront our college campuses. I ask unanimous consent that it appear at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME TO STOP THE NONSENSE ON CAMPUS

The disgraceful episode at Georgetown University Thursday night, when a handful of young hoodlums, most of them with no connection with the University, refused to permit the Mayor of San Francisco to make a speech, is the logical outcome of the attitude that previously led to the seizure by students of offices and buildings at Howard University. It is an attitude, common these days among some students and nonstudents who like to foment trouble, that no one's rights matter but their own and that society must allow them to do their thing regardless of what it is or where they do it.

It is long past time for an end to this kind of nonsense. There is room on every college campus for dissent and for criticism of the status quo. A campus without those elements is likely to stagnate and deserves to die. But there is a place and a time for dissent and for demonstration and there are limits on protests, whether by faculty, students, or nonstudents, that every university ought to enforce.

Two recent actions of the Supreme Court provide some guidance as to what those limits ought to be. A couple of weeks ago, the Court upheld the right of students to wear black armbands to class as a demonstration of their opposition to the war in Vietnam. This was a proper exercise of the right of free expression, the Justices said, and was protected by the Constitution against interference by school administrators. But the Court added that "conduct by the student, in class or out of it, which for any reason—whether it stems from time, place or type of behavior—materially disrupts classwork or involves substantial disorder or invasion of the rights of others is, of course, not immunized by the constitutional guaranty of freedom of speech." As if to underline that sentence the Court refused last Monday to review the expulsion of ten students from Bluefield State College in West Virginia for "riotous" behavior. Justice Fortas, speaking only for himself, pointed out the difference. These ten students, he said, were "engaged in an aggressive and violent demonstration, and not in peaceful, nondisruptive expression."

That is precisely the distinction that needs to be drawn in all campus protests. Students must be free to air their complaints and grievances, real or imaginary, in meetings, speeches, handbills, newspapers, conferences, and any other form of nonviolent persuasion including noncoercive picket lines. But they ought not to be free to disrupt classes, destroy property, deprive others of the right to speak, bar anyone from going into or out of a building, or interfere with the normal functioning of any part of a university's activities.

Merely saying that such a distinction ought to exist is quite a different thing from establishing it on campuses as different as Howard and Harvard, Georgetown and Berkeley. The primary burden, of course, for putting an end to the current nonsense is on those who administer colleges, who teach in them, and who attend them. About the last thing any university wants to do is to call in the police. If student groups, aided by campus police, can organize themselves sufficiently to cope with disruptions, so much the better. But, if they cannot, the formal power of society, in the form of the police, must be called upon to maintain order.

Father Hesburgh's formula for handling disorders at Notre Dame is still a good one. He has warned students that anyone disrupting a university activity will be given 15 minutes to think about it, then suspended if he continues to disrupt, and then expelled if he persists; nonstudents participating in disorders are to be arrested. But it takes more than an *ipse dixit* to establish such a policy. To make it stick, administrators must have done their homework—unifying behind them the great mass of faculty members and students who are interested in learning even while reforming the universities and making clear to all students what the penalties for riotous behavior are to be.

These are two great dangers in the current wave of unrest on the campuses. The first is that if disorder continues unchecked some great educational institutions will be destroyed. The second is that a wave of repression, aimed not at confining protest to its proper scope but at eliminating it, will follow. One of the major causative factors of the current problem is that many colleges refused for too long to listen when student and faculty members were protesting quietly. The affair at Columbia University a year ago demonstrated, much too well, that violence could produce changes that peaceful dissent had failed to produce. Thus a wave of repression unaccompanied by needed reforms will lead eventually only to greater trouble.

The Gallup Poll noted last week that campus disorders have replaced the Vietnam War as the No. 1 topic of serious discussion in homes across the country. When you add to this ferment the rumblings from state legislatures, alumni groups, and moderate students the message should be clear enough not only to those who would rather disrupt and destroy than learn and reform but to those who administer the institutions of higher education as well.

A BILL TO PROVIDE HAZARDOUS RETIREMENT FOR AIR TRAFFIC CONTROLLERS

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. BROYHILL of Virginia. Mr. Speaker, today, I am introducing a bill supported by the Air Traffic Control Association, an association of air traffic controllers in the employ of the Federal Aviation Administration, to obtain for them the same privileges of retirement at age 50 after 20 years of service as are now provided to other classes of Federal employees who have hazardous or arduous duties under section 8336 of the Retirement Act.

Already included in this category are Federal law-enforcement officers such as FBI agents, employees of the Bureau of Prisons, employees of military disciplinary barracks, and employees of the Department of Corrections of the District of Columbia. As my colleagues know, there are other classes of Federal employees who have these same benefits through separate legislation, such as Public Health Service officers and Foreign Service officers.

Mr. Speaker, the hazards of air traffic control duties are not newly discovered. This is something the Congress knew 10 years ago. When Congress enacted the Federal Aviation Act in 1958, it inserted section 302(g) which directed the Administrator of FAA to prepare a report and submit it to Congress with respect to the need for early retirement for controllers. The Administrator did so. It is identified as Senate Document No. 57, 87th Congress, second session. The Administrator found there were unique pressures and tensions in this profession, and that it was a young man's game. He found that controllers should have early retirement, not only for their own good, but for the good of the service and the safety of the air traffic control system.

Mr. Speaker, to further point up the need for this legislation, I want to place in the RECORD a portion of the testimony of Mr. James D. Hill, general counsel of the Air Traffic Control Association, on May 7, 1968, before the Senate Subcommittee on Retirement, when the subcommittee was considering Senator RANDOLPH's bill, S. 3424, 90th Congress:

We respectfully suggest to the Committee that there is no more deserving group in the entire Government for twenty-year retirement than air traffic controllers, with due deference to all the hazards foreign service officers or others may have.

An air traffic controller's job was difficult ten years ago and it has been made twice as hard since that time because of the fact that air traffic volume has doubled in the last ten years.

When the Act was passed in 1958, towers handled 25 million operations a year; now it is 50 million. Centers handled 8 million instrument operations a year; now it is 17 million. Flight Service Stations assisted 17 million aircraft; now it is 34 million.

The Administrator issued his ten-year aviation forecast last month and estimated that aviation traffic will triple or quadruple again in the next ten years.

The trouble is, the size of the air traffic control work force is about the same today as it was ten years ago, and no provision is being made to meet the future.

Many controllers who were supposed to handle four or five aircraft at a time are handling 35 or 40 at a time. Because of personnel shortages in the system, they don't even get a coffee break and they have to eat lunch at their position. They work eight hours a day, six days a week, in concentrated effort. When they get up, their pants stick to the seat. One controller tells of spilling a hot cup of coffee on the hand of the man next to him, who did not even notice it, as he was so involved in his work.

This is not just the opinion of the controllers' group; a great deal of medical research has been done on the subject by many people. This includes the FAA medical staff at Georgetown Medical Center; the FAA Aeromedical Institute at Oklahoma City; the Flight Safety Foundation; the U.S. Air Force Human Factors Research Laboratory; Carnegie Institute; the British RAF Institute of Aviation Medicine; the Medical Center at New York State University; Harvard's Guggenheim Center for Aerospace Health and Safety—I could go on and on. All of these groups have made studies of the effects of tension and pressure and aging on air traffic controllers. All report that these people have an undue amount of tension and pressure, which in time worsens into serious ailments. Initially they may just suffer irritability, inability to sleep, nervousness, tremors, cramps, headaches or nausea, but with time, as with any tension or pressure when not relieved, it degenerates into the three usual products of unrelieved tension and pressure—heart attacks, ulcers and mental illness. All of these affect controllers, to a much greater extent than the general population.

The FAA puts out a monthly list of people who retire, and when I examined the list last month, I noticed that 11 controllers retired. Over half—six of them—were disability retirements. I suggest to the committee

where more than half of the people of any Federal occupational specialty can't make it to age 55 and must retire on disability because of the debilitating, arduous nature of their job, you have per se, a hazardous occupation.

If we were to consider that "hazardous" in the statute means hazardous to life, such as being shot to death in law enforcement duties, rather than hazardous to health, we would be glad to compare our profession with the others on this basis also. Within the last month we have received reports of five of our members who suffered heart attacks on the job. Two died immediately. Let me refer just to one for the committee's enlightenment. This is a typical example of the problem. This man was a controller at the Kansas City Center on the 4:00 p.m. to midnight shift with heavy traffic all the time. At about 9:30 he got an unusually complex traffic situation, the kind that can result in a midair collision if not speedily corrected—it took him about twenty minutes, working in cold perspiration, I am sure. When he finished he said he was sick, got up holding himself, slumped to the ground and died within a few minutes. He was 32 years old, and left a wife and three small children.

Let me emphasize, this man did not have a bad heart when he came into the service. Controllers have to pass a medical examination which is more rigorous than the examination which the agency requires for commercial pilots. Also, a psychological examination; and they must repeat these exams and pass them every year to stay in the service. This was a man with a perfectly sound heart a few hours before, but these are the kinds of things that happen all the time in the Air Traffic Control Service.

We think that this situation raises some questions. First is the moral question: How much should the Federal Government, as an employer, expect of an employee? Should it require him to continue to work until the day he is carried out on a stretcher dead or a useless hulk of a man for the rest of his life or should it give him freedom before this happens?

Second, is the question of safety. FAA medical research has found that the ability of a controller to handle heavy traffic starts to slide down hill fast after he becomes forty years of age. Yet he can't quit because of this; he has to stay on until he is 55, although he can't really do the job any more. It is like asking an athlete to play major league baseball at age 55. He can't do it, and neither can a controller. But, under present law, he is forced to hang on like grim death to a job he can't really do. His comrades on each side "carry" him, and try to conceal it from the facility chief—so he must hang on until the "lucky" day when he is "fortunate" enough to have a heart attack or ulcer and can get out on disability. This is not a safe way to operate the air traffic control system.

Third, it creates recruitment, retention and staffing problems; people no longer want to enter the service because of the job pressures. This is especially true of the high density terminals like Chicago, New York and Los Angeles. I saw a report last week stating that O'Hare Tower, which has 64 journeyman positions, had 39 journeymen on duty and 25 vacancies. When this occurs, it means the facility chief must use trainees who have not checked out, or he must double up positions, or must call fatigued controllers back on overtime. All of these have safety implications.

Mr. Speaker, various measures to achieve earlier retirement for air traffic controllers have been introduced in prior Congresses, but none have been enacted. Daily we are asking these men to control the lives of thousands of people. We can't keep putting off a decision in a matter as important as this. I urge the Congress to act on this legislation without delay.

YOUNG MARYLANDER WINS SCHOLARSHIP

HON. JOSEPH D. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, March 26, 1969

Mr. TYDINGS. Mr. President, the Westinghouse Corp. recently conducted its annual talent search for outstanding scientists and mathematicians. Over 22,000 students from high schools cross the country submitted projects to this year's conference in Dallas.

Among the top 10 national winners was a young Marylander, Justin C. Schaffert, of Silver Spring, Md. Justin's project, which dealt with the patterns of numerical coefficients of Pascal's triangle, won the young mathematician a $4,000 scholarship. Justin, who now attends Springbrook High School, hopes to use his scholarship at the Massachusetts Institute of Technology this coming fall.

Our technological society is demanding that each of us acquire a greater understanding of the physical sciences in order to be able to handle the exigencies of modern life. I bring the accomplishments of this young man to the attention of my colleagues not only because Justin is an outstanding scholar but also because he recognizes the impact of technology on our society and environment and the need to apply our knowledge of the sciences in solving the problems that confront us.

I ask unanimous consent that an article honoring Justin, published in the Washington Star on March 4, 1969, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUNG MATH WIZARD GETS $4,000 AWARD

A 17-year-old mathematics wizard from Silver Spring has won a $4,000 scholarship in competition in the 28th annual Westinghouse talent search.

Justin C. Schaffert, a senior at Springbrook High School and the son of Mr. and Mrs. Justin C. Schaffert of 1039 Cresthaven Drive, was selected among the top 10 young scientists in the country for his study of Pascal numbers. Schaffert's project deals with the aspects of a pattern of numerical progression first explored by Blaise Pascal.

Complex number theories are nothing new to the young mathematician, who wants to attend Massachusetts Institute of Technology and study pure math. Last summer he attended a special session on math at Ohio State University. He has founded a chapter of a national mathematics society at Springbrook and has organized a math tutoring system there.

Schaffert also is working with other students to build a permanent 10-inch reflector telescope on the school grounds. Montgomery County is sponsoring the materials for the telescope, which Schaffert says will be worth about $3,000 when finished.

Schaffert's father is an electrical engineer at the Goddard Space Flight Center.

The top winner of the national contest is a Dallas high school senior who won a $10,000 scholarship for a mathematical theory on the origin of the universe. Seventeen year old Lane P. Hughston, who last year was victorious in the International Science Fair competition, won on a project dealing with the theory of collision of interstellar bodies.

Other area winners of the contest, which drew more than 22,000 entrants, were two Virginia high school students who each won $250.

Jack R. Woodside Jr. of W. T. Woodson High School in Fairfax won for computing the radius of the moon's orbit. Joseph B. Jordan Jr. of McLean High School won for surveying two types of stars and evaluating their characteristics from variations in brightness.

THE NATIONAL COUNCIL ON THE AGING HONORS GENEVA MATHIASEN

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, March 26, 1969

Mr. WILLIAMS of New Jersey. Mr. President, the Ollie A. Randall Award is presented each year by the National Council on the Aging to a person who has performed especially meritoriously to help make life better for older Americans. This year, the award was given to Mrs. Geneva Mathiasen, who had served as executive director of the NCOA until her retirement late last year.

The honor paid to Mrs. Mathiasen can be well appreciated by members of the Senate Special Committee on Aging. Mrs. Mathiasen has been an informative and very helpful friend of that committee on many occasions during the past 8 years. In fact, her suggestions have led directly to several committee or subcommittee studies in areas that needed close attention. Her concern about the problems facing the elderly is genuine and far-reaching; but she also sees that great new opportunities open up to a nation as large numbers of the elderly assert their determination to enjoy satisfying and rewarding lives in retirement or in second or even third careers.

Perhaps the best description of Mrs. Mathiasen's contribution to the field of aging can be found in the citation for the Ollie A. Randall Award. I ask unanimous consent that this tribute to one of the pioneer leaders in her field be printed in the RECORD.

I also wish to note that the NCOA is fortunate in having Mr. William C. Fitch as Mrs. Mathiasen's successor. Mr. Fitch has served inside of government and in other ways for the well-being of older citizens, and his past experience bodes well for his present responsibilities.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

THE OLLIE A. RANDALL AWARD, 1969

To Geneva Mathiasen, our esteemed associate and former Executive Director, the National Council on the Aging is honored to present the 1969 Ollie A. Randall Award for Distinguished Service to Older People.

For two decades as Executive Director of NCOA and its predecessor organization, The National Committee on the Aging of the National Social Welfare Assembly, Mrs. Mathiasen has exemplified the nation's concern for the well-being of its older citizens.

As a writer, editor, speaker, and more than these as a humanitarian, she has had a major part in the achievement of the most significant programs for the elderly. In forums as diverse as the Congress of the United States and the small neighborhood meeting hall she has been the spokesman for those who are often neglected and forgotten.

Mrs. Mathiasen has long been the guiding spirit of the National Council on the Aging. We are proud to be associated with her, and we are honored that she joins the other distinguished Americans who have been recipients of the Ollie A. Randall Award.

S/Edwin F. Shelly, President,
William C. Fitch, Executive Director.

THE PARIS PEACE TALKS

HON. ALBERT GORE

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 26, 1969

Mr. GORE. Mr. President, I ask unanimous consent that there be printed in the Extensions of Remarks an article entitled "Peace Talks: All Talk, No Peace," written by Mr. James McCartney and published in the Chicago Daily News of March 25, 1969.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PEACE TALKS: ALL TALK, NO PEACE—BOTH SIDES SHY AWAY FROM MAKING REAL CONCESSIONS OR TAKING FIRST STEP TOWARD ENDING VIETNAM WAR

(By James McCartney)

PARIS.—To this date the Vietnam peace talks have been a flimsy facade, an exercise in "let's pretend."

A year from the time that President Lyndon B. Johnson withdrew from politics to make peace talks possible, the situation is grim.

There is no sign the Communists came to Paris with the intention of making peace. And the United States has put nothing on the table that could be called a solid, give-and-take negotiating proposal.

If President Nixon has a "fresh approach," as promised in his campaign, it is the best-kept secret in Paris.

The struggle over Vietnam is not being fought here at all, but on battlefields half a world away.

Those who know the situation best predict a road so long and hard that they may have to sell it to President Nixon as well as to the public.

Mr. Nixon has said he is pinning his major hopes for peace on these talks. But those in key spots here can't see how the talks are going to do it.

Neither side is speaking to the other. Each is talking only in its own language, for its own people.

You can't really call these round table sessions negotiations. As one high U.S. official puts it: "We talk past each other."

The urbane Henry Cabot Lodge, chief U.S. negotiator, still believes that the most significant achievement so far was getting the Communists to come to Paris.

One top man in the U.S. delegation frankly doubts if the Communists came expecting to make peace. He points out they didn't agree to do so—they only agreed to show up in Paris if the United States would stop bombing North Vietnam.

So far the U.S. approach has been extremely cautious.

Ambassador Lodge has said he would like to talk about three things—the demilitarized zone, prisoner exchange and mutual troop withdrawal. But the United States has not offered to do anything, specifically, to end the war.

There is some question whether either side is ready to end the war as matters stand. Each is still attempting to influence the talks by what it does on the battlefield. The war, once again, is escalating—and each side, in a pattern that goes back for years, accuses the other of starting the latest round.

The two sides don't agree on the most fundamental question—who is winning? This is what is causing the continuing struggle on the battlefield, as both sides attempt to win negotiating points.

Each believes it must "negotiate from a position of strength." Each finds it easier to apply military pressure than to make a first step toward stopping the war.

North Vietnam, in fact, came to these talks with the swagger of a conqueror. "They talk like conquerors, with a hobnailed boot on our heads." says one U.S. negotiator.

The Communists argue they have won, and that the United States is too proud, corrupt or stubborn to admit it. "Defeated and yet trying to seek a position of strength on the battlefield and at the conference table, the United States is nurturing sheer illusions," the chief negotiator for the Viet Cong, Tran Buu Kiem, said recently.

U.S. negotiators insist that the Communists know better than to think they have won. Both sides know all too well that the war is a stalemate, according to the sources.

But the battlefield struggle suggests strongly that a more convincing settlement may have to be reached there before any settlement at all will be possible here.

"It's going to be messy," says a high U.S. official. "Everything about Vietnam has always been messy. It's going to be fight and talk, fight and talk. It's likely to go on a long time."

Sen. Edward M. Kennedy (D-Mass.) said that Mr. Nixon told congressional leaders he had a "peace plan" he intended to bring to Europe on his recent trip. Nobody here seems to know anything about it.

Mr. Nixon also has referred to a "phase two" of the Paris negotiations, in which the parties get down to brass tacks. There is no evidence of a "phase two" here yet.

At the moment, U.S. officials, including the President, are hinting strongly that secret negotiations—or "private talks," as Mr. Nixon has used the term—may provide the ultimate breakthrough.

It is a measure of the desperate state of the U.S. position that the possibility of unpublicized talks had to be discussed openly—possibly in the hope it might advertise U.S. willingness to participate.

FAINT WISP OF HOPE

On such a slender reed do U.S. hopes currently rest. It is a slender reed because the objective is so limited.

The question is not what might be said in secret negotiations—what the basis of a settlement might be—but whether the Communists can be persuaded to talk.

There is almost no suggestion of compromise or new initiatives to try to break the deadlock. There is, on the other hand, complete awareness that the U.S. public would not accept a huge escalation of the war to try to win it.

The present U.S. program, from all indications, is simply this:

We will continue battlefield pressure to try to convince the Communists we can't be beaten.

We will attempt to get discussions started on small items in the hope of broadening them eventually to major, important issues.

We will concede nothing.

We will be prepared to stay as long as necessary to hammer out some kind of a peace agreement.

All of this is another way of saying: We will not try for a dramatic breakthrough.

NO CLEAR-CUT ANSWERS

So the questions remain: What might we do? How do we get out of Vietnam?

There are no clear-cut answers, but in the months that there have been contacts with North Vietnam and the National Liberation Front (NLF), the United States has learned a lot. It has not been able to find the ground rules for a settlement, but it has been able to see the kinds of choices available.

At least some members of the U.S. delegation believe a major mistake may have been made last fall after President Johnson's bombing halt.

As is now well known, the bombing halt was a result of an "understanding" between the North Vietnamese and the United States. The United States was to stop bombing—the Communists were to lessen tensions in the demilitarized zone and stop shelling civilians in major cities.

On their own and without announcement, the North Vietnamese withdrew 30,000 to 40,000 troops from the demilitarized zone before the United States actually stopped the bombing. They also abruptly stopped shelling cities the day the bombing halt began.

At this time the United States had an option of lowering the intensity of combat in South Vietnam as a further gesture of good faith.

It did not do so. U.S. commanders, in fact, may have increased it—although this is still a matter of dispute.

The bombers that weren't bombing the North were put to work in the South—and thus the volume of attacks there increased.

Says one official: "We might have taken a step to lower the intensity of fighting. Perhaps it would have worked."

A time may come in the talks when someone will have to take a first step—or there won't be one.

There is a quality of rage, either real or artificial in all of the Communist invective now. The Viet Cong's Kiem recently launched a tirade in which he said:

"With millions of tons of bombs each year, with hundreds of thousands of tons of toxic chemicals, the United States has razed to the ground vast rural and mountainous areas, heavily damaged many cities and towns of South Vietnam, killed or wounded hundreds of thousands of persons, made tens of thousands of women widows, and children orphans, and millions of people homeless. . . ."

In the Communist view, the United States is always the "aggressor," intervening in Indochina in 1950 and escalating ever since. Thus they formally recognize only one approach to ending the war.

As stated by the adroit Xuan Thuy, the gray-haired chief diplomat for North Vietnam: "There is no other way but the United States stopping its aggression, unconditionally withdrawing all U.S. and satellite troops from South Vietnam, and letting the South Vietnam people settle their internal affairs. . . ."

There is a hooker, of course: The settlement must be made "in accordance with the political program of the South Vietnam Na-

tional Front for Liberation, without foreign interference."

In the U.S. view, the NLF political program is designed to turn the country over to the Communists.

SOUTH VIET SETTLEMENT

The impasse has led some members of the U.S. delegation to believe that nothing is really going to move at the talks unless agreements can be reached first on a political settlement in South Vietnam.

The political future of South Vietnam, of course, is what the war is all about. The question is: Who is going to run it?

Strangely, the positions of the two sides on this all-important settlement appear to be coming at least a little closer.

The United States strongly believes that the Saigon regime and representatives of the National Liberation Front (the Viet Cong) eventually will have to sit down together to hammer out a program.

The NLF continues to insist that a settlement must be reached in terms of its long-range program. And Saigon continues to consider the NLF all but traitors—but is willing to sit down with them.

The key concept now is the idea of a new "peace cabinet" for South Vietnam that would include NLF representatives.

The issue is whether the present Saigon regime would be represented in such a cabinet. Lodge would have President Nguyen Van Thieu and Vice President Nguyen Cao Ky in the cabinet. The NLF wants an entirely new cabinet without them.

The United States is clearly willing to accept elections in South Vietnam in which the Communists would be on the ticket. If a breakthrough is going to come in the political area, it is probably going to involve U.S. pressure on Saigon to loosen up and accept a greater role by the NLF.

The alternative may well be to keep scrapping on the battlefield until one side or the other is ready to make concessions.

RELEVANCE IN EDUCATION

HON. GILBERT GUDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. GUDE. Mr. Speaker, there is currently an experiment of great importance being conducted by Walt Whitman High School in Bethesda, Md. It is the result of an openness to life and a creative boldness to contend with things new; it promises an improved perspective on education for students and faculty alike, a perspective born from relevance.

This week the students at Walt Whitman High School have been given the opportunity to study whatever interests them. The student-planned curriculum reflects the diversity of their interests, the breadth of their awareness, and the depth of their involvement. The administration at Walt Whitman has assured us that this is not a student protest, but, on the contrary, is a positive educational experience. That the program stands in refutation of the otherwise widely held opinion that many of our students today lack responsibility bespeaks one of its greatest advances.

It is my good fortune and pleasure to have two Whitman students in my office for the week. We are seeking to advance their "studies" by providing them with an inside look into the operation of a congressional office, and, just as importantly, we are finding ourselves being educated by their presence, too.

I would like to commend to my colleagues the following article from the Washington Star of March 25, 1969, which outlines the details of this impressive and inspiring program:

RELEVANCE IS THE WHITMAN "CLASSWORD"

(By Barry Kalb)

Here's a very contemporary riddle: What do sex education, world protest, the hazards of night driving, current trends in the Catholic church, the stock market, the draft, Balkan Kolo dancing, marijuana and the way a football game should be watched have in common?

A very contemporary answer: They're all relevant.

At least the students at Walt Whitman High School in Bethesda think they're all relevant to the students at Walt Whiteman High School.

Among complaints that have cropped up most frequently in student protests of late are that the current course offerings—such as earth science and trigonometry—have no meaning for the student, or that they are just plain boring.

BLESSED BY AUTHORITIES

Whitman students were given the opportunity to outdo professional curriculum designers. The result of their efforts, including the above courses, began yesterday and will run through Friday under the title, "An Experiment in Free Form Education."

But this is no protest, and the students had the full blessing of the administration, faculty, PTA and county school board in their endeavors.

"We didn't sit down and say the school system is tearing us down, and hurting our minds, and we hate it, and therefore we're doing this," explains Lance Dublin, a student and prime mover behind the program.

"Obviously, the school has done something for us, or we wouldn't have this," he continued, pointing to the mild pandemonium that accompanied EFFE's first day of operation.

The whole thing began back in October with a few students and a couple of teachers talking about new ideas in education. The idea for EFFE quickly took shape, Dublin says, and in December, the school was presented with a proposal for the experiment.

"Some people were dubious of the scope and size, but by February, we had pretty much 100 percent backing," he says.

Students were polled as to what courses they would like to have taught, teachers were recruited to help plan and eventually teach the experimental courses, and parents—"the parents were fantastic," Dublin says—pitched in with advice and special parttime jobs.

The courses are of two major types: Those that are completely new, such as the seminar on "What It's Like to Be a College Professor," and regular courses that "aren't being taught the way they are normally."

In addition, 268 of Whitman's 2,200 students are spending the week on special work study programs, doing such things as teaching school, working for United States congressmen, learning how a newspaper is put together, and working at the Montgomery County Board of Education in Rockville.

Courses are non-graded, attendance is optional, and if the student decides to show up for classes, there is nothing to turn in at the end of the week to show that he actually got something out of it.

A good many did show up, and a leisurely stroll around Whitman's long, narrow corridors revealed a glimpse of what free form education is like.

In the class called "Honest to God Debate," a visiting priest—Dublin says more than 250 outsiders volunteered as teachers and speakers—was asked by a boy:

"Can I ask you a question, sir? When you say 'God,' what do you—I'm not asking you to defend your faith—but when you say 'God', what do you mean?"

In "Four Modern Underground Writers," a young teacher with a beard and muddy boots and a peace symbol around his neck instead of a tie read excerpts from Norman Mailer's "The Siege of Chicago," and told his students:

"If you remember that as a human being you have the potentialities to do harm to people or to concur in doing harm to people, you may not be so quick to condone some of the atrocities that are committed in your name."

Robert George, a chemistry teacher, looked over his busy organic chemistry class. "This week, they're making some common things like soap, aspirin, DDT, nylon," he said.

"Normally, they just work with conceptual things, to prove a particular point. I thought this would be a nice departure."

The program will be evaluated next week and the week following the Easter vacation, Dublin says. The University of Maryland, the National Institute of Mental Health and the Board of Education are all at work designing evaluation procedures.

THERE'S A BEALL BACK IN CONGRESS

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, March 26, 1969

Mr. MATHIAS. Mr. President, the name J. GLENN BEALL is well known in Congress. J. Glenn Beall, Sr., served in the other body from 1942 to 1952, when he was elected to the Senate and reelected in 1958. Now his son, J. GLENN BEALL, JR., is representing the Sixth Congressional District of Maryland.

Charles S. Mack, a columnist for the Suburban Record, Silver Spring, Md., has written an excellent article on the Beall family. I ask unanimous consent that Mr. Mack's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THERE'S A BEALL BACK IN CONGRESS

(By Charles S. Mack)

When does a politician decide he wants to be a Congressman? If your name is J. Glenn Beall, Jr., you set your cap for Congress at a pretty early age.

Of course, you've got some incentive if your father was in Congress. J. Glenn Beall, Sr., sat in the U.S. House of Representatives from the Maryland 6th District for ten years before being elected to the United States Senate in 1952. Beall served two terms before being unseated by Joseph Tydings in the Goldwater debacle of 1964.

Two years before his father's near-quarter century in Congress came to an end, Glenn Beall, Jr., was elected to the Maryland House of Delegates. 1962 was a year of Republican resurgence in Maryland. Four years earlier, the GOP contingent had all but been wiped out in the state's legislative elections. When the dust of the 1962 elections had blown over, the number of Republicans in the House of Delegates had grown from seven to 25.

Some illustrious Republicans were among those 25. Names like Jim Miller, Charlie Bresler, and Louise Gore. And Tom Ander-

son, Stu McInerney and Perry Doing. All of the new faces, and looking for the one man among them who could do the best job to mobilize them as an effective minority. The gentleman from Alleghany County, Glenn Beall, Jr., was their choice. He continued as House minority leader until his election to Congress in 1968.

OLD-LINE NAME

"Beall" is one of those old-line Maryland names that literally goes back to the founding of the Republic: One Samuel Beall sat for the upper district of Frederick County in the Maryland Constitutional Convention of 1776. A few years later, in 1779, a Delegate from Prince George's County, Josias Beall, served as the state's fourth Speaker of the House of Delegates. Today, there must be a Beall in nearly every part of Maryland.

But no Beall ever served in Congress until J. Glenn, Sr. made it in 1942. He succeeded Katherine S. Byron, a Democrat who had been elected to represent the Western Maryland district—which included Montgomery County in those days—in a 1941 special election. Mrs. Byron was elected to the seat vacated at the death of her husband, William D. Byron.

Ironically, Glenn, Jr. won the district in 1968 by defeating the Byrons' son, Goodloe, currently a State Senator who represents Frederick and Carroll Counties.

The new Representative sits for a district shaped a bit differently than his father's old constituency. The 6th district still starts way out at the Garrett County line where the stream that will become the Potomac River trickles slowly out of a mountain spring. The district moves east to include the Bealls' home county of Allegany, and then Washington and Frederick Counties.

But where Beall, Sr.'s district ran southeast at that point to take in the Washington suburbs of Montgomery County, the redistricted 6th runs due east to include Carroll County, the northern half of Howard County, and the Baltimore suburbs around Catonsville.

UP FROM THE BOTTOM

J. Glenn Beall, Jr. makes no bones about having wanted to go to Congress a long time before he made it there. "I ran for the legislature in 1962 because I wanted one day to be in Congress. I wanted to get good experience, and I believe people should start at the bottom."

He worked his way up in leadership positions. In 1953—the year his father was sworn in as a United States Senator—Glenn was elected President of the Maryland Federation of Young Republicans. In 1958 he won election to the Republican State Central Committee for Allegany County and served as its chairman for the full four-year term.

During his years in the General Assembly—especially the years before Spiro Agnew became Governor—Beall recognized that one of the responsibilities of legislative eminence was representation of the GOP leadership around the State. No Republican club was too small, no distance too far to travel. If he could possibly make it, Beall accepted every speaking engagement. Glenn spoke everywhere from Oakland to Ocean City.

DIFFERENT PROBLEMS

Constituents' problems in those days in the legislature dealt with road location and recreation, sewers and schools, liquor licenses and zoning laws. No more.

Not long ago, he took a seven-day tour of the district to meet his constituents and listen to their problems. They turned out by the busload. In one day in the Hagerstown post office, 55 people came to talk to their Congressman. The problems they brought to him were a lot different than the ones he used to get when a road was going to trim a few feet off somebody's cornfield.

One 62-year-old widow told him that she made $3108 in wages in 1968. More than $500 of it was withheld in Federal and state taxes—one-sixth of her income—even though the poverty level is officially defined as $3000 a year. After paying for her food, rent, and other necessities, she had exactly $130 left to take care of clothing, entertainment, and any medical expenses she might have. She was distressed because she would have to pay more in taxes in 1969, and she didn't know where the money would come from.

As a state legislator, Beall was aware of poverty problems. "You couldn't escape it in areas up home like the one we used to call Mosquito Flats." But it didn't have the impact on him it does now.

"I was more concerned with making sure of state financial aid for my county." As a federal legislator, though, he's got only two major public works projects in the whole district instead of the large number of small ones he had before. As a result, he can give more of his attention to public policy issues like tax reforms to help the Hagerstown widow.

"People come to their Congressman for everything," Beall says. "A couple came to me because they wanted to fight an application for a liquor license. A divorced woman wanted my help in wrestling with her county's welfare department over custody of her child. The welfare people won't approve her well water."

FULL-TIME CONGRESSMAN

Washington is a far cry from Annapolis. "As a state legislator, I had full-time responsibility with part-time involvement. Now I can give it my full time. You can accomplish so much more full time. State government should be a full-time vocation."

There's another difference, too, Beall notes. "As a member of Congress, I'm adequately staffed. As a state legislator, I wasn't." That makes a world of difference. Serving as his chief aide is David Markey, a young lawyer from Frederick County who had been assistant legislative officer on Governor Agnew's staff.

Glenn was fortunate in his committee assignment in the House. He was named to the Banking and Currency Committee, a body which, despite its name, deals with everything from housing and urban programs to consumer credit. It's a good opportunity for a freshman Congressman who wants to make his mark.

He'll make that mark with little trouble. As one of the brighter lights of the "class of 1969," he'll do well.

How well? Congressmen from Maryland's 6th district have a habit of going far. Beall's father moved into the Senate from the 6th. So did Charles McC. Mathias, Jr., whose successful 1968 Senatorial campaign opened the way for Beall to make the House race.

1970 is probably too early to make a move. But Beall is only 42 with lots of time and the seasoned judgment to use that time wisely to his best advantage.

Meanwhile . . . it's good to have a Beall back in Congress.

MITCHELL KILLED SUIT AGAINST EX-CLIENT

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. BINGHAM. Mr. Speaker, the day before yesterday the new administration announced that it was going to sue one of the biggest of the conglomerates—Ling-Temco-Vought—to force it to unload Jones & Laughlin Steel Corp.

This was welcome news indeed, particularly in the light of the failure of the preceding administration to take effective action against the current rash of conglomerate mergers.

However, today's column in the Washington Post by Mr. Drew Pearson raises very grave questions about the dismissal of an antitrust case affecting the El Paso Natural Gas Co. by the new Attorney General, just 6 days after taking office. According to Mr. Pearson, this case was at one time described by Attorney General Ramsey Clark to be one of the most important antitrust suits in the country. Also according to Mr. Pearson, during the years 1961–67 the El Paso Natural Gas Co. paid to the law firm headed by Mr. Nixon, of which Attorney General Mitchell was a senior partner, a total of $771,129.83.

At the very least, the Congress and the public are entitled to know the facts of the matter.

Mr. Pearson's column follows:

MITCHELL KILLED SUIT AGAINST EX-CLIENT

(By Drew Pearson)

SPOKANE, WASH.—The powerful El Paso Natural Gas Company, which paid the Nixon law firm $771,129.83 during the years 1961–67, has managed to get the Justice Department to dismiss an antitrust case involving the 11-year battle over competing pipelines in the Far West. John Mitchell, now Attorney General, who dismissed the case on Jan. 26, six days after taking office, is a former senior partner in the Nixon law firm.

A spokesman for the Justice Department stated that "the decision not to appeal the case was made on Jan. 17, before Mr. Mitchell's succession as Attorney General."

A check at the Justice Department revealed that on that date Solicitor General Erwin Griswold did recommend that the Justice Department dismiss its appeal. However Prof. John J. Flynn of the University of Utah, who has petitioned the Supreme Court to retain its jurisdiction, informed this column that he had flown to Washington on Jan. 20, and discussed the case with Griswold on Jan. 21, one day after President Nixon was inaugurated.

"At that time," said Prof. Flynn, "the case was wide open. There had been no decision. I mentioned to the Solicitor General the interest of the Nixon law firm, and he said the case was being cleared upstairs, obviously referring to Attorney General Mitchell."

William Bennett, former Chairman of the California Public Utilities Commission, who handled the three El Paso cases before the Supreme Court, commented: "Assuming the Justice Department's statement to be true—which I doubt—the Nixon Administration has not gone along with other Johnson recommendations. Nixon dropped the Johnson appointment of Cecil Moore as the first Negro judge on the West Coast and the appointment of Barefoot Sanders to be U.S. Court of Appeals judge. Why the haste to drop one of the most important antitrust cases in this decade?"

Gov. Ronald Reagan's administration in California also dismissed California's suit against El Paso, as did Gov. Calvin Rampton of Utah, under very peculiar circumstances.

The case involves the attempt by El Paso Natural Gas, biggest pipeline company in the world, to monopolize the supply of natural gas to the Far West by buying up and merging with Pacific Northwest Gas, its chief competitor, on Dec. 31, 1959. The Supreme Court overturned this merger in 1962 with a strongly worded opinion.

Three times the Supreme Court has spoken out on this case, each time vigorously ruling against natural gas monopoly. The last time it spoke out, it severely critized U.S. District Judge Willis Ritter of Salt Lake City, and ordered him removed from the case. "Judge

Ritter," the Supreme Court stated, "has knuckled under to El Paso."

The case then was turned over to U.S. District Judge Olin Hatfield Chilson, who okayed a merger between Pacific Northwest Gas and Colorado Interstate Gas.

Because this would give two companies a monopoly of the entire West, the Justice Department under Attorney General Ramsey Clark filed a new antitrust suit. The State of California and the State of Utah joined in the suit. The merger of Pacific Northwest with Colorado Interstate, they contended, would let El Paso and the new combine divide the Western market between them.

Attorney General Clark stated that he considered the case one of the most important antitrust suits in the country.

MITCHELL DISAGREES

He had only been out of office six days, however, when his successor, who had been Nixon's campaign manager and a partner in the firm which received $771,129.83 from El Paso, dismissed the suit.

In Utah, one interesting aspect of the dismissal is that the letter of dismissal was signed not by Attorney General Vernon Romney of Utah but by the Governor, who normally does not sign legal papers.

Furthermore, notice of the dismissal was mailed to other attorneys in the case in the envelopes of Colorado Interstate Gas in Colorado Springs, not in the envelopes of the Utah state government, nor from Salt Lake City, Utah's capital.

Gov. Rampton, in telling the press why he dismissed the case, lamely explained that Colorado Interstate had promised to deposit some of its funds in Utah banks, which, of course, has nothing to do with the rates which Western gas consumers will now have to pay as a result of monopoly.

El Paso has already been forced to refund $155,000,000 to California consumers for overcharging, and at the present moment is passing the Federal surtax on to Pacific Gas and Electric, which in turn is passing it on to consumers. Congress, of course, never intended that the surtax be passed on to consumers.

As a result of the petitions from former California Public Utilities Chairman William Bennett and two University of Utah professors, John J. Flynn and Daniel Stewart Jr., the Supreme Court now has the case before it.

DR. M. NOEL STOW

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 26, 1969

Mr. TALMADGE. Mr. President, I would like to recognize an individual who is doing outstanding work in an unheralded field, Dr. M. Noel Stow, one of the founders and the driving force behind the Ophthalmic Research Foundation of Washington, D.C. Created for the purpose of supporting research in ophthalmology, the foundation was established initially in February 1967 through the generosity of a gracious lady who was almost blind, but had her normal vision restored through surgery by Dr. Stow. Dr. Stow is now the president and medical director of the foundation.

One million Americans are blind and 3½ million have permanent, noncorrectional vision defects. Americans are becoming blind at twice the rate that the population is increasing. From 1940 to 1960, while the total population increased by 36 percent, the blind population increased by 67 percent and it appears that new factors are arising which will accelerate the increase in serious visual disability in this country. Despite these alarming figures, only $1 million is spent annually to prevent blindness, while $1 billion is spent every year to restore sight.

Dr. Stow's group plans research into the use of lasers to cauterize veins in the eye and to remove part of the pituitary gland by X-ray or surgery in the early stages of diabetes to prevent blindness. It is his hope that the Ophthalmic Research Foundation will receive contributions from many sources. As a physician and surgeon, he has been especially grateful for pledges and contributions that have come to the foundation from men and women who have been given the miracle of restored sight through eye surgery. Help for future generations, Dr. Stow emphasizes, is the real purpose of the foundation.

Dr. Stow, a native of Jesup, Ga., is the son and grandson of physicians and his son is also preparing to enter the medical field. A graduate of Emory University, at Decatur, Ga., Dr. Stow continued his studies at Emory School of Medicine where he received his medical degree in 1939. Following his internship in Baltimore at the West Baltimore General Hospital, he was a resident in ophthalmology at the Eye Institute of the Columbia Presbyterian Medical Center in New York City. Dr. Stow has been in the practice of ophthalmology in Washington for 22 years and during those years he has served on the staff of many local hospitals. He has been a faculty member in the Department of Ophthalmology at George Washington University for several years.

Certified by the American Board of Ophthalmology in 1943, he is a member of the American Medical Association, the Medical Society of the District of Columbia, and the American Academy of Ophthalmology and Otolaryngology. A member of the teaching faculty of the latter for 22 years, he was awarded the academy's honor key in 1951.

There appeared in the Washington Sunday Star on March 16, an article on the works of Dr. Stow at George Washington University, and I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BLIND RESEARCH GROUP TAKES QUARTERS AT GW

The Ophthalmic Research Foundation, formed here in 1967 by a number of people concerned with the need for basic research to prevent blindness, will move into the same building and be associated with the George Washington University Medical School's ophthalmology department, it has been announced.

Dr. Noel Stow, president and medical director of the foundation, said his group plans research into the use of lasers to cauterize veins in the eye, and into removal of part of the pituitary gland, by x-ray or surgery, in the early stages of diabetes to prevent blindness, among other methods.

The group also is interested in work with the causes of blindness from cataracts, glaucoma and cancer. Dr. Stow said that while $1 billion is spent every year to restore sight, only $1 million is spent annually to prevent blindness.

The university and foundation ophthalmic researchers will occupy the former Warwick Memorial Cancer Clinic building at 2300 K St. NW; no date has been set yet for the move from the foundation's present offices at 3900 Wisconsin Ave. NW.

"The rate of blindness has gone up appallingly fast," as the number of older Americans increases, Dr. Stow said. "We hope to prevent certain of these blinding diseases."

AMERICANS OF LITHUANIAN ANCESTORY

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. WOLFF. Mr. Speaker, I have received an interesting letter from a constituent, Mr. Kestutis K. Miklas, of Plainview, N.Y., on the subject of Lithuania and the large community of Americans of Lithuanian ancestory. This letter makes certain cogent points about the need for refusing to accept Soviet control of Lithuania. Also included in Mr. Miklas' well-thought letter is a history of activities on Long Island in commemoration of the recent anniversary of Lithuanian Independence.

I commend Mr. Miklas' letter to my colleagues' attention and wish to include it in the RECORD at this point:

HON. LESTER L. WOLFF,
House Office Building,
Washington, D.C.

MY DEAR REPRESENTATIVE: Over 40,000 Americans of Lithuanian origin and descent here on Long Island and their friends in February of this year commemorated the 718th anniversary of the formation of the Lithuanian state when Mindaugas the Great unified all Lithuanian principalities into kingdom in 1251, and the 51st anniversary of the establishment of the Republic of Lithuania that took place on February 16, 1918.

Since its ancient settlement along the Baltic Sea coast for centuries the Lithuanian Nation has played an important role in North-Eastern Europe. Especially that role became significant when Lithuania assumed the responsibility of protecting the Western culture from the Asiatic onslaughts.

The growing strength of Russian Imperialistic power continually threatened Lithuanian lands, and finally at the end of eighteenth century Russia invaded and occupied Lithuania. Foreign subjugation, however, failed to destroy the spirit of the people who, for 120 years continually objected to foreign domination by civil and cultural resistance, by numerous uprisings and revolutions against the invaders.

The intensive and determined struggle for freedom and independence from Czarist Russia was climaxed on February 16, 1918, by the Declaration of the Lithuanian National Council, proclaiming the restoration of the Independence to Lithuania.

It is tragic that Lithuania enjoyed such a brief period of freedom. Since 1940 the once great Lithuanian nation of the Middle Ages and the proud and progressive Republic of the period between the two world wars still lies under the yoke of Soviet despotism.

In the United Nations and elsewhere the Soviets are still accusing the United States and other western powers of imperialism and colonialism. As part of their unceasing campaign to win power and influence among the

underdeveloped countries, Kremlin propagandists never tire of boasting that Russia is an implacable foe of imperialism and a dedicated champion of "self-determination." Yet Moscow brusquely dismisses any suggestion that non-Russian peoples within the Soviet Union are entitled to determine their own destinies, too.

The Kremlin is fond of saying that Russian imperialism died with the czar. But the fate of the Baltic nations—Lithuania, Latvia and Estonia—shows this to be a cruel fiction.

The Communist regime did not come to power in Lithuania by legal or democratic process. During the Second World War, the Republic of Lithuania became a victim of Soviet Russia's and Nazi Germany's conspiracy and aggression, and as a result of secret agreements between those two powers of August 23rd and September 28th, 1939, became invaded and occupied by Soviet Russian armed forces on June 15, 1940.

Since the days of Soviet Russian occupation, however, the Lithuanian people have waged an intensive fight for freedom. During the period between 1944 and 1952 alone, some 30,000 freedom fighters lost their lives in an organized resistance movement against the invaders. Hundreds of thousands of others were imprisoned or driven to Siberia. Though that resistance movement was weakened and finally subdued to a failure to get any material aid from the West, nevertheless, the Lithuanian people are continuing their passive resistance against the Soviet Russian genocidal aggression to this very day.

The United States of America, mindful of its own struggle for freedom and independence, has remained sensitive to the aspirations of other people for self-determination. For this reason, we, the American-Lithuanians are grateful to the Government of the United States for denouncing the Soviet Russian aggression in Lithuania and for refusal to recognize the alien subjugation of Lithuania since 1940.

I am very thankful to you for the kind words you said at U.S. Congress and for the understanding of Lithuanians struggle for freedom.

You should feel free that the Lithuanians on Long Island are with you. I think that it would be proper at this time to brief you about the activity and the accomplishments of the American-Lithuanians living on Long Island on the occasion of this commemoration.

Nassau County Executive Mr. Eugene H. Nickerson issued a proclamation declaring February 17–23 as Lithuanian Independence Week and raised the flag of free Lithuania at County Executive Office Building in Mineola, N.Y.

Suffolk County Executive Mr. H. Lee Dennison through his proclamation declared the week of February 17 as Lithuanian Independence Week and raised the Lithuanian flag to be flown during this entire week at his office building in Riverhead, N.Y.

Presiding Supervisor of Town of Hempstead Mr. Ralph G. Caso proclaimed the week of February 17 as Lithuanian Independence Week and raised the Lithuanian flag at the Town Hall in Hempstead, N.Y.

Town of North Hempstead Supervisor Mr. Robert C. Meade through his proclamation declared the Lithuanian Independence Week February 16 through 23 and raised the Lithuanian flag at the Town Hall in Manhasset, N.Y.

Town of Oyster Bay Supervisor Mr. Michael N. Petito issued his proclamation declaring the Sunday, February 16, the Lithuanian Independence Day and raised the Lithuanian flag at the Town Hall in Oyster Bay, N.Y.

The Long Island radio station WGBB presented a special program about Lithuania and the aspirations of the Lithuanian people for self-determination and to national independence in their own country, on Sunday, February 16 at 12:45 p.m. The presentations on the occasion of this anniversary were made by the Consul General of Lithuania at New York Mr. Anicetas Simutis, by the member of the Executive Committee for the Liberation of Lithuania and the press officer of Assembly of Captive European Nations (ACEN) Dr. Algirdas Budreckis and by the member of the Supreme Council of American-Lithuanian Community of USA Mr. Kestutis K. Miklas.

The American-Lithuanian Community of Great Neck, N.Y. held a mass meeting on February 15 at the local Elks Lodge Hall with guest speakers and with a special program prepared for this occasion. The following day, on Sunday, there was a religious service held in St. Aloysius R.C. Church in Great Neck with prayers for Lithuania and the Lithuania's freedom fighters who lost their lives in fight for freedom of their beloved country.

The news media of Long Island provided a wide coverage on this occasion. The three major daily newspapers (Newsday, Long Island Press and Suffolk Sun) as well as the local weekly newspapers (Bethpage Tribune, County Seat Press, Great Neck News, Great Neck Record, Herald Courier, Manhasset Mail, Manhasset Press, Garden City News, The Eagle, Newsgram in Bethpage, Centre Island News, Bellmore Life, Oyster Bay Guardian, Roosevelt Press, Syosset Guardian, Syosset Advance, Mid-Island Times, Levittown Times, Mid-Island Tribune, Mineola American and Williston Times)—in toto 24—in their issues to date published articles about Lithuania, about the issuance of proclamations by counties and townships, and pictures of the American-Lithuanian delegations (dressed in Lithuanian Folk costumes) with governing officials of Long Island.

I would be very pleased if you could make possible to record this activity of the American-Lithuanian Community on Long Island in the United States Congress.

With all good wishes and regards,

Sincerely,

KESTUTIS K. MIKLAS,
Member of the Supreme Council of the American-Lithuanian Community of USA.

RIGGIN S. EVANS

HON. JOSEPH D. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, March 26, 1969

Mr. TYDINGS. Mr. President, on Friday, January 31, Riggin S. Evans, of Somerset County, Md., passed away at the Perry Point Veterans' Administration Hospital. Mr. Evans was one of six brothers, all of Crisfield, Somerset County, Md. The Evans family for many years has been a leader in civic and community affairs in Somerset County on Maryland's Eastern Shore. Riggin Evans himself was typical of the solid American tradition of the Evans family. For many years he was supervisor of buildings of the Havre de Grace High School, admired and beloved by all who came in contact with him. During the last years of his life he was closely associated with me and my family. He possessed all those characteristics which we prize so highly in this country: integrity, industry, ability, imagination, and kindness. His passing was a great loss, not only to the community in which he lived but to my family personally as well.

I ask unanimous consent that the article published in the Bel Air Aegis be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RIGGIN S. EVANS

Riggin S. Evans, 48, of Havre de Grace, died on Friday, Jan. 31 in the Perry Point Veterans Administration Hospital.

Mr. Evans was a maintenance supervisor on a farm belonging to Senator Joseph D. Tydings.

He is survived by five brothers, Horace Evans, Carey Evans, Frank Evans, Wesley Evans and Richard Evans, all of Crisfield; and a number of nieces and nephews.

Funeral services were held on Monday, Feb. 3, at 2 p.m. from the Bradshaw Funeral Home, Crisfield, Md.

HIPPIE-CARE

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. RARICK. Mr. Speaker, the taxpayers will be very happy to know that HEW has now extended a $25,000 grant for the hippies in New York City.

Under unanimous consent I submit a report by Peter Kihss of the New York Times, March 18, 1969, for inclusion in the CONGRESSIONAL RECORD, as follows.

[From the New York Times, Mar. 18, 1969]

PROGRAM TO AID HIPPIES HERE GIVEN $25,000 BY WASHINGTON

(By Peter Kihss)

A Federal grant was announced yesterday for a pilot project to develop "bridging mechanisms" between the community and what was described as "a population of dissident youth (known as the 'Hippies')" in the East Village.

The $25,000 grant by the Department of Health, Education and Welfare went to the Educational Alliance, a 79-year-old settlement house, to carry on an effort it has had under way since March, 1968, in a store front at 220 East Seventh Street.

Robert Meltzer, assistant director of the Educational Alliance and director of the hippie project, estimated the number of hippies—"young people running away, lost, angry"—as "still very heavy, probably in the thousands" despite some reports that the phenomenon was fading away.

Mrs. Bernice L. Bernstein, regional director of the Federal agency, said it was "essential that we understand—and in turn gain the understanding of—all the dissident groups in our society."

TWO-WAY COMMUNICATION SOUGHT

The pilot effort, she said, sought two-way communication with and help for the hippies in the East Village. She said she hoped it would "show us how to return to the community at large the skills, the talents and the abilities that are locked up in the disaffected young and young women."

Mr. Meltzer said a number of young people living in "communes" had asked for Educational Alliance help 18 months ago to deal with hospital, legal and police problems.

The storefront named Contact by some hippie leaders, was set up to provide medical service; emergency food and help in finding sleeping arrangements; a place for craft work, and counseling.

The storefront has been open Monday, Wednesday, Thursday and Friday afternoons and evenings. Help has also been provided

by St. Brigid's Roman Catholic Church and the New York Infirmary.

Mr. Meltzer said therapy and psychiatric aid had been provided when requested by the hippies. The numbers visiting the storefront, he said, have ranged from as few as four to as many as 40 on any day.

The effort, he said, has indicated, some "visible influence" on about half the hippies coming in—in some cases helping send them home or find jobs, in others reducing drug use or stopping the carrying of weapons, in some cases at least some change in basic attitudes.

The application by the Educational Alliance for the grant described the hippies as "social retreatists—that is, rather than engaging in direct confrontation with the established community and its institutions, they have withdrawn into what they hope to be a separate, self-sustaining subcommunity and subculture."

The hippies' chances for sustaining themselves were described as jeopardized by "gross educational and vocational handicaps." Thus far, the Educational Alliance reported, there has appeared to be "a progressive deterioration for most into poor health and functioning."

The project is to include "crisis service" on food, clothing, shelter, medical and legal problems, "mediation services" on relations with police, courts, families, landlords and welfare agencies, and "groups involvement" of hippies in planning and operating programs.

ELIMINATION OF THE SOCIAL SECURITY EARNINGS LIMITATION—REPORT OF THE NEW YORK STATE BAR ASSOCIATION COMMITTEE ON FEDERAL LEGISLATION

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 26, 1969

Mr. JAVITS. Mr. President, I have long been in favor of eliminating the earnings limitation under the social security laws. While the earnings limitation was raised during the last Congress, I still believe that it unduly penalizes those of our older citizens who are willing and able to work. Moreover, at this time, there is a distinct shortage of skilled manpower. Therefore the retention of the earnings limitation at this time is not only unfair to the individuals concerned, but is a disservice to the Nation.

The Committee on Federal Legislation of the New York State Bar Association has recently issued a report on some of the bills which have already been introduced in this Congress to increase or remove the earnings limitation. The committee report endorsed the June, 1966, report of the Committee on Labor and Social Security Legislation of the Association of the Bar of the City of New York recommending the elimination of the earnings limitation. I ask unanimous consent that the report of the committee be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

NEW YORK STATE BAR ASSOCIATION COMMITTEE ON FEDERAL LEGISLATION: REPORT ON BILLS TO INCREASE PERMISSIBLE OUTSIDE EARNINGS OF SOCIAL SECURITY BENEFICIARIES

Several bills have been introduced in the 91st Congress to amend Title II of the Social Security Act to increase from $1,500 to $3,000 the amount of outside earnings permitted without loss or deduction from benefits. H.R. 80 introduced by Mr. Anderson of Illinois makes this change as to both covered beneficiaries and their dependents; H.R. 201 introduced by Mr. Eilberg of Pennsylvania for the breadwinner only. H.R. 1372 introduced by Mr. Thomson of Wisconsin would remove the limitation entirely.

In June 1966 the Committee on Labor and Social Security Legislation of the Association of the Bar of the City of New York unanimously recommended elimination of the limitation. Its report stated in part:

BILLS TO PERMIT SOCIAL SECURITY BENEFICIARIES TO EARN INCOME TO THE EXTENT OF THEIR ABILITY WITHOUT DEDUCTIONS FROM SOCIAL SECURITY BENEFITS

Several bills are before the Congress to permit receipt of full Social Security benefits by otherwise qualified employees over 65 who are able to continue to make a contribution to their own welfare and to society by part-time or full-time work.[1] This Committee endorses the purposes of the bills.

Under present law, persons over 65 receiving Social Security benefits cannot earn more than $1,500 per year without having their benefits reduced.[2] Penalties are provided for failure to report earnings.[3]

These income limitations were initially enacted in 1935 [4] during the period of the Great Depression, when the notion was widespread that as many persons as possible should be removed from the labor force in order to spread the available work. In our opinion the limitations serve no useful purpose today and should be removed.

We have found other ways of promoting high employment than discouraging people anxious and willing to work. Social Security benefits are frequently insufficient by themselves to maintain our older citizens in the dignity which should be their lot. These citizens in our opinion should be encouraged in their efforts to supplement their income by constructive work which also redounds to the benefit of society. This seems particularly true today when many employers are reporting a shortage of qualified personnel for many jobs.[5] Older citizens who possess skills accumulated during many years of experience may be especially qualified for many of these very positions. Indeed it is now recognized that an important segment of retired persons as the average life span lengthens, will want and need to continue to work beyond 65 in order to feel a sense of constructive usefulness in their lives.[6]

The earned income limitation is also contrary to the basic philosophy of the Social Security Act, which has always been that benefits were available as a matter of right on the basis of the contribution paid in through Social Security taxes, without resort to a "Means test" of any kind.

In addition we note that under present law a person over 65 can receive an unlimited amount of income from investments, whereas he is penalized if he works to earn additional income. Similarly, those over 72 can now earn more than the limit without losing benefits. In our opinion such distinctions have no basis and should be abolished.

We, therefore, endorse the bills calling for repeal of the income limitation."

We concur with this reasoning. We also note that at least in New York City, welfare authorities have concluded that a family of 4 needs $6,000 for bare necessities.

We believe that an increase in the ceiling to $3,000 would be desirable and we endorse this proposal even though we also favor complete removal of the limitation for the reasons given.

COMMITTEE ON FEDERAL LEGISLATION

Richard A. Givens, Chairman.
Anthony P. Marshall, Secretary.
Leslie H. Arps, New York City.
Harold Baer, Jr., New York City.
Mark K. Benenson, New York City.
Edward S. Blackstone, New York City.
Vincent L. Broderick, New York City.
Mason O. Damon, Buffalo.
David M. Dorsen, New York City.
John T. Elfvin, Buffalo.
Robert B. Fiske, Jr., New York City.
Lawrence W. Keepnews, New York City.
Norman Kellar, Kingston.
Herbert C. Miller, New York City.
George W. Myers, Jr., Buffalo.
Bernard Nussbaum, New York City.
Robert Patterson, Jr., New York City.
Arthur C. Stever, Jr., Watertown.

[1] Referring to bills in the 89th Congress, omitted.

[2] 42 U.S.C. Section 403(b) and (f). The limit was raised from $1,200 to $1,500; 79 Stat. 363 (1965).

[3] 42 U.S.C. Section 403(g). Enforcement problems are also created where erroneous certifications are given by Social Security recipients as to their outside income. The amounts due the Government are often relatively small, yet the beneficiary may be unable to pay them except over a period of years which may frequently be less than his or her anticipated lifetime. False statements are, of course, a source of possible criminal penalties. E.G., 18 U.S.C. Section 1001; 42 U.S.C. Section 1307. Older citizens who erroneously report income for Social Security purposes are thus subjected to potential prison sentences in connection with the income limitations under discussion here. Questions necessarily arise in such cases whether the individual understood the requirements of the law or was sufficiently aware of the discrepancies to be liable.

These issues in this context create difficult problems for prosecuting authorities and the courts which would be obviated by repeal of the income limitation.

THE BEGINNING OF THE COLD WAR

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. GUBSER. Mr. Speaker, on January 28, I inserted in the CONGRESSIONAL RECORD part 1 of a study entitled "The Beginning of the Cold War" which was written by Mr. Julius Epstein of the Hoover Institution on War, Revolution, and Peace, at Stanford University.

The second part of the study has just appeared in the March issue of the Central Europe Journal and I submit it herewith so that readers of the RECORD will have the benefit of this excellent work in its entirety:

THE BEGINNING OF THE COLD WAR: PART 2

(By Julius Epstein)

(NOTE.—This is the second part of an article by Julius Epstein of the Hoover Institution on War, Revolution and Peace treating of the recently published Diplomatic Papers of the U.S. Department of State from 1945. In this present article the content of a telegram from George Kennan, U.S. Chargé d'Affaires in Moscow, to the U.S. Secretary of State, on January 25, 1945, gives a primary pointer to the fact that Czechoslovak-Soviet Russian relations were headed for tension and double-play between the Soviets, and Czechs and Poles. Although eager for boundary rectifications, Czechoslovakia had agreed to discuss the matter in accord with Allied governments, desiring of course that frontiers be drawn as of pre-Munich Agreement status.

(In a telegram sent by Czechoslovak Acting Minister for Foreign Affairs to U.S. Chargé d'Affaires in Czechoslovakia, Mr. Klieforth, on May 31, 1945, this desire for revision of borders is clearly expressed. It tells, however, of steps taken by Poland in areas the Czechs claimed — especially Kladsko (German Glatz)—where the Polish authorities, not waiting for final settlement of border issue, denationalized, persecuted, and drove to the brink of economic ruin the Slavonic people there. The Czechoslovak government planned to take over control, despite Poland's pro tem administrative rule there, "not as a final act" but in amicable accord with Poland. The United States had also left room open for treatment of this issue by the Allied Control Council on a temporary basis.

(The information given here shows that a term, taken in all seriousness by the other participant countries, was used as a smoke-screen by the Soviets who paid lip-service to the agreement of waiting for a final "peace conference" to solve the Kladsko and other territorial issues, but in reality playing Czechs against Poles.

(Here are reproductions of telegraphic messages between the countries concerned that will serve as valuable references in weighing these disputes and applying the principle of holding them in abeyance until a final peace settlement is reached, also for all persons who plead for the recognition of the Oder-Neisse line as a permanent boundary between Poland and Germany.)

Long before V-E Day (May 8, 1945) it became clear to the Czech Government-in-Exile in London that Soviet-Czech relations were headed for collision rather than for a road of friendly relations. This became especially clear after Soviet troops had entered Ruthenia (Carpatho-Ukraine). The documents as published by the Department of State in its recently released volume *"Foreign Relations of the United States, Diplomatic Papers, 1945, Volume IV, Europe"*, United States Government Printing Office, Washington, 1968, show beyond the shadow of any doubt that as early as January 1945, the Beneš Government must have realized that the road of Czech-Soviet relations would be a rather rough one.

One of the first diplomatic papers bearing upon this subject is the telegram, sent by the American Chargé d'Affaires in Moscow, George Kennan, to the Secretary of State in Washington. The telegram bears the date of January 25, 1945. The pertinent parts read as follows:

"Němec (Frantisek Němec, Delegate for Liberated Territories for the Czechoslovak Government-in-Exile in London. Delegate Němec and his staff arrived in a portion of Ruthenia liberated by the Soviet Army in October 1944); returned to Moscow beginning of December (1944) to establish contact with his Government. During the month he and his delegation had spent in liberated area they had been allowed to reside in Chust but not to visit larger centers of Uzhorod and Munkacevo nearer to front. He had also not been able to communicate with his Government. Local executive power was exercised by Ruthenian National Council, a local political, Communist-controlled organization, ostensibly representing resistance and patriotic elements. Němec and other members of delegation had functioned as liaison officers of London Government vis-à-vis Ruthenian National Council and Red Army. Council had come out in favor of annexation with Soviet Union. Formal resolution to this effect passed November 26 (1944). Red Army had been entirely correct and had remained aloof from this agitation. Czechs recognized, however, that movement enjoys at least tolerance of Moscow party circles, and realized that choice before them was whether to retain province nominally part of Czechoslovakia though penetrated and dominated from Soviet side or to cede it entirely, which could be done only after liberation of entire country and consultation of electorate."

PEACE SETTLEMENT TO DETERMINE CZECHOSLOVAK FRONTIERS

In April 1945, the question of Czechoslovakia's boundaries preoccupied the European Advisory Commission in London. It confirmed "the full political authority of the Czechoslovak Government within 1937 boundaries" and reserved "final determination of Czechoslovak frontiers until frontiers in central Europe are defined in the peace settlement." The document referred to is a telegram from the American ambassador in the United Kingdom, *Winant*, to the Secretary of State in Washington. It is dated April 28, 1945.

The British representative at the meeting of the European Advisory Commission of April 25, 1945, on which Ambassador Winant reported to the American Secretary of State was Sir *William Strang*. As Winant telegraphed:

"Strang proposed that a statement like that contained in the second paragraph of the United Kingdom formula be made to the representatives of the Czechoslovak Government by the Allied Consultation Committee of the EAC in reply to a question raised by the latter regarding steps for declaring invalid the Munich Agreement and German acts deriving from it. (The statement contained in the second paragraph of the United Kingdom formula read as follows: His Majesty's Government in the United Kingdom for their part agree that the Czechoslovak Government should exercise full political authority from the date of unconditional surrender of Germany throughout the area bounded by the frontiers of Czechoslovakia as these existed before December 31st, 1937. His Majesty's Government consider, however, that the question of the final settlement of Czechoslovak frontiers must remain in abeyance until international frontiers in Central Europe are definitely laid down in the peace settlement)".

The only Soviet comment on this formula was that the Soviet Government had had nothing to do in any form with the Munich Agreement. This brief comment gave no indication whether the Soviet Government agrees with the United Kingdom position that the final settlement of the Czechoslovak frontiers should be held in abeyance pending the general peace settlement.

"Since the United Kingdom formula is in general accord with previous expressions of United States policy I propose to agree to the step proposed unless otherwise instructed." Ambassador Winant was not "otherwise instructed," a fact which spelled out the United States' agreement.

While the Czechs agreed to the restoration of the 1937 frontiers—with the exception of the Carpatho-Ukraine, to be ceded without any plebiscite to the Soviet Union—they were by no means satisfied with this solution. They wanted more than the 1937 frontiers. This evolves from a written communication from the Czechoslovak Acting Minister for Foreign Affairs, *Clementis*—later purged and hanged by the Communists—to the American Chargé d'Affaires in Czechoslovakia, Mr. *Klieforth*, dated May 31, 1945.

FOR A "RECTIFICATION" OF BOUNDARIES

Mr. Clementis wrote: "Sir: I have the honour to address to you the following information: The Czechoslovak Government has always claimed frontiers for this country which were in existence before Munich, at the same time never failing to emphasize to the competent bodies that this point of view must not be prejudicial to future claims of rectification of frontiers to be raised at a suitable time in full accord with the Allied Governments, in favour of the Czechoslovak Republic and to the disadvantage of the enemy states. The period immediately following the end of war operations has on our part been considered as most suitable for this purpose. The Czechoslovak Government has therefore prepared proposals along this line in order to lay duly substantiated claims before all Allied Governments and, should such rectification concern the boundaries of the friendly neighbouring Polish State, naturally also before the Polish Government."

"In the meantime, however, it has been brought to the knowledge of the Czechoslovak Government that the territory of Kladsko (Glatz) was placed under the administration of the Polish authorities and that, by a proclamation dated in April 1945, Mr. St. Plaskowski was appointed commissioner of the Polish Republic for the administrative province of Lower Silesia. This proclamation which was addressed to the population of Lower Silesia and South Brandenburg, and which having been posted also in the area of Kladsko, was evidently supposed to cover this area too, asserted that this province, Slavonic from time immemorial, had been taken from Poland."

"With respect to the arguments contained in the aforesaid proclamation, I take the liberty of drawing your attention to the fact that the area of Kladsko, up to the year 1742 when first annexation by Prussia took place, had been a possession of Bohemia to which it belonged also ethnographically to such an extent that even at the present time, after more than two hundred years of forced Germanization, entire groups of communities have never been deprived of their decidedly Czech character."

"It should be added to the statement of the Polish proclamation that the primary origin of these inhabitants is Slavonic, that these primarily Slavonic inhabitants used to and still do belong to the Czech branch. For this reason these people applied to the Czechoslovak Government to take charge of Kladsko until final determination of the frontiers should be made."

CLAIMS AIMED AT GLATZ

"Owing to the fact that Kladsko gravitates to Czechoslovakia also economically and by its system of transport, it is the intention of the Czechoslovak Government to take over the control of this territory, as shown in the map attached hereto, without any further delay. The Czechoslovak Government would not consider the taking charge of Kladsko as a final act, being fully aware of the fact that this problem will ultimately have to be solved at the Peace Conference. The Czechoslovak Government, knowing that such regulation of northeastern boundaries of Czechoslovakia in her favour may concern future Polish frontiers, is determined to settle this point in amicable accord with the Polish Government."

"I may add that the Czechoslovak Government does not consider the present note as providing for all claims concerning rectification of frontiers which may have to be raised in connection with ethnological, historical, geographical, economic, transport and other motives."

"A similar note is being addressed to the representatives of the Governments of Great Britain, the Union of Soviet Socialist Republics, France and to the Polish Government."

"Accept [etc.] "Under Secretary of State:"

"Dr. V. Clementis M. P."

A memorandum prepared in the Department of State to be used as background information for President *Truman* and his advisers at the Potsdam Conference clarifies the American point of view in regard to frontier changes concerning Czechoslovakia. The document bears the date of June 23, 1945 and reads in its pertinent parts as follows:

The specific territorial questions are as follows: (a) *Sudetenland.* The Munich Agreement of 1938 incorporating Sudeten territories into Germany was not recognized by the United States. These areas should be returned to Czechoslovakia and incorporated immediately into the Czechoslovak State.

(b) *Teschen.* The United States favors a direct settlement of the Teschen question by Poland and Czechoslovakia. If the two states do not reach an agreement, this Government favors the resumption of Czechoslovak administration in the Teschen area since it does not recognize the transfer of this territory to Poland in 1939. (The date should be 1938, since the Czechoslovak Government yielded to a Polish ultimatum for the immediate cession of Teschen on October 1, 1938. J.E.)

(c) *Ruthenia.* The United States favors a direct settlement of the question of Ruthenia by Czechoslovakia and the Soviet Union. It is hoped that the Ruthenian question is settled as a whole and that the final settlement is based on the desires of the Ruthenian people as ascertained in a free and fair plebiscite.

(d) *Glatz.* The Czechoslovak Government has announced its intention to occupy Glatz (Kladsko) in the Silesian salient without prejudicing the final settlement of the question at the Peace Conference. This area is now reported to be under Polish administration. The United States assumes that, if the Allied Control Council in Germany agrees to this proposal, the Czechoslovak Government will agree that the territory in question remain subject to the authority of the Allied Control Council until a final decision is made concerning the disposition of territories lying within the 1937 frontiers of Germany.

DUPLICITY OF SOVIET FOREIGN POLICY

The symptomatic question of Teschen appears again in a noteworthy State Department Paper, dated July 2, 1945. It is a telegram from Mr. *Klieforth* to the American Secretary of State, reporting Klieforth's conversation with Mr. *Clementis,* Acting Minister of Foreign Affairs of the same day. The document and an attached footnote by the editors shows the duplicity of Soviet foreign policy. The brief document reads:

"Clementis, Acting Minister of Foreign Affairs, requested me to see him this morning (July 2, 1945)."

"He said negotiations with Poles in Moscow regarding Teschen resulted in no decision. Neither side surrendered its claims but both parties agreed to avoid frontier incidents. Russians maintained formal neutral attitude but recommended that dispute be referred to peace conference."

"He added that Czechoslovakia 'was pleased' to complete transfer of Ruthenia to Russia. Full text of agreement followed by pouch. In return Russians agreed to evacuate all Russian troops from Czechoslovakia by July 5th except for 9 divisions about 90,000 troops which would remain along Czechoslovak-German frontier."

"Czechoslovak Commission in Moscow also discussed with Russia all Czech claims for rectification of frontier including Glatz and Leobschuetz area together with quite an extensive but narrow strip along practically entire Czech-German frontier. He promised to send me full description of this area at an early date. Russians told Czechs that boundary changes would have to be settled at peace conference."

Playing up the final settlement of all frontier questions at the "peace conference" was the official stance of Soviet diplomacy. Behind the diplomatic scene the Soviets played quite another game.

In the footnote mentioned above, the Department of State reveals that the American Ambassador in Moscow, *Harriman,* had reported a conversation with the Czech Ambassador in Moscow, *Fierlinger,* in which the latter stated "that negotiations with the Poles at Moscow regarding Teschen had come to no conclusion, that Poles were pressing their claim particularly because of their loss of territory to the Soviet Union, and that the Poles also rejected Czech claims to Kladsko".

The same footnote informs the readers that President *Benes* had told the American Chargé d'Affaires *Klieforth* that "Czechoslovakia would never give up its claims to Teschen." It also reveals that the American Ambassador in Warsaw, *Arthur Bliss Lane* "reported the opinion of the Czechoslovak Ambassador in Poland, *Joseph Hejret,* that Polish agitation over Teshen had been fostered by the Soviet Government in order to make its influence further felt in Poland and Czechoslovakia."

STRATEGIC ANNEXATION OF CARPATHO-UKRAINE

That the Americans never fell for the flimsy "justifications" of the Soviet annexation of the Carpatho-Ukraine can be seen by the despatch which the American Ambassador in Moscow, *Harriman,* sent to the Secretary of State on July 3, 1945. He telegraphed:

"Citation of ethnological affinity and of Ruthenian people for reunion with Ukrainian Motherland can only bring a smile from anyone familiar with province of Ruthenia. Ruthenia was last associated with Uraine, as far as we are aware, in 1220: a period not likely to evoke any lively associations in minds of present population. Bulk of people are illiterate and politically apathetic. Most of them are probably inclined for economic reasons to look back on their inclusion in Hapsburg Hungary as most prosperous and happy time in recollection of living people. Outward manifestations of Ruthenian political sentiment have usually been chiefly a matter of a few intellectuals, usually not natives of the province. Claim of cultural affinity with Ukraine is tenuous and debatable. It is of fairly recent origin and its protagonists among whom the Nazis in 1939 were some of the most prominent have generally had ulterior motives."

Province contains no economic resources of any importance; its population is in a pitiable state of squalor and backwardness; and it has always been a financial burden on any larger state it was associated with. It could therefore hardly be desired by Russia for economic reasons."

"In view of the above it seems clear that main reasons for cession was its strategic position and desire of Moscow leaders to have common frontier with Hungary. (This motive became evident when Khrushchev decided in 1956 to march into Hungary in order to crush the Hungarian revolution. J. E.) Extensive connection of Ruthenian economy with Hungary, favored by geographical factors will give Soviet authorities another channel of entry into Hungarian economic affairs."

On July 9, 1945, the American Chargé d'Affaires in Prague expressed his agreement with Harriman's opinion concerning Ruthenia. He wired the Secretary of State:

"I agree fully with Harriman's views regarding incorporation of Ruthenia. While Czechoslovakia gladly got rid of Ruthenia, as it was a real burden on the state, the authorities are very apprehensive of public opinion in US fearing that they will be accused of 'selling Ruthenia down the river' as a matter of appeasement. The Czechs frankly are ashamed of the deal, as it was realized that the vast majority of Ruthenians would have voted against it given a chance. I learned reliably that the main objection to Allied diplomats landing in Constanza en route to Praha (Prague) was desire to prevent them from learning true situation in Ruthenia."

POLISH MEASURES AGAINST THE LOCAL CZECH POPULATION

An interesting light upon the Polish practices in the areas claimed by Czechoslovakia is being shed in a despatch from the Czechoslovak Ministry for Foreign Affairs to the American Embassy in Czech * * * slovak Ministry of Foreign Affairs sent a similar note to the Repre * * * ber 13. The following parts may be quoted:

"By a note of the beginning of June 1945, concerning Czechoslovak claims on the area of Kladsko, the Czechoslovak Ministry of Foreign Affairs took the liberty of informing the Representative of the Government of the United States of America that the Czechoslovak Government were preparing proposals for the rectification of the frontiers of Czechoslovakia to the disadvantage of hostile powers. The Czechoslovak Ministry of Foreign Affairs sent a similar note to the Representatives at Praha (Prague) of the Government of Great Britain, of the Union of Socialist Soviet Republics, and of France."

"At the same time, the Czechoslovak Government informed the Polish Government through their Minister at Warsaw of the preparation of such proposals. The Czechoslovak Government did this in the knowledge that a rectification of the northeast boundaries of Czechoslovakia to its advantage could affect the future boundaries of Poland, and with the determination to settle problems of this kind in amicable accord with the Polish Government. From the note of the Czechoslovak Minister, as well as from oral communications, made by competent persons, the Polish Government learned that the Czechoslovak proposals also concerned Kladsko, Hlubcice and Ratibor districts and that the Czechoslovak Government intends supporting their claims to those regions also by ethnographical arguments."

"It is true that, by the Potsdam Agreement, the administration of the Kladsko, Hlubcice and Ratibor districts has been entrusted to Poland, and therefore, the settling of the question into which State these districts should be incorporated, has been reserved for the peace conference. The Czechoslovak demands for the rectification of the frontiers in these regions have not, therefore, become meaningless and, for this reason, the Czechoslovak Government cannot be indifferent if the Polish authorities in the said districts take measures against the local Czech population which create the impression of having as their object the eradication of the Czech element in these regions and thus the depriving of the Czechoslovak Government of one of the arguments which they intend to put forward in favour of their territorial demands; neither can they be indifferent if the Polish authorities and Polish troops act in a manner which must necessarily result in the total cessation of all economic life in those districts."

OPPRESSION OF CZECH NATIONAL MINORITY

"According to authentic reports, the population of Czech nationality in the Kladsko (Glatz), Hlubcice (Leobschütz) and Ratibor areas is being constantly changed, requisition, expel, beat and persecute, and Polish state authorities. This population is constrained by all means to take part in demonstrations for the annexation of these regions to Poland and is compelled to sign manifestoes calling for this annexation. The Polish authorities have started a forcible action for the acquisition of Polish State citizenship. They summon inhabitants of Czech nationality, particularly supporters of families, and confer upon them Polish State citizenship. Everyone is obliged to sign and protests are of no avail. In communities where Czechs are living, Polish schools are being established and church-services in Polish are being introduced: sermons in the mother-

tongue of the people, customary from time immemorial, are interdicted."

"Hand in Hand with nationality oppressions goes unscrupulous economic oppression. The economic situation in these parts is so dreadful that they are faced with absolute ruin. The army units, which are being constantly changed, requisition, expel, beat and persecute, and the administrative authorities do not remain far behind in similar activities. The local population is driven to despair by the terror reigning everywhere. Bedding, furnishings, including wall-clocks and sewingmachines, as well as agricultural machines and implements, cattle—down to the last cow—and even crops are being taken from the inhabitants. Czech farms are being occupied by Polish colonists from the East, who force the Czech population to work in the fields; for their work they give them neither food nor money. In some places the inhabitants are being driven out altogether from their farms and dwellings, are being assembled in camps and then taken away; the Czech inhabitants, in some places, have been tortured by official Polish organs in rooms especially equipped for that purpose."

"It is no wonder that, in this dreadful economic situation, famine is setting in and, in consequence of that as well as of the severe mental and physical torment to which this population is being subjected, mortality is increasing at an amazing rate. In Ratibor, for instance, between twenty and thirty persons die every day, mostly children. There are no hospitals, no doctors, no medicaments and, in some communities, typhoid fever is beginning to spread."

"FOR THREE DAYS NEITHER GOD NOR MERCY"

"These horrors are crowned by the fact that both soldiers and civil commissaries and their assistants every day utter threats to the effect that, if the population does not remain in those regions, the time will come when *'trzy dni nie bendzie Boga a slitowania'* ('For three days there will be neither God nor mercy'). Under these circumstances, and for fear lest they should be transferred to Poland, the inhabitants, often with only a small suitcase, are fleeing across the frontier into Czechoslovakia."

"Since it cannot be concealed that by this method of proceeding, the Polish authorities are pursuing in the Kladsko, Hlubcice and Ratibor districts a policy of faits accomplis which, in their consequences, might impair some of the premises in favour of the satisfying of the Czechoslovak claims to the said districts or, on the satisfying of those claims, might, to say the least, cause Czechoslovakia to come into possession of territory ethnically estranged and economically depreciated, the Czechoslovak Government take the liberty of drawing attention to this state of affairs."

"It is true that the Potsdam Conference entrusted Poland with the administration even of those parts, but at the same time it stressed the fact that the definite frontiers would be determined by the Peace Conference. Hence, in the opinion of the Czechoslovak Government, it plainly follows that the Polish Government are not empowered to effect in those districts changes in the situation such as would prejudice the decision of the Peace Conference. The settling of those areas with Polish population alone creates a state which is of itself prejudicial. The Ministry of Foreign Affairs drew the attention of the Polish Government to the matter in their note of August 20th, 1945, with the request that they should remedy it and now take the liberty of requesting the Government of the United States of America to be kind enough to act accordingly."

"The Ministry of Foreign Affairs avail themselves of this opportunity to express to the Embassy of the United States of America the assurance of their highest consideration.—Praha, August 26, 1945."

FINAL SETTLEMENT ONLY BY PEACE CONFERENCE

This truly remarkable diplomatic document should be of interest to Germans who plead for the recognition of the Oder-Neisse line as a permanent frontier between Poland and Germany. Every single argument brought forth by *Jan Masaryk's* Czech Foreign Ministry can and should be applied to the dispute about the Oder-Neisse line. The Czechs were right in stressing the fact that Polish administration of the Hlubcice-Ratibor areas was—under international law—of temporary character and that the final settlement could only be made by a Peace Conference.

What was the reaction of the U.S. Department of State?

The reaction is contained in a telegram from the American Acting Secretary of State, *Dean Acheson* of September 29, 1945, addressed to the American Ambassador in Prague, Steinhardt. Acheson's answer to the Czech document reads—in its decisive part—as follows:

"Since Polish control of area is temporary pending final decision of German frontiers, Dept. considers that problem contained in Zecho note should be brought to the attention of Council of Foreign Ministers by Zecho Govt as a development which prejudices final settlement of frontiers as contemplated in Potsdam agreement."

"Repeated to London as 8640; repeated to Warsaw as 150.—Acheson."

This was the correct position of the American Department of State.

The purpose of this study was not to exhaust the evaluation of the documents produced. Its purpose was to produce a selection of the documents contained in the latest State Department publication, documents which shall for years be the subject of historical and political consideration by present and future historians.

GIDEON OPPENHEIMER—RENAISSANCE MAN

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, March 26, 1969

Mr. CHURCH. Mr. President, recently in Boise, Idaho, a gentle man by the name of Gideon Oppenheimer died, the victim of a heart attack. Gideon was a close personal friend and certainly one of Idaho's most illustrious adopted sons, for he was born in Berlin, reared in Prague, and spent much of his life in New York. It was a flip of a coin 16 years ago that made him decide to move to Idaho, where he purchased a small weekly newspaper. Idaho was fortunate the coin brought him West from New York.

Gideon Oppenheimer was a man of many talents and many interests. He was a newspaperman, a lawyer, a scholar. Little failed to interest him, from athletics to politics to chess. But his special interest was recruiting young Idahoans with outstanding scholastic talents for his alma mater, Columbia University. Through his efforts, scores of Idahoans of high scholastic ability were given the opportunity to study at Columbia, and the university recognized his efforts by awarding him its Outstanding Alumni Award.

In the words of Suzanne Dabney Taylor, who wrote movingly of Gideon in an article published in the Intermountain Observer following his death, "With the I.Q. which hovered around the genius level, Gideon lashed into activities so diverse that he smacked of the Renaissance Man."

Gideon Oppenheimer was this and more, Bob Lorimer, whose sensitive, well-written columns grace the pages of the Idaho Daily Statesman, captured another side.

His secret was empathy. He understood people and was kind and thoughtful when kindness and thoughtfulness counted.

Mr. President, Idaho has lost an unusually gifted citizen. But Gideon Oppenheimer will long linger in the memory of his adopted State.

I ask that the articles by Suzanne Dabney Taylor and Bob Lorimer be printed in the Extensions of Remarks.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

FRIEND'S DEATH ROUSES MEMORIES OF BOISE LAWYER'S VARIED LIFE

I lost a friend a few days ago.

The whole thing seemed unreal when I glanced at the death notices. It had only been two months since his charming mother had died—also suddenly and also of a heart attack. He was only 46 and I hadn't even known he was sick.

He was part of Boiseana even though he had been born in Berlin, reared in Prague and had attended New York schools. He worked hard at being a westerner in general and an Idahoan specifically ever since he moved here 16 years ago to take over management of the Meridian Times.

It took a little time to get acquainted with Gideon Oppenheimer. When I first met him I wasn't too sure I even liked him. He brought with him the coolness of many easterners augmented with the influence of formal European upbringing. Frankly, I felt he was a little snooty.

I was wrong. Actually, I believe he was instinctively very shy. He sometimes tried to cover up with brusque mannerism and, occasionally, impatient outbursts when faced with people who hit him the wrong way. Then he would do an about-face and treat a child or an animal in a way that was well beyond what either deserved.

Unlike some people who exploit their past, he seldom talked about his war years. I knew that he earned a Purple Heart but I didn't know he had two of them—or five battle stars—until I read the obituary.

He once showed me some pictures he had taken when American troops liberated one of the Nazi torture camps. It was too late for liberation of many of the prisoners. It must have been a terrible emotional experience for Gideon. In spite of his special training as an interpreter for his work as a combat intelligence officer, he had a personal stake in the mess.

As I recall, at least six of his mother's relatives had fallen victim to the horrors perpetrated by Hitler's butchers. In addition to first-hand knowledge what the Nazis did to members of his own race, he was aware of how other minorities had been mistreated for their refusing to compromise to demands of storm troopers.

The funny thing was Gideon and I had few mutual interests. I mentioned the wonders of the Dodgers when he talked about Mickey Mantle. When he lauded Columbia College, I would take another side. I didn't share his avid interest in politics nor literature for literature's sake.

Gideon lacked natural ability to work with his hands but he had a brilliant mind—not only full of facts but also possessing the abil-

ity to put it into gear as evidenced by his prowess at the chess board and bridge table. Incidentally, I play neither nor am I interested in learning.

His secret was empathy. He understood people and was kind and thoughtful when kindness and thoughtfulness counted.

He had other friends. This was proven by the acid test, a funeral attended by but one living relative (as far as I know), a cousin who participated in the simple Jewish service. But there were a number of persons attending. They were of various ages. It was obvious from the looks on the faces of the young pallbearers that they felt personal loss.

It was windy and cloudy at the cemetery. I couldn't hear very well but what I did hear sounded like: "A thousand will fall at your very side and ten thousand at your right hand; to you it will not come near . . ."

THE COIN FELL TO THE WEST FOR GIDEON OPPENHEIMER

One day about a decade ago Gideon Oppenheimer tossed a coin in his New York apartment to decide whether to buy a newspaper at Meriden, Conn., or Meridian, Idaho. It was Idaho's luck that the coin fell west.

Gideon was a degree-carrying lawyer from Columbia University, a member of the bar of the City and State of New York, and the architect of the law course designed for the American Legion Boys State delegates and the YMCA Youth Legislature, in which Idaho is a participant. However, he had another field that called him, the challenge and excitement of newspaper work. He had come under its spell while editor of his school newspaper and as a writer for university publications.

Shortly after coming to Boise he made a deal for a weekly published at Meridian which he promptly re-named the *Meridian Times*. Later when he bought a daily at Caldwell he also re-named this the *Caldwell Times*. Both were in honor of his model, the *New York Times*, which he read without fail every day until his death last week at the age of 46.

After a period spent with these newspaper enterprises he sold out and opened a law practice in Boise where his mother, Mrs. Carol Oppenheimer, had joined him. She died last December.

During this newspaper experience he had become an active participant in Idaho Democratic politics and worked in the early campaigns of Sen. Frank Church. As a campaign manager, he piloted Robert McLaughlin of Mountain Home to the Democratic nomination for U.S. Senator in 1960, but lost in the general election to Republican Henry Dworshak.

With the I.Q. which hovered around the genius level, Gideon lashed into activities so diverse that he smacked of the Renaissance Man.

He adored games, but how he hated to lose! Eugene Thomas, Boise attorney and a classmate of Gideon's at Columbia, recalls on one pleasant day a dozen tables for chess were set out in the university close under the lofty plane trees. Gideon was the challenger for each. He took every game with scarcely a furrow of concentration on his brow.

During World War II he served as a combat intelligence officer in the infantry. He was severely wounded and received two purple hearts and five battle stars.

His driving passion was the development of young men of the highest intellectual ability toward university experience. Specifically, that meant the recruitment of bright young Idahoans for Columbia.

To these he opened his excellent library as well as the pages of his sophisticated mind, which had been nurtured in Germany where he was born in 1922. He was a school boy at Prague, Czechoslovakia and experienced travel in other European countries, where his father's business as a metals buyer took him (Gideon's father died shortly before his son's removal to Idaho).

The young students whose scholastic records would seem to fit them for undergraduate work at Columbia were Gideon's project. In his search for the worthy he was as relentless as a blood hound and scoured the state for those whose attainments reached his ears. For these efforts, which gave Columbia scores of Idahoans, many of them of the highest calibre, he received his alma mater's Outstanding Alumni Award.

The achievements of these young men will serve as Oppenheimer's memorial long after his personal memory has vanished like the blue haze of autumn from the Idaho hills.

THE URBAN CRISIS—EVERYBODY'S BUSINESS

HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. WYDLER. Mr. Speaker, recently, an outstanding American, Mr. David Rockefeller, spoke at Long Island University on the problems faced by our Nation's urban centers. His speech was a good one and to the point, stressing the responsibilities of free enterprise in solving the problems of our cities. The text of the speech follows:

THE URBAN CRISIS—EVERYBODY'S BUSINESS

(Address by David Rockefeller)

When Alexander Aldrich and his academic colleagues invited me to participate in this Conference, they neglected to explain the historic antecedents of the area. It was only later that I learned that we are meeting in the shadow of a shrine of rock 'n roll music—the old Brooklyn Paramount Theatre!

To me, it is reassuring to find that there is actually one place in our city where the three R's of learning have displaced the two R's of music!

One place, that is, where "Beatlemania" has given way to entomology!

Of course, there may be some who would take issue with this shift, but I'm sure the chorus of dissent would not be nearly so loud as the one that greeted the news that, on our Avenue of the Americas, there are now more banks than bars!

I've heard a number of people express grave doubts that this trend represents urban progress!

At any rate, it seems to me the site of today's meeting provides an appropriate setting for a discussion of one of our most pressing long-term economic problems—a problem known perhaps too familiarly as the crisis of our cities.

Within a short distance, we have numerous examples of the activities, hopes and frustrations that surround efforts to bring about a better life for all our citizens.

A few blocks to the north, plans for development of the Brooklyn Navy Yard complex hold out the prospect of a significant increase in job opportunities. The adjacent Bedford-Stuyvesant area, which houses the nation's largest non-white population, is the focus of ambitious training and redevelopment programs. And in the nearby Ocean Hill experimental school district, recent events demonstrated that change does not come easily and that even the best intentioned efforts may inflame feelings of resentment that have smoldered for years.

All these activities, I think, reflect an expanded growing public awareness of the problems of our cities. But unhappily they reflect, too, the fact that far more intensive efforts are needed if we are to cure present ills, while retaining the representative character of our Government and insuring the freedom of individuals and enterprises to pursue the quest for betterment.

While solutions to specific urban problems are immensely complicated, I feel that the experience of the past few years has clarified at least the general approach that must be taken. It is not a Government approach exclusively. Nor is it a private sector approach. It is a massive cooperative effort that mobilizes every segment of our society for a sustained campaign.

Anything less, in my judgment, is doomed to failure. The crisis of our cities must be everybody's concern and everybody's business.

As John Gardner put it recently, "We have an ample supply of handwringers, but we are in very short supply of people willing to lend a hand."

The cooperative approach I mentioned is perhaps best exemplified by the concept of Mr. Gardner's National Urban Coalition. As you know, this is an organization that embraces business, labor, education, church groups, community leaders—the entire spectrum of our society—and reaches out to local areas where these problems must ultimately find their solutions. It is unique in two respects: first, because it is not sponsored by any one constituency but by all significant elements of the community; second, because it does not focus on a single problem but on the whole range of urban problems.

To understand why such a broadly based effort is indispensable, we need only remind ourselves of the issues that are straining the sinews of our social structure—issues rooted in social, technological, political and economic conditions of incredible complexity.

From a social standpoint, a critical factor has been the migration of Negro farm labor from the south to our northern urban centers, a movement involving almost four million people over the past 30 years. Although much progress has been made in assimilating these people, much more remains to be done. And, paradoxically, even as progress is accelerated, it has given rise, in some quarters, to strident demands for a fragmented rather than an integrated society.

The technological implications of this rural-to-urban migration have been awesome, indeed, especially in the field of transportation. The task of getting people into and out of our cities, as well as moving them around inside, is a long way from being mastered. We are equally far behind in dealing with air and water pollution and the provision of adequate recreation facilities.

The political and economic impact of this population shift is further cause for grave concern. For the most part, suburban areas do not fall within the same political jurisdiction as the major cities themselves. Our metropolitan areas are made up of a host of autonomous political entities—some 1,500 in the Greater New York region alone—and each is understandably jealous of its independent status. From the point of view of effective municipal administration, this constitutes a major obstacle. Beyond this, the influx of low-income families and the exodus of middle-income families from the central cities have reduced tax revenues at the very time when the costs of providing education, police protection, sanitation, health services and welfare have all risen astronomically.

In view of the magnitude and complexity of these problems, it is clear that we must come to some firm conclusions on national priorities. Without a realistic schedule of goals and a commitment of resources to meet them, we are certain to experience duplication of effort and a consequent lack of accomplishment. Regrettably, the resources available to deal with the urban crisis are far more limited than our aspirations, so we can

scarcely afford to squander anything through lack of planning and coordination.

In recent months, as the new Administration in Washington has developed plans for the future, we have heard a great deal about the private sector's shouldering an increasing burden in managing projects to improve training, education, health services and housing among the disadvantaged.

I think this move, toward what Peter Drucker calls "reprivatization" of the economy is most encouraging, and I hope that more will come of it. Business must assume greater responsibility in the urban area if it wants to preserve the rights it has enjoyed up to now. And, in my view, it has much to contribute through the application of the efficiency and economy of business practice to public problem-solving.

The particular credentials business has for this role rest in the procedures by which private managements establish goals and move to their accomplishment. Wherever the condition of voluntary enterprise governs and the consumer makes independent decisions, a business has to plan how to produce and distribute at a cost the market is able to absorb. Because failure is costly, every effort is made to seek each new objective with more science and exactitude, less intuition and compromise.

Above all, business is an innovator. It is the only institution in our society created specifically for managing change. It is also the most flexible and adaptable of our institutions at a time when these qualities are needed as never before.

Government now faces the necessity of providing greater benefits and satisfactions within the increasingly limited resources that can be mustered. There is questioning whether a limit has not been reached in a tax load that can be borne without slowing down the economy. There is also evidence of a serious shortage of capital to supply the houses, schools, service facilities and machines needed to provide jobs and produce goods for our growing population.

There must be dramatic breakthroughs in providing better education, health services and housing at reasonable cost. Here, typically, the innovative leadership must come from business, with Government furnishing appropriate incentives.

The best example of this we have had, to my way of thinking, is the Federal Housing Administration, which was introduced during the 1930's as a guarantor of home mortgages. Originally, the Government appeared to be taking a substantial risk. In point of fact, though, there have been virtually no losses. Because the Government stood behind these mortgages, private funds flowed into the market and enabled people to build and to own homes.

More recently, Business-Government cooperation in construction has been stimulated with the formation of the New York State Urban Development Corporation. Through this body, the state will initiate and plan large-scale community projects and, in some cases, handle land acquisition and demolition. Then private enterprise will be brought in to acquire the vacant land and develop the various elements of the project, except in instances where additional public funds may be required for subsidized low-income housing.

The passage of the Housing and Urban Development Act of 1968 has also opened many avenues for cooperation and business action in this field. One of the most promising new features of that legislation is the National Corporation for Housing Partnerships, which has as its goal the construction of 50,000 additional low- and middle-income homes each year. A significant effect should be to stimulate research into advanced construction technology so that low-income housing will become even more attractive to private developers.

These examples suggest that the cooperative approach to urban problems is not merely desirable, but, in many cases, essential to success. This applies to cooperation among Federal, state and local Government units as well as to cooperation within the private sector.

For instance, the Urban Coalition's Task Force on Housing and Urban Development, on which I serve, includes representatives of labor, the financial community, the construction industry, and the academic community, urban affairs specialists and city and state officials.

Such a diverse membership provides a broad base from which to attack problems that could not be adequately dealt with by any one segment. This Task Force is currently coordinating information on the contributions that corporations, universities, the states and local governments can make to the physical rebuilding of our cities. It is also studying the formation of national housing markets—markets large enough to take advantage of advanced technology in construction and make low-income housing economically attractive to builders.

I believe the type of partnership exemplified by the Urban Coalition can usefully be carried a step further. The Coalition, with its wide cross-sectional representation, should be able to contribute enormously to the setting of realistic national priorities and goals, and I would hope that arrangements could be worked out with the appropriate Government agencies to make such a contribution possible.

The primary task of Government, of course, is to focus the political energies of the people, to dramatize the issues, to present the fundamental choices, and to make decisions.

Once we have achieved a measure of consensus on goals and priorities, though, there remains the formidable task of implementation. And here, as I have indicated, there is a pivotal role that business and individual businessmen can play.

Too often, I'm afraid, the measures chosen by Government are those that survive the executive and legislative obstacle course after every interest group has exerted its maximum pressure. Frequently the best measures have the least support, placing an intolerable burden on responsible public servants who want to achieve the best possible results for the underprivileged while keeping the country economically strong and able to continue improving itself.

It is my thought that the business community—with the great capacity it has for searching out methods, devising techniques, and programming operations economically—cannot do less than vigorously promote the adoption of the best projects and policies proposed, in the interests of all our citizens.

What is needed, in my view, is some means of mobilizing the opinions and resources of the business community behind workable approaches to urban problems, and then persuading Congress to do the things that must be done. The influence and ideas of businessmen are needed now as never before, and we should apply them in the area of social legislation as we have, in the past, on issues such as taxes and tariffs.

Not long ago, I suggested that one means of doing this might be through a Business Committee for Social Progress. This would be a policy-making group which would unify and coordinate the otherwise isolated efforts of the business community in this field. It could perform a highly useful function by enlisting wider public and legislative support for constructive proposals to encourage and reinforce national, state and local efforts to cope with urban problems. It could also help, on Capitol Hill, to promote the aims of the Urban Coalition. It seems to me that such a Business Committee could do much to sift through the many studies of the urban problem and help put together a realistic program for action.

In any event, regardless of the mechanism, I think the business community must involve itself even more deeply in urban issues in the future than it has in the past. And that future is not likely to be two or three or five years, but the rest of your lifetime and mine.

Yet I don't think we should allow ourselves to become unduly discouraged, either by the magnitude of the problem or by its likely duration. All of us can perhaps draw inspiration from the example of the French Marshal Hubert Lyautey who asked his gardener to plant a tree near a bench on which he particularly liked to sit. The gardener protested, saying that the tree grew only slowly and would not reach maturity for 100 years.

"In that case," replied the Marshal, "we have no time to lose so plant it this afternoon."

In dealing with the urban crisis, we, too, have no time to lose. We must think hard about how our cities can be made to work, then get down to the tough practical details of implementing our thoughts in employment, housing, education and elsewhere. This is a job for all of us—government, business, labor, the academic world, religious and civic groups all working together. We must remain everlastingly at the job if our cities are ever to realize their full potential and to hold out for all our citizens the actuality of the American Dream.

LEGISLATIVE OBJECTIVES: NRTA–AARP

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, March 26, 1969

Mr. WILLIAMS of New Jersey. Mr. President, a statement of "Legislative Objectives" was adopted on February 25, 26, 1969, by the Legislative Council of the National Retired Teachers Association and the American Association of Retired Persons. The legislative council represents the one and a half million members of these sister organizations, and the council statement serves as a guide to those who are authorized to speak for these organizations on legislative issues, including their executive director, Cyril F. Brickfield; their legislative representative, Ernest Giddings; and their legislative counsel, James S. Rubin.

This statement of "Legislative Objectives" is significant not only as a statement of the aspirations of these one and a half million older Americans, but also as an informative indication of the desires of millions of others of this age who are not affiliated with NRTA and AARP.

Included among these legislative objectives are recommendations to increase and improve social security and medicare benefits, to protect fixed incomes against the ravages of inflation, to enact new laws and implement existing laws to promote safety in the streets and at home, to provide equitable tax treatment, to improve employment and service opportunities for the elderly, and to protect consumers against frauds, misrepresentations, and other undesirable practices.

The statement urges the President to issue a proclamation calling the White House Conference on Aging for 1971, as authorized by Public Law 90–526, enacted last year, and urges the appropri-

ation of funds for allocation to the States to permit immediate beginning of planning at State and local levels in preparation for that Conference.

Time does not permit me to discuss other recommendations in this statement of legislative objectives. In order that the full text may be available to Senators and others who may be interested, I ask unanimous consent that the text be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LEGISLATIVE OBJECTIVES

IMPROVED SOCIAL SECURITY AND MEDICARE BENEFITS

1. We support legislation to increase the minimum Social Security benefit to at least $120 a month and provide corresponding increases at all Social benefit levels.

2. We recommend that the Social Security earnings limitation be amended to permit annual earned income of $3000 without reduction in Social Security benefits.

3. We urge that the widows Social Security benefit be increased to 100 per cent of the worker's benefit.

4. We favor legislation to establish minimum Social Security benefits for all persons age 70 or older who are not otherwise eligible for cash benefits under the Social Security program.

5. We urge Congress to assure that all persons will be eligible for Medicare upon attaining age 65.

6. We urge the Congress to include prescription drug costs in Medicare.

7. We support the principle of preventive care to promote the physical and mental health of the aged.

8. We urge a bipartisan study of the whole Social Security system in relation to today's economy.

ADEQUATE RETIREMENT INCOME

9. We urge the states to increase pension benefits of all retired teachers to at least a $2400 a year minimum based on 25 years of service, with proportional benefits for all service of shorter duration.

10. We urge adoption of a national policy of (a) the transferability of public and private retirement credits, (b) five-year or earlier vesting of retirement benefits, and (c) adequate funding.

11. We urge the Congress to provide federal funding to encourage the States to accept the transfer of outstate teaching credit.

12. We urge the Congress to provide adequate pension increases for railroad retirees.

13. We urge the Congress to provide adequate pension increases for civil service retirees.

14. We urge the Congress to protect veterans, their dependents, and all other older Americans in their benefits when increases are voted in Social Security or pensions.

SAFETY IN THE STREETS AND AT HOME

15. We urge effective implementation and strict enforcement of criminal laws, and enactment of new ones where necessary.

PROTECTION AGAINST INFLATION

16. We urge the Members of Congress and the President to intensify all efforts to protect the purchasing power of persons on fixed retirement incomes.

17. We urge that all public and private pension programs be revised to provide automatic pension increases tied to a rise in the cost of living.

EQUITABLE TAX TREATMENT

18. We urge that the entire economic community of the Nation contribute to the financial improvement of needy older Americans.

19. We urge the Congress to permit persons age 65 and over to deduct all unreimbursed expenses for drugs and other medical expenditures from their Federal income taxes.

20. We believe that single persons over age 65 with incomes up to $3500 a year and married couples over age 65 with incomes up to $6000 a year should be exempt from paying a Federal personal income tax.

21. We urge the Congress to adjust the retirement income credit base in accordance with the increase and the maximum Social Security.

22. We favor replacing the retirement income tax credit with retirement income tax exemption.

EMPLOYMENT OPPORTUNITIES

23. We urge more effective enforcement of the Age Discrimination Act passed by the 90th Congress and expansion of its provisions to better assure those over age 65 who want to work, the opportunity to do so.

24. We urge the Secretary of Housing and Urban Development to see that applications under the Model Cities Act take into account the needs of older persons in the affected areas and the community at large.

CONSUMER PROTECTION

25. We support legislation to expose and restrict all categories of misrepresentation and fraud to consumers.

26. We favor legislation to provide additional protection for the aged against high drug expenses.

27. We urge that there be a Consumer spokesman at the highest Executive level of Federal Government.

28. We oppose the adoption by any State of the Uniform Consumer Credit Code until at least July 1970, to afford adequate study of the complex provisions of the Code.

29. We urge that organizations be established to study and promote the interest of people as consumers, encourage protective legislation, and further consumer education.

INDEPENDENCE, SELF-RESPECT AND DIGNITY

30. We urge that the method of choosing the President of the United States be reformed.

31. We reaffirm our support of the Older Americans Act and the principles upon which it is based; we urge Congress in its consideration of the extension of the grants program to continue support of those projects which have proved successful, but to terminate those which have not fulfilled their original purposes, redirecting funds into other more promising programs; we further urge that amendments to the Older American Act fulfill the objectives established by Congress.

32. We urge the Congress to appropriate the funds necessary for allocation to the states by the Administration on Aging in order to permit immediate planning by states in preparation for the White House Conference on Aging.

33. We reconfirm our belief in the need for an independent Federal Commission on Aging and independent State Commissions on Aging.

34. We urge an appraisal of the effectiveness of the President's Council on Aging in coordinating the various Federal agencies having jurisdiction over the problems of the elderly.

35. We urge immediate implementation of the National Community Senior Service Corps concept under the Older Americans Act to provide programs of employment and service opportunities for older persons.

36. We urge the Congress to support more dynamic educational programs for older persons.

37. We urge that the several states develop and adopt a uniform probate code.

RESOLUTIONS

Resolved, That the National Retired Teachers Association and the American Association of Retired Persons urge:

38. That President Nixon, at an early date, appoint a Special White House Assistant on Aging.

39. That President Nixon issue a proclamation calling for the White House Conference on Aging for 1971.

40. That the month of May be proclaimed "Older Americans' Month".

PRICE COMPETITIVENESS

HON. KEITH G. SEBELIUS

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. SEBELIUS. Mr. Speaker, the Kansas wheat industry plays a most important role in our Nation's economy and in addition represents a mighty weapon to be used in our Government's concerted attack on the problem of hunger and malnutrition.

Today, Mr. Carl Dumler, the president of Great Plains Wheat, Inc., at the third annual congressional breakfast sponsored by Great Plains Wheat, Inc., Western Wheat Associates, U.S.A., Inc., and National Association of Wheat Growers, made some very pertinent and timely remarks concerning several new barriers that those of us vitally interested in the wheat industry are facing this year. I feel that Mr. Dumler's remarks and suggestions concerning the present gulf port dock strike and the need for the United States to adopt a more aggressive export price competitive program represent the kind of thinking we must have to find workable answers to these pressing problems. I commend Mr. Dumler's remarks to the attention of my colleagues and all those interested in agriculture:

PRICE COMPETITIVENESS

(Remarks by Carl Dumler, president, Great Plains Wheat, Inc., at the third annual congressional breakfast sponsored by Great Plains Wheat, Inc., Western Wheat Associates, U.S.A., Inc., National Association of Wheat Growers, Washington, D.C., March 26, 1969)

Senator Goodell, distinguished Senators and Congressmen, and fellow wheat producers. Like most people today, we farmers are prone to complain about our problems while taking many of our blessings for granted. Before I go any further, I would like to take note of one of our blessings—these gentlemen of the Congress who have made a special effort to visit us this morning and the interest they express in our problems by their attendance. Thank you, gentlemen, for attending.

The year since our last meeting here in Washington, however, has really not been one with many blessings to count in the export market, let alone take for granted. It has been a crucial year with many factors combining to send U.S. wheat exports sliding downhill. Shipments of wheat from July 1 to the end of February were down more than 40 percent compared to the same period last year. I will discuss here new barriers which have faced U.S. Wheat this year.

Of immediate concern is the dock strike, resolved in some areas, continuing to stifle export movement in others. The strike has taken its toll in our exports. Up to the end of December, U.S. shipments for dollars showed a gain of more than 461,000 bushels compared to the same period last year. These same dollar shipments, however, have now slipped into a 14 percent deficit since the beginning of the dock strike.

Another deterrent to sales was the embargo initiated by Japan. Shipments to this leading cash customer are off about 25 per cent. We are pleased that shipments have been resumed and the important role played by marketing organizations in the negotiations leading to the lifting of the ban.

But the principle barrier to U.S. Wheat exports has been the loss of price competitiveness. Precipitating this crisis has been an abundant world supply of wheat. The fears of world starvation a few years ago have now been replaced by concern of oversupply. Wheat production soared in the major food-deficit countries last year. Coupled with recent high levels of production in the developed countries, world wheat output has surpassed the 10-billion-bushel level, something like the four-minute mile in track, for the last three years. This year's production set a record at 10.8 billion bushels.

Also influencing the loss of price competitiveness has been the International Grains Arrangement. The wheat marketing organizations supported the I.G.A., providing we could remain competitive in our traditional markets. This we have not been able to do. In fact, we have had to price below the I.G.A. minimum in order to make sales. And we have lost sales because of this non-competitiveness.

For instance, Brazil issued a worldwide tender for 100,000 tons on October 23. The United States sold 75,000 tons. To make this sale, however, we had to price our wheat 10 cents per bushel below the I.G.A. minimum. And in spite of being below the minimum, Argentina, whose I.G.A. pegged price at the Gulf is the same as the United States, offered at three cents per bushel below our price and sold 25,000 tons. Other f.o.b. offers were received from Australia at six cents under the U.S. price, France at 21 cents under and Spain at 17 cents under. Romania offered wheat at the same price as the United States.

Also, the United Kingdom estimated a need for 500,000 to 700,000 tons of filler wheat this year. We have not been able to take advantage of this opportunity because our wheat has been priced 10 to 15 cents per bushel higher than wheat offered by the EEC, Sweden, Spain, Bulgaria and Romania.

A French sale was made to Turkey at more than 12 cents per bushel under the I.G.A. minimum due to freight interpretations of the agreement. This again prevented a possible U.S. sale.

Other freight interpretations and quality up-grading of I.G.A. pegged wheats has made the United States non-competitive in many areas. Non-member wheats are being priced under U.S. Wheat. For instance, Russian 441 is priced at more than $2.00 per ton under Hard Red Winter, 13.5 per cent protein, in Rotterdam and Russian SKS, 14 per cent protein is about $4.80 per ton under U.S. Spring, 14 per cent protein, in the United Kingdom around the first of March.

The facts clearly show the United States is not price competitive in many of our traditional markets. And we must be competitive if we are to sell. Our wheat exports can bounce back with an aggressive price competitiveness program through the coordinated efforts of the U.S. Department of Agriculture, grain trade and producers.

ADDRESS BY SENATOR TYDINGS BEFORE LIONS CLUBS OF ARBUTUS, LINTHICUM, AND GLEN BURNIE

HON. JOSEPH D. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, March 26, 1969

Mr. TYDINGS. Mr. President, early this month, in Baltimore, I had the pleasure of speaking before three Lions Clubs, Arbutus, Linthicum, and Glen Burnie.

As an individual who is concerned with the quality of our environment and as a Senator from a State which is trying to preserve and enhance this quality, I ask unanimous consent that my remarks to these groups be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR TYDINGS BEFORE LIONS CLUBS OF ARBUTUS, LINTHICUM, AND GLEN BURNIE

Few concerns of mankind today are as important as the preservation of the quality of the environment.

Before telling you how we in Congress are alarmed by the shocking decline in environmental quality and what some of us are trying to do about it, let me just relate some facts which indicate the degree to which man has abused his natural environment.

Every river system in this country is polluted.

Toxic matter is being released into the air over the United States at a rate of more than 142 million tons a year, or three-fourths of a ton for every American—a new and invidious form of overkill.

Not counting industrial and agricultural wastes, we discard more than 165 tons of solid wastes each year. While we send 3 men to the moon and back in an unprecedented display of technological skill, the rest of us on earth are being buried in our own trash. It has been said, "We reach for the moon standing knee deep in garbage."

There are over 19 thousand communities whose public water supplies serve about 58 million people which are not covered by U.S. public health standards.

Each year over 300 new chemical compounds are introduced into industry without sufficient concern shown for the health of the individual and ecology of the country side. Damage to materials and crops is $65.00 per person, 11 billion per year.

I could go on but I won't. I'll just mention that this senseless destruction of the environment is taking place close to home as well as nationwide.

Here in the Baltimore metropolitan area as well as in other metropolitan areas, air pollution is reaching crisis proportions.

Our factories, automobiles and office buildings spew forth sulfur oxides, hydrocarbons and particulate matter in dangerous quantities. These damage our health, causing bronchitis, asthma, and emphysema.

Air pollution covers this area with dirt and smoke, destroying its attractiveness and giving the area a bad name.

Air pollution increases the cost of living, as cleaning expenses rise.

And scientists tell us now that air pollution may be damaging and upsetting the world's weather.

What is needed in the Baltimore area and elsewhere are stiffer laws and stiffer penalties. At State and local level our present lax attitude no longer can be tolerated.

Very simply, the blatant pollution of our skies must stop.

We can no longer afford to treat our air as an aerial sewer.

Government and industry must join together in a massive effort to bring back clean air to the Baltimore area. We have the technology available to do the job. What we lack is the will.

The greatest natural resource in Maryland is the Chesapeake Bay. But even this has not escaped the heavy hand of man. The Director of the Federal Water Pollution Control Administration's mid-Atlantic regional office in Charlottesville recently reported that each year $3 million worth of fish are lost because of pollution in the bay and its tributaries.

The point of all this is that man is now in the process of destroying his environment.

And let me interject here that man is part of this environment. It is a small point, perhaps, but an important one and is too frequently overlooked. Man does not exist on his environment. He exists within it.

Dr. Charles C. Johnson, Jr., the Administrator of the Consumer Protection and Environmental Health Service within the Public Health Service has said "unless our Nation learns and learns quickly to apply the scientific knowledge we have to the problems of the environment, we are courting inevitable disaster."

I would like to briefly review how the Congress has responded in the past years and what I think must be done if we are to restore the quality of our environment.

You may be surprised to know that in the past eight years Congress by and large has recognized the seriousness of the problems we face and has enacted into law a wide ranging and far reaching package of environmental legislation. Since 1960, under two Democratic administrations, we have passed more and better legislation than in any other period of our history.

Let me run down the list of legislative achievements.

The Water Quality Act of 1965 which provides for the establishment of quality standards for both State and interstate waterways.

The 1966 Clean Water Restoration Act which encourages the river basin approach and provides a massive financial authorization to construct water quality treatment plants.

The 1964 land and water conservation fund which provides financial assistance to the States for planning and acquisition of outdoor space for recreational purposes.

The 1968 wild and scenic rivers systems which seeks to protect the few remaining rivers we have that are in their natural state.

The Solid Waste Disposal Act of 1965 which establishes a research and planning effort for means to dispose of millions of tons of garbage, rubbish, junk autos, and other litter that clog our cities and countryside.

The Clean Air Act of 1967 which authorizes the setting up of our quality control regions and directs HEW to establish air criteria for certain pollutants.

The list is, I think you will agree, an impressive one. Let me add to it 2 bills of my own that have been signed into law.

The first established an office of estuarine studies in the Department of the Interior to conduct a nationwide study of pollution in our estuaries. The bill was drafted so as to provide us with the first real analysis of the Nation's estuaries. This should be completed by this fall and will contain a follow-up program of action.

The second directs the Corps of Engineers to undertake the first nationwide survey of coastal erosion, to establish a list of priority control projects and to submit to the Congress a series of recommendations for the sensible, comprehensive protection of our shoreline.

Overall, then, the achievements of the last eight years have shown a remarkable awareness of the depth and scope of the problems involved in the restoration of our environment.

But there is a hitch, and that hitch is money. There does not seem to be enough of it.

The acts which I have mentioned are all authorizations. They permit the executive branch to spend money but they do not provide it with any funds. For this you need an appropriation. It is a double barrel process. First the authorization and then the appropriation.

But in the field of environmental legislation, the appropriations have been way below

the authorizations. We have, in effect a money gap.

The 1969 fiscal year authorization for construction of water quality treatment plants was $700 million. Yet only $214 million of this was appropriated.

The combined total of the appropriations for the land and water conservation fund in fiscal 65, 66, 67, and 68 was less than the cost of a nuclear powered aircraft carrier of which we have one, are building a second, and planning a third.

Yet even with more money and with all this legislative authority, and with the growing recognition of the need to restore the quality of our environment, I believe very strongly that an essential element of any successful effort is absent.

We have legislation for trails and recreational funds. We have legislation for our pollution and desalinization, and so on and so forth.

But what we don't have is legislation providing for an overview. We haven't pulled it all together. No one in our government is looking at the big picture. Our efforts at environmental control are diversified and fragmented.

Some Federal agencies are involved in a portion of the environment but none of them is viewing it in its totality.

This is a great mistake, for our environment is a complex system, made up of different parts, but parts that are completely interrelated and form a single entity. It is also a great tragedy, for unless the environment is considered as a whole, our efforts to restore its quality will be half measures.

I am going therefore, to introduce legislation that will establish a new, small yet select office within the executive office of the White House to consider the overall environmental effects of the policies and projects of the many agencies within the Federal Government.

This office will be called the Office of Environmental Quality. It will be well staffed and amply financed. It would operate much like the Bureau of the Budget.

Its principal purpose, however, would be to review, through in-house research or by contract, Federal activity affecting the environment, and to render judgements on such activity.

I cannot help but be impressed by the tremendous resources we have in this country, their basic unity, and the need for all of us to try to maintain their quality. In this country today there is no more serious problem than the restoration of the environment. We simply must make the effort and spend the time and money to stop the abuses that have been taking place. Very simply. We must regain the integrity of our environment. As rational men in a rational age, we can do no less.

THE DAY I KNEW I BELONGED TO THE FLAG

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. UTT. Mr. Speaker, it is a pity that those elements in our society who are working ceaselessly to subvert our youth have robbed so many young people of the deep pride and pleasure that comes from a sense of patriotism and from the knowledge of the glorious history of America.

Former President Eisenhower experienced this thrill countless times and expresses his feelings so wonderfully in his article "The Day I Knew I Belonged to the Flag," which appeared in the March 1969 edition of the Reader's Digest. I believe everybody should read it.

Mr. Speaker, under unanimous consent I include it in the Extensions of Remarks in the RECORD:

THE DAY I KNEW I BELONGED TO THE FLAG

(By Dwight D. Eisenhower, former President of the United States)

My first day at West Point—June 14, 1911—had been rough. My classmates and I had been barked at and ordered by upperclassmen to do all sorts of ridiculous chores, on the double. All 285 of us were weary and resentful.

Toward evening, however, we assembled outdoors and, with the American flag floating majestically above us, were sworn in as cadets of the United States Military Academy. It was an impressive ceremony. As I looked up at our national colors and swore my allegiance, I realized humbly that *now I belonged to the flag.* It is a moment I have never forgotten.

Later I became color sergeant of our class, and my final year at West Point it was my privilege to carry the American flag at all official parades and ceremonies. No honor could have meant more to me.

To tell you why I love and respect our flag so much would take a book, for it would be the long, brave story of America. Briefly, I love our flag because it is the most beautiful national banner of all, and because it stands, today as always, for the finest nation on earth.

Today we urgently need a new commitment to the basic principles that made our nation great. Our flag is the symbol of these principles, and I would hope that all of us might find some way to display it, not merely on patriotic holidays but every day in the year. Such a visible upsurge of respect for flag and country will do much to help bring about a new national solidarity, a renewed pride and faith in America.

A TRIBUTE TO OUR FINE YOUNG PEOPLE

HON. LOWELL P. WEICKER, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. WEICKER. Mr. Speaker, almost every day our newspapers and our radio and television newscasts report to us about the growing unrest among the Nation's youth. Hardly a day goes by that we do not hear of a campus riot or some sort of antiestablishment demonstration by protesting youth.

As a result of this spotlight on the negative aspects of a few young people an entire generation has been stigmatized as way-out hippies, yippies, and kooks.

Nothing could be further from the truth.

Today, I would like to call my colleagues attention to a project undertaken by responsible young adults who more typically personify the majority of our Nation's youngsters.

In Fairfield, Conn., there is a young people's group called "Kids Who Kare."

A year ago this month, a young lady at Roger Ludlowe High School, Claudia Stephens, the daughter of Mr. and Mrs. Claud Stephens of Fairfield, Conn., brought together a group of her school friends to discuss what they could do for the servicemen fighting in Vietnam.

The teenagers decided to form a group to write letters and send packages of cookies, reading material, and other useful items to the boys from their town, serving their country in Vietnam.

From this meeting "Kids Who Kare" was born. The energetic young people set out with the drive and enthusiasm of youth and their contagious spirit infected their town's adults.

The first adult recruited was a banker, Jesse P. Sanford, vice president of the Connecticut National Bank, who was asked to handle the finances of the group and to receive any contributions that were sent in.

The young people then got the Remar Printing Co., of Bridgeport, to donate posters and forms which were placed in local stores and sent to GI's. The posters asked for donations of soap, cigarettes, shaving equipment, reading materials, and other items requested by the GI's. The forms were sent to each serviceman asking his needs.

For the past year, the dismal days of lonely GI's, in far-off Vietnam have been brightened by a package or a letter from a young person back home who cared enough to think of them.

How has their project been received? First, they have been an inspiration to the adults at home. The Fairfield Elks have loaned their hall for the packaging of monthly parcels to the GI's. The Fairfield Emblem Club helps the youngsters with the packaging and have given their all-out support.

The residents of Fairfield have also gone all out to help with donations of money and materials.

Most important, the servicemen know that someone at home really cares about them. The letters the men send back praise the young people and tell how their buddies wish that there were similar groups in their hometowns.

Here are a few examples of the GI's feelings. A U.S. marine, Ken Athens, wrote the young people:

Hope you all do real good with school because it will show in the future. We are trying our best to win the hearts and minds of these people. And we are trying to show them the right road. I will never forget you and how you've treated me so good. Be good and take care. May God bless you now and forever.

Airman Mark E. Trupp, wrote the youngsters:

There are not words that can express the way I feel about what you young people are doing for us over here.

Pfc. Richard Skudlarek wrote:

Gestures like yours are a clear indication that there are some people back home who are aware that we are here.

Pvt. Bohden Howera wrote:

It really makes a guy feel great when he knows there are people like you back home who care.

The letters of thank you from our servicemen would fill a book and each one is treasured by these young people who care.

When you have youngsters in this country like the young men and young ladies of "Kids Who Kare" can there be

any doubt in anyone's mind that there still is a big, bright, beautiful tomorrow in store for America.

THE DEMISE OF FREE TELEVISION

HON. JAMES HARVEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. HARVEY. Mr. Speaker, a number of weeks ago I inserted in the RECORD my thoughts and comments relative to what I consider disturbing trends toward the possible and eventual elimination of free television to that of paid television. Preliminary hearings before the House Committee on Interstate and Foreign Commerce with the Federal Communications Commission has failed to allay my concerns.

In the last day or so I have observed further public announcements which, unfortunately, substantiate my fears. For example, I would like to insert an article from the March 23 edition of the Washington Post, in which the famous name of Howard Hughes appears concerning this matter. In addition, I would like to include an article which appeared in the March 21 edition of the Saginaw News, Saginaw, Mich., which touches on the matter of paid television.

While both of these articles, which will follow at the conclusion of my remarks, center on the sports field, I think it is quite obvious that such paid television operations could and would be quickly expanded to include practically all free television as we know it today. The news articles follow:

[From the Washington Post, Mar. 23, 1969]

BID FOR FOOTBALL TELECASTS IS NEXT MOVE: HUGHES MINES PAY-TV GOLD

(By Dave Brady)

PALM SPRINGS, CALIF., March 22.—On a clear day in the sparkling desert air of Las Vegas, Howard Hughes can see beyond the outer limits of free television. And into the golden horizon of pay TV.

As a first step toward making that vision a reality, he has bought Sports Network, Inc., from Dick Bailey for some $16 million. Bailey built it from a "country store" operation into its present worth. Hughes is taking it from there.

Bailey is still minding the store for Hughes in the canyons of Manhattan, but the firm is doing business as Hughes Sports Network.

As a warning signal to the established major networks that he is ready to poach on their domains, possibly to the extent of eventually building a conventional news and entertainment rival, Hughes has bought for nearly one-half million dollars the right to carry highlights of National and American football league games in 1969 and 1970.

It is a trifling deal for a man of Hughes' stature, but it is a sampling of what he has in mind. Bailey was a bit prudent when he was asked whether Hughes would bid against the three major networks for pro football game telecasts in 1970, when the contracts of the Columbia Broadcasting System and National Broadcasting Co. expire.

"I'll say this—we are very interested in pro football," Bailey said in New York. "We can handle anything."

A source closer to Hughes was not nearly so cautious once he was assured anonymity. "Hughes is going to bid for the pro football game telecasts," he said.

Commissioner Pete Rozelle said that CBS and NBC, which have been televising the NFL and AFL games, respectively, would be extended the courtesy of bidding first on a combined package in 1970. He also said that the complexity of it might require two networks.

But despite Rozell's enthusiasm for prime-time Monday night telecasts to attract more revenue, the networks have not shown a mutual interest because of conflicts with high-rated entertainment programs.

Also, the talk along Madison Avenue is that sponsors have reached the choking price for game telecasts on Sunday, when there are no serious conflicts.

It is into this vacuum that Hughes is tempted to test his big-dealing expertise, backed by indeterminate financial resources.

As his man Bailey said, "We can handle anything the other networks can. We have the equipment, the personnel and the know-how. Ten of our key people represent more than 200 years experience in radio and TV.

"Mr. Hughes has the resources. All we have to have is the product."

Queried about the dream of zillions of dollars to be made from pay TV, which pro football owners secretly nurture, Bailey said, "We are in a position to handle it but what our policy will be on it, I am not prepared to say until the right time."

Pro football has reached a plateau of diminishing returns with costs still rising and other sources of revenue such as gate receipts drying up. The commissioner's office admitted as much here this week, when it pointed out that the NFL is already playing to 87.1 per cent stadium capacity and the AFL 74.8.

The clubs are reduced to inching up their ticket prices in an era when the population of 21,000 in mountain-locked Palm Springs has learned to live with the idea of paying $7 a month to pull in its entertainment by Community Antenna Television, or doing without. CATV is pay TV, any way you slice it.

[From the Saginaw (Mich.) News, Mar. 21, 1969]

HARVEY POINTS OUT DANGERS OF "COMING-SOON" PAY-TV

(By Robert D. G. Lewis)

WASHINGTON.—Sports fans, don't be surprised if the time comes when it will cost a dollar or two to watch your favorite team on television.

The Federal Communications Commission is scheduled to start accepting applications in the next few months for pay television stations.

At the start, Subscription Television (STV) will be limited to the largest cities. Under FCC rules, Detroit will be immediately eligible for a pay-TV outlet. Three outstate markets—Grand Rapids-Kalamazoo, Flint-Saginaw-Bay City and Lansing-Jackson—do not qualify for a STV station but are close to the line.

FCC regulations scheduled to take effect June 12 are written to prevent pay-TV stations from "siphoning" away sporting events and other programs now shown free on television.

But there is a large body of opinion that holds that once STV gets a foothold, it will swallow up the best of network television. Viewers will have to pay for the most popular movies, programs and sporting events that they now see free, the argument goes.

Others contend that pay-TV will be just another medium in the entertainment field, taking its place alongside television, radio, movies and the theater.

Rep. James Harvey, R-Saginaw, a member of the House Committee on Interstate and Foreign Commerce, which oversees the FCC, believes the siphoning away of sports events from free television to STV is about to begin.

FCC rules would prohibit this, but Harvey believes professional sports sooner or later would find a way around the prohibition.

"As objectionable as the average American may often find 'commercials' on TV today, I do not believe he would took favorably upon the necessary for paying outright to see a sporting event that he has been watching for free," Harvey said.

"The FCC would, of course, deny that this will come about. But the testimony at our hearings, coupled with events described in the articles to which I have referred, makes clear that professional football on pay-TV is indeed what is in store."

NATIONAL CONCERN FOR DECENCY LED BY OUR YOUTH

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. BENNETT. Mr. Speaker, there is a national concern for decency spreading across the land today, and it is being led by the youth of America. This is one of the most refreshing and exciting things developing in our beloved country today.

The scope of the "Crusade for Decency" is reflected in last Sunday's rally at the Orange Bowl Stadium in Miami, Fla., when 30,000 young people demonstrated their interest against the flow of obscene materials and pornographic magazines and movies.

In my hometown of Jacksonville, Fla., a group of young people are forming a decency drive, emulating the Miami youth. I plan to assist them in this effort through a congressional youth forum I am sponsoring in Jacksonville on April 12, 1969. I include two articles in the CONGRESSIONAL RECORD on the Miami rally and on the youth plans in Jacksonville.

On January 29 I introduced a bill, H.R. 5171, which is designed to curb the alarming flow of obscene materials to our youth. It is pending in the House Judiciary Committee. This bill, together with two identical subsequent bills, H.R. 6186 and H.R. 7167, has 40 cosponsors. Because it is similar to a New York State statute which was upheld by the Supreme Court last April in Ginsberg against New York, I am confident that my legislation will also be upheld.

Similar legislation is being introduced in the Senate today by Senator JAMES B. ALLEN, of Alabama, with a group of important cosponsors.

Since I introduced H.R. 5171, I have received hundreds of letters from all over the country expressing support for this measure.

John Grace, lieutenant commissioner of the Salvation Army, stated in a recent letter:

> We are appalled at the volume of pornographic literature that seems to find its way into the hands of youth, and certainly, any move that can be made to protect our young people is a move in the right direction. We have written Chairman Celler . . . asking that he expedite action on this bill.

Winfrey C. Link, a member of the President's Commission on Obscenity and Pornography, wrote me:

I hope your bill is successful. We desperately need controls for minors.

Sam Wolgemuth, president of Youth for Christ International, said in a letter to Chairman Celler:

I am joining with others in urging hearings on the bill sponsored by Congressman Charles E. Bennett, H.R. 5171. I wholeheartedly support this bill, believing that there would be tremendous value nationwide in its passage.

The President of the General Federation of Women's Clubs, Mrs. Walter Varney Magee, told me:

The General Federation of Women's Clubs would wish to go on record as being strongly in favor of the legislation. . . . We intend to make H.R. 5171 the subject of a Legislative Bulletin in the near future. . . . We shall consider it a privilege to support it in any way we can.

These are but four of the many distinguished Americans who have offered their support and help in the effort to obtain the enactment of this vital legislation. Others include: The International Association of Chiefs of Police; Columbia, the Knights of Columbus magazine; the Young Men's Christian Association; Billy Casper, the famous golfer; the National Urban League, and the American Legion.

Mr. Speaker, there exists today a tremendous need to create some kind of control over what may be distributed to minors through the mails, and in interstate commerce. It is no longer possible for a parent to protect his children from pornography by himself. If any Member wishes to join the 40 cosponsors of this measure, I hope he will contact my office.

The cosponsors are: E. Ross Adair, Republican, of Indiana, Watkins M. Abbitt, Democrat, of Virginia, Joseph P. Addabbo, Democrat, of New York, Walter S. Baring, Democrat, of Nevada, Benjamin B. Blackburn, Republican, of Georgia, Tom Bevill, Democrat, of Alabama, James A. Byrne, Democrat, of Pennsylvania, Earle Cabell, Democrat, of Texas, R. Lawrence Coughlin, Republican, of Pennsylvania, Tim Lee Carter, Republican, of Kentucky, Edward J. Derwinski, Republican, of Illinois, William L. Dickinson, Republican, of Alabama, Harold D. Youth May Stage Decency Drive Here

(By Tom Sawyer)

A teen-age "decency crusade" may be staged in Jacksonville this summer.

Representatives of the county's high school student councils say the possibility is being explored.

Sunday, a youth crusade for decency in entertainment drew 30,000 persons to the Orange Bowl in Miami.

Jim Lanahan, 17, president of the Bishop Kenny student council, said a local program may be staged at the Gator Bowl.

The possibility of a rally was revealed during a press conference Monday by the Student Action Committee of the county's associated student councils.

The students said they hoped to expand on the program presented at Miami, but added that nothing yet has been arranged.

The committee currently is studying drug abuse in local schools, and indicated it also plans to look into other problems such as student unrest, dress codes, drinking and sex.

Drinking currently is a much bigger problem here, but drug use has received more publicly, the student group said.

It estimated that only 5 percent of students have experimented with pep pills, glue-sniffing or drugs, but one female member of the committee called the estimate low.

Easily Obtained

"I could get drugs whenever I wanted to," she said, adding they were widespread at her school.

While declaring that the drug problem has been "blown up" here, the committee said it is establishing a five-point program for dealing with the situation in schools. It includes:

Presenting an assembly program at each high school, featuring experts in the fields of drug abuse.

Supplying students with a list of doctors they can go to for confidential counseling.

Sending drug experts to the schools for individual counseling.

Distributing literature on drugs to all students.

Supplying through local news media drug information for parents and students thereby "helping to close the generation gap."

Paul Harden, 17, of Andrew Jackson High School, said if the program proves successful in high schools it will be expanded to junior high schools.

"We feel education is the best road to take in reaching the drug user or potential drug user, because if students knew the physical and mental damage they faced when they experimented with drugs they would never begin," Harden said.

Tom Cornelson, editor of the school newspaper at Forrest High School, said that when he was a sophomore students would laugh if you talked about a drug problem in school; when he was a junior it was acknowledged and now as a senior the use of drugs is accepted and expanding.

The Student Action Committee meets every Monday night at the Duval Medical Society building. Its meetings are open to the public.

Fed-Up Young People Speak Out

The "Crusade for Decency" launched at a rally of 30,000 in Miami's Orange Bowl under the initiative of that city's teen-agers and which snowballed under spontaneous, community-wide backing is the sort of good news for which most of the nation hungers.

Most of the big names in show business who were in Miami at the time, including Jackie Gleason, Anita Bryant, Ted Mack, the Lettermen, and many others, appeared at the rally not to lead, but to applaud the determination of the young organizers to demand entertainment free of vulgarity and obscenity and to boycott all those who refuse to get their message.

The rally was sparked, strangely enough, when a popular rock and roll group put on a nauseating show in Miami.

Mike Levesque, a Miami Springs High School student, and other members of his church study group, were credited with originating the rally idea as an answer to the offensive performance and to demonstrate for established beliefs including love of country, love of God and equality of all men.

Clergymen of all faiths gave their help, but left the leadership in their hands.

The electrifying response by the people of Miami, sometimes regarded as blase and sophisticated, is an encouraging barometric reading on the nation's mood. It is a testimonial that the great majority of the nation's youth are at least keeping pace, if not ahead of their elders in their digust with the open commercialization of depravity. It is reassuring to all who recognize that today's youth are the only hope for the nation's future.

Alert and responsible young people in Jacksonville and elsewhere are moving in the same direction as the Miami rally-organizers in their efforts among their peers to fight the evil of drugs through friend-to-friend logic free of preaching.

When enough Americans, young and old, become sufficiently fed up with filth to speak out for decency, filth will recede down the drain.

CCC SUPPLEMENTAL APPROPRIATION

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. ZWACH. Mr. Speaker, I rise in support of House Joint Resolution 584, which requests a supplemental appropriation of $1 billion to restore the capital funds of the Commodity Credit Corporation.

This request has become necessary this year, rather than next year as originally scheduled, because of a whole series of unexpected developments. Lower market prices for our 1968 crops, a most harmful and prolonged dock strike, and thus a larger backup of grains here in the United States, have all been factors in the need to advance this funding authority.

We are advised that the borrowing limit of $14.5 billion for CCC is nearly exhausted or will be this month, so that it is necessary to take prompt action.

I strongly urge my colleagues to pass this resolution in order to prevent further financial hardship on our producers.

It should be pointed out that emergency of CCC loan funds should not be considered as a fault of either the CCC or of farmers. Farmers have lived within the lines as laid down by the Congress. The CCC has only been carrying out the provisions of the charter as approved by Congress.

Mr. Speaker, the passage of this reso-

lution is an urgent necessity, it will not upset the budget, and the limited relief that it provides to our producers is most important.

HARRY S. GENUNG: HE SPREADS THE AMERICAN DREAM

HON. CLARK MacGREGOR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. MacGREGOR. Mr. Speaker, Harry S. Genung of Minneapolis, a longtime friend of mine, epitomizes the patriotic American who is seeking, as an individual, to instill the values of democracy among people throughout the world.

He and his wife conceived the idea of spreading democracy's value through the distribution of school yearbooks. The opportunity for young people in other nations to see another side of American youth is an enlightening experience. It will lead to a greater understanding of our Nation.

The Genung's program is called "Y-O-U—Yearbooks Offer Understanding." I feel very strongly that this program can do much to contribute to teach ing the values of democracy in foreign lands. It is a project which deserves support and encouragement.

I insert in the RECORD two articles which more fully explain this imaginative program. The first is an article in the November 1954, issue of Torch and Trefoil, published at North Dakota State College, entitled "Yearbooks Offer Understanding." The second is an article contained in the January 1969, issue of NEW, published by the Unity School of Christianity, Lee's Summit, Mo., entitled "Harry S. Genung: He Spreads the American Dream":

YEARBOOKS OFFER UNDERSTANDING

(By Ardean Rystad)

"Yearbooks Offer Understanding," originated by Mr. Harry Genung of Minneapolis, Minnesota, is a program that consists of mailing copies of yearbooks or college annuals to colleges, universities, and schools of other nations, in hopes that they, through the media of pictures, illustrations, etc., will lead to a true understanding of the average American student by the students and youth of other lands.

Alpha Lambda Chapter at North Dakota State in Fargo, North Dakota, took on this program as one of its projects for 1954. The chapter was able to obtain about 200 college annuals from two other colleges together with those rounded up on our own campus. The College Blue Book was used to find the names and mailing addresses of colleges in other nations. A letter was inserted which explained the program and stated that we would be pleased to receive any information about their school and themselves which would help us to get a true picture of them. Quoting from the letter itself, "Troubles among nations begin with misunderstandings. We want you to better understand the American college student through examining this book. We hope that you will use this book. If you care for another book next year, we would appreciate a letter from you." A mimeographed list of Alpha Phi Omega members of this chapter was also enclosed, together with complete addresses.

Books were sent to thirty-two different countries including most of South America, Mexico, much of Europe, and even behind the Iron Curtain into Russia and its satellites.

An assembly line for getting the books ready for mailing was set up one evening after a chapter meeting, in the basement of our college library. We wrapped each book with a light cardboard called "flexpack" and then inserted them in No. 20 envelopes.

The activity was publicized by the local newspapers, our college paper, and was mentioned at one of the student senate meetings. It was well thought of by everyone and Alpha Lambda Chapter gained new friends.

We had lots of fun, and if we're able to obtain yearbooks next year, we shall continue our participation in the program of Y.-O.-U.

This is an excellent project, and we recommend it to all chapters of Alpha Phi Omega. Any chapter desiring further information about Y.-O.-U. may obtain it by writing to Donald Hanson, President of Alpha Lambda Chapter, 1016 Fourth Street, North, Fargo, North Dakota.

HE SPREADS THE AMERICAN DREAM

For 25 years Harry S. Genung stood before students—in this country and the Philippines—teaching the values of democracy. Today, from his home in Minneapolis, the 66-year-old teacher and world traveler is helping instill those same values in young people around the world.

Genung is the founder of YOU (Yearbooks Offer Understanding), a project sparked by a German student's letter, received while Genung was teaching in a Minneapolis high school. Europe was still recovering from World War II in 1948, and Genung helped some of his students send a CARE package overseas. Soon a thank-you letter arrived from Martin Girschner, a former Hilter youth who had since become president of a German Boys Club. Girschner asked many questions—about the school, the country, about the American people. *Der Fuhrer* had commanded him to hate. There was one question Genung couldn't forget: "Do you teach democracy in your school?"

The next year Genung and his class sent another CARE parcel to the same German boys and included a high school yearbook. A boy wrote back: "Your book is a gesture of friendship and goodwill which will help make peace in the world."

Genung had found a way to answer the questions of Martin Girschner and others like him who wonder if America really does practice what it propagandizes. Since then Genung has sent yearbooks from high schools and colleges in every state to more than 50 foreign countries.

"What better way to show democracy in practice," he asked, "than to show the youth of other countries how our own young people live? And what could be a better barometer of American youth than a school yearbook!"

Genung's voice projects a contagious excitement as he explains that YOU feeds minds, just as CARE feeds bodies. "Yearbooks don't say in bold print, 'Here is democracy'—they show it.

"How can a Japanese youth accuse the United States of intolerance when he sees a Japanese-American pictured as president of the senior class in some yearbook? And how can an African label all of us 'prejudiced' when he sees a Negro boy as captain of an American school's debating team!

"Another thing, yearbooks show teachers and students working together—through student councils, student papers, on the yearbook itself. These active examples of democratic life, along with pictures of scholastic Societies—French clubs and foreign affairs groups and all the rest—show foreign students that American kids are more than hot-rodders and juvenile delinquents."

Quoting from memory, Genung explained, "Right now the Russians are publishing 720 times as much information for overseas distribution as we are. Last year they shipped over three and one-half billion pieces of propaganda into democratic and uncommitted nations; the best USIA (United States Information Agency) ever did in one year was five million pieces."

Genung insists YOU is a joint effort of many people. "One company furnishes me yearbooks—I had to buy some in the early days, but that doesn't happen too often anymore. Another company furnishes the cartons People-to-People (ex-President Eisenhower's international good will program) coordinates distribution."

In addition, young people at youth centers and settlement houses and boys' homes stamp each book on the inside cover (the stamped letters to Americans shown in the book). "This stamping is a big thing with the youngsters," says Genung, "and it gives our own young people a chance to do something for world peace."

Harry Genung—educator, statesman, traveler, crusader—summarized the reasons behind his years of work when he explained a void in his own life: "My wife and I never had any children of our own. So, we've adopted the youth of the world instead."

CONGRESS FORCING CENSUS INVASION OF PRIVACY

HON. R. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. COUGHLIN. Mr. Speaker, the unwarranted intrusion of Government into the private lives of the people is illustrated by the growing and understandable resentment of Americans against questions asked them under provisions of the U.S. census.

In an era when the Government's tax bite so deeply affects citizens economically, it adds unconscionable insult to monetary injury when census takers delve into the intimate aspects of family life. I support congressional reform that will eliminate this invasion of privacy and put the census back into its proper perspective—a count of the number of people living in this country.

On February 20, 1969, WCAU radio in Philadelphia, Pa., broadcast an editorial which cuts to the heart of the census matter. I agree wholeheartedly with the editorial and am pleased to enter it into the CONGRESSIONAL RECORD.

WCAU radio believes the American people are getting sick and tired of being numbered, indexed, cataloged, pigeonholed, and having their privacy invaded.

We believe most of them will be outraged by the mandatory provisions of the 1970 census. Fines of $100 and 3 months in prison may be the lot of anyone refusing to answer some of the very personal questions they would not think of answering for their neighbors.

The U.S. Constitution calls for a count of the number of people in this country every 10 years so that Representatives and direct taxes may be apportioned among the States. It calls for nothing more. But Congress has seen fit to make mandatory, under threat of severe penalty, the answering of questions having nothing to do with a head count.

There is a 20-question short form that more than covers the needs of the Government, but the House Subcommittee on Census and Statistics has approved a long form checking into 68 areas of our lives.

It inquires into whether you share a bathroom, what are your savings, dividends, stock, interest, alimony payments, tips, bonuses, physical disabilities, marital record, and ownership of appliances. We have no doubt such information would be of great value to many phases of business. WCAU radio does not believe, however, answering such questions should be mandatory, but given voluntarily. WCAU radio holds Congress should adopt regulations making the bare enumeration mandatory as prescribed in the Constitution. We think forcing people to answer personal questions for the benefit of any segment of our society is revolting.

MOLLY LUDWIG HAYS McCAULY OFTEN KNOWN AS "MOLLY PITCHER"

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. MAHON. Mr. Speaker, recognition has again come to the Hal J. Rucker family, of Midland, Tex. This time, the youngest son, Douglas, age 12, has brought honor to the family and he is the third member of the family to be awarded a medal in the American History Month essay contest sponsored by the Daughters of the American Revolution.

Douglas received the medal for an essay on Molly Pitcher. He has now won first place in the city of Midland, and first place in the State for 1969.

I submit this interesting and stimulating essay for the consideration of the readers of the RECORD.

The essay follows:

MOLLY LUDWIG HAYS McCAULY

Molly McCauly was a heroine of the American Revolution. She was born near Trenton, New Jersey, the daughter of John George Ludwig, a farmer who had come to the colonies from Germany.

In 1769, at the age of 15, Molly took a job in Philadelphia as a maid. Later that same year, she married John Caspar Hays, a Philadelphia barber, who enlisted in the army in December, 1775.

After Hays left with the Seventh Pennsylvania Regiment, Molly's parents sent a courier to pick her up and bring her to their home. It is said that the courier brought a secret letter to Molly, sent by her husband for her to come to her parent's farm so that he might possibly see her. She had a long, tiresome ride because of poor roads and the only way to get there was on horseback.

Molly was with the army during the Battle of Monmouth. Molly was 24 years old at this time. The battle was fought on a June day in 1778, one of the hottest days of the year. The battle was from nine o'clock in the morning until night. It was so hot that it was said that fifty men died of thirst and others were very thirsty. Molly found a spring that is today still a historic spot, and carried the water to the men in a cannoneer's bucket. This was done under fire and shelter and the sight of Molly with her "pitcher" was a joyful sight to the tired and thirsty soldiers. The soldiers gave her the sobriquet, "Molly Pitcher".

Molly constantly watched the battery where her husband was a gunner and when she saw a soldier lying by his gun, she rushed there to see if it was her husband. She found him wounded and she sprung to his place and kept his gun in action the rest of the battle.

For this brave action she was praised by General Nathaniel Greene and was made an honorary sergeant by George Washington. She was also called "Major Molly" by the soldiers.

Molly always wanted to help other people. She was very interested in the war, and being a good patriot and an enemy in her heart of the redcoats. She felt it necessary to risk her life by taking her place at the gun and to transport water to the thirsty men.

The battle was won with the help of this strong, courageous woman. The state of New Jersey was the first to give honor to Molly Pitcher. At Freehold, New Jersey there is a monument with five tablets around it, one of which commemorates her heroism.

Several years after the death of John Hays she married a man that was a comrade of her husband, named George McKolly. This name was changed so that after her death it became McCauly.

The last years of her life were spent in Carlisle, where she had kept a small store, located not far from the house where Major André and Lt. Despard had been confined in 1776. Molly died the 22nd day of January, 1832 and was buried in the old Graveyard, then known as the English Graveyard in Carlisle, where many of the prominent citizens are buried.

Mrs. Mary McKolly was 90 years of age when she died. Her last name was written McKolly, McAuley, and on her tombstone it was McCauly.

She had served her country so well that she had been honored by the different states and had received a pension from the government during the latter years of her life. We remember her with honor.

HOW CAN I EXIST ON SOCIAL SECURITY ALONE?

HON. LOUIS FREY, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. FREY. Mr. Speaker, I have today introduced two bills aiding those who live on social security. Many of the estimated 80,000 people in my district who receive social security checks each month have this as their only means of income. This is true throughout the country. Most of these people have worked all their lives—but inflation, medical expenses, and the cost of living have consumed their savings. I have been in many of their homes and have been unable to answer the question, "How can I exist on social security alone?" A change is needed.

The bills I have introduced are not the complete solution, but they are positive means which will help. The first bill provides for an automatic increase in social security benefits each time the Consumer Price Index rises by at least 3 percent. In this manner, the increase in the cost of living can be met. The second bill would allow those living on social security to earn up to $3,000 annually and still receive full benefits. The present earning restriction of $1,680 is unrealistic based on today's living costs.

BIG JIM FARLEY: TUMULT, GRACE

HON. HUGH L. CAREY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. CAREY. Mr. Speaker, I am inserting in the RECORD an interesting article on the Honorable James Farley by Richard Ryan which appeared in the Tablet of Thursday, March 13, 1969.

Mr. Ryan has given us an interesting account of this outstanding American:

BIG JIM FARLEY: TUMULT, GRACE

(By Richard Ryan)

There is, on the walls of his office, the kind of wordless biography that speaks quietly about James Aloysius Farley. The paneled office at Coca-Cola serve as a gallery for all these pictures that speak of Big Jim's time and epoch in American history when politics was boisterous and intense, pushing and shoving, fierce, loud, and terribly human. There are pictures of this man at a dinner or walking the street or standing in a room with someone like Lyndon Johnson or Pope Paul or Richard Nixon. There are bright new glossies and photos tanned by time and on each of them there are these affectionate apostrophes to a great patriot, a good friend, a loyal advisor. There are pictures of his family and his grandchildren. There are pictures of Jim Farley sitting in a room with Franklin Roosevelt and there is a picture of Jim Farley leaning over the shoulder of John Kennedy at a dinner in New York two weeks before another dinner in Dallas.

They are part of the memories of this man who, across his 80 years, has been the personal friend of seven Presidents, the confidante and campaign manager of Franklin D. Roosevelt, the architect who has watched the Democratic Party mature and become petulant and discover some of its own dignity and turn cranky and edgy and then move back again toward its own adulthood. The chairman of the board of the Coca-Cola Export Corporation since 1940, he has in his office relics that speak of things that will always be fond, cherished, part of him.

EX-POSTMASTER GENERAL

There are, you see, things in his office that speak of things that are gone, from another day, the seed of everything that is now and future. Over in the corner, a tinted majestic bronze bust of Farley by Paul Manship that was given to him by the employees of the New York City Post Office after his retirement as U.S. Postmaster General in 1940, seems to look out solemnly at the desk and the newspapers strewn on the floor and at the street below on Madison Ave. There is a samurai sword given to him in the Orient, as well as a delicately magnificent replica of a rickshaw encased in glass.

And if the pictures and the inscriptions and the long-ago gifts carry with them a nostalgia for the man and his era, there is in another corner of the room something that recalls the memory of any childhood when the name of James Farley was gospel for the Irish and for the people coming off boats, coming here to this country to make their fortune and climb their mountain.

In one corner of the room there is one of these proud old cabinet radios that was in every home years ago when the voices of Gabriel Heatter and Lowell Thomas brought into the living room and into the kitchen, solemnly and gravely, the good news tonight.

And for those of us sitting around waiting for the half-hour miracle of the Lone Ranger or I Love a Mystery, there were always the shushing from an intense father who nodded silently at the adventures of the people like Jim Farley and Al Smith and Jimmy Walker, who dominated and cajoled his age.

CHARM AND PASSION

For the Irish coming into this town during the Depression, the stature and achievements of men like Farley and Smith and Walker sustained them and lifted them over the lean weeks and prodded them on with the dream that perhaps they, their own children, their own family might one day bring into politics some of the charm and some of the passion that people like Farley held out as good and noble, something to be admired, a rough and tumble sacrament that could lift up and transform a whole city, a nation.

For the black man looking up and out, the thread of hope for tomorrow was there in the glories and achievements of Joe Louis. For the Irish it was there in the 6'2½" outline of Big Jim Farley, with his straw hat and unrehearsed smile and the massive imprint he had made in politics and the standard he had left for those who would come out of the tenements and the local wards later on.

And now sitting in his office and talking casually about the young in this country and about some of his own mildly disappointing memories like losing the re-election to the Assembly in 1923 and of never having achieved his dream of sitting in the State Senate, the words bring back some of that warm, gentle orthodoxy from an Irish living room when parents and uncles and relatives would, in another day, respond to Heatter and the cabinet radio and the news of their day with the kind of reverent awe that has gone out of our conversation on politics and society.

HUMOR, HOPE, HUMANITY

There is in any conversation with this man the memory of some long ago Irish uncle because there is in everything he says, whether in speaking of Presidents or Popes or young people or another election, there is always the husky-throated humor and hope and simple, shimmering humanity. Jim Farley can sit in a room with you and tell you that perhaps the two greatest Presidents who ever lived in this country were, if only for the social legislation they passed, Franklin Delano Roosevelt and Lyndon Baines Johnson. He numbers Harry Truman among the five greatest Presidents of our country and will tell you that New York has never had a Governor like Al Smith or a Mayor as popular and friendly as Jimmy Walker. "This man, with all his faults, was the acme of loyalty."

Warming to his subject, he will also tell you that Hubert Humphrey would be sitting in the White House today if the McCarthy and Kennedy forces had dropped their differences, closed ranks after the convention and supported Humphrey and Muskie. The name of McCarthy comes out and the smile dilutes into puzzlement, disappointment.

The future leadership of the Democratic Party, he will tell you, will have to come out of the Senate and the House because it is in these two chambers, according to Farley, that the ball game is played. He talks of his time as campaign manager for Roosevelt and of his disagreement with him over a third term. He talks also of his disappointment when Al Smith was defeated in the presidential nomination of 1924 and defeated for the presidency in 1928. He talks of the differences that television has made in political campaigns and noted how men of real ability sometimes simply don't appear as well on television as a flashier, more charming, no-talent opponent. He talks optimistically of New York City as the greatest city in the world "despite all of its new buildings," calling it "a strong religious city" with probably more to offer the people coming into it than any place in the country.

NEW POLITICS: A HOAX

The Democratic and Republican Parties will never, he feels, be replaced by the Conservative or Liberal groups. You see, for Jim Farley, there is only little boy optimism when speaking about the Democratic Party. He knocks no one. And the idea of a New Politics is, as far as James Aloysius Farley is concerned, a hoax. But all of it, the memories, the optimism about tomorrow, the conjectures on past elections and what-might-have-been defeats, the comparisons of the strong, other-era personalities, all of it is the blood and adrenalin and breath of this man.

You don't talk about this man and his time as something out of the past because there is in everything that he did and in everything that he talks about so much of the flare and virtue that have gone out of politics but that are still possible, still a hope. He has given to politics an elan and an honesty that in some areas have gone out of style. He has given to it much more than he has received. And no one, in any career or in any age, can be asked for more than this. In an era of tumult, he has been part of its grace.

PRESIDENT NIXON'S STAND ON THE QUOTA ISSUE

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. BERRY. Mr. Speaker, the plight of the domestic mink rancher has been outlined several times on the House floor and has been heard in 1967 before the U.S. Tariff Commission and in 1968 before the House Ways and Means Committee. The facts are, Mr. Speaker, that mink imports today make up 53 percent of the total domestic consumption and have driven 56 percent of our mink ranchers out of business since 1960. Because of this serious situation, mink ranchers have repeatedly asked Congress for a quota limitation of imports, but failing in that, they are willing to work for voluntary quotas with their main competitors.

To illustrate this I am inserting an article which appeared in the March issue of the National Fur News:

PRESIDENT NIXON'S STAND ON THE QUOTA ISSUE

(By Galen E. "Gene" Broyles)

The first hint of President Nixon's stand on the quota problem came out during his February 6th press conference.

The question asked was: "Mr. President, during the election campaign, you said you would seek international agreements to limit the import of certain textiles. Can you tell us when you plan to get around to doing that? Also, can you give us some idea as to what you feel about the growing of protectionism in Congress?"

"I take a dim view of this tendency to move toward quotas and other methods that may become permanent, whether they are applied here or by other nations abroad," Nixon said.

"Second, as far as the textile situation is concerned, that is a special problem which has caused very great distress in certain parts of the country, and to a great number of wage earners, as well as to those who operate our textile facilities.

"For that reason, exploratory discussions have taken place, and will be taking place with the major countries involved to see if we can handle this on a volunteer basis, rather than having to go to legislation, which would impose quotas and, I would think, turn the clock back in our objective of trying to achieve freer trade."

Could the mink industry, with government help, explore the possibility of voluntary quotas with our principal competitors?

Others are turning in this direction. The steel industry has been working for many months on voluntary quotas. Effective January 1, 1969, the European coal and steel community and Japan have agreed to reduce their exports to the U.S. This year, they will be cut back by some 2½ million tons. They will then be allowed to raise their exports no more than 5% in 1970 and another 5% in 1971. These arrangements were worked out in co-operation with our State Department. They intend to maintain the present mixture of steel products in their sales to the United States.

Will this be the trend? Dozens of industries in the United States are being hurt by excessive imports. Senator Everett Dirksen thought President Nixon made a mistake by not mentioning steel as a special problem in his press conference on February 6th. His state is a major steel producer. Dirksen questioned whether voluntary restrictions, agreed to by other nations, will reduce imports to a satisfying level. He stated that he would not rule out a quota bill for steel. Senator Vance Hartke, of Indiana, who has sponsored a steel bill, said he welcomed Dirksen's support.

As has been said many times, the pressure mounts on both sides. Some industries are profiting by freer trade. Others are suffering. Perhaps there is a ray of hope in that our new president has stated that he will work with industries that are in trouble.

As mink ranchers, we must work every angle. There is only one course of action. Whether it's by quota, or on a voluntary basis, the pressure must come from our congressmen. They are representatives of the people who make up our various industries.

The pressure has got to be put on through introduction of bills in the Senate and in the House as we did in last year's session of the Congress. Because of the work we did last time. I am confident we can double our support. We are now more experienced in how to go about getting bills sponsored. Last time, we introduced 60 bills in the House and the two bills in the Senate were supported by 25 Senators.

This gets our problem in front of government officials so they can logically study our position. The previous administration, at the executive level, refused to even look at the problem. President Johnson repeatedly stated that any quota bills laid on his desk would be promptly vetoed.

Mr. President, you've recognized that the textile people have a problem and you will work on it. The mink ranchers of the United States also have a problem and we have a right to expect that you will give the same kind of attention to our good citizens.

The United States founded the mink industry as a sound agricultural pursuit. American mink ranchers are entitled to live and prosper in a market that has now become world-wide.

LIBERAL NEWSMAN FIRED

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. MIKVA. Mr. Speaker, we sometimes forget how hard free speech is to come by and how much harder it is to

preserve. While we think of ways and means to tell the media what to do and what to say, we should be reminded that there are already too many people offering that advice. Last week a bright young radio newscaster lost his job in Chicago—not because he was faithless to the traditions of integrity, rather because he took them seriously.

The airwaves are less free in Chicago with Jeff Kamen not broadcasting. Hopefully, that will be remedied. The more difficult question is how we curtail our itch to silence anybody that disagrees with us. Two columnists from Chicago described the circumstances of Mr. Kamen's discharge very well. An article by Jack Mabley of Chicago's American and an article by Dean Gysel of Chicago's Daily News tell the story.

The articles follow:

[From the Chicago (Ill.) American, Mar. 19, 1969]

MABLEY'S REPORT

The climate inside the office is uniform, 365 days of the year. We can't open the windows to let in the fresh air because it throws off the regulators, or something. At least our windows open. On the new buildings you're sealed in.

Jeff Kamen, a news reporter of WCFL, owned and operated by the Chicago Federation of Labor, William A. Lee, pres., called. "I got fired," he said.

It was hard for me to grasp how one news organization, WCFL, could at one and the same time provide air time for Howard Miller and Jeff Kamen, who represent, respectively, as far right and as far left as you can reasonably go on the mass media. My puzzlement was justified. There is not room for both.

Kamen said that Lew M. Witz, general manager of WCFL, told him:

"I'm sick and tired of hearing all those niggers and Puerto Ricans screaming on our radio station. I just can't stand to have Mr. Lee upset by the mayor's calling him up on the telephone and complaining about you."

Witz said this morning:

"I never made that statement or any statement resembling it to Mr. Kamen. I am shocked that he would say such a thing."

WCFL said Kamen was fired, as of 8 a.m. yesterday, because of a "policy rift." For a 25-year-old, that's pretty big potatoes.

[From the Chicago (Ill.) Daily News, Mar. 19, 1969]

WCFL FIRES LIBERAL NEWSMAN

(By Dean Gysel)

WCFL radio has fired its zealous young newsman Jeff Kamen in what station general manager Lew M. Witz called a "policy difference."

Kamen said he was fired because of his liberal social-political attitudes.

He said City Hall and William A. Lee, president of the Chicago Federation of Labor-Industrial Union Council, which owns WCFL, criticized his anti-establishment documentaries and Sunday night reports.

Kamen said Witz complained that he (Kamen) paid too much attention to the problems of Negroes and Puerto Ricans, and too openly espoused left wing views.

Witz in turn said, "It was a long series of things that we weren't pleased with. It was very painful for us to do it. He's an aggressive reporter but sometimes he goes past the stage of reporting and injects his own feelings, which is not our news policy.

"It really doesn't bear any more discussion than that."

Kamen, who is 25, had trouble with WCFL policies in 1966 and left briefly to join WBBM radio. He returned to WCFL under a change of management.

WBBM, which now has an all-news operation, is a likely attraction again for Kamen since WBBM's chief correspondent, Dick Westerkamp leaves next week to become editorial director of WBBM–TV, replacing the late Carter Davidson.

Although controversy seems to follow Kamen—indeed, he courts it—he is regarded in the trade as a very skilled newsman.

His coverage of James Meredith's civil rights march in Mississippi in 1966 won high praise. Last year he made headlines by volunteering to be maced by the sheriff's office to test the medical effects of the chemical.

He suffered it more easily than a fellow reporter, Joseph Cummings, who got a whiff and was hospitalized for a week.

For a couple weeks last fall Kamen was half of a striking mixed marriage when he aired the news on conservative Howard Miller's early morning disk jockeyship.

While Kamen's professional intensity can be overbearing at times, I can understand the mutual disenchantment at WCFL. Any relationship between the Chicago Federation of Labor and the liberal ideals of the laboring class is purely historical.

NEWSLETTER ISSUED BY THE HONORABLE BILL DICKINSON

HON. JACK EDWARDS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. EDWARDS of Alabama. Mr. Speaker, I want to call to the attention of the readers of the CONGRESSIONAL RECORD the March newsletter issued by my colleague, the Honorable BILL DICKINSON of Alabama's Second Congressional District:

DEAR FOLKS: The 1968 elections and the Presidential Inauguration are now history. I deeply appreciate your again choosing me as your Representative in Washington.

The Inaugural meant something special, not only to me, but also to most of the Second Congressional District. With our new Postmaster General, Red Blount; Governor Brewer; Chief of Naval Operations, Adm. Moorer (who was born in Lowndes County); Johnny Long and the Troy State Band; and the lovely girls who rode on Alabama's float, our District must have been the best represented in the parade.

Miss Sharan Fay Hill of Andalusia, Miss Marian Jones of Troy, and Miss Colleen Smith of Brewton represented our District on the Inaugural float.

There is surprisingly little difference between the old Congress and the new 91st. There is the smallest crop of freshman Members in years. Of the 435 Representatives elected, 396 were incumbents and 39 newcomers—20 Democrats and 19 Republicans. Of these, Republicans took 9 seats from the Democrats and lost 5 Republican seats, for a net gain of 4 seats. In the Senate, there are 58 Democrats and 42 Republicans—a net gain of 5 for the Republicans.

I hope the product of the current Congress will be different!

Red Blount is the first Alabamian of the 62 men who have served in the office of Postmaster General since it was established in colonial America 215 years ago. He is only the second Alabamian ever to serve in the President's cabinet.

Real gone dollar: The value of the dollar, over the past 29 years, looks like this: 1939 equals 100 cents; 1945 equals 77 cents; 1950 equals 57.6 cents; 1955 equals 51.7 cents; 1960 equals 47 cents; 1965 equals 43.7 cents; 1967 equals 42.2 cents. Wonder what it will be at the end of this year?

Freshman Congressmen are finding out fast about crime in Washington. Rep. Shirley Chisholm (D–NY), the first Negro woman in Congress, wasn't in town a week before housebreakers looted her apartment (she moved and got an unlisted telephone number). Thieves also drove off with Senator Barry Goldwater's rented gold Mustang not long ago.

Inaugural pictures: If you wish to acquire color slides of the Inauguration, including the Troy State University Band and the Alabama float, write to Lt. Col. M. W. Arps (Ret.), P. O. Box 1715, Washington, D.C. The slides are 35 cents each and Col. Arps will send you an order form. Please do not write my office.

Public Law 90–301: Increases maximum guarantee on VA home loans from $7,500 to $12,500.

Public Law 90–491: Prevents employment discrimination against Reservists and National Guardsmen for their periods of Reserve and active duty training.

My mail indicates a popular interest in revision of our Internal Revenue laws. Most writers want "loopholes" plugged and are irritated by reports of some citizens with enormous income paying little or no federal taxes.

The Committee on Ways and Means has opened hearings on the subject of tax reform, the first since 1954. The Committee began by considering tax-exempt foundations, and other subjects on the agenda include tax treatment of the elderly, taxation of single persons, maximum and minimum tax on individuals, and various deductions relating to farm losses, gasoline taxes, and moving expenses.

Over 60 Congressmen, myself included, are sponsoring legislation to eliminate the $100 fine and 60-day jail sentence which can be imposed on citizens who refuse to reveal personal information about themselves and their households on the forthcoming decennial census form. Some of the questions would be of a very personal nature and would certainly be an invasion of personal privacy if the law required the householder to answer them. Counting heads is the proper function of the Census—counting the number of people using a bathroom is not!

All of the living Congressional Medal of Honor winners were invited to Washington as guests of the House of Representatives to attend the Inauguration. Two of Alabama's seven recipients of the Medal of Honor attended the festivities and the special reception given for them.

On the left (not printed in the RECORD) is Col. William R. Lawley, Commander of the 3825 Support Group at Maxwell Air Force Base.

On the right (not printed in the RECORD) is Col. Charles Davis, Deputy Chief of Staff for Logistics, 6th Army. He is a native Montgomerian.

Did you know? Alabama is probably the pimento capital of the world. From 9543 acres growers harvested a $2.6 million crop in our State last year. What's more, there's a future in pimento peppers: Alabama's only processor still has to "import" some from out of state.

Pictured above (not printed in the RECORD) is Mr. Charles Kelley, Director of the Fish and Game Division of the Alabama Department of Conservation, who was recently in Washington to accept an award as Conservationist of the Year from the American Wildlife Federation. Congratulations!

Radio stations which carry my weekly newscasts:

WHEP, Foley, Saturday, at 2:35 p.m.
WTBF, Troy, Thursday, at 12:20 p.m.
WAMI, Opp, Sunday, at 1:55 p.m.
WATM–FM, Atmore, Friday, at 7:30 a.m.
WCTA, Andalusia, Sunday, at 12:15 p.m.
WEBJ, Brewton, after receipt, at 7:30 a.m.

CRIME ON THE CAMPUS

HON. EDWIN D. ESHLEMAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. ESHLEMAN. Mr. Speaker, many of us supported the action in the 90th Congress which provided for denial of Federal moneys to students found guilty of criminal violations in campus disorders. We are therefore heartened by President Nixon's stated intention to use that provision of the law to assist in bringing an end to crime on the campus.

The Nation has been shocked by the irresponsible student rebellions that have spread throughout many of America's colleges and universities. The seizure of buildings and the disruption of educational activity by small bands of student and nonstudent roughnecks on the campuses has been a totally deplorable situation. The rights of the student majority have not only been threatened by organized minority groups of militants, but in some cases overt physical violence has endangered the lives of professors, college administrators, and law-abiding students.

I noted with great concern the disclosure out of Philadelphia recently that pamphlets are being distributed among college students which describe in detail how to deal with police during campus disturbances. One of the recommendations read: "If you can't kill them, harass them." In addition, that outrageous document was complete with crudely drawn illustrations of how to make bombs.

One may hope that school authorities will cooperate with the Nixon administration in dealing with hard-core student leaders who promote campus turmoil. The fund-cutoff legislation is definitely not intended to interfere with peaceful and orderly protest, but would aid in preserving the public order which is so necessary to the functioning of any institution. Attorney General John N. Mitchell has said that his department is having a "terrible time" with college presidents and professors who do not want the Justice Department to proceed with enforcement of statutes designed to curb campus riot leaders. I am hopeful that these educators will see fit to cooperate in the new pattern which will allow the university community to make the basic decision as to which of its student militants are undeserving of continued Federal support. College administrators have responsibilities under the law to use the authority which they unquestionably have to deal appropriately with all students who participate in the proscribed illegal activity.

President Nixon summed up the need to deal decisively in the area of campus crime when he stated:

> Violence or the threat of violence may never be permitted to influence the actions or judgments of the university community. Once it does the community, almost by definition, ceases to be a university.

The congressional command is that college students who are guilty of law violations must not be the beneficiaries of public funds. The action to implement that command is long overdue, and I am hopeful that the administration's determination to take the needed steps will aid the universities in coping with the crime problem on the campus.

CURBING MISMANAGEMENT AND WASTE IN THE EXECUTIVE DEPARTMENT

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. BETTS. Mr. Speaker, in recent Congresses I have sought to focus attention on the need to save tax dollars through adoption of improved accounting procedures by many agencies and departments. I have also urged creation of a complaint desk at the General Accounting Office, under the direction of the Comptroller General, where any citizen or Government employee could present, on a confidential basis, reports of improper management or expenditure of funds or in other ways mishandling public moneys. Today, I introduce legislation to accomplish these objectives and call on the 91st Congress to take appropriate action.

Anyone who reads the annual reports of the Comptroller General, inspects the hundreds of GAO audits and special investigations, or scans newspapers for articles on Government waste and inefficiency can find a wide array of examples my bill seeks to curb. Let me summarize its major provisions:

First. To require publication in General Accounting Office reports of the names of Government employees personally responsible for failing to comply with the laws or administrative procedures in spending public funds after this has once been reported by the Comptroller General to the appropriate agency head.

Second. To require that before 1 cent of taxpayers' money can be spent by a newly established Federal agency, the head of that agency must consult with the Comptroller General to become well acquainted with requirements for the disbursement of funds and contracting procedures.

Third. To suspend from all agencies whose accounting systems have not been approved by the GAO within 2 years after passage of the bill, and requiring all new agencies to meet these approved standards within 2 years after they begin operation.

Fourth. To require that every agency which receives GAO recommendations because of findings of mismanagement of funds must submit to the Bureau of the Budget a report of corrective action to prevent recurring waste.

Fifth. To require the head of each executive agency to transmit a report to Congress on the status of the development of its accounting system or systems at the end of any calendar year during which its systems have not been approved.

Sixth. Each agency shall be required within 1 year following the approval of its accounting systems to submit to Congress a report setting forth the manner and extent to which such systems are being used by the agency's management and the benefits derived therefrom.

Seventh. Provides for the creation of a complaint desk at the GAO designed to receive, review, and investigate reports from citizens and Government employees of cases of waste and mismanagement in any department or agency.

Mr. Speaker, little has been accomplished so far as I can ascertain to upgrade the accounting systems of laggard agencies which still do not meet GAO standards. I am hopeful this Congress will press for progress in this area and that President Nixon will call on each unit under his jurisdiction to upgrade administrative and financial practices to reduce drastically the amount of mismanagement in the executive department. In order to underscore the importance of the legislation I present today, I will include at this point an editorial from the Wall Street Journal of October 4, 1967, which is still most timely on this subject:

> NO-ACCOUNT FEDERAL ACCOUNTING
>
> Eleven years ago Congress took a look at all the money the Government was spending, and at the antiquated, helter-skelter accounting systems most Federal agencies were using. Alarmed by what it saw, it amended the Budget and Accounting Act to require the agencies to adopt up-to-date, cost accounting systems.
>
> At the time, in 1956, annual Federal expenditures totaled about $66 billion and the public debt stood at $273 billion. This fiscal year, spending is expected to reach about $143 billion and the debt may exceed $335 billion.
>
> However, of the 173 Federal agencies subject to the law requiring them to set up Government Accounting Office-approved, modernized accounting systems, only 61 have complied. And most of those are small agencies with small budgets.
>
> The big agencies are still dragging their feet, for the most part using what are called obligation accounting systems. These show the amount of money agencies are authorized to spend, but fail to show the actual costs of particular programs or operations.
>
> Properly designed cost accrual accounting systems, on the other hand, provide not only better control over funds but also up-to-date cost data on operations. They help to determine whether money is being spent wisely and used efficiently, and whether results justify the costs. Adequate cost accounting systems, says the U.S. Comptroller General, are "basic and fundamental to the whole operation of the Federal Government."
>
> If that is so, perhaps it helps to explain some of the deficiencies evident in Federal agency operations. The Health, Education and Welfare Department, for instance, has 12 accounting systems subject to GAO approval; the number so far approved is zero. HEW has been found, by GAO, to be guilty during fiscal 1966 of inefficient record-keeping and property management.
>
> The Agriculture Department has 15 accounting systems subject to approval; only five have been approved. Interior has 17 systems with six so far approved. And Treasury, which surely ought to be setting an example, has only four approved systems out of 18.
>
> Rep. Jackson Betts of Ohio is leading a move in the House to compel all agencies to speed up the accounting reforms they were obligated by law to adopt 11 years ago. Since no-account Federal accounting tends to breed no-account Federal programs, that move deserves full Congressional support.

TELLING IT LIKE IT IS IN SAN ANTONIO

HON. HENRY B. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. GONZALEZ. Mr. Speaker, the public information program of the Social Security district office in San Antonio was singled out for praiseworthy coverage in the February regional newsletter of the Social Security Administration's Dallas region.

The article points out that San Antonio maintained one of the best operation records among class I offices in the Nation. Not only is the office in my district efficient, but it reaches out to the people it serves. Mary Ruiz recently directed 20 bilingual students in a door-to-door survey of the inner city area to determine if potential beneficiaries had failed to apply.

The value of the public information program of the San Antonio office is explained by Roy Swift, the district manager:

(The people) know the office as a friendly, human place, and so they just simply work better with us. That's why our staff has time to carry out this program—they know it saves time in the long run.

Mr. Speaker, having received permission, I include the full text of the article at this point in my remarks:

TELLING IT LIKE IT IS IN SAN ANTONIO

HemisFair '68, the April-to-October Texas World's Fair in San Antonio, brought millions of guests to that city. It was also the theme of a "Social Security in America" film featuring 27 beneficiaries in all walks of life.

San Antonio is a colorful city with a colorful history. The Texas Pavilion at the HemisFair had a special exhibit for each of the racial, national and cultural groups which contributed significantly to population, culture, and development. There were 26 such groups. In San Antonio, the predominant group is the Mexican-American, and it is to this group that many of the public information activities in San Antonio are directed.

And San Antonio has an active, ongoing public information program. During the last five years, this one office has published 14,890 news articles; broadcast 5,851 radio programs; published 365 magazine articles; telecast 659 local talent television programs; displayed 136 exhibits, and delivered 1,379 talks. During the same period, San Antonio received 123,276 claims and cleared 123,810, and maintained one of the best operational records among Class I offices in the Nation. Some specific projects of their public information activities are:

Special projects and activities are a routine part of the ongoing public information program. This season's programs include personal visits to all high schools and colleges in the district, crew leader meetings with guest speakers, presenting informational material and talks to all ministerial associations in the area, distribution of 10,000 SSI-32 booklets ("Self-Employed Farmers—Are You Getting Your Social Security Credit?") through farm agencies, and a locally developed exhibit (for the 9th year) aimed at farm and ranch people at the San Antonio Livestock Show and Exposition. Weekly classes in Spanish language uses on technical SSA matters are conducted, and a weekly news-writing course for field reps and selected claims reps has been initiated.

Social Security in America Participation—This SSIA Film used all local background and cast and is an all-out "significant beneficiary story." It was developed by Field Reps Sybil Boland, Charles Adcock, Evelyn Heny, and William Watson, and Claims Reps Esther Garcia, Louise Joplin, Bart Irby, and Dennis Beran. The crew from the Office of Information was able to shoot the show in one and one-half days. The film was promoted by the DO through mass media and selected groups. The premier telecast was over a local station.

Headquarters for the Regional Informational Materials Exchange—The San Antonio DO sets up production quotas and reviews, types, proofreads, assigns item number, and requests printing and distribution of some 850 RIME submittals yearly with coordination by Oper. Supv. Jack Jones, backed up by the field and administrative unit members.

With Evelyn Heny, Field Rep, as national chairman of the Spanish Informational Materials Exchange, the office is responsible for translations, editing, typing, and forwarding for printing and distribution of Spanish radio monologues, press releases, and spot announcements.

The office has also produced a continuing series of Spanish radio programs, monologues, and spots for national distribution to Spanish radio stations, translated and prepared Spanish informational leaflets and booklets for national distribution by the Office of Information, and produced weekly TV programs both in Spanish and in English.

Reaching the Disadvantaged—among the Mexican-Americans of the area (comprising 37 percent of the total population with a much higher concentration in metropolitan sections) is of continuing priority in San Antonio. Mary Ruiz, Officer-in-Charge of the new metropolitan branch office, spearheaded a door-to-door survey of the disadvantaged area where her office was established. It was conducted by 20 especially trained bi-lingual students. The 1968 survey, an effort to determine whether any potential beneficiaries had failed to apply, followed along the lines of the 1966 door-to-door Medicare enrollment campaign conducted by district office trained SANYO (Spanish American National Youth Opportunity) employees.

Every District Office Employee Is Involved—in San Antonio's public information program with employees using a special district office form to jot down questions claimants are asking and also notes about confusing situations, trends, documents claimants should bring to the interview, and cases of significant beneficiaries interviewed to route through the field unit for consideration as basis of press, radio, and TV release.

With special impetus under the leadership of John Palmer (now Asst. Reg. Dir. for Information, DHEW) when he was district manager in San Antonio, the district office employees learned to understand and fulfill SSA Objective 9: "Let people know about their rights and responsibilities under the program." This philosophy has played a major role in the leadership continued by those who followed Palmer—George Clark, now Dist. Mgr., Pasadena; Weldon McNeely, Asst. Reg. Rep. DI, RO; Jim Forbus, Dir. of Mgt., KCPC; D. G. Hudson, Asst. Dist. Mgr., San Antonio, and Roy Swift, Dist. Mgr., San Antonio.

"Even more significant," says Swift, "I find this office long ago recognized that an informed community, developed through continuing long-range programs, makes all operations easier and more efficient. People are better prepared for the claims interview; thus we have more single interview claims. They have learned to respond to advice on the best times to come to the office for faster service. They know the office as a friendly, human place, and so they just simply work better with us. That's why our staff has time to carry out this information program—they know it saves time in the long run.

"I firmly believe that the touchstone of social security's success over the past third of a century is that its leaders from the start determined to administer it in human terms rather than the dry abstractions which have doomed many programs. Therefore, the public has been able to identify with social security—to feel that it is their own."

Wayman Register, Reg. Com., commented, "The record of San Antonio in public information and public affairs is a remarkable example of what a dedicated staff, working together, can accomplish. Their work processing record illustrates the contribution an effective informational service can make."

FLOODS HIT EASTERN MASSACHUSETTS; MORE FEARED

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. BURKE of Massachusetts. Mr. Speaker, may I take this opportunity to bring to the attention of the Members of the Congress the terrible threat of floods being faced in the eastern section of Massachusetts this spring. The need of coordinated effort on the part of Federal, State, and local governments is very clear. From past experience it is expected that the cities of Brockton and Quincy will have flooded conditions, the towns of Canton, Dedham, Milton, Braintree, and surrounding towns could suffer from flood damage. Recently in a short period over 51 inches of snow fell in the Greater Boston area and in the southeastern section of Massachusetts. These snows have melted. Heavy rains have fallen threatening the rivers and streams with overflowing. I have contacted the Army Corps of Engineers and I have requested their complete cooperation with local and State officials on the serious threat of floods. I have been assured that every reasonable precaution has been taken.

I insert a news item on flood conditions that appeared in today's Boston Globe:

[From the Boston (Mass.) Globe, Mar. 26, 1969]

FLOODS HIT EASTERN MASSACHUSETTS—MORE FEARED

(By Ken O. Botwright)

Widespread flash flooding occurred in Eastern Massachusetts and other areas of Southern New England yesterday, as small rivers and brooks boiled over their banks following a 12-hour storm that deluged the area with 1 to 3 inches of rain.

Muddy floodwaters inundated streets, cut roads and poured into thousands of basements in Greater Boston.

Brockton was hardest hit. It declared a state of emergency. Hundreds of homes were flooded by the Salisbury River and about 50 persons were evacuated from houses and a school for retarded children.

But river-watchers called the flooding "minor." They said the danger had abated by nightfall because most of the streams had receded.

They warned, however, that fast-rising large rivers, like the Charles, the Merrimac, Housatonic and Connecticut, could pose a

fresh flood threat within 48 hours as they became swollen by runoff from the storm and melting snow. Said state Civil Defense Director Allan R. Zenowitz: "We've just had a taste of what could come."

The U.S. Weather Bureau at Boston predicted that the Charles was due to crest tomorrow at one foot above flood stage. The river lapped over its banks in lowlands at Charles River Village yesterday afternoon, after topping its flood stage of 93.4 feet above sea level. "We don't expect a major problem when the Charles crests because the flood stage will be about four feet below that of last Spring," said Oscar Tenenbaum, weather bureau chief.

Tenenbaum said dry weather was expected to prevail throughout New England for the next two days at least, and that should help alleviate the threat.

Outlook for today is fair and colder, with high temperatures ranging from the low 40s in Boston to the low 30s in the snow-covered mountains of northern New England, where the big rivers rise. Tomorrow ought to be fair with little temperature change.

While southern New England was being soaked by torrential rain, blasted by gales and rocked by thunderstorms yesterday, the ski country in central and northern New Hampshire, Vermont and in Maine was blanketed by from 6 to 13 inches of new snow.

FIFTY FAMILIES FLEE

The rain began late Monday night and sluiced down until shortly after noon yesterday. The Weather Bureau at Boston's Logan International Airport measured 1.18 inches and Falmouth on Cape Cod reported nearly 3 inches.

In Brockton, scene of serious flooding last year, rising water forced 50 families out of their homes on the West Side. In the South End of the city, police and firemen rescued 18 youngsters from the headquarters of the Brockton Area Assn. for Retarded Children.

Although city officials declared a state of emergency, Civil Defense experts said the flooding was not as grave as that last Spring.

There was some isolated flooding in Canton—kids paddled canoes on Park drive and Short street—and overworked drains inundated streets in Braintree, Quincy and other communities.

However, the major trouble spots during last year's floods posed no danger because the levels of the Charles and Neponset Rivers had been lowered before the storm struck.

For instance, at Taunton, the Mill River remained within its banks. But just to be safe, city officials ordered 10,000 sandbags from Civil Defense headquarters in Framingham.

Taunton had trouble of another kind, though. Three homes and the Pilgrim Congregational Church were struck by lightning.

West of Boston, streets were flooded in areas of Framingham, Sudbury, and Tewksbury. Wayland firemen kept sandbags ready as the Sudbury River rose steadily. The river flooded last year and isolated the residents of the Pelham Island section.

On the North Shore, the flooding Ipswich River menaced scores of homes in North Reading, West Peabody and Middleton.

More than 2 inches of rain fell in the area, and nearly every community had some flooding. Roads, backyards and fields were under water in West Peabody, Wenham, Lowell, North Reading, Middleton and Topsfield.

DISTRIBUTED 200,000 SANDBAGS

During a morning thunderstorm, power failures blacked out sections of Hamilton, Lynn, Saugus, West Peabody, Beverly, Wenham and Essex.

CD Director Zenowitz said more than 40 Bay State communities had requested emergency flood control assistance and technical aid. Flood control experts were dispatched to many towns by the U.S. Army Corps of Engineers, he said.

A Corps spokesman in Waltham said 200,000 sandbags had been distributed and 100,000 were being stockpiled at Ft. Devens.

The state CD agency has begun transporting 50,000 sandbags from Devens to the Public Works Department depot in Wellesley.

They'll be available to communities who need them.

BROOK OVERFLOWS, HOMES PERILED IN TEWKSBURY

TEWKSBURY.—During the Summer the brook that runs beside Fred Merrill's home on Deering drive is only a trickle, but yesterday it turned into a rushing, destructive flow of water that threatened to flood 25 homes.

"When I left at 8 in the morning the brook looked to be all right. But my wife called me around 10 and said that in 15 minutes time the water had gushed over the top and began running down the street.

"By the time I got home at 10:30 the water had ripped up my asphalt driveway and run into the house. The entire basement was filled with six inches of water and we have to move all the furniture upstairs," Merrill said.

"All the houses on the street were in danger so I called the town's highway department and the Civil Defense people to try to get a truckload of sand. It took about four hours—until at least 3 p.m.—for them to bring the sand and by that time it was too late to help much.

"I used snow, linen, logs and carpets to keep the water from coming into the house but it didn't do much good. There's about $3000 damage to my house alone. And the stink from the water picking up the sewerage is terrible," Merrill added.

Merrill blamed an inadequate drain pipe running under Deering drive for the problem.

FOCUS ON THE FEDERAL CITY COLLEGE—PART I

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. HAWKINS. Mr. Speaker, as a result of an article in a local daily, an assertion was read into the CONGRESSIONAL RECORD on March 6, 1969, which states:

The people at Federal City College must be naive if they feel the taxpayers of the United States are going to continue to fund a university specializing in teaching the catechism of revolution, confiscation of lands, and destruction of culture of the United States, and as a base of operation for a bunch of loudmouthed anarchists.

From my reading of material on Federal City College including a statement made by the interim college commission of Federal City College, composed of representatives of the entire college community—faculty, administration, students, classified personnel, and so forth, and statements by the board of higher education and the student government association, I find that, contrary to the assertion, there is tremendous momentum by a wide representative group of the college to develop a truly profound and meaningful urban community college.

Therefore, Mr. Speaker, I am bringing to your attention and that of my colleagues what I believe to be a clearer picture of the District's new institution of higher education.

In November 1968 the interim college commission prepared a news release which was distributed widely to local press agencies. The statement indicated that Federal City College, perhaps uniquely in American higher education, had tried to establish a genuinely democratic and interracial faculty. The release stated in part:

We can see the beginning of many innovative and exciting programs and ideas, such as a Community Education Program, an interdisciplinary curriculum, a Black Studies Program and a College-wide senate where faculty, students and staff are equally represented. So far, these efforts have attracted widespread attention and interest from educators and students. . . .

In addition to these innovative programs and activities, FCC has developed a number of high quality programs that are within the best traditions of institutions of higher education. Programs in this area include nursing, family life, health education, business, social science, natural science, liberal arts, etc.

The student government association of Federal City College recently held a press conference to present a statement concerning their views on the state of the college. The statement had been read to the student body and overwhelmingly approved. The student government association's press conference was held with the advice and consent of numerous representatives of student organizations, thereby providing a cross section of the student body. Their statement indicated that the principal responsibilities of the student government is to take those actions which will result in benefits for the students and which will enable the college and community to act in accordance with the needs and aspirations of the students.

The student government association made three basic statements:

(1) The students attend Federal City College to obtain a high quality education; this is our basic and primary purpose, (2) the students accept the need for several different types of educational programs to co-exist as part of the urban higher educational experiment, with the qualification that all such programs must be academically sound in content, philosophy, and instructional method, and (3) the students remain dedicated to the growth and development of the College and consider as irresponsible any discussion of the need to terminate or restrict the growth of the College.

The student government association also stated that the black studies program that is presently available within the college already has the support of a large number of students. The black studies program as pictured in the news accounts has little or no support, except from those who wish to use this inaccurate view as a means of causing additional confusion and to achieve some objective other than support of the institution. It is unfortunate that outsiders are attacking the college on this biased information.

Mr. Speaker, in my opinion there is an urgent need for consideration of a legitimate black studies program within the broader context of education and I will discuss at another time my views on this. I submit at this time the following class schedule at Federal City College which has just concluded:

CLASS SCHEDULE, WINTER QUARTER 1968-70

[Explanation of course numbering system: 1st digit indicates division: Blank, skills center; 1, humanities division; 2, social sciences division; 3, natural sciences division; 4, professional division; 5, black studies program. 2d digit indicates level: 0, noncollege course; 1, freshman courses; 2, sophomore courses; 3, junior courses; 5, graduate courses]

Course No.	Section	Title	Instructor	Qtr. hrs.	Days	Time	Room
		SKILLS CENTER					
.001	01	Basic communication skills	Coffey	5	MTThF	9-12 a.m	3304
	02		Johnson		MTWTh	1-4 p.m	3304
	03		Anderson		MTWTh	6-9 p.m	3304
.002	01	Developmental reading	Hausman	2	TTh	9-12 a.m	3318
	02		Tannenbaum		Daily	10-11 a.m	3375
	03		Tannenbaum		Daily	11-12 a.m	3375
	04		Pickney		MWF	1-3 p.m	3429
	05		Tannenbaum		TTh	1-4 p.m	3305
	06		Dobbins		MW	6-9 p.m	3429
.003	01	Advanced reading	Burstein	2	MWF	8-10 a.m	3429
	02		Burstein		TTh	10-12 a.m	3429
	03		Maben		MWF	1-3 p.m	3305
	04		Maben		TTh	1-4 p.m	3318
	05		McMillan		MW	6-9 p.m	3305
.004	01	Basic writing	Hutchinson	2	MWF	8-10 a.m	3359
	02		Thomas		TThS	8-10 a.m	3305
	03		Schaeffer		TThS	10-12 a.m	3375
	04		Schaeffer		MWF	1-3 p.m	3318
	05		McMillan		TTh	1-4 p.m	3429
	06		Thomas		MW	6-9 o.m	3318
.005	01	Fundamental concepts of math	Hutchinson	3	Daily	10-11 a.m	3359
	02		Hutchinson		Daily	1-2 p.m	3359
	03		Pinckney		Daily	6-7 p.m	3359
	04		Pinckney		Daily	7-8 p.m	3359
.006	01	Beginning typewriting	Dobbins		TTh	8-10 a.m	3303
	02		Dobbins		TTh	10-12 a.m	3303
		HUMANITIES DIVISION					
		Freshman courses:					
1.100B	01	Revolutionary tradition	Rodgers	5	TTh	1-3 p.m	B105

NEW CITIES FOR AMERICA

HON. THOMAS M. REES

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. REES. Mr. Speaker, last year Congress passed the Housing Act of 1968, which, if implemented, will prove to be the most farsighted housing act ever developed by Congress.

One title of the act called for the establishment of new cities throughout our country, and I would like at this time to have printed in the RECORD an article, "New Cities for America," by Edgardo Contini, who is a partner of Victor Gruen Associates, Los Angeles. The Gruen firm and Mr. Contini have been pioneers in the development of the new city concept. The article follows:

NEW CITIES FOR AMERICA

(By Edgardo Contini)

In the next thirty-five years we must literally build a second America—putting in as many houses, schools, apartments, parks and offices as we have built through all the time since the Pilgrims arrived on these shores.—PRESIDENT LYNDON B. JOHNSON

This statement puts into focus the enormity of the task before us better than any set of statistics. Yet it may be worthwhile to refer to a set of figures derived from U.S. Census statistics applicable to metropolitan areas. They summarize past conditions and projections of population growth and its distribution between rural and urban locations.

Year	U.S. population	Population inside SMSA [1]	Percent of total	Population outside SMSA [1]	Percent of total
1940	132,165,000	72,834,000	55.1	59,331,000	44.9
1950	151,326,000	89,317,000	59.0	62,009,000	41.0
1960	179,323,000	112,885,000	63.0	66,438,000	37.0
1965	192,185,000	123,813,000	64.4	68,372,000	35.6
1970	208,249,000	137,444,000	66.0	70,805,000	34.0
1980	244,566,000	168,751,000	69.0	75,815,000	31.0
1990	287,472,000	206,980,000	72.0	80,492,000	28.0
2000	337,472,000	253,104,000	75.0	84,368,000	25.0

[1] Standard metropolitan statistical areas.

The tabulation tells us that between the present and the turn of the century urban population in the U.S. will be more than double what it is now, and will represent seventy-five percent of the total population.

All present trends and predictions indicate that without a serious national effort to encourage other patterns of growth, most of the increase will occur around existing metropolitan complexes.

Growth of the city contributes increasing opportunities for employment, residential choice, education, recreation and culture. But growth also aggravates the problems of the community, increases the complexity of transportation and service sytsems, and generally requires more for the support of public facilities and services.

As growth continues indefinitely, there is a point of diminishing return. Benefits tend to decline while problems and liabilities increase. There may be disagreement about exactly where this point occurs, but when urban settlement reaches the order of ten or twenty millions, the residents of Megalopolis pay a high price for the dubious advantages of bigness. The only residual benefit is an increase in business or employment oppor-

tunities. Yet it can be argued that the average level of employment results from the over-all rate of national population growth and productivity, not from the size of population in any specific area. As for increased cultural and educational opportunities, beyond a certain point they fail to follow urban growth. When Megalopolis requires duplication of museums, theaters, civic centers, and multiple urban centers, each center remains limited in its influence. As Megalopolis continues to grow its residents limit themselves to their immediate neighborhood and actually enjoy fewer cultural and recreational advantages than residents of a smaller city.

Other disadvantages of Megalopolis are more obvious. The resident is robbed of the benefit of leisure time. Travelling through mile after mile of uninterrupted urban structure to reach the country for a breath of fresh air is a depressing experience, regardless how well designed the freeway, how comfortable the seat on the commuter train.

If the projection of growth cannot be challenged and the trend toward urbanization is not reversible, are there alternatives to the predicted image of the United States of tomorrow—two-thirds of its population concentrated in a dozen clusters of urbanization of fifteen to twenty million each? Are our children destined to have no other choice than Megalopolis?

The alternative consists of undertaking as a matter of national policy the creation of *New Cities*—"new" in that they must be viewed as urban organizations responsive to human needs and aspirations; "cities" in that (unlike the "new towns" dependent upon an adjacent metropolis) they must from the beginning be complete urban structures; "New Cities" in that their self-sufficiency, independence of existing political forces and interests will permit experimentation with techniques that are not possible in the existing cities.

The *New Cities* must be large enough to support a full range of cultural and educational facilities. The optimum size will have to be determined by regional characteristics, the local economic base and other factors. Indefinite expansion beyond optimum size should be discouraged. New political and economic devices and incentives should initially encourage and, at later stages, limit their growth.

The hardening of the social, political and economic structures of the nation's cities is so advanced that experimentation with new techniques has become almost impossible. People are becoming impatient with the slow pace of accomplishment. But no amount of indignation can alter the fact that our existing cities simply do not respond to reform. The *New Cities*, as laboratories for experimentation, may prove to be the best investment in terms of long-range returns.

Aristotle's words, "The aim of the city is to make man happy and safe," remain to this day a valid prescription. It is easy to evaluate urban structure in terms of safety. The definition of happiness may be more elusive, but where urban amenity is concerned, it is not difficult to recognize certain of its ingredients.

The contribution of *New Cities* to urban amenity must be based on greater sensitivity toward environmental design. Some of the values that our present cities have either never possessed or have lost can be recaptured. Imaginative design can also create new ones by being responsive to our emerging way of life.

Technological improvements that have lifted our standard of living at almost all other levels have failed to make an equal contribution to the building industry: techniques and materials, like attitudes, are in many ways those of our grandfathers. Obsolete and inconsistent building ordinances and union featherbedding, as well as romantic and irrational public attitudes toward shelter, have blocked efforts to produce housing of adequate standards at lower cost. To this day, we cannot produce new housing within the reach of one-third of the population, without subsidy. As a consequence, we are forced to fall back on the "hand-me-down" solution that is one of the prime causes of urban deterioration.

If the technology employed for the production of appliances, automobiles or farm produce was applied to housing, within a few years we could bring unsubsidized housing within the reach of everyone.

For *New Cities*, building ordinances should be prepared by professionals to encourage rather than penalize technological innovation. The building unions might more readily accept innovations for the *New Cities* (where they would not disturb the existing structures of economy and power) than if they were applied to existing urban areas.

Technological innovation for the *New City* should go far beyond the more efficient building of shelter. For example, the possibility of total climate control should be explored. The covered airconditioned pedestrian areas of recent years are just modest forerunners of the potentials already technologically available. Through them regions previously bypassed because of climate can be opened to urban settlement. Furthermore, new approaches to water supply and disposal, new techniques of power generation and distribution, and new methods of communication should readily be introduced in the design for the *New Cities*.

One of the most promising innovations in the *New Cities* should be in the field of transportation. The building of a *New City* offers an unparalleled opportunity to retain the benefits of private mobility without sacrificing the characteristics of compactness, efficiency and variety that must prevail in the new urban complexes. A system of private and public transportation designed to maximize the benefits of both, and new techniques of rapid mass transit should be developed as integral elements.

The major difficulty encountered in eliminating the ghettoes of existing communities is that efforts to redistribute housing, schooling, and recreation run up against prejudice and natural resistance to change established patterns.

Obviously, in the case of existing cities, change by flat cannot be enforced. In the *New Cities* there would be no *status quo* to defend, no change to enforce. Its urban structure would be conceived to make racial and economic integration an element in its basic design. Its residents' sense of belonging and their desire for participation in civic affairs should be reinforced by structuring the complex into identifiable elements, comprehensible in size and organization, correlated to each other and to the city's center, by interspersing public spaces at the neighborhood level and providing for recreational facilities related to the over-all urban structure.

The functioning of the urban structure as a whole has not yet been subjected to the critical analysis applied to major private industrial complexes or the nation's defense system. The present pattern of urbanization is conductive to inefficient and uneconomical public services and improvements. Discontinuous development, fragmentation of government and authorities, and obsolete habits and institutions result in unnecessary costs for the support of public services and facilities. These in turn are reflected in the high rate of taxation.

Even if it were possible to unravel the complex tangle of functions and services within the urban structure, and, by sophisticated analysis, develop a system of optimum relationships for minimum cost, it would be extremely difficult to bring about the political reforms necessary to implement such a system in our existing cities.

But a careful analysis of functions, services, costs and techniques for a *New City* should be undertaken prior to the plan and the administrative scheme of the *New City* should be based on the findings. It will thus be possible to expand the range of public services and amenities without increasing taxes.

The role of the educational institutions is changing and expanding. Pre-school head-start programs and adult extension programs have widened the range of educational services. New relationships are emerging: the elementary school as a neighborhood center; the high school as an integral element of the community center; the use of school facilities to fulfill civic as well as educational needs; the university conceived as an urban campus reflecting its relationship with private institutions of research and industry, as well as the broad cultural influence it can exert on the entire community. These are just beginnings.

Similarly, in the field of community health, the emphasis is shifting from curative to preventive medicine; mental health is being tied in with environmental amenity, and the problems of the aged are viewed as a community responsibility.

Both in terms of educational and health facilities the *New Cities* should provide an opportunity for experimentation that would be valuable elsewhere.

The political systems inherited by our cities have proved cumbersome in coping with the problems of the metropolis. Conceived and structured at a time of slow change and limited range of public service, they were directed more toward maintaining democratic processes at the local level than providing efficient government.

The challenge for *New Cities* thus is clear: to devise and adopt a government structure that will not only retain but will reinforce the democratic process in contemporary urban life and, at the same time, function effectively in administering the complex machinery of the city. The multiplicity of independent (and often competing) governments should be replaced in the *New Cities* by a new form of municipal government structured to respond quickly to metropolitan problems as they arise and yet sensitive to neighborhood and community needs. It will have to combine the best characteristics of corporate management with the tradition of representation and participation by the residents.

It is an open secret that our cities are in dire economic straits. Growth and deterioration, operating simultaneously in the framework of an obsolete system of taxation and financing, have resulted in land speculation and fiscal insolvency. A large measure of the difficulty results from the conflict between the concept of private ownership of land and rapid growth.

Individual ownership of land served the urban community as long as growth rate and obsolescence were slow. But as soon as growth became pressing and, more recently, as obsolescence tended to accelerate the pace of change, ownership of urban land was overshadowed by speculation, which led to the frustration of efforts to guide urban growth.

Thus, as other democratic countries have done already, we must come to view urban land as a public asset, a resource to be used wisely and efficiently for the greatest common good.

This concept has already been adopted on a limited scale by the urban renewal process: eminent domain is exercised when hope of self-improvement has faded; land is assembled as a community asset and returned to private development. The differential between acquisition cost and disposal price is borne by the community, with substantial federal assistance.

Can this concept be expanded? Why should the instrument of community guidance and

control be instituted only after things get desperate and the price of rehabilitation is sky high? Why not reverse the process, and, from the beginning, introduce community control of the development rights of all land destined to become urban?

In this manner it would be possible to program the pattern of urban growth efficiently, to install services and utilities of adequate size. The community, by making land available to the private developer when it is required, and pricing it at its fair market value, could retain the differential between the cost of raw land plus improvements and the disposal price. Thus it could accumulate a rotating capital to finance the process of growth and the added services growth requires. The result: not subsidized renewal but urban administration on a self-supporting basis, with a lower and more equitable tax burden.

The implementation of the *New Cities* program—like many of the new ventures recently undertaken as a matter of national policy—can best be accomplished by joining the initiative and financial support of government and the imagination, technological skill and investment of private enterprise.

The scale of the *New Cities* program is too overwhelming for private initiative. Its purposes and implications are too relevant to the country's future to be sacrificed to the profit motive alone. Nor should the venture be undertaken entirely by government. Not only would this represent a departure from the nation's tradition, it would deprive the undertaking of the contribution of ingenuity, motivation and capability that private enterprise can provide. Through a joint venture involving the coordinated participation of three principles, government, industry in general, and the building and urban development industry in particular, the program can be carried out.

The government should formulate the program and provide the financial support or guarantees necessary to generate incentive.

The role of industry should be to develop research and production facilities to establish employment possibilities for this new community.

The building and development industry would have responsibility for translating the program into reality.

I have attempted to outline the benefits of such a program. Beyond such specifics, a national commitment to the bold new venture of establishing new urban settlements would have extraordinary psychological value. As long as we view urbanization essentially as a generator of problems and grief, and address our public efforts to remedy, relief, or repair, we lose the spirit of our heritage.

We should view the urban revolution as we viewed the industrial revolution—as an extraordinary opportunity: the opportunity for the joint exercise of public vision and commitment and private ingenuity.

A RESOLUTION IN OPPOSITION TO THE PERMITTING OF OFFSHORE DRILLING FOR OIL AND GAS IN LAKE ERIE

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. BETTS. Mr. Speaker, the matter of exploration of oil and gas drilling on the floor of Lake Erie is one of increasing concern to the residents in the areas bordering on the lake.

Recently the city council of Sandusky, Ohio, passed a resolution opposing this offshore drilling, and I am taking this opportunity to make its contents available to every Member of Congress. I sincerely urge that Members read it and take note of this problem which is developing in the Great Lakes area.

The following is the text of the resolution:

RESOLUTION 1441–C: A RESOLUTION IN OPPOSITION TO THE PERMITTING OF OFF-SHORE DRILLING FOR OIL AND GAS IN LAKE ERIE

Whereas, Lake Erie is a great natural resource as a primary source of water supply, for commerce, for many forms of recreation, and

Whereas, although Lake Erie has been neglected for many years by the public and by the various governments that have jurisdiction in the matter and they have permitted it to become polluted and be otherwise misused, principally by private interests, to the great detriment of the public generally, and

Whereas, there is now a great awakening and much concern is now being shown and vast sums of money spent by the public, and the various governments toward the preservation of Lake Erie as a great natural resource, to keep it from being further polluted and otherwise misused, to restore it to its former state of relative purity and natural beauty, but there is still a great deal more to be done, and

Whereas, private interests still persist in their efforts to get permission to drill offshore in Lake Erie for oil and gas primarily for their own interests and to the detriment of the interest of the public generally, particularly when it has recently been demonstrated through off-shore drilling in California that the same may be a source of pollution of monstrous proportion, now therefore

Be it resolved by the City Commission of the City of Sandusky, Ohio:

SECTION 1. That the City of Sandusky be and it is opposed to the permitting of offshore drilling in Lake Erie for oil and gas.

SEC. 2. That our representatives in the legislature of the State of Ohio and the Congress of the United States be made aware of our concern for the preservation of Lake Erie as a great natural resource and its restoration to its former state of relative purity and natural beauty, and that they be urged to have the same concern when considering legislation that is proposed which directly or indirectly relates to these things.

SEC. 3. That this Resolution shall take effect and be in full force from and after the earliest period allowed by law.

J. ROBERT HANLON,
President of the City Commission.

Attest.

VIRGINIA SCHAEFER,
Clerk of the City Commission.

Passed: March 10, 1969.

THE 50TH ANNIVERSARY OF THE AMERICAN LEGION

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. ANDERSON of California. Mr. Speaker, it is with a sense of personal pride that I rise today to join with my colleagues in paying tribute to the American Legion on the occasion of its 50th anniversary.

As a member of Post No. 314 of Hawthorne, Calif., for 25 years, I have long been familiar with the outstanding work of the American Legion in the field of community service.

The Legion, for example, has trained our young people for positions of leadership and responsibility through sponsorship of programs such as Boys State, Boys Nation, American Legion junior baseball teams, American Legion oratorical contests, and Boy Scout troops. These programs have given millions of young Americans an opportunity to develop their talents in a constructive and responsible manner while at the same time strengthening their character.

During its five decades, the American Legion has compiled an impressive record of legislative achievements. The establishment of the Veterans' Bureau in 1921 and its successor, the Veterans' Administration in 1930; the World War Veterans' Act of 1924; the first non-service-connected pension program for widows and orphans; the World War II GI bill and similar programs for veterans of more recent conflicts are but a few of the major pieces of legislation in which the American Legion played a leading role.

Ever since that historic day, March 15, 1919, when a group of World War I veterans, known as the Paris Caucus, met in Paris, France, the American Legion has grown from 500 then to almost 3 million veterans today of World War I, World War II, the Korean conflict, and Vietnam.

The work they have done for our young people, for veterans and their families, and for the community has shown their great concern for the future of our country and serves as an inspiring example of what a dedicated organization can accomplish.

Mr. Speaker, I am happy to salute this great organization and wish the American Legion well in its next 50 years.

OREGON HOUSE JOINT MEMORIAL 12

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. ULLMAN. Mr. Speaker, I testified before the House Interior Committee recently requesting a reversal or major modification in the proposed increases in grazing fees on public land. At that time I expressed my belief that this increase is not equitable and that the departments should reconsider this decision. The Public Land Law Review Commission is now in the process of studying these questions, and I believe it is appropriate to delay the increases until the study is completed and the Commission has submitted its recommendations.

The people of Oregon feel strongly about this issue and I think this feeling is well demonstrated by the joint house memorial which the Oregon Legislature recently passed in opposition to the fee increases. The gentlewoman from Oregon (Mrs. GREEN) and I have asked that this memorial be introduced to the House today and referred to the proper com-

mittee. I would like to have it printed in full at this point in the RECORD:

HOUSE JOINT MEMORIAL 12

TO THE HONORABLE SECRETARY OF AGRICULTURE AND SECRETARY OF INTERIOR:

We, your memorialists, the Fifty-fifth Legislative Assembly of the State of Oregon, respectfully represent as follows:

Whereas the agricultural sector of this nation's economy is undergoing a period of recession; and

Whereas the increase in the fees for grazing on public lands that has been proposed by the Department of Agriculture and the Department of Interior would have such detrimental economic impact on the livestock industry that the entire profit margin in many livestock operations would be removed; now, therefore,

Be It Resolved by the Legislative Assembly of the State of Oregon:

(1) The Secretary of Agriculture and the Secretary of Interior are memorialized to refrain from implementing the recently proposed increases in fees for grazing on public lands.

(2) The Chief Clerk of the House of Representatives shall send a copy of this memorial to the Secretary of Agriculture, the Secretary of Interior and to each member of the Oregon Congressional Delegation.

NIXON AND ATLANTIC UNION

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. FINDLEY. Mr. Speaker, the noted columnist Roscoe Drummond discussed the question of President Nixon and the movement for Atlantic Union in his column for Sunday, March 9, 1969. This was the second of a series of two Drummond columns on the Nixon-in-Europe trip. Unfortunately, the Washington Post published only the first of the articles but omitted the second. Therefore, I present it at this point in my remarks:

NIXON AND ATLANTIC UNION

(By Roscoe and Geoffrey Drummond)

Will Richard Nixon as President act on his conviction that patching up the North Atlantic Treaty Organization just would not be good enough?

And will he take bold initiative on his long-held view that the Atlantic Alliance should be an Atlantic Union?

Mr. Nixon has strongly backed the proposed congressional resolution to invite interested NATO countries to prepare the way to turn the present military alliance into a federal union.

When the Atlantic Union Resolution was before the House Foreign Affairs Committee in 1966, he spoke for it:

"It is fitting that the United States, the world's first truly federal government, should be a main force behind the effort to find a basis for a broad federation of free Atlantic nations."

As President, he can turn promise into performance.

In 1966, Mr. Nixon noted that "the concept of an 'Atlantica' is at present only a dream, but, in the age of the rocket, dreams become reality with a speed which is difficult to imagine."

On his recent European trip the President found ample evidence that every nation he visited, except France, wanted to be partners in a more unified Western Europe.

Three years ago Mr. Nixon was "deeply disturbed" by the "renewed nationalism of France" and on his latest trip he found President de Gaulle as nationalist-minded as ever.

But in 1966 Mr. Nixon said that "by adopting a measure such as the Atlantic Union Resolution we could give new impetus to the spirit of federalism in Western Europe."

And there is more support for further unifying the Atlantic community now than there was three years ago. Most European nations now outside the Common Market—Britain, Scandinavia, Greece, Switzerland and others—want to join, and all the Common Market countries, except France, want them to join.

In the United States there is a wide political base to encourage the President to actively help the move for a Citizens' Convention to see what first steps can be taken to enable the free nations of the Atlantic world who want to join closer together to do so.

Time was when it was venturesome, even perilous, for American political leaders to show that they favored any moves toward a federation of like-minded free nations.

No longer. And President Nixon would have no reason to fear any serious political opposition either from the responsible right or left if he put his prestige behind the Atlantic Resolution.

Few, if any, congressional proposals have won such wide and prestigious backing as the Atlantic Resolution. It is supported by nearly every national Republican leader—Dwight Eisenhower, Mr. Nixon, Nelson Rockefeller, Barry Goldwater, George Romney, William Scranton, Charles Percy, Mark Hatfield and others. It was supported by the contenders for the Democratic presidential nomination—Hubert Humphrey, Robert Kennedy and Eugene McCarthy.

It probably wouldn't take either courage or daring for President Nixon to put himself behind an Atlantic convention. But it would take something because the tendency of many Presidents, once they are in office, is to feel that it is unwise to rock the boat in foreign relations.

But the President may well feel on the basis of his trip to Europe that now is the time to act more boldly if the Atlantic world is, in Mr. Nixon's own words, to respond adequately to "the incredible change which is going on in the world around us."

FOCUS ON THE FEDERAL CITY COLLEGE—PART II

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. HAWKINS. Mr. Speaker, the black studies program at Federal City College is a tentative and projected curriculum which, like all other majors, has not yet come to the administration and the board of higher education for final approval.

Recent newspaper stories, nevertheless, have given the public a distorted and confusing view of the proposed black studies program. I feel it important, therefore, to bring to the attention of my colleagues the details of the program, its objectives and goals, as outlined in the following report on the activities at the Federal City College from the college information office:

FOCUS ON THE FEDERAL CITY COLLEGE—A PERSPECTIVE: BLACK STUDIES PROGRAM AT FCC

"There must be a way to legitimize black thought—the intellectual concerns of black people," says FCC Associate Professor of English Andress Taylor. "The Black Studies Program at Federal City College and other colleges in the country will provide the leadership in the challenge to take manifestations of black culture out of the streets, institutionalize it, discover its relationship to the past and transmit it to present and future generations," he continues. This is the goal of the Black Studies Program at Federal City College.

The Black Studies Program at FCC is a comprehensive and complete rather than the usual fragmented approach to black studies. According to Black Studies Program Director James Garrett, "It focuses upon the realities and prospects of those of African origin where they exist or, the Continent of Africa, in the West Indies, and in the Americas. In essence, the Program is at once a cultural and educational vehicle for creative awareness, confidence, and determination of black people."

The objective of the Program is to provide sorely needed manpower in black communities at home and abroad in areas of (1) food and medicine for nutriment planning assistance and care for the ill, (2) architecture for physical development of the community, (3) communication for communicating effectively within and between communities, (4) political and economic structures for effective contributions in productive and conciliatory activities in the communities, (5) historical and cultural structures for development of knowledge and appreciation of heritage and aesthetic activities, and (6) teacher education for expertise in training people of the communities to train each other. To achieve this end, the Program proposes to encourage black people to understand the disciplines of science, mathematics, and other technical areas as they apply to these black educational needs. It will seek to provide an arena for the perfection of those skills necessary for the vitalization of black communities.

FCC Professor of English and Chairman of Humanities Division William Couch, Jr. says, "It is normal for any school to serve the interests of its citizens. Black Studies defines and furthers the interest of students whose lives are rooted in black existence."

The Black Studies Program has as its purpose revitalization and maintenance of values, attitudes, social structure, and technology relevant to black people through (1) development of undying love for each other; (2) realization that black people are descendants of Africans; and (3) realization that security, respect and equality shall be the necessary foundation of black life.

Community involvement and dedication will be the means for achieving the goal of love among black people. Accordingly, the Program will seek to develop a relationship among black people that manifests itself to the black community. It will advocate an African cooperative family concept of dedication to the black community as opposed to the individual concept of "me first." For example, a black doctor would go into the black community that most desperately needs his talent. He would seek *only to make a living* and not accumulate great amounts of wealth. In time the black community would support him and he would serve that black community. He would also devote himself to encouraging black youth to become interested in medicine and serving the black community. The black community in return would pay for the education and training of the black doctors who would come back to serve them. The same model would apply to all technical and professional areas, including architecture, engineering, food processing, biology and chemistry.

In the second instance, Black Studies will provide a physical and emotional setting for strengthening the currently vaguely perceived ties between black people throughout the world. This will mean the institution of methods of communication and vehicles of exchange which will serve to bring together

the information and talent of black people everywhere.

In addition, it is hoped that various kinds of exchange programs between African, Caribbean, and the North and South American blacks will be instituted to lead to a knowledge of an empathy politics, cultural and economic with black people in those countries.

In connection with this, the Program will include in its activities a series of group-travel plans through which students will be able to visit, work, and learn in various areas of the country, such as black cooperatives in the South, and the rest of the black world including the Caribbean, Africa and Latin America. In this way real contact will be established and maintained between black people in countries around the world and black people in America.

The Program proposes that meaningful education for black people must insure security. Black security must mean security from hunger, sickness, and shelterlessness. Black security also includes a psychological well being. Respect represents a basic principle which must be strengthened through the Black Studies Program. This will increase the dignity and sense of security of black people.

In order to achieve these specific objectives and goals, the Program will take total responsibility for the academic pursuit of students enrolled in Black Studies. The Program will be composed of two major parts—a degree program and a series of individual course offerings. The degree program is a systematic four-year course which will lead to a degree in Black Studies. The first two years will focus primarily on channelling the student to a spirit of dedication and community work, and development of interpretive skills necessary to define for themselves the relationship between the history of black people and their present situation so that they may better understand how to create their future. The latter two years will focus on specialization in one of three curriculum cores—technical, political, or cultural.

"All courses in the degree program are mandatory. They are divided into the following areas with students taking one course in each area each quarter:

FIRST YEAR

Pan African World—The study of the historical, social and cultural development of African communities in the Caribbean, on the Continent, and in the Americas.

Natural Sciences—Basic courses for a historical survey of the general principles and uses of the sciences and an introduction to practical application of these principles of the social life of the community.

Communicative Skills—Courses designed to advance the concepts and applications of reading, writing, and speech.

African Peoples and World Reality—Survey and analysis of the dominating forces and facts and the relationship of African peoples to this context.

Languages—Choice of Swahili, Kikuyu, Arabic, French, Spanish, or Portuguese. (Students must specialize in one language).

Physical Development—Program of study and activity in the arts which strengthen the body and discipline the mind, including Akikdo Karate, Aquatics, Gymnastics, the African Hunt, and Dance.

SECOND YEAR

Interpretation of the African Experience—History and analysis designed to develop the student's interpretative understanding of political developments in the African world.

Cultural Concepts of African Peoples—Discussion of cultural themes in specific areas of the African world.

World's Great Men of Color—Courses concerning life and time of outstanding black men.

THIRD YEAR

Concentration in one:

Technical Core—Training and instruction in the specific skills, scientific and technical, relevant to black education, such as courses emphasizing food technology, biomedics, and physical planning and development.

Political Core—The exploration and development of social techniques in response to the situation of the Pan-African world.

Cultural Core—The transmission of the culture and heritage of the African peoples.

(In all cores, a course in geography is required in the first quarter, one on institutions is required in the second quarter, and a course in black intellectual thinking and development is required in the third quarter.)

FOURTH YEAR

A yearly rather than quarterly program will be pursued in the fourth year, with major emphasis on the development of areas for the application and acquisition of advanced skills with direction always toward applications.

The fourth year will be a cooperative effort among the cores of three different levels—individual level, intra-core level, and inter-core level—within a particular part of the African world. With the shift to the yearly basis rather than the quarterly, there will be closer personal supervision between instructor and student. The fourth year also provides time for extensive travel. There is a good possibility that some of the courses of study will require a fifth or sixth year. Also in some cases students will be sent to other institutions for further study and skill development.

The several individual courses offered by the Black Studies Program to the entire student body for credit will not lead to a degree in Black Studies, but will focus on various aspects of black history and culture. These courses include "Afro-American Heritage of Music," "African Heritage in Negro Music," and "Afro-American Art History."

The Black Studies Program has set its list of priorities as:

1. The Community—Institution of a carefully designed segment of the program dealing specifically with such areas as participation by students and staff in projects being carried on in black communities, including schools, churches, political organizations, and businesses. The community will be a crucial part of the Program and it will become equally important to the lives of the people in the community.

2. Students in the Program—Understanding and acceptance of the Program aims and objectives by the students and complete training of the students in the area of study.

3. The Staff—General acceptance of the principles of the Black Studies Program, willingness to function in a staff position as opposed to the usual faculty positions, and thorough knowledge of area of specialty—not necessarily expressed in the form of degrees.

4. The Program itself—Achievement of the program goals and objectives.

Black Studies now has proposals under discussion for establishment of formal relationships with all College divisions, especially in teacher education which will be a major focus of the Program. A formal relationship has already been established with the College Humanities Division and will include such cooperation as joint faculty appointments. Later such relationships will be established with professional schools of certain area universities. These relationships will strengthen the Black Studies Program and insure more definite achievement of the Program goals.

The need for establishment of Black Studies as an area of formal studies has been demonstrated nationally. An editor of a large metropolitan daily newspaper recently asserted that those persons thinking that they will "find the sites of a black Rome or Greece in Africa, are in for a sad disappointment." He was in fact saying that the current surge in black history, black awareness and the study of black culture, is more equated to the fabricating of black cultures and civilizations of our fantasy and legend into pseudo facts.

His assumption is incorrect. Evidently he has not read the *Tarikh al Fattash* (*Chronicle of the Searcher*), which Daniel McCall in his book, *Africa in Time-Perspective*, states as being "the oldest *written* history now extant that was composed by a West African." He apparently has not read other works (mostly in Arabic) describing the great Sudanese empires of Ghana, Mali, and Songhai. One ancient manuscript was not discovered until 1911 and it is apparent that few of us know much of its contents now. There is much to learn from the works of the *Tarikh al Sudan* and the *Tarikh al Fattash* as well as many facts to glean from the scholars of Sonike and Timbuktu.

The need for information on what has transpired culturally and historically between the Niger and the Nile is a significant part of the thirst that has stimulated the growth of the fairly new discipline of Black Studies.

HANDLOADING AND CRIME?

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert in the CONGRESSIONAL RECORD an excellent editorial appearing in the Handloader publication of March-April 1969 pointing out some of the follies attendant upon the passage of the recent firearms control legislation and some of the foolish administration which has been attendant thereon:

HANDLOADING AND CRIME?

The legislative record of the Gun Control Act of 1968 comprises transcripts of public hearings, committee reports and House and Senate floor debates during some five years of arguing the pros and cons of attempting to control crime by controlling firearms. These records include thousands of pages and millions of words. Stacked one atop the other they make a pile almost three feet tall.

Yet in all this mass of material there is not one suggestion that there is a relationship between reloading and crime. At no time during any of the hearings or debates did *anyone* offer even an opinion that the availability of reloading components has any effect upon the crime rate.

But when the "gun law" was passed, reloading components were given almost the same treatment as guns. Why? Where is the evidence of any need to regulate and prohibit the sale of components?

Is the Congress of the United States so docile that it will enact a major provision of law without a single word in its support, without a single reason why it should be enacted? Apparently so, for that is precisely what the 90th Congress did when it included reloading components in the Gun Control Act of 1968!

In the editorial in the last issue of *The Handloader* we pointed out that there were never any public hearings in regard to *any* federal law which would control ammunition or reloading components. Had there been hearings we doubt that either ammo or components would have been included, for both are patently impossible to effectively regulate,

even if there were a valid reason for attempting to do so.

In any event, the proponents of the law should have been made to offer some form of reasonable evidence in support of component controls, and handloaders should have been given an opportunity to present the reasons why such controls should not have been enacted. But neither happened. The handloading components controls simply became law, without public argument either for or against, simply because someone in the Johnson Administration wanted components "regulated." *That kind of shenanigan is expected in a dictatorship, but we didn't think democracy was supposed to work that way!*

Until the Johnson Administration pulled H.R. 17735 out of the hat after Sen. Robert Kennedy's assassination, no Administration bill had called for ammunition controls—and the Treasury Department had testified that it didn't want such a law because experience with the ammo controls of the Federal Firearms Act had shown that ammunition could not be effectively controlled or traced.

In the furor created by President Johnson's call for passage of a firearms registration and licensing bill, too little attention was paid to the "lesser" bill to extend "mail order" prohibitions to long guns and ammunition. As a result, few people noticed that "ammunition" was defined to include "cartridge cases, primers, bullets, or propellant powder."

Since the last *Handloader* editorial was written, Treasury Department regulations on the new law have been published specifically exempting ammo and components for "antique firearms," loose shot and unloaded, unprimed "non-metallic" shotgun hulls from the law's prohibitions. The Treasury Department did not explain why brass shotgun cases are considered more hazardous to the public safety than paper or plastic cases!

Had there been hearings on ammunition—and reloading component—controls, someone would have been expected to explain why the bill included ammo and components and would have been expected to establish some sort of relationship to the crime problems. But no hearings—no explanation.

Bills are reportedly being prepared by Sen. John Tower (Texas) and others to repeal the ammunition section of the new law. The nation's handloaders need to get behind those bills by asking our congressmen a few questions:

"Where is the evidence that reloading or the availability of reloading components has anything to do with crime? Why were reloading components—and ammunition—included in the law without benefit of public hearings? How are you going to vote on the proposal to remove reloading components and ammo from the law's prohibitions?"

We'd like to see some answers to those questions—and the ammunition section of the law repealed!—NEAL KNOX.

INAUGURAL ADDRESS

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. QUILLEN. Mr. Speaker, I would like to take this opportunity to share the following speech, given by a fine, young man in my district, upon his election as Governor of the American Legion Boys' State, with the readers of the RECORD.

I am mighty proud of Kent Stair for this outstanding achievement, and his speech is an accomplishment which I feel deserves recognition by all of us:

INAUGURAL ADDRESS

Mr. Chief Justice, Distinguished Guests, My Friends and Fellow Boy Staters: I come before you on this Inaugural Day of June 5, 1968 with the hopes and beliefs that tomorrow will be a brighter day.

Today, a dark cloud of hatred and confusion hangs over the world. Today, a storm of prejudices divides our nation and our world. Today, self is put first, while country is a distant second. You may ask yourself when will it ever end? . . . Will it ever end? Is there any hope for tomorrow? What is the hope for tomorrow?

Fellow Boy Staters, we are the hope for tomorrow. It will be up to our generation to end this hatred. It will be up to our generation to end this turmoil. Our generation will end this gloomy day one way or the other.

Will we work for peace and live, or hate our neighbor and die? The answer lies in our own hearts. Tomorrow belongs to us! We are the hope for tomorrow!

As governor-elect of American Legion Boys State, I have appointed what I believe to be a capable and qualified staff. Each and every one of these gentlemen is here to serve you. Come share your problems with them. They want to help you. Each and every one of them is looking for a brighter tomorrow.

The keynote we sound here today is that we understand, appreciate, and educate our youth.

Too many times in our world today, the word "teen-ager" has been used as a bad word. We, the Governor's Staff at Boys State, disagree.

You read about the hippie from Columbia University, but do you hear about the clean-cut law student. You see and read about the marches on our national capital, but what about the young man who is out having to work his way through college. You hear of the black power advocates, but you never hear of the young Negro out trying to constructively help his race. You see the draft-card burners, but you never see the boy lying dead in Vietnam because he put his friends and his country before himself.

Too many times in our world today, adults look down upon teenagers. They contend that the teen-agers are gradually digressing to an immoral state. We, on the Governor's Staff, disagree. Some adults point to the problems of liquor, drugs, obscene literature, and a lack of morals. Have these adults ever stopped to figure out who is promoting all of these items? If they take a deep look, they will see that it is not the teen-ager, it is the adult.

No, fellow Boy Staters, the word "teen-ager" is not a dirty word. It is the greatest word in our vocabulary because it is our hope for a better tomorrow.

As governor of your state, I would like to see better education and better opportunity. I want every one in our State to have a chance to live and be truly free . . . free from fear, free from prejudice, and free from hatred. Not until that day will our society be truly free.

Tomorrow draws closer. We must not wait on it to come. We must meet it and we must conquer it. This is what we, the citizens of American Legion Boys State, can do. We can lead the way. We can show a sincere desire to help others. We can make a brighter tomorrow.

I stand before you a proud and honored young man. I have come to realize that when my term as governor ends, my wonderful memories of Boys State will continue. I realize that when my term as governor dies, that the thrill of knowing you all will live in my heart forever. I realize that this week I have made friendships which neither time nor distance can ever break.

I am honored to be your governor, but I am even more honored to be your friend and fellow-citizen in American Legion Boys State.

I sincerely hope that someday, we can all wake up to a brighter tomorrow.

Mr. Chief Justice, I am now ready to take the oath of office.

PASSPORT CLUB, INC.

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. BIAGGI. Mr. Speaker, in recent years steps have been taken both in the private and public sectors to help foster a better image of the United States throughout the world. The Peace Corps in particular is a noted example of a people-to-people program that has met with outstanding success and has enabled our citizens to better understand other cultures and other people while at the same time extending to them an understanding of the American spirit.

We know that individual contacts with citizens of foreign lands, for both business and pleasure, may someday be the ultimate answer to peace in our time. Recently, I learned of a very unusual enterprise that is about to begin in the United States that I would like very much to bring to your attention. Passport Club, Inc., which is headquartered in New York City, offers to its members an opportunity to see the world and its people, their philosophies, their ideas, their difficulties and their heritage. For the first time the average American will be able to participate in a 3-year travel program.

The program offers to its members an opportunity to travel within their own hemisphere and to the far reaches of the globe including Europe and the Orient. An important feature is the awareness by those who have founded Passport Club that, in addition to people-to-people communication, there is another problem which we must face—that of our balance of payments.

Passport Club has made a commitment to use U.S. carriers wherever possible. Arrangements for first-class hotels and car service overseas will also be made through U.S.-based companies.

Last, plans are currently afoot to organize similar clubs in other countries so that those who live in Europe, in the Orient, in South America, in Africa, will have a similar opportunity to travel and experience the joys of other people, other worlds, and other countries including the United States. In addition, to further this communication, the Passport Club is embarking on a unique series of services for its members including the offering of foreign language courses prior to their visiting a country, regular group meetings so that members will be able to get to know each other better, special arrangements with large companies offering all the advantages of group purchasing power at the individual level and, within the framework of the club, a spe-

cial travel insurance policy for each member.

I feel this is a program that offers to its members a unique opportunity to be a great help to our country in promoting better relations throughout the world. And, at the same time, offers them the opportunity to see sights and places that only a few short years ago they never would have dared to dream about. Those who are responsible for Passport Club should be commended for offering this opportunity to so many.

PRESIDENT ACTS TO CURB ONE-BANK HOLDING COMPANIES

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. BENNETT. Mr. Speaker, I was extremely pleased to note that the President has now taken concrete action in proposing legislation to eliminate loopholes in the Bank Holding Company Act which allows banking and nonbanking interests to mix. I feel strongly that this type of mixing threatens the financial stability of our country and for many years have sought to close these loopholes. In 1956 when the Bank Holding Act was passed, it was agreed that everything that should be done had not been done in passing the bill. President Eisenhower said on signing the law:

> The legislation falls short of achieving these objectives—the exemptions and other special provisions will require the further attention of the Congress.

In 1966 as a result of legislation I introduced, the House voted to eliminate all exemptions to the Bank Holding Act, but only four exemptions were removed in the Senate. Of the two remaining provisions, the one which allows bank holding companies to escape Federal regulation has become a major concern. Until the mid-1960's this exemption allowed relatively small financial institutions to offer services, usually in nonmetropolitan areas which may not have been available otherwise. In 1965 the average deposits of the 550 one-bank holding companies was $15 billion. The most recent figures available show that there are now almost 800 one-bank holding companies controlling over $100 billion. A recent report published by the House Banking Committee indicates that nine of the 12 largest commercial banks in the country have recently formed one-bank holding companies.

In his communication to the Congress the President underscored the importance of this legislation when he stated:

> Left unchecked, the trend toward the combining of banking and business could lead to the formation of a relatively small number of power centers dominating the American economy. This must not be permitted to happen. It would be bad for banking, bad for business and bad for borrowers and consumers.

I agree fully with the President in this and I commend him for his foresight in this regard. Legislation which I have introduced in this Congress will eliminate these exemptions which provide for one-bank holding companies. I hope the Congress will act promptly in resolving this matter which has the potential of undermining the diversity of business on which the economic foundation of this country rests.

SAGINAW: ALL-AMERICA CITY

HON. JAMES HARVEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. HARVEY. Mr. Speaker, I would like to take this opportunity to bring to the attention of the membership some very pertinent newspaper articles on the selection of Saginaw, Mich., as an All-America City. The articles, from recent editions of the Saginaw News, follow:

[From the Saginaw News, Mar. 20, 1969]

IN WHICH OUR FINEST HOUR DAWNS UPON US

Saginawians awoke to a very special first day of spring today.

There may not ever again be another one quite like it. If there ever is, there will never be a second realization like the first.

A flag flies over City Hall. It bears a simple inscription.

"Saginaw: All-America City."

Equally unstrained but eloquent ceremonies this morning at the seat of city government acknowledged Saginaw's official designation as one of 11 cities in the United States of America receiving today this signal honor. There are more than 16,000 in the U.S. that makes us "one in fifteen hundred."

How does that grab you? It ought to grab you pretty good, dear reader, because the honor is yours. It doesn't belong to any government. It is yours and yours alone.

No tricks. No double talk. No gimmicks. The National Municipal League and Look Magazine, co-sponsors of the annual All-America City judging, run a hard-nosed event. The only basis on which the award is given is the tested measure of citizen participation in and commitment to the solution of urban problems. That and the measure of accomplishment.

As Look says, "in keeping with today's epidemic of urban ills, each of the winners had problems or sins-in-the-past to confess. But the winners . . . are not being recognized for the quality of their confessions. Their citizens went beyond identifying their troubles to do something about them."

In our case what we've been honored for doing something about is the nation's No. 1 problem—race relations. Only one other among the 11 designated was similarly recognized. This makes it something very, very special. It focuses the eyes of a nation on us.

This is a joyous day, of course. It is a historic moment. Few things nicer have ever happened to Saginaw. It is an appropriate time, moreover, to try to capture the perspective and the enormity of what has come to the people of this community.

We in Saginaw know very well what we are about in the entire field of endeavor for which we are now singled out. We know where we were, we know how far we have come to get where we are and we should know just how far we have yet to go.

Most of us are pretty familiar by now with what Look calls "pace-setting programs" begun here in the area of improved race relations . . . passage of an open housing ordinance . . . the creative work of the Mayor's Committee of Concern ranging over the whole spectrum of problems that keep so many out of the mainstream of attainment . . . passage of an 8-mill tax to improve educational opportunities for all of the city's school children and the deep personal involvement of our teen-age youth that made public approval possible . . . First Ward Community's Center's fully-funded program to secure jobs and job training for the hard core unemployed . . . the city's rental housing inspection program . . . United Fund's activist support of social agencies reaching to the very heart of these ills.

We could go on. Project READ. Opportunities Industrialization Center. The involvement of the churches, the ministry and lay leaders. The list is long. It is made up of efforts large and small, many being conducted on a quiet, more personal basis of man-to-man involvement—some drawing fewer headlines than others, some moving faster than others.

These are the things that deeply impressed the national panel of judges who heard them and asked to know more.

Now, of course, what strikes us about this title which has been bestowed upon the citizens of Saginaw is what it means.

Titles, awards are transitory things. It is what they impose upon their recipients that matters. And what they impose is challenge to live up to them.

Today and the days of official observance that follow will be joyous and prideful ones. That is as it should be. It is not wrong, it will never be wrong to view with satisfaction what we have done in commitment that has brought this honor.

The deeper impact, however, is that the designation "All-America City" marks the end of the beginning.

It is, as Mayor Henry G. Marsh said this morning, necessary to remind ourselves that this award in no way spells municipal perfection in solving the maladies associated with modern urban life of which he spoke in New Orleans before the reviewers—discrimination, low educational achievement, unemployment and poor housing. We are far from that. But we are discovering that an enormous amount is possible by government, business and individual working with each other.

What this award says is that the task of healing the ills has begun in this community. The mayor laid heavy emphasis upon the words "challenge" and "responsibility." They are the key words today in Saginaw for every resident.

"If we can use the title we have received as a foundation upon which to build, look upon it as a landmark telling us that we are heading in the right direction—then we will be truly worthy of the award," said the mayor.

This is a good day for walking tall. As we pass through this period of euphoria, however, let each of us do so with perspective and humility. Let us resolve that this happy moment in our lives will not be merely an anthem to past and present but a pledge to the future.

FLAG RAISING LAUNCHES ALL-AMERICA CITY WEEK

(By Frank J. Koontz)

Official anouncement this morning that Saginaw has been named an All-America City launched a round of celebrations which will climax April 1.

The not-very-kell-kept secret was "made public" this morning at a press conference and flag-raising ceremony at the City Hall.

Mayor Henry G. Marsh has proclaimed the period from now until April 1 as "Saginaw All-America City Week."

A red flag with white lettering spelling out, "Saginaw: All-America City" was hoisted up the flagpole shortly after 9 a.m.

under the overcast sky and Central Junior High School's band played several selections.

Mayor Marsh stressed that the award is for citizen action rather than governmental accomplishment. He also noted that the award which he called "the highest honor that can be earned by an American community," could have been made to any of more than 16,000 cities in America.

Only 11 cities are chosen each year by the National Municipal League and Look Magazine to receive the honor.

(The magazine scheduled the announcement for national release today. The release was broken Wednesday by a Saginaw radio station and also by a newspaper in a Texas city receiving the same honor. As a result, the national wire services carried the story Wednesday evening, too late for The News to print an account prepared several days ago.)

The proud celebrations planned for the next dozen days will touch almost every citizen.

Decals of the red, white and blue All-America City shield have been attached to all city vehicles; shoulder patch shields will be worn by all uniformed city employees; the All-America City shield has been affixed to all entrance signs welcoming motorists to the city.

The Saginaw Post Office will start using a new cancellation stamp proclaiming Saginaw's proud accomplishment; stewardesses on airplanes going to and from Tri-City Airport will tell the passengers that Saginaw is an All-America City; city schools have scheduled art and essay contests, dances and special flag presentation ceremonies.

The main festivities will end April 1, when Gov. William G. Milliken and other officials are scheduled to come to Saginaw to participate in the official award presentation.

On that date, representatives from Look and the Municipal League will present the All-America City award to Mayor Marsh at a public ceremony at 6 p.m. in the Auditorium.

Because the award is given for constructive citizen action—rather than for governmental action—the public is urged to attend the ceremonies at the Auditorium.

A parade involving local school bands, local and visiting dignitaries and perhaps floats will leave City Hall at 5:15 p.m. and proceed to the Auditorium.

There, the award is to be presented to Marsh, acting as the representative of the citizens of Saginaw. The Saginaw Youth Band is scheduled to entertain the audience.

A banquet at the Bancroft Hotel is scheduled for 7:30 p.m. More than 425 invitations have been mailed for the $7.50-a-plate dinner, which is designed to honor some of the citizens who have helped to earn Saginaw her "All-America" title.

In making the announcement this morning, Mayor Marsh noted that the award is by no means an indicator of "municipal perfection."

"In accepting this award on behalf of the citizens of Saginaw, I am obligated to remind them of the challenge and responsibility that accompanies being singled out as an example," Marsh said. "There is, as we have often said, much left to do—the agenda of needed improvements is long."

Marsh cautioned citizens not to "rest on our laurels." He said that "the real strength of our community is in the people of the community. This award is tangible expression that this particular strength does exist in Saginaw and has been exercised to the common benefit of all," he added.

"If we can use the title we have received as a foundation upon which to build—looking upon it as a 'landmark telling us we are heading in the right direction—then we will truly be worthy of the award," he said.

"All of us know that even in the short time that has passed since we entered the All-America City competition, new problems have arisen and many old ones have become complicated with age. To meet these, greater efforts will be required."

To the many city employes who attended the flag-raising ceremony, Marsh urged even greater cooperation with citizens. He said steps toward solutions of Saginaw's problems were taken "when we in government turned to the people for help.

"I think most of us in government—at both the administrative and policy levels—learned that common goals were more easily attained and our tasks are made more meaningful when we work with—not simply for—our citizens."

During a press conference following his speech, Marsh noted that suburban areas of Saginaw played a part in earning the title for Saginaw.

"When I speak of a 'community,'" Marsh said, "I don't stop at governmental boundaries. I include the suburbs. The city received the award, but it took a 'community attitude' to do it."

He added that it is his hope that "the suburbs will play an increasing role in realizing what it means to be an All-American City."

CITY'S RACE RELATIONS EFFORTS KEY TO ALL-AMERICA TITLE

Saginaw was named an All-America City today, being cited especially for "pace-setting programs to ease the nation's No. 1 problem—race relations."

Only one other Midwestern city was among the 11 All-America title winners and only one other was cited for efforts in the area of race relations.

New Albany, Ind., was the only other Midwestern title winner and Savannah, Ga., was the winner cited for its work to overcome racial barriers.

The awards are cosponsored by Look Magazine and the National Municipal League.

Other winning cities are: Charlotte, N.C.; Cottage Grove, Ore.; Danville, Ky.; Edinburg, Tex.; Fairbanks, Alaska; Jacksonville, Fla.; San Diego, Calif., and Snyder, Tex.

In keeping with today's epidemic of urban ills, each of the winners had problems or sins-of-the-past to confess.

"But the winners of the All-American Cities Awards are not being recognized for the quality of their confessions. Their citizens went beyond identifying their troubles to doing something about them," LOOK says in an article on the cities appearing in the April 15 issue, out April 1.

In announcing that Saginaw was a winning city, Look sketched this picture of the city:

"Saginaw's primary race problem is one of job opportunities. The General Motors plants and satellite industries provide work enough to go around, but as elsewhere the lowest paying jobs are held by the city's 25 per cent nonwhite population.

"Shaken by the black revolt that rocked Detroit in 1967, Saginaw took stock of its own situation and appointed a commission to study the problem.

"The City Council caught the spirit and elected fellow-member Henry G. Marsh, a Negro attorney, as mayor of the city. While Saginaw still struggles with the problems of race and air pollution, the barriers are crumbling between whites and blacks. Even a black militant leader admits he "has hope for this place."

Saginaw made her pitch for the title in New Orleans, La., last December.

Harry W. Browne then a Saginaw labor leader, explained to the All-America Cities jury what the Committee of Concern was and what it has done. He cited the establishment and financing of an employment center at the First Ward Community Center as an example of the committee's work.

Marsh noted that citizens approved by a better than 2–1 margin a local open housing ordinance in a May election. He also noted progress in improving the quality of housing available in the city, especially through the city rental inspection program and the city's scattered housing project.

Michael R. McCormick, a former Arthur Hill High School student who now attends Michigan State University, explained to the jury how students campaigned for approval of the 8-mill "Project BRITE" program.

His presentation seemed to greatly impress the jury. Panelists were interested in how Saginaw had been able to involve its youth in constructive activities.

PRESIDENT NIXON'S OPEN ADMINISTRATION

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. WYMAN. Mr. Speaker, the American people are in the process of experiencing a renewed and healthy rapport with the Presidency. The "new" and welcomed open approach by President Nixon toward the affairs of his office makes evident the sincere efforts being made by his administration to create a forthright and credible atmosphere for greater trust and unity between the people and their Government in the United States.

This greatly hoped for occurrence is being confirmed by much of the Nation's press. In this connection the following editorial by Hugh Sidey entitled "The Presidency: The Surprising Asset of Normality" which appeared in the March 21 issue of Life, is particularly expressive of the situation:

THE PRESIDENCY: THE SURPRISING ASSET OF NORMALITY

(By Hugh Sidey)

By conducting the Presidency steadily and sensibly so far (in "normal" fashion), Richard Nixon has astounded the Washington galleries, which says almost as much about the state of affairs among the experts down along the Potomac as it does about the 37th President.

What seems to stun resident critics is that the new President doesn't use notes or TelePrompTers or cue cards or have aides tugging at his sleeves and whispering instructions when he talks about the business of the day. He simply walks into the spotlight, stuffs a hand into his pocket, grabs the mike and then thrashes through matters with reasonable coherence and knowledgeability. The chief columnist of the left-liberal *New Republic,* who signs himself TRB, has in the past carved Nixon up like a turkey. The other night he walked through the moonlight to the White House to watch the President give an hour-long extemporaneous report on his European tour and came away absolutely lyrical. "Dazzling . . . death-defying tightrope act. . . . He talked swiftly, deftly. . . . It was a brilliant performance."

The moon was strong that evening and TRB did seem a little sad at such success: "But can it last? The iridescent bubble of harmony floats up in a draft of words. Deeds are when the trouble starts." But he and many others who reacted the same way raise

a fundamental question. Why is it so unusual for the President of the United States to know his job and be able to talk about it without going into a spasm? The rather unfortunate truth seems to be that it *is* unusual. Over the last decades the Presidency has been encased in such manipulation and mystique that those routine practices which go on every day in thousands of PTA meetings, business conventions and Elks luncheons across the country are hailed as genius when they are applied in the White House. Certainly the environment of the Presidency is far more critical than any other, but one might suppose that the men who arrive there would be conditioned to demands. Richard Nixon spends at least 10 or 15 hours of every day immersed in the major issues of the moment. It is not so illogical that he should have a good working understanding of them. Another thing Washington seems to have rediscovered through Nixon is that knowing what you are talking about—and not talking about what you don't know—is a pretty good idea even in the Oval Office. Most of America runs on such candor, and it is always a little alarming to discover that it is such an unusual commodity in the federal environs.

A while back, when the President was asked about the doubts that black Americans have about him, he did not try to deny the premise of the question—the truth of which was known to any observer of the scene—but devoted himself to pledging action and asking that he be judged on that. Such a semi-confession won a whole half-column of startled praise from the New York *Times*. Again, when he was asked how come so few women were in his government, he simply said he didn't know the facts but would find out. That kind of frankness, practiced without much forethought in places like Pocatello and Pontiac, brought more gasps of astonishment. And just a few days ago one of the Washington *Post's* hard-eyed columnists added it all up and declared that in less than two months Nixon had broken the habit of secretiveness in the top government ranks and was well on his way to redeeming his campaign pledge for an "open administration."

In fact, Richard Nixon has performed no miracles yet. He has not even been put to anything that could rightly be called a mild test. The catalogue of national woes is still intact, just put off for a while. Nixon has done his work routinely and rationally and with a minimum of ostentation. The hunger in and around the capital for a return to normalcy has seized on his quiet approach and built it into the image of a man about to conquer all. He may, but nobody can say for sure just yet.

Happily, Richard Nixon himself is one of the biggest skeptics, and in that may lie his greatest strength for the inevitable tests to come. He was wary from the start. He pored over the final drafts of his inaugural address to make sure that it contained no heart-lifting slogan or even some unintentional phrase that could be pounced upon by a public anxious for a panacea. Once when a friend came to him and declared that he had given "a great speech" Nixon shot back instantly, "Not a great speech, but a good speech." A few days ago, when visitors in his office began to express their optimism over the course of the shooting war in Vietnam, it was the President who spoke up to remind them that he had heard that before.

Riding back from Europe on Air Force One he called his staff members to his cabin and asked their judgment on how the journey had gone. Their vote was unanimous—a success. Nixon thought a second and then gave an answer that could apply to almost everything now. "Too soon," he said. "Too soon. A year from now we will know if it was a success."

CAMBRIDGE CITY COUNCIL, OPPOSITION TO ABM

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. O'NEILL of Massachusetts. Mr. Speaker, it is my privilege to submit to this body a resolution adopted by the city council of the city of Cambridge, February 24, 1969. The Cambridge City Council expressed its support of Senator KENNEDY and Senator BROOKE of the Commonwealth of Massachusetts in their call for reconsideration, by President Nixon, of the decision to build the Sentinel anti-ballistic-missile site. Although the President has recently changed the structure of the ABM and called for different locations, this resolution is still entirely valid for criticisms of the ABM as an effective system have not been answered. I firmly believe that the ABM system is exorbitantly expensive, ineffective, and not at all necessary to our country's defense system. It is my pleasure to submit this resolution to my colleagues for their consideration:

RESOLUTION

Whereas: The United States Department of Defense and the President of the United States did designate Camp Curtis Guild—located in parts of Reading, Lynnfield and Wakefield—as the site of the nation's first Sentinel Anti-Ballistic Missile System, and

Whereas: The City of Cambridge and other cities and towns throughout the Commonwealth and nation are experiencing great financial crises which can only be relieved by devoting a greater portion of our national resources to the solution of the problems afflicting our cities and towns; by curtailing non-essential defense spending and by returning more of the federal revenues to the cities and towns, and

Whereas: Senator Edward M. Kennedy, knowledgeable scientists, and other residents of Metropolitan Boston, the Commonwealth and other parts of the country have questioned both the technical justification of this so-called "Thin Missile" system, and the $5 to $6 billion expenditure necessary to build it, and

Whereas: Many citizens of Reading, Lynnfield and Wakefield expressed concern about the possible impact such an installation might have on their communities, and

Whereas: Many citizens of Cambridge also expressed alarm at the potential danger to the City of Cambridge and to other heavily populated cities and towns by the installation of such a site within the Boston metropolitan area, and

Whereas: Defense Secretary Melvin Laird, in response to said public pressures, has recently said he may move the site and cut down on the size of the program, thereby suggesting that this enormously expensive program was undertaken last year without sufficient proof that it was absolutely necessary, and

Whereas: It is in the interest of the City of Cambridge to participate in the development of a unified response by the cities and towns in the Boston metropolitan area to the various questions posed by the proposed Anti-Ballistic Missile System and sites selected for that System, and

Whereas: The Boston City Council has adopted a resolution instructing its Committee on Public Welfare to explore the feasibility of establishing a Metropolitan Boston Elected Officials Emergency Council on this matter,

Now, therefore, be it resolved by the Cambridge City Council that: 1. We support the positions taken by both Senators Edward M. Kennedy and Edward W. Brooke urging a full reconsideration by President Nixon of the decision to build the Sentinel Anti-Ballistic Missile site, and the position taken by Senator Edward M. Kennedy in calling for a freeze on any further expenditures of funds or development at Camp Curtis Guild for the proposed Sentinel Anti-Ballistic Missile System, pending a full review by the Congress and President, which freeze is presently in effect pursuant to orders of the Secretary of Defense;

2. We instruct the City Manager to communicate with the chairman of the Boston City Council Committee on Public Welfare, and to offer the cooperation of the City of Cambridge in efforts to develop a unified response by the cities and towns in the Boston metropolitan area to the various questions posed by the proposed Anti-Ballistic Missile System and sites selected for that System;

3. We respectfully request our congressman and senators, when considering authorization and appropriations for anti-ballistic systems and for other defense programs, that they consider the critical plight of our cities and towns and the plight of the taxpayer.

In City Council, February 24, 1969. Adopted by the affirmative vote of 8 members. Attest: Paul E. Healy, Temporary Clerk.

PAUL E. HEALY,
Temporary City Clerk.

BILL TO PROVIDE PERIODIC RECHECK ON COMMUTER ALIENS CROSSING BORDER FROM CANADA AND MEXICO TO U.S. JOBS

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. DULSKI. Mr. Speaker, I am introducing legislation today to provide a periodic check on the alien commuters who live in Canada or Mexico and commute to jobs in the United States.

My bill calls for an amendment to the Immigration and Nationality Act to assure more effective regulation of the influx of these workers into the labor market on the U.S. side of the border.

I have no intention of halting this practice. Rather, my proposal is simply to require that each of these so-called green-card aliens obtain recertification every 6 months by the U.S. Department of Labor.

This certification would show that the alien's continued presence in the United States to seek or to continue employment does not adversely affect the wages and working conditions of U.S. workers similarly employed.

I am informed by the Immigration and Naturalization Service that, at last count, there were 1,488 registered green-card holders who are coming into the Niagara frontier from Canada regularly for full-time jobs. The total crossing through Canadian and Mexican borders

is estimated at about 50,000, of whom 80 percent are crossing from Mexico.

The bill also would eliminate the current exemption from criminal statutes for those who knowingly employ aliens who have entered the United States illegally.

This is a particular problem on the Mexican border where the U.S. Border Patrol has reported an increase in the number of apprehensions of immigrants illegally entering the United States, many of them lured by U.S. employers who are now exempt from prosecution.

RESOLUTION BY THE COMMONWEALTH OF MASSACHUSETTS

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. CONTE. Mr. Speaker, the current debate over whether to establish an oil refinery at Machiasport, Maine, has quite clearly established the fact that the people of New England pay more for fuel oil. The rigid import quotas, about which I plan to speak in the near future, have resulted in much higher prices on the New England markets.

I would like at this point to introduce a resolution by the Commonwealth of Massachusetts that sets forth in greater detail how the people of New England have been discriminated against. The resolution also supports the efforts of the Massachusetts congressional delegation to gain approval of the application by the Maine Port Authority to establish a foreign trade zone in Portland, Maine, and a subzone for the purpose of oil refining in Machiasport, Maine.

The resolution follows:

RESOLUTIONS URGING THE PRESIDENT OF THE UNITED STATES TO ORDER AN IMMEDIATE INCREASE IN THE DISCRIMINATORY ALLOCATION OF BARRELS OF IMPORTED NO. 2 FUEL OIL TO NEW ENGLAND AND TO ESTABLISH AN OIL REFINERY AT MACHIASPORT, MAINE

Whereas, The consumers of home heating oil in the Commonwealth, as well as those of the other New England states, have been discriminated against for the past decade because of stringent quotas relating to the imports of No. 2 fuel oil; and

Whereas, According to the Massachusetts Consumers' Council the consumers of Massachusetts are overcharged forty-two million dollars annually because of the imposition of such quotas under the Eisenhower Administration; and

Whereas, Said Consumers' Council and the New England Council consistently presented the facts of such discriminatory policies before the appropriate federal bodies; and

Whereas, There has been no decision to rescind the executive order establishing such quotas; and

Whereas, Secretary of the Interior Stewart Udall during his term of office reportedly indicated a willingness to recommend an allocation of 30,000 barrels a day of imported No. 2 fuel oil to New England; and

Whereas, The proposed Foreign Trade Zone in Portland, Maine could help to correct the inequities occasioned by the No. 2 fuel oil quota discrimination, by (allowing) making available an additional 90,000 to 101,000 barrels of No. 2 fuel oil in New England at reduced prices; and

Whereas, The establishment and operation of an oil refinery at Machiasport, Maine would relieve the shortage of No. 2 fuel oil for the consumers of heating oil in the Commonwealth in peak heating seasons and retard price increases of this necessity of life; now, therefore, be it

Resolved, That the Massachusetts Senate respectfully urges President Nixon to direct the Secretary of the Interior and Secretary of Commerce to implement forthwith the Udall recommendations relative to the allocation of additional oil imports to New England; and be it further

Resolved, That the Massachusetts Senate supports the efforts of Senator Kennedy and other members of the Massachusetts Congressional delegation to gain approval of the application by the Maine Port Authority to establish, operate and maintain a general-purpose foreign trade zone in Portland, Maine and a subzone for the purpose of oil refining in Machiasport, Maine; and be it further

Resolved, That copies of these resolutions be forwarded by the Secretary of State to the President of the United States, the presiding officer of each branch of the Congress and to the members thereof from the Commonwealth.

Senate, adopted, March 12, 1969.

NORMAN L. PIDGEON,
Clerk.

MR. ZIMMER AND THE NAB

HON. DONALD D. CLANCY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. CLANCY. Mr. Speaker, I am indeed pleased to learn of President Nixon's nomination of William H. Zimmer to the post of Director of the National Alliance of Businessmen in Cincinnati, Ohio. I would like to congratulate Mr. Zimmer on this occasion and urge him on behalf of the Cincinnati community to continue with this challenging work.

Under unanimous consent I am inserting in the CONGRESSIONAL RECORD, for the attention of my colleagues, the following editorial from the Cincinnati Enquirer commending Mr. Zimmer:

President Nixon's choice of William H. Zimmer, president of the Cincinnati Gas & Electric Co., to direct Greater Cincinnati's participation in the National Alliance of Businessmen puts one of the Queen City's most energetic business figures at the head of a cause that can stand no diminution of effort.

The NAB is a nationwide campaign designed to create useful, productive employment opportunities for the hard-core jobless.

Mr. Zimmer will succeed Howard J. Morgens, president of the Procter & Gamble Co. Mr. Morgens was the campaign's initiator in Cincinnati, and he leaves behind a record of achievement that will not easily be duplicated. At the moment, some 1852 men and women are now gainfully employed in the seven-county Greater Cincinnati area under the program's auspices—more than 200% of the target quota.

In addition, some 36 companies have pledged to hire 420 more from the ranks of the hard-core unemployed.

The National Alliance of Businessmen is the most ambitious attempt thus far to enlist the energies of the private sector to find jobs for those who lack the experience and qualifications normally required of job-seekers.

Cincinnati's answer to the challenge thus far has been that private enterprise can indeed do the job. Mr. Zimmer's resolve is to sustain and enlarge the momentum.

STOP MIND POLLUTION

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. GAYDOS. Mr. Speaker, I invite the attention of my colleagues to an excellent editorial by Mr. John Troan of the Pittsburgh Press, in which he lucidly illustrates the magnitude of the pornography problem and extent the purveyors of filth are reaching to promote their mind polluting wares.

I wish to commend Mr. Troan for his observations and submit for the RECORD the following editorial:

STOP MIND POLLUTION—SMUT PEDDLERS MUST BE CURBED

(By John Troan)

Walking along the street the other day, I glanced into the window of one of those cut-rate book stores.

And I was compelled to conclude that although we have made good headway against the perils of mine pollution, we have yet to mount a meaningful attack against the menace of mind pollution.

What I'm referring to is the flood of filth that is swirling about us—engulfing the minds of young and old alike.

True, there always have been dirty books. But never have I seen such a mess of muck as that which is today transforming many of our book stalls and magazine racks into pornography pits.

Frankly, I am apalled by the way the smutsmiths have perverted freedom of the press into a license for licentiousness. And I am disturbed by our inability to curb them.

Our courts have ruled that freedom of the press does not include obscenity.

BLAME THE READERS

But when it comes to defining what's obscene, our courts have weaseled and reweaseled so much that even a decent man is tempted to resort to the latrine language they have condoned to tell them where to shove their decisions.

The courts, however, are not alone to blame. After all, what keeps the purveyors of pornography in business are not so much the courts as the customers.

And there obviously are plenty of goggle-eyed customers—of all ages—panting in the wings to explore the clinical details of the latest sex-ploits of the horizontal heroes of a cesspool society.

Some of the smutsmiths try to pass off pornography as literature. And we reward them by elevating their slush to the best-seller lists!

Others make no pretense about their wares. Witness this excerpt from a letter a pulp pornographer sent to prospective writers several years ago:

"We are starting a new line of paperbacks and need tough, hard-hitting, sex-action-filled books, geared to the demands of today's competitive market.

PSYCHIATRIC VIEW

"What we seek is offbeat sex, with emphasis on deviations. The sex must be as strong and as offbeat as possible."

One of my favorite psychiatrists, Dr. Max Levin of New York, summed up this sleazy business when he wrote in the Current Medical Digest:

"One of the uglier pimples on the face of our society is the pornography business.

"Unscrupulous publishers cater to the sex hungers of our people, and their lurid books and magazines are hot numbers on newsstands, in candy stores and wherever teenagers gather.

"These panderers of literary aphrodisiacs are lower than worms."

I can't say it any better. Except perhaps to note that the pimple has become a boil. Or maybe even a cancer.

A BILL TO MODERNIZE CERTAIN PROVISIONS OF THE IMMIGRATION LAW

HON. CLARK MacGREGOR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. MACGREGOR. Mr. Speaker, I have today introduced legislation to facilitate the entry as nonimmigrants of specially skilled foreign nationals and aliens of distinguished merit and ability into the United States for temporary employment or training.

This bill is designed to modernize certain provisions of the immigration law to bring them in tune with the increasingly international nature of our economic and cultural society.

Presently, a specially skilled foreigner can come temporarily to the United States to fill a universty post, for example, only if the teaching post is classed as temporary. He cannot come to occupy the endowed chair of an educational specialty for 2 or 3 years, let us say, because the position is not temporary, although his tenure is. In other words, the position he comes to fill must be temporary in the sense that it will go out of existence in a short time.

This restriction results in the exclusion of aliens whose temporary services in permanent positions in hospitals, symphony orchestras, and both profit and nonprofit corporations as well as educational institutions would be of inestimable value to this country.

In this modern age we have many U.S. corporations with branches throughout the civilized world. They are truly international in the range and scope of their operations. Under present law there is no way, for example, by which such a firm can bring to the United States an alien officials from a foreign branch to fill a permanent post for 3 or 4 years. It is an increasingly common practice for international corporations to rotate officials throughout the world for relatively short tours of duty.

Our present immigration law makes such practice very difficult if not impossible. Presently such firms are forced to bring in foreign officers as immigrants for permanent residence even though they do not intend to become U.S. citizens, but usually plan to return to their home country or move on to another foreign assignment. A wait of 2 or 3 years is now required before such an intending immigrant can be admitted. Thus, the desires of U.S. firms to bring in executives for training or short tours of duty in positions of importance are thwarted and our economy suffers.

The same situation exists with reference to the temporary use by American hospitals, symphony orchestras and other institutions of persons of exceptional and outstanding ability. Under present law, we are often denied the economic, cultural, and educational advantages of the free exchange of international talent.

My bill will not only permit such persons to come temporarily to permanent positions, it will also broaden the "training" category of nonimmigrants desiring admittance to improve their techniques and skills. Presently only industrial trainees may come temporarily. By removing the industrial limitation, all fields of economic and cultural endeavor can offer training opportunities to aliens.

This proposed legislation contains safeguards to protect our economy and national security. In all instances the alien coming for temporary and short run service will be admitted only if unemployed persons performing such services cannot be found in the United States. Additionally, all such temporary nonimmigrant admissions—be they exceptionally gifted musicians and artists, physicians, business executives, professors of distinguished merit and ability, or trainees—must satisfy all the present rigorous requirements pertaining to health, character, and security clearance before admission.

I submit, Mr. Speaker, under my bill American industry, education, and culture will benefit through the international exchange of special skills and talents.

PROTECTION OF CONSUMERS' CREDIT RATING PROPOSED

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. ROSENTHAL. Mr. Speaker, the public is only beginning to realize the immense power over individuals wielded by the more than 2,100 credit bureaus in the United States. With the use of computers and new transmission methods, it is now possible to retrieve and send a person's complete credit history to any city in the Nation in less than a minute.

I strongly believe that legislation is needed to protect the consumer against erroneous credit ratings and the unwarranted publication of credit information.

A special report featured on "CBS Evening News With Walter Cronkite," March 17, 1969, illustrated the serious problems posed by careless credit bureaus that ignore the rules set out by their national organ, the Associated Credit Bureaus of America.

The transcript of the telecast follows:

EXCERPT FROM CBS EVENING NEWS WITH WALTER CRONKITE, MARCH 17, 1969

CRONKITE. One area of recent concern to many people is the question of credit ratings and the invasion of privacy. CBS News Correspondent Mike Wallace investigated that question.

WOMAN. May I help you?

WALLACE. Yes, please. My name is Wallace and I'm starting a small business. We're not going to have an office to begin with, and I understand that you take telephone calls.

WOMAN. Oh, you want to use our address and telephone number?

WALLACE. Exactly.

WOMAN. Oh, yes, of course, we can arrange that. Do you know what the rates are?

WALLACE. No, I don't.

WOMAN They are $15 a month for both, and the only thing that you . . .

WALLACE. For, for both?

WOMAN. For both, mail and telephone service, per month.

WALLACE. I can have my mail sent here and my calls received here.

WOMAN. Exactly. That's right.

WALLACE. Fifteen dollars a month.

WOMAN. Right. The only thing that's required is that you fill out a form from the Post Office that permits us to act as agents and accept mail for you.

WALLACE. Understood.

This is where the experiment began, a building at 200 West 57th Street, in New York City. That is the home of Accurate Secretarial Service. The firm provides a business address for small enterprises that don't want to rent their own offices. We signed a standard Post Office form permitting delivery of mail through an agent. We filled in the name of our non-existent company, Transitair Systems, and the nature of the business, systems consultants.

WOMAN. And would you also like some business cards?

WALLACE. Huh uh.

WOMAN. Just letterheads. That's 20, that's 24.15 for the letterheads.

WALLACE. So Transitair Systems was in business, an office, a telephone number, and a letterhead. What we wanted to find out was this: Is it possible for a small, unknown firm having nothing to do with credit to obtain supposedly confidential credit ratings? How easy is it to crack the files of local credit bureaus around the country?

There are more than 2100 local credit bureaus in the United States. They collect and file information on the finances of persons living in their localities, information obtained from a variety of sources, from banks, department stores, employers, court records, to name a few. The local bureaus are joined together in a national organization. They exchange information among themselves and sell that information to clients, those clients being firms that are considering granting credit. According to industry spokesmen, that information is not available to outsiders.

John Spafford, Executive Director of Associated Credit Bureaus of America, talked with Reporter Norman Glubok.

GLUBOK. Could anyone who's interested buy a credit report on anybody?

SPAFFORD. No, sir, they could not. First of all, as I mentioned earlier, they have to be a bona fide creditor, and by that I mean they have to be in the business of extending credit to individual consumers. They go make an application to become a member of the local credit bureau. The local credit bureau will investigate them to find out that they are in the business of extending credit, and if they find they meet the qualifications of that bureau, they will sign a contract with that individual credit granter. And then, and only then, do they have access to credit information in the files of that bureau.

GLUBOK. Then in your opinion a person down here in Houston couldn't write to Chicago, for example, and ask for information about some Chicagoan—would he receive that information?

SPAFFORD. No, he would not. He would not.

WALLACE. Transitair Systems, of course, had nothing to do with granting credit, because in fact it did no business at all. But we sent off letters to 20 credit bureaus around the

country, bureaus picked at random from an industry directory. In each case, we asked for a credit report on an individual, a name picked, again at random, from the local telephone book. We said we were considering granting credit to that person. Under the industry guidelines we should have been told to contact our local New York credit bureau, which could then have checked out our credentials.

That isn't exactly the way it happened. Out of that mailing of 20 letters, we received, without further question, full credit reports on ten individuals. We received them directly from credit bureaus in Norwalk, Connecticut, in Corbin, Kentucky, Huntington, West Virginia, Belvidere, Illinois, Fort Smith, Arkansas, Greenville, Mississippi, Bismarck, North Dakota, Blytheville, Arkansas, and Bowling Green, Kentucky. Two other local bureaus offered to send information if we would sign a contract with them. Three others reported they had no file on the individual requested. Four did not reply. Only two of the 20 referred us to our local credit bureau, the procedure ostensibly required by the industry code. So on that first mailing of 20 letters, we batted an even .500, in spite of assurances that it could not be done.

GLUBOK. And in your opinion it's not easy for people who are not entitled to information to get it?

SPAFFORD. It's impossible.

WALLACE. Perhaps you'd like to see what a credit report looks like. This is a composite. We typed up a report using entries from several of the reports that we received, and of course we changed the names and addresses so as not to identify the subjects.

The top half of the form gives general information, name, address, employment, income, size of family, that kind of thing. But the bottom half gets down to the crux of the matter, credit history. This column on the left shows the kind of credit involved, B for bank loan, F for finance company, D for department store, and so on. The form shows the highest amount of credit involved in each transaction, the amount remaining, the amount past due, if any. But perhaps the most significant column is over here at the right, terms of sale and usual manner of payment. Here, for example, I stands for installment payments, $129 per payment, and that last number, one, is a code. It means the subject usually pays within 30 days. That's pretty good. But here, a code number, two, 30 to 60 days. Down here O stands for open account, and the code number, three, payments more than 60 days but not more than 90 days late. You'll notice the higher the code number the higher the credit risk, so this worst number of all, nine, is usually reserved for deadbeats. This man would have a hard time getting credit.

Then there is a section called public record. Here we show a collection agency record, a couple of lawsuits, and the fact that the subject was divorced and remarried. Up here, in small type, is a warning that the information is confidential. But in one case, the report from Greenville, Mississippi, there was an additional warning. It says right there in red ink under no circumstances should the subject be allowed to see or have possession or knowledge of this report or a copy of it.

We decided to try one more mailing, but to make it a little more difficult. There were three differences this time. First, we no longer stated that we were thinking of granting credit. We simply asked for a full credit report with no explanation why. Second, we no longer chose individuals at random. Instead, we chose persons who had complained to Congressional investigators about their credit problems. And third, although we didn't know it at the time, the industry had just issued new, tougher guidelines. They state that local credit bureaus must require contracts with clients in which the client certifies that inquiries will be made only for purposes of granting credit. This time we sent out 28 letters, and, as expected we had a tougher time. Only one-fourth of the credit bureaus sent us reports directly. This one came from Boston, Mass, this one from Alma, Michigan, Fond du Lac, Wisconsin, Rice Lake, Wisconsin, Austin, Texas, Dallas, Texas, and this one came from Peoria, Illinois. The Peoria report had another of those special warnings attached. "Strictly confidential," it said, "don't subject yourself to libel suits."

But there were some bright spots. This time 12 credit bureaus referred us to the New York bureau, and one flatly refused to help us at all. Five did not reply, but three others said that they would help us if we'd fill out application forms and sign contracts. In one case we decided to see what would happen. The credit bureau of Dalton, Georgia, asked us to sign a written contract affirming that we were intending to grant credit and agreeing to keep the information confidential. We did so. The letter also asked us to advise what type of company we were. We replied, "We are a systems company." We mailed that off and within a few days received the credit report that we'd requested. It would seem that signing a written contract is not much of a safeguard; all the client has to do is lie. But seven of the 28 bureaus provided us with credit reports without even that precaution.

GLUBOK. What about your members who violate your rules, who give out information to people who are not entitled to it? Do you have any penalties?

SPAFFORD. We have some 30-odd membership qualifications and requirements, and any member who is found to be violating these and is, does not correct the violation, their membership is subject to cancellation, and we do cancel them on occasion.

GLUBOK. About how many members have you cancelled over the years?

SPAFFORD. Over the years I couldn't tell you; I would say it might average ten to 15 a year.

GLUBOK. Out of 2200.

SPAFFORD. Uh huh.

WALLACE. We found more violations than that just by mailing out 48 letters. Perhaps things will be better as the industry's new guidelines receive more attention. One would certainly hope that things will be better. In the meantime, Transitair Systems has been quietly phased out of the credit business.

Mike Wallace, CBS News, New York.

SENATOR KENNEDY DEDICATES BOSTON'S CITY HALL

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. O'NEILL of Massachusetts. Mr. Speaker, on February 11, 1969, the new city hall of the city of Boston was dedicated to the people of Boston. This building is extremely controversial, both in Boston and I believe, in architectural circles around the country. But only its design and appearance are controversial for the construction of the new city hall indicates the beginning of a new era in urban growth and the commencement of new programs to end urban ills in the great city of Boston.

Senator EDWARD M. KENNEDY dedicated the building and addressed himself to the problems of the city in his speech.

We all have warm spots in our hearts for certain places. For those of us from the country, it may be a particular field or stream or hill, and for those of us from the city it can be that city or special places therein. The people of Boston love their home, for it is perhaps one of the most beautiful and certainly the most historically significant in the United States. She is a varied city—a port, commercial hub, home of the descendants of the first settlers and the newest immigrants. She reflects the contributions of every ethnic group to have come to this land of freedom. Her buildings and monuments tell the history of our Nation.

The senior Senator from Massachusetts is certainly a man of the world, but he is a man of Boston. I believe his speech on February 11 indicates the important position that Boston and the Commonwealth have in his life. Its history has affected him, helped to shape him, and has prepared him for his great undertakings in helping to solve the problems of the present and the future. Senator KENNEDY is an optimist and believes that we, and the people of our Nation, can solve our problems and end our differences if we truly care enough about our Nation and our neighbors. He sees the construction of a new building to house the seat of the city's government as a step toward ending those problems. It signifies the future, progress, and growth. I commend this speech to my colleagues and am happy to have it placed in the RECORD at this time. I also include a resolution adopted by the city council of the city of Cambridge, Mass., congratulating Senator KENNEDY for his timely and understanding remarks on the problems of the city.

CAMBRIDGE CITY COUNCIL,
March 10, 1969.

Whereas: Senator Edward M. Kennedy recently delivered a thoughtful and engagingly personal address at the dedication of Boston's new City Hall (more distinctive than attractive in the opinion of many), and

Whereas: His remarks included, in listing major municipal contingencies, the following excerpt: "If the City of Boston becomes a city for highways rather than for people then our problems will overcome us, Boston will have failed its heritage, will have failed its own people, its neighbors and the people who love it all over the world"

Whereas: Senator Kennedy expressed his hopes and satisfaction in observing that a local "community council is making sure that people are consulted on where the Inner Belt should go", be it

Resolved: That the Cambridge City Council congratulates our Senior Senator from Massachusetts for his timely alert and commentary on the works and pomps of the lush urban assassins whose plans and biddings for thru-city expressways threaten to destroy our community way of life, and be it further

Resolved: That a copy of these resolutions be sent to Senator Edward M. Kennedy, Senator Edward W. Brooke, Speaker John W. McCormack, Congressman Thomas P. O'Neill, Jr., Secretary of Transportation John A. Volpe, and Francis C. Turner, federal Director of Public Roads and more recently nominated for the position of Federal Highway Administrator.

Attest:

PAUL E. HEALY,
Temporary City Clerk.

DEDICATION OF NEW BOSTON CITY HALL, FEBRUARY 11, 1969

Senator EDWARD KENNEDY. I am happy to be here today and delighted to be able to

participate in dedicating—to the people of the city of Boston—this historic and impressive building. I am glad that this building is controversial. Every important building is controversial. The Parthenon was called "remote" because it was set upon a hill; and Fanueil Hall was called "a scar upon the landscape." I think we owe a debt of gratitude to those who had the vision to design this city hall and those who had the courage to accept the design. It adds a new dimension not only to the architecture of the city of Boston, but to the entire concept of what public buildings should be in the United States.

Boston is an old city, which has allowed the present to be imposed upon her without complaint. She is a busy city—the center of New England; she is a proud city—proud that she has been the stage of so much history; proud that she has been the gathering place for so many people from different lands and different heritages; proud that she has a river and a harbor; gardens and museums; beauty in her buildings and excitement in her streets. All of us are here today because we love Boston—each of us in our own way, with our own favorite places, our own special memories, our own private feelings of fondness.

My love of Boston began when I was a little boy. I would walk around town with my grandfather, Mayor John F. Fitzgerald. We would go to the Common where the British soldiers used to train during the Revolution. (When he was mayor the most distinguished people on the Common wore beards.) He would take me to Spring Street and show me where the city got its water; we would go down to the docks where the ships came in from Europe. Later my brothers and I used to walk up Hanover Street and through the north end markets; go out to East Boston to see the houses of the old sea captains; over to Beacon Hill to see the lights in the windows and hear the carollers on Christmas Eve. Each of us found special things that Boston meant to him.

Boston means something to many more than live within her city limits. This is where the growth of Massachusetts began. This is the place the people of Massachusetts and all New England look to as the center of action in communications and culture, in sports and entertainment, in business and fashion and modern life. When people from the towns around Boston go to other parts of the United States and to other parts of the world, and are asked where they come from, they do not say they are from Reading or Wakefield or Hingham or Scituate—even though that may be their home—they say they are from Boston. That is the name that is known and respected around the world. This is their city, their symbol, their mecca, even though their houses are in other towns.

Boston may not be the hub of the universe. It probably never was. But it is the hub of urban life for 15 million people, the center of thought and vitality for all New England, and that, we hope will be true forever.

The task we undertake, with the dedication of this building, is nothing less than making sure that Boston will be as powerful and positive a symbol of New England life in the future as it has been in the past.

This will not be easy. For it is obvious that all of the problems that afflict urban life in the United States today—the problems of change and growth and tension; of congestion and crime; of schools and budgets and medical care—and above all the problem of the dignity of the individual in a huge urban society—all of these problems have come to Boston as they have to other large cities. They are testing us, challenging us, calling on the best that we can offer for the future of us all.

Urban life in the United States has come to a critical point of decision, caught between the narrowing walls of change and decay on one hand and, on the other, priorities created for another age. If we were to be told that our nation was in danger from without, and that enormous expenditures and sacrifice would be necessary to save it, there is no doubt what our answer would be. But at a time when our urban way of life is in equal danger from within, there is doubt what the answer will be.

Despite the dedicated effort of the public officials here today, and all that has been done by dedicated private groups and citizens, we know the things that Boston needs have often been ignored. They have been frustrated by lack of understanding, by dogged resistance to change, by bickering and friction, by the attitudes and prejudices of an older age. They have been crippled badly by advocates of violence and by those who prefer dissent and defiance for the sake of drama rather than as a means for change and progress. They have lost the support of those who see traffic and pollution and congestion as plagues to be suffered instead of evils to be overcome. And they have been blocked, most of all, by the spirit of resignation and cynicism and powerlessness on the part of so many people who have concluded it is far better to spend their money and their energy on their own private comforts rather than on the tasks of the community that affects us all.

These attitudes have not always prevailed. They are constantly challenged and progress has often been made. But if they do prevail, if the city of Boston becomes a city filled with crime; if it becomes a city lived in only by the very rich and the very poor, a city for highways rather than for people; if, over the next 50 years, it gradually becomes an all black city, rather than an integrated city; if our schools are not stimulating and our playgrounds are not adequate; if our harbor grows idle and the air above our streets grows foul; if the citizens of Boston come to feel that the greatest goal of government is the stability of the tax rate; then our problems will overcome us. Boston will have failed its heritage. It will have failed its own people, its neighbors and the people who love it all over the world.

But if the city of Boston can set about its tasks with the same spirit of cooperation and sacrifice that the patriots had, that the immigrants had, then we can be sure that Boston will be great forever.

This is the challenge to everyone who works in this building. This is the opportunity represented by the dedication of this hall.

I for one am an optimist about Boston and one who appreciates all that has been done. Meeting here, we should salute the beginning of the new Boston under Mayor John Hynes; and the important work of rebuilding continued by Mayor John Collins, one of the great progressive mayors of the United States. We pay tribute to the activities of the administration of Kevin White which have turned us away from group conflict and brought a new and imaginative approach to the problem of making the big city government responsive to the people. There are, as well, the continuing efforts of the many organizations that have served Boston for years—the Chamber of Commerce, which speaks around the country about our virtues as a place to live and work; Father Joyce and his Boston College Forum where the most difficult problems are examined with candor and intelligence; and all of those corporations and labor organizations that have been willing to invest hundreds of millions of dollars in the future of Boston as a center of commerce and industry.

Yes, there are difficulties all over Boston—but there are also signs of hope. When a city becomes as large as Boston has become, no impressive building, no city government, can re-create by itself the sense of living in a community which people need so much. A community has to be a place where people can see and know each other; where children can play and adults can work in an environment that gives them satisfaction. I see hope, as well, for this, the most difficult part of urban living. I see it in Jamaica Plain, where the community council is making sure that people are consulted on where the inner belt should go. I see it in East Boston, where citizens are saving vacant lots so their children can play. I see it in Southie, where the people of a neighborhood created Sister Mary Veronica Park, as a shelter of rest in memory of a beloved lady. And in Roxbury, I see great hope in the beginning of the concept of community corporations, where black people come toogether to form businesses and build theatres owned and controlled by themselves—just as the fathers and grandfathers of those of us who are Irish or Italian or Jewish tried to do when they were new to the city.

And most of all, perhaps, I see the growing number of young couples, many from suburban backgrounds, who have decided to make their homes in the south end, and improve the neighborhood, rather than flee to the suburbs. They deserve our special thanks, for they have been willing to stake their futures and those of their families on their love of this city and on their vision of what it can be.

These activities are participation in its finest sense. They are the future of the city of Boston—a city not only of fine buildings and stores and jobs and education and culture but a city of neighborhoods strong and vibrant where people learn to know and trust each other once again, and work together in the tasks of better living. Each of the efforts I spoke about may be small, important only to the people involved and the people they touch. But taken together, they can be very large, and if they can be multiplied in every neighborhood and block in the city of Boston, it will be the greatest investment in the future of the city.

Boston was built in the early days by giving of herself. The earth from the hills was taken and used to fill in the waters, so that people would have room to live. Now each of us must give of himself to the tasks ahead, so that the hills of opportunity may rise again to where they were in the eyes of those who came here 330 years ago.

And so we dedicate this building with the confidence that city hall will not just be a center of the government but it will be a motive force in making Boston, in the fullest sense, a community once again, and by doing so to repay the confidence of those who have loved this city for all she has been to so many of us.

CAMDEN COUNTY COLLEGE: AFFIRMATIVE ACTION ON STUDENT DISSENT

HON. JOHN E. HUNT

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. HUNT. Mr. Speaker, consistent with my position—that student militancy can be no substitute for the rule of reason—I have occasion to recognize and commend the stand taken by the Board of Trustees of Camden County College, situated in the First Congressional District of New Jersey. While recognizing the right to dissent, the board has ex-

plicitly set out a "code of behavior" for all of the students at the college:

1. That dissent *shall not* interfere with the normal operation of the college.

2. That dissent *shall not* lead to the destruction of public or private property.

3. That dissent *shall not* interfere with classroom instruction. (Emphasis added.)

Violation of this code will result in suspension or expulsion from the institution and any nonstudent found to be engaged in activities contrary to the code will be prosecuted under the laws of the State of New Jersey. The deliberate utilization of the terminology "shall" and "will" in lieu of "may" makes the intent and determination of the Board of Trustees unmistakably clear. It can be said that the wording of the board's resolution is not so as to make it understood, but so that it cannot be misunderstood.

A word of praise is in order, too, for the conduct of those students who concede the point that their demands are more apt to be met by understanding if promulgated in the form of proposals with the honest desire to have them evaluated on their merits by representatives of the student body, faculty, and college administration. To challenge the authority of the administration to establish the curriculum, policies, and standards of an institution of higher education by use or threat of violence and intimidation is an outright admission that such an institution should be nothing more than a forum for shallow and arbitrary academic deliberations in the mistaken name of intellectual freedom. An education under these circumstances would be without foundation and substance.

For the benefit of objectivity, I include at this point in the RECORD the list of proposals of the Society for Black Cultural Awareness, as presented to the Camden County College administration, and the board of trustees' response to each; an open letter concerning the proposals from the president of the college, Dr. Otto R. Mauke; the board's resolution with respect to student dissent; and, an editorial from the Camden Courier-Post commenting on the board's action:

PROPOSALS OF THE SOCIETY FOR BLACK CULTURAL AWARENESS

["(P)" indicates proposal, "(R)" indicates response]

1. (P) We propose the acknowledgment of Black Martyr's Day, February 21, be recognized as a holiday with leave of absence from college.

(R) Black students were authorized to be absent without penalty on Black Martyr's Day February 21, 1969. This policy will be continued in the future.

2. (P) We propose the passing of the constitution for the Society for Black Cultural Awareness with no restrictions and all the benefits that accompany its passing.

(R) The Constitution for the Society for Black Cultural Awareness will be handled by the Student Government Association through normal channels.

3. (P) We propose social activities for Blacks, something that we can identify ourselves with, or the refund of our activity fees.

(R) Camden County College has one of the most active social programs in the State of New Jersey. These affairs are designed to meet the needs and taste of all of the groups on our campus and are available on a free basis to students upon presentation of ID cards.

4. (P) We propose a bus for students (day and evening) that have to walk Little Gloucester Road.

(R) We asked Public Service to provide bus service from the City of Camden to our campus in the morning with a return trip in the late afternoon. The request has been denied twice, but we are still pursuing this objective. We are planning to purchase a nine-passenger vehicle for all College use and we will provide service of the type requested on an experimental basis when the vehicle is available.

5. (P) We propose equal time on the radio station—Disc Jockeys installed with pay.

(R) The Radio Club is responsible for the operation of the campus radio station. The club is open to all students who may make their wishes known through their membership. All students are free to make known their tastes to members of the Club. Students are not paid for serving as announcers.

6. (P) We propose that this college hire Black personnel other than faculty that are qualified for their position.

(R) The College does not practice discrimination in its hiring policies. All qualified individuals regardless of race or creed are invited to apply for positions of all types on this campus. We have advertised several of our openings during the past two weeks and would appreciate receiving responses to these advertisements.

7. (P) We propose the removal of all "racist inspired" faculty and administrators in this college.

(R) One must define the term "racist inspired" and determine the means of testing for this particular characteristic. We would like the Faculty Association to deal with this item in cooperation with representatives of the black students and the administration.

8. (P) We propose seminars at this institute that correspond to urban problems of the Black community.

(R) Seminars dealing with the varied problems of urban life will be developed for initiation next Fall.

9. (P) We propose qualified Black instructors to teach Physical Education and Health: (a) recruitment of more Black athletes, (b) addition of a scholarship program.

(R) Qualified blacks are invited to apply for teaching physical education at Camden County College. Athletes of both races are invited to apply for admission. Our scholarship programs do not include athletic scholarships for students of any race.

10. (P) We propose that a board for the recruiting of Black and Spanish-speaking high school seniors be set up to recruit students from Urban Camden and Lower Camden County.

(R) We have had an extensive recruitment program for black students and Spanish-speaking students. We would be happy to receive recommendations of names and individuals qualified to assist the College in recruitment in these areas.

11. (P) We propose various lecturers to elaborate on racism.

(R) Lecturers on racism can be incorporated into the seminar program discussed in number 8.

12. (P) We propose that the college open its facilities for the community.

(R) No college in the State of New Jersey has been more community-minded than Camden County College. Our facilities have been available and will continue to be available to community groups. Our extensive cultural series is available without charge to the general public.

13. (P) We propose a more concise and increased Black Section in the library.

(R) We have an extensive Black Section in the Library which is being expanded continually. A list of books available is attached.

14. (P) We propose that the students of the "100 Go-to-College" program be allowed to participate in all college activities.

(R) The "100 Go-to-College" students are permitted to participate in all activities on campus with the exception of athletics and student government. NCAA regulations do not permit non-matriculated students to participate in intercollegiate activities. The "100 Go-to-College" students have formed their own representative government.

15. (P) We propose the lowering of the College's food prices.

(R) A.R.A. will be asked to submit results of a survey to be conducted by that organization on comparative food prices. S.G.A. has been working in this area.

16. (P) We propose a course in practical application in the Black Ghetto.

(R) A course in Urban Sociology will be introduced next Fall.

17. (P) We propose jobs for all students on the campus.

(R) No deserving student has been denied financial assistance on this campus. Job opportunities are open to all who are interested regardless of race or creed.

18. (P) We propose that Black instructors that are qualified to teach African-Civilization.

(R) Qualified black instructors are invited to apply for teaching African-Civilization as well as other courses at Camden County College. The College has actively sought the services of such individuals since its inception.

19. (P) We propose the removal of the police officers patrolling the building at night, while college is in session, with their riot clubs.

(R) Security personnel are employed by the College for the protection of all of our students. No officer carries a riot club on this campus.

20. (P) We propose the capacity of classes be distributed evenly.

(R) The Registrar makes every effort to balance class size. Open registration procedures may create minor imbalances as students make their own section choices. This can be rectified by arbitrary assignment of students to course sections.

21. (P) We propose that the Black students, out of popular vote, be able to vote for three Black students that can truly represent them in the student government.

(R) All matriculated students who meet academic requirements are free to run for any position in Student Government.

22. (P) We propose a Black Financial Director for Black students.

(R) Financial aid must be centralized in one office for the purpose of coordination of the program and the recording of disbursements.

23. (P) We propose Black instructors to instruct Black Studies Dept. in the following: (a) History, (b) African linguistics, (c) art, (d) music, (e) politics.

(R) The HEW decision relative to Antioch College indicates that federal funding will be suspended where a college segregates black students even though black students have themselves made such a request. We will attempt to integrate into existing courses information relative to the preceding points where relevant and then to develop courses

dealing with the culture, art, language, and music of the African people.

24. (P) We propose that Black Guidance programs be set up for the Black students to help them in choosing the proper subjects in their particular curriculum.

(R) Counseling is an integral part of the community college philosophy. Qualified counselors of all races make a positive contribution in this vital area. Qualified black counselors are invited to apply.

25. (P) We propose that a Cultural Education Plan be established for the college and community.

(R) The contribution of all minority groups to American Culture is incorporated in the context of appropriate courses and will be expanded where possible.

OPEN LETTER FROM DR. OTTO R. MAUKE, PRESIDENT, CAMDEN COUNTY COLLEGE

MARCH 11, 1969.

"The members of the Board of Trustees, the faculty, staff and administration of Camden County College are interested in all of the students at this College—white and black, male and female, Christian and Jew and other religions. We are interested in serving the needs of all of our students and in maintaining the integrity of the College.

"For these reasons, when certain proposals were presented by black students to the administration last Thursday, it was decided to work jointly with representatives of Student Government and the blacks on these areas affecting the entire student body. At the conclusion of the meeting Friday it was decided by all present not to publicize these requests since it was generally understood that they could be resolved through existing government and academic structures. Because of the concern of all students and the general air of confusion following yesterday's faculty meeting, it was decided to make the proposals public at this afternoon's meeting.

"I believe that all of us working together can resolve issues on this campus without calling upon outside assistance or interference. I have faith in the students of Camden County College and this faith has been revealed by me in the past few days and upheld by them in their actions to date."

DR. OTTO R. MAUKE,
President, Camden County College.

RESOLUTION BY THE BOARD OF TRUSTEES

Whereas the Board of Trustees of Camden County College recognizes that the right of dissent is part of our American heritage, and

Whereas minority groups and majority groups share a wide spectrum of rights, privileges and responsibilities under the laws of the State of New Jersey and the laws of the United States of America, now therefore

Be it resolved that this Board does adopt the following code of behavior for all Camden County College students:

1. That dissent shall not interfere with the normal operation of the college.

2. That dissent shall not lead to the destruction of public or private property.

3. That dissent shall not interfere with classroom instruction.

Be it further resolved that any student who engages in such behavior shall be suspended or expelled; and that any non-student engaging in such behavior on this campus will be liable for prosecution under the laws of the State of New Jersey.

MAXINE COLM,
Chairman, Board of Trustees, Camden County College.

[From the Camden (N.J.) Courier-Post, Mar. 15, 1969]

THEY HANDLED IT WELL

Camden County College officials are to be commended for their warning to students that dissenters interfering with the school's normal operations would be suspended or expelled.

The ground rules have been laid down:

Dissent shall not interfere with the normal operation of the college, lead to the destruction of public or private property, or interfere with classroom instruction. Any student who engages in such behavior shall be suspended or expelled and any non-student engaging in such behavior on this campus shall be liable for prosecution under the laws of the State of New Jersey.

That position made known, the college officials handled the requests, made by black students at the college, with commendable understanding, restraint, and good sense.

A delicate situation was handled well as the trustees showed a disposition to begin seminars on urban life, accept black assistance in the recruitment of black students for the school, start a course in urban sociology at the school, develop courses dealing with the culture, art, language, and music of the African people, and in agreeing to other requests.

At the same time, the school pointed out it could not accede to requests that black instructors be hired or that black students be separated for black studies. That would be discrimination for blacks instead of against blacks.

The authorities made it clear, we believe, that they already have excellent policies concerning policing of the campus and the opportunities for jobs for students.

Dr. Otto Mauke, college president, also scores with his assertion that "all of us, working together can resolve issues on this campus" and that he has "faith in the students."

It is good, too, that all know the ground rules—that for disruptive demonstrations offenders must be prepared to suffer the consequences.

SILVER ANNIVERSARY

HON. WALTER FLOWERS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1969

Mr. FLOWERS. Mr. Speaker, Friday, March 21, 1969, was a significant date in the career of one of the most distinguished Members of this House. This date marked the 25th anniversary of service in Congress by the Honorable GEORGE W. ANDREWS, dean of our Alabama delegation.

It is a great honor for me to praise him on this occasion for his long history of effective service to his district, his State, and his Nation.

As a first-term Member of Congress and the newest member of in the Alabama delegation, I would like also to pay tribute to him for his kind and unselfish help to me. I am sure that his assistance in many ways has enabled me to begin serving my district in an effective manner sooner than might otherwise have been the case.

I salute our colleague, GEORGE ANDREWS, and wish him at least 25 more years of outstanding service.

BYELORUSSIAN INDEPENDENCE

HON. JAMES J. HOWARD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. HOWARD. Mr. Speaker, in the last few months we have recognized the struggles of several small nations in their fight for independence. On March 25, those citizens of our Nation of Byelorussian origin, celebrated the 51st anniversary of their independence. Once again, however, we are faced with celebrating an anniversary of a fact which is, sadly, no longer a fact, but rather, has become a dream of hope.

During the decade prior to World War I, the Byelorussian people, who had been ruled by the Russians, began to redevelop their own national culture and language. This cultural revival was later to have distinct political relevance as well.

The outbreak of World War I created unique opportunities for those non-Russian peoples residing along the borderlands betwen the Russian Empire and Europe proper. The Byelorussians, like the Ukranians, Lithuanians, Estonians, and others within the empire, seized the opportunity to establish their own national independence.

During the German occupation, during the war, the Byelorussian leaders were able to carry on their political work. Further, they were able to carry on the redevelopment of the cultural aspects of their nationalism.

During 1917 and 1918, the Byelorussian people constructed a democratic constituiton, and finally on March 25, 1918, they declared their independence and set up a government at Minsk, the capital city. Although the existence of the Byelorussian National Republic was greatly dependent on the fortunes of the occupying military forces, it is generally agreed that the government made significant advances in the fields of education, culture, and social welfare.

With the end of the war and the dissolution of German Armed Forces, the Red Army advanced into Byelorussia, and on December 10, 1918, seized Minsk. In 1921, the Treaty of Riga divided the Byelorussian territory, and their national efforts were defeated.

Today, however, the 8 million Byelorussian people still hope, and it is appropriate that we commend them on their continuing efforts to become, once again, a free and independent nation. We must all continue to pray for the release of these captive nations, that they may once again stand with heads high in the world of free men.

BISHOP JOHN J. WRIGHT HELPS PLAN WORLD CONFERENCE ON RELIGION AND PEACE

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to call to the attention of the U.S. Congress and the American people the plans which are being developed for a world conference on religion and peace to be held in Kyoto, Japan in September of 1970.

We in Pittsburgh are especially proud that His Excellency John J. Wright, Bishop of Pittsburgh, is a member of the advisory committee planning for this conference. He has recently returned from attending a meeting of this committee in Istanbul, Turkey, where groundwork for the peace conference was mapped.

I want to compliment Bishop Wright and the other religious representatives on this fine example of international cooperation and on their concern and work for a peaceful world.

I submit the article from the Pittsburgh Post Gazette, 5 March 1969, that gives Bishop Wright's report on his trip. The proposed world conference on religion and peace can well be a major turning point in world affairs and religious history of our times.

The article follows:

NEW THEOLOGY OF PEACE DUE—BISHOP TELLS PLANS FOR WORLD PARLEY IN JAPAN IN 1970

(By Thomas M. Hritz)

Bishop John J. Wright said here yesterday that a "new theology of peace" will emerge from a world conference on Religion and Peace scheduled to be held in Kyoto, Japan, in September of 1970.

The Roman Catholic prelate, who returned early yesterday from an advisory committee in Istanbul, Turkey, where groundwork for the peace conference was mapped, said a "solid passion for peace" now exists among religious leaders all over the world.

CITES "EXPLOSIVE" SITUATION

"The political situation in the world is sufficiently explosive and critical to justify intensive concentration on the problems of peace and utilizing the moral and spiritual resources of all religions to promote a climate of peace without which it would be impossible for the human community to survive with dignity and decency," he said.

Bishop Wright said the old imperial city of Kyoto was chosen as the site of the world forum so the conference will coincide with the world's fair, Expo '70, scheduled to be held there next year.

He added that Japan is a neutral country—both religiously and politically—where the Arab and the Jew can meet.

The bishop reported that the Japanese especially are looking to the conference as a source to a lasting world peace.

JAPAN OFFERS AID

He said that country's hideous experience with the horrors of the atomic bomb a quarter of a century ago inspired a desperate quest for peace.

The bishop added that Japan sent more representatives of its religions to the committee meeting than any other country.

It even offered to render financial aid to some African and Latin American countries who said they may not be able to afford to participate in the conference, he added.

Bishop Wright said representatives at the committee meeting worked in harmony. "We often found ourselves agreeing on many theological matters," he said, noting that Christians, Buddhists, Moslems, Hindus, Shintoists and representatives of other religions attended the meeting.

AN OIL REFINERY AT MACHIASPORT, MAINE, SHOULD BE ESTABLISHED IN FAIRNESS TO NEW ENGLAND CONSUMERS

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. DONOHUE. Mr. Speaker, I am pleased to include the very timely resolution, recently adopted by the Massachusetts State Senate, urging the President to order an immediate increase in the present allocation of imported No. 2 fuel oil to New England and to establish an oil refinery at Machiasport, Maine.

The objective of this resolution is to provide a too long withheld measure of economic equity to the consumers in Massachusetts and throughout the New England region. I most earnestly hope that the President will see fit to promptly initiate the just action requested in the resolution, which follows:

RESOLUTION URGING THE PRESIDENT OF THE UNITED STATES TO ORDER AN IMMEDIATE INCREASE IN THE DISCRIMINATORY ALLOCATION OF BARRELS OF IMPORTED NO. 2 FUEL OIL TO NEW ENGLAND AND TO ESTABLISH AN OIL REFINERY AT MACHIASPORT, MAINE

Whereas, The Consumers of home heating oil in the Commonwealth, as well as those of the other New England states, have been discriminated against for the past decade because of stringent quotas relating to the imports of No. 2 fuel oil; and

Whereas, According to the Massachusetts Consumers' Council the consumers of Massachusetts are overcharged forty-two million dollars annually because of the imposition of such quotas under the Eisenhower Administration; and

Whereas, Said Consumers' Council and the New England Council consistently presented the facts of such discriminatory policies before the appropriate federal bodies; and

Whereas, There has been no decision to rescind the executive order establishing such quotas; and

Whereas, Secretary of the Interior Stewart Udall during his term of office reportedly indicated a willingness to recommend an allocation of 30,000 barrels a day of imported #2 fuel oil to New England; and

Whereas, The proposed Foreign Trade Zone in Portland, Maine could help to correct the inequities occasioned by the #2 fuel oil quota discrimination, by (allowing) making available an additional 90,000 to 101,000 barrels of #2 fuel oil in New England at reduced prices; and

Whereas, The establishment and operation of an oil refinery at Machiasport, Maine would relieve the shortage of #2 fuel oil for the consumers of heating oil in the Commonwealth in peak heating seasons and retard price increases of this necessity of life; now, therefore, be it

Resolved, That the Massachusetts Senate respectfully urges President Nixon to direct the Secretary of the Interior and Secretary of Commerce to implement forthwith the Udall recommendations relative to the allocation of additional oil imports to New England; and be it further

Resolved, That the Massachusetts Senate supports the efforts of Senator Kennedy and other members of the Massachusetts Congressional delegation to gain approval of the application by the Maine Port Authority to establish, operate and maintain a general-purpose foreign trade zone in Portland, Maine, and a subzone for the purpose of oil refining in Machiasport, Maine; and be it further

Resolved, That copies of these resolutions be forwarded by the Secretary of State to the President of the United States, the presiding officer of each branch of the Congress and to the members thereof from the Commonwealth.

A BILL TO REVISE THE SELECTIVE SERVICE LAWS

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. ASHLEY. Mr. Speaker, I am introducing today a bill to establish procedures for the fair and equitable selection of qualified young men to meet the continuing military manpower needs of the Nation.

Let me state initially that I agree with the conclusion of the single most thorough public study of the draft, that of the Marshall Commission that "the Nation must now, and in the foreseeable future, have a system which includes the draft."

This is simply because our first concern must be to guarantee a continuing supply of manpower for national defense purposes and past experience has amply demonstrated that the draft provides such a guarantee.

In any revision of our draft laws I believe we must be concerned with flexibility so we can adjust to high or low manpower needs and with uniformity so that every young man will know to as great an extent as is possible at any time if and when he might be called to duty. We must also be concerned with fairness so that every young man in every population group can expect and get equal treatment. I further believe that we can achieve these goals by drafting the youngest first at age 19 and by drastically curtailing deferments with the choice for service made by a random selection system.

The bill I am introducing today would deal with the many problems raised by our present Selective Service System. In summary my bill's principal provisions are as follows:

First. It requires that the youngest—the 19-year-olds—be drafted first;

Second. It requires use of random selection to select those young men to be drafted;

Third. It provides for a 3-year transitional period in establishing the random selection system from among 19-year-olds;

Fourth. It eliminates occupational deferments except where ordered by the President;

Fifth. It permits students to postpone their exposure to the draft during the course of bona fide study, but does not permit this postponement to become an exemption;

Sixth. It discontinues this postponement feature whenever casualties in a shooting war reach 10 percent of those drafted in a given month;

Seventh. It grants conscientious objector status to atheists and agnostics, so long as

they are genuine pacifists, as well as to those whose objection is based on conventional religious training and belief;

Eighth. It requires the adoption of national standards and criteria in the administration of the draft law, and requires their uniform application;

Ninth. It prohibits use of the draft as a punishment for protest activities, by limiting draft delinquency to acts relating to a registrant's own individual status;

Tenth. It permits judicial review of questions of law regarding classification proceedings, and permits use of habeas corpus proceedings by those who comply with induction orders;

Eleventh. It restores the role of the Justice Department in reviewing conscientious objector cases;

Twelfth. It gives registrants the right to appear in draft board proceedings affecting them, and to be represented by counsel;

Thirteenth. It conforms our draft treatment of aliens to our treaty requirements, as recommended by the State Department;

Fourteenth. It limits the term of the Director of the Selective Service System to 6 years;

Fifteenth. It prohibits discrimination of any kind in the makeup of any selective service panels which determine an individual's draft status;

Sixteenth. It calls for a thorough public study of a National Service Corps, in which individuals seeking nonmilitary service might fulfill their obligation of service to the Nation;

Seventeenth. It calls for a thorough public study of all aspects of a volunteer army;

Eighteenth. It calls for a thorough public study of military youth opportunity schools, which would offer special educational and physical assistance to those falling below induction standards who desired to volunteer for military duty:

Nineteenth. It calls for a thorough public study of the ramifications of granting amnesty to those young men who fled the country rather than face the draft;

Twentieth. It encourages use of civilians to replace military personnel in nonmilitary jobs; and

Twenty-first. It closes a number of loopholes in the present law.

I believe that each of the changes enumerated above is essential and must be enacted if we are really to reform our Selective Service laws to provide a fair, certain, and flexible system.

For example, under the present system, men between 19 and 25 years of age are drafted in reverse order of their age; that is, oldest first. The oldest-first system has been unanimously condemned by all who have studied draft reform, including the Marshall Commission, combat commanders, and the Defense Department. Obviously it forces young men to plan their careers and families in an atmosphere of uncertainty and unpredictability. Furthermore, the incidence of deferment rises sharply with age. According to a 1966 Defense Department study only 3 percent of classified registrants had dependency deferments at age 19 and only two-tenths of 1 percent had any form of occupational deferments. But at age 24, nearly 30 percent of all registrants were in just these two deferred categories. Consequently, a rising average age of induction multiplies the number of deferment decisions each local registrant faces.

It should be pointed out, too, that our military commanders have consistently preferred 19- and 20-year-olds because they are more adaptable to the combat training regimen.

That the youngest should be drafted first has had unanimous support of the Marshall Commission, the Clark Panel, President Johnson's special message to the Congress on the draft, and the report of the Senate and House Armed Services Committees.

Those who might be deferred for one reason or another during all or part of their 19th year would be draft eligible upon expiration of the deferment as "constructive 19-years-olds." Drafting the youngest first would be mandatory.

My bill contains a random selection system to determine who shall serve when not all serve and I believe this would do away with that inherent element of unfairness which is suspect in any system that must choose a few from among many. When a person is called upon to serve his country and risk the possibility of death or dismemberment, no one can presume to judge which life may be less valuable. As the system now works, each local draft board determines, with minimal national guidance, classifications, deferments and other elements of draft procedure; that is, who shall be drafted. It is imperative that we change this subjective system to an objective one of random selection, thereby creating a more equitable distribution of risk.

The need for a lottery is also clearly shown by the "imperative of numbers." Over the next decade we will have a pool of 820,000 eligible 19-year-olds each year from which 260,000 must be drafted. Thus even when the Vietnam war demands high draft calls as it does this year we will only be selecting one man from among four eligible and it is estimated that during peacetime we will have to choose only one man from among seven or eight eligible.

Briefly the random selection system I propose would work as follows:

Young men would be eligible for induction only so long as they were in the "prime selection group" and they could be in this group for no longer than a total of 12 months. Basically, the young men in this prime selection group would be 19-year-olds who met the mental, physical and moral standards for induction. Also in this group would be the "constructive 19-year-olds," those who were deferred for all or part of their 19th year, but who would be placed in the prime selection group upon the termination of their deferment. Only those individuals actually in the prime selection group would be subject to induction.

To effect the change from the present oldest-first subjective selection procedure to my proposed youngest-first random selection procedure, my bill adopted the 3-year transition feature recommended by a number of experts. Under its terms, those men 20 years and older and still eligible for induction would be phased into the prime selection group as follows: In the first year those over 24; in the second year those between 22 and 24; and in the third year those between 20 and 22. After the end of this 3-year transition the system would be fully operative and the impact upon those older than 19—primarily graduate students—would be largely minimized.

Occuptional deferments would be discontinued under my measure unless the President were to determine that the efficacy of our national defense required that certain occupations were critical and that those holding these occupations should be deferred. If he so determined, he would be required to identify the particular occupation and require deferments on a uniform national basis.

Student deferments, particularly when this country is engaged in armed combat, stand out as a major inequity. To meet this problem my bill proposes a number of changes.

High school students would be deferred until they finish high school as the law now provides. Upon graduation from high school they could enter the prime selection group at 19 or choose to go on to college thereby postponing their entry into the prime selection group. Upon completing college or at 25, these men would become "constructive 19-year-olds" and be within the prime selection group for 12 months. Thus, all those who did not voluntarily enlist would at some point in their 19- to 26-year-old span be in the prime selection group equally with their contemporaries.

So that no young man could use college to avoid a shooting war, my bill provides that student deferments would be discontinued when the number of casualties in a shooting war exceeded 10 percent of the number of draftees for 3 consecutive months. And when the discontinuance did take place, it would stay in effect for the following 12 months.

This discontinuance insures that when draftees face an appreciable risk of being sent to a combat zone, all young men must stand as equals at that particular time before the draft process. To permit some to elect to enter college and postpone exposure to the draft for 4 years while denying this election to others would be to continue one of our present system's worse features.

It is important to note that the discontinuance would not apply to students already in college or occupational training when the 10-percent figure was reached. These students made their choice to enter college or training not out of a desire to avoid being drafted into a shooting war because the shooting had not reached an appreciable extent when their decisions on whether to take up the option was made in the light of combat casualties.

My bill would make no change in our tradition of according conscientious objector status only to those conscientiously opposed to war in any form. However, it would repeal the amendment adopted in 1967 designed to overrule the Seeger decision of the U.S. Supreme Court. My proposal reinstates the language of the statute in effect before the 1967 amendments, a result which seems in conformity with the principle underlying the conscientious objector exemption—a genuine objection to wars in any form based on conscience.

Mr. Speaker, the need for draft reform is very clear. Our present law is patchwork and outdated. It provides neither flexibility nor fairness nor certainty. I believe we have an obligation to our young people and to the country to change it and I urge this Congress to react to this cry for change now.

JIM FARLEY GRADUATES AT 80

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. DELANEY. Mr. Speaker, the Rockland County Journal of Nyack, N.Y., recently printed an interesting article telling how the Honorable James A. Farley, elder stateman of the Democratic Party, and chairman of the board of the Coca-Cola Export Corp., received his high school diploma 64 years after completing his secondary school studies, at the age of 80.

Mr. Farley is a highly respected expert on international trade, and has for many years been acclaimed as one of this Nation's most astute authorities on American politics. His determination to succeed in life, regardless of his educational handicap, should be an inspiration to today's school dropouts, and other youth who experience difficulty with their studies.

The article by Scott Webber also contains some cogent observations by the distinguished former Postmaster General, which I think my colleagues will find of interest. Under leave to extend my remarks, the article follows:

FARLEY CAST IN NEW ROLE: THE GRADUATE

(By Scott Webber)

James A. Farley, a native of Grassy Point who rose to be Postmaster General of the United States and who has known 7 Presidents personally, always had one regret in his life: He never got his New York State Regents' High School Diploma.

Sixty-four years ago he took his English Regents and got a 78. But when his paper got to Albany for checking, the mark was reduced to 73, which meant he had failed.

"I didn't have enough sense in those days to go back and take the test over," Farley said the other day, noting that the oversight prevented him from getting his Regents diploma.

In the years that passed since the Class of 1905 left the Stony Point High School (now the administrative offices of the North Rockland Central School District on W. Main Street), Farley became Stony Point town clerk, supervisor and a member of the Assembly before joining up with Franklin D. Roosevelt as his 1932 campaign manager.

The new junior high school that opened in Stony Point in 1967 is named after him. On the day of its dedication, he told the assembled audience that the one big disappointment of his life was that he never got his diploma.

Then one day last summer, he was sitting next to the State Commissioner of Education, Dr. James E. Allen (soon to be the new U.S. Commissioner of Education), and in jest told him that he had a bone to pick with his department.

A few weeks ago Dr. Allen walked in to Farley's office in New York, where he is chairman of The Coca-Cola Export Corp., and presented him with the diploma, Stony Point High School Class of 1905.

Farley keeps active on the political front. He was a delegate last summer to the Democratic convention in Chicago and he sides with the efforts of the police to keep the rioters from breaking up the convention. He said the rioters had one purpose in going to Chicago and that was to disrupt the proceedings by provoking trouble by any means necessary.

In 1936, Farley had accurately predicted that Roosevelt would carry all but two states. Last year Farley saw that unless the Humphrey-Muskie ticket got the support of the McCarthy, Kennedy and liberal elements of the party, it would lose to Nixon. And this is what happened, he says.

"I never will understand why they refused to back the candidate once the choice had been made," Farley added.

Because he knew the ticket would lose, he made no public predictions, he pointed out.

Farley now lives in the Waldorf-Astoria where his neighbors have included Herbert Hoover and Douglas MacArthur.

While noting that some of Hoover's political judgment "might not have been too good," Farley said the former President was one of the "most dedicated unselfish Americans I ever knew" and a person with whom in later years he often had very friendly and frank discussions about politics.

Farley recalled that Hoover and Roosevelt were very good friends up until the time of the 1932 election, having known each other in Washington during the Wilson Administration. Roosevelt was the only person whom Farley ever heard call Hoover "Bert."

Pointing out that he knew Lyndon B. Johnson beginning in 1934, Farley said that the Vietnam War was his downfall. Roosevelt was hurt by the secret agreements made at Yalta; Johnson by the Vietnam war, which Farley personally believes was the right thing and something the President had to do.

(The walls of Farley's New York office are lined with autographed pictures of many of the people in public life he has known over the years, and quite a few of them are of Lyndon Johnson with warm inscriptions.)

Dwight Eisenhower would have been a third term President in 1960 except for the constitutional prohibition, Farley says. "No question about it, no one could have beaten him, not even John F. Kennedy."

Farley believes that Ike "made a good President" and "fitted into the demands of that period," adding that he is a "fine man whose place is secure in history."

MacArthur, whom he first knew in the early years of the Roosevelt administration when he was Army Chief of Staff, was "an extremely interesting conversationalist," says Farley.

Asked about proposals for making all postal appointments by Civil Service, Farley said he believes it will still be done by appointing those from the list who are members of the party in power, the system that he used when he was Postmaster General.

"That was the best system then and I still think so," he added.

His future plans? He wants to write another book about the Roosevelt years, explaining that when he wrote his book, "Jim Farley's Story," back in the 1940's, much of what can now be told couldn't be told then.

And on May 30, his 81st birthday, he will arrive at St. Peter's Cemetery in Haverstraw to visit the graves of his parents and then ride through Grassy Point, stopping at homes and calling on those with whom he grew up.

FEDERAL LAW TO BETTER PROTECT HOUSES OF WORSHIP FROM ARSONISTS NEEDED

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. ROSENTHAL. Mr. Speaker, today I am introducing legislation to apply more comprehensive protection under Federal law to houses of worship that are the targets of arsonists.

Although the Bill of Rights guarantees Americans freedom of worship and the Civil Rights Act of 1968 extends Federal protection to individuals whose civil rights—including the right to worship—are violated, Federal law only makes it a Federal crime to use explosives to destroy houses of worship.

Although arson is a common law crime, many States have adopted statutes directed at specific acts of arson that provide penalties with varying degrees of severity. My bill would close the gap among State laws and between Federal and State law, in those instances where States have weak or ineffective protection for houses of worship victimized by arsonists. This legislation—by extending the acts of arson subject to Federal jurisdiction—would provide stricter coverage in those States where penalties for certain crimes of arson may be nonexistent. And my bill provides a uniform standard for dealing with this serious problem.

Violence against houses of worship threatens one of our most basic rights; we must secure full protection of our freedom to worship.

THE SILENT MAJORITY SPEAKS OUT

HON. CLARENCE E. MILLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. MILLER of Ohio. Mr. Speaker, recently Rio Grande College in Ohio was the scene of an attempt by protesters to wreck orderly campus activity at this fine institution. The attempt failed because the school administration under Dr. A. R. Christensen swiftly enlisted the assistance of local law-enforcement officials and made it clear that disruptions would not be tolerated. Perhaps there is a lesson here that violence-plagued schools in other parts of our country might heed. A timely evaluation of the Rio Grande incident and of campus disorder in general was recently published in an editorial by the distinguished editor of the Gallipolis Daily Tribune, Mr. Hobart Wilson, Jr.

The editorial follows:

IT'S TIME FOR SILENT MAJORITY TO SPEAK OUT

Giving in to the anarchists—and there is no better word to describe the mindless militants who in recent months have made it quite plain their bag is to destroy, not create—is only asking for more of the same.

Tuesday, Rio Grande College officials let it be known that they are responsible for running that institution, not a handful (41) of student dissidents urged on by outsiders and controversial instructors.

We admire the Rio Grande administration for its stand, and back them 100 percent. We urge all Gallia Countians to do likewise.

In our opinion, it's a stand that will "catch on" across this great nation, because the majority of responsible American students attending college for a higher education, along with the taxpayers, are "fed up" with acts of vandalism, riots, demonstrations and other nonsense.

The academic back is stiffening, and it should be pointed out Rio Grande College is

among the first in the country to take such a stand. Other colleges have formed "counter-revolts" to combat the minority dissidents. One group calls itself SPASM—the "Society for Prevention of Asinine Student Movements."

The time has come for all of us to take a stand on today's problems, stop beating around the bush like a bunch of scared rabbits.

We will glady be the first to speak out and tell you exactly where we stand.

We suggest student body president Michael Graham resign if he continues to favor the minority over the majority at Rio Grande College.

We are fed up to the gills with the publicity (and this is what radicals thrive on) given the militants, draft card burners, the acid heads and all their ilk, be they green, blue, black, white, or just plain yellow.

We are sick of the false aura of grandeur that we have permitted these people to assume through excess publicity.

Every time one of these public bleeders climbs up on his soap box and berates the United States, its laws, courts, enforcement and economy, he is doing it with our money.

Our taxes make it possible for him to exist without visible means of support. Our obedience to the law makes it possible for him to flout it. The willingness of others to serve under arms makes this country safe for him to point with scorn and burn his draft card.

We, as a majority of Americans, hold no brief for wrong in high places. We subscribe wholeheartedly to the doctrine of change. We know that growth is one of the inexorable laws of life. Grow or die. (In the past five years, under the capable leadership of Dr. A. R. Christensen, Rio Grande College has made its greatest progress ever in total development.)

But, we do not subscribe for one moment to the theory that every cockeyed nut, confused in economics, bewildered in politics, and pinked by "pie in the sky" has the right to tear down the government or our schools under which we live and learn by whatever means he may see fit.—Hobart Wilson, Jr.

EQUAL HOUSING—UNEQUAL TAXES

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. RARICK. Mr. Speaker, public housing at reduced rentals to indigent nonworking citizens subsidized by the taxpayers is most certainly charitable.

However, the same taxpayers who are already supporting an exorbitant load are awakening to the realization that once the Federal Government moves in and buys the housing developments it not only contributes to the inflation faced by the taxpayers but removes the real estate from the tax rolls. Too late the poor taxpayer comes to realize that he will be faced with even a greater percentage of taxes to compensate for the property's being taken out of the private sector.

One wonders how far the Federal planners will be permitted to go in this socialistic maneuver before there is no longer any taxable property in the private sector to subsidize the rentals or before the borderline worker gives up trying to pay his own rent and also enters a Federal housing unit on the Federal dole.

I think our colleagues will find of interest a recent report indicating that HEW was now moving its tax subsidized socialistic experiment into Fairfax County and I present a clipping from the Sunday Star for March 23, and letters to the editor from the Star of March 26, as follows:

[From the Washington (D.C.) Sunday Star, Mar. 23, 1969]

FAIRFAX GARDEN APARTMENT—PUBLIC HOUSING FAMILIES MOVE INTO COMPLEX

While a controversy raged in the District of Columbia over the purchase of Regency House for public housing, Fairfax County quietly moved public housing families into what had been an all-white garden apartment complex near Baileys Crossroads.

Before the Fairfax County Housing Authority purchased the Spring Hill Apartments in October for $1.12 million, neighbors objected to the acquisition as strongly as Upper Connecticut Avenue residents protested the District's plans.

Now, however, original tenants of Spring Hill, still living there, say the coming of public housing families has not interfered with their way of life.

One of them, Mrs. Alice McNey, who has lived there five years, even volunteered to act as resident manager for the housing authority.

WILL BE SORRY TO MOVE

"I will be sorry when October comes and I will have to move," she said yesterday. The authority gave the original tenants a year to find another home.

Mrs. McNey's opinion was echoed by 27-year-old George Deihl, another of the original tenants.

"The biggest difference now is that I can find a parking space easier," he said. Many of the public housing families do not have automobiles.

The garden apartment complex is located off Columbia Pike, one block east of Baileys Crossroads. Its three buildings have one efficiency unit, 26 one-bedroom units, 56 two-bedroom units and 13 three-bedroom units.

During the first two weeks after the purchase, about 15 families moved out.

"They were the ones who had objected the most," said Warren R. Nellis, executive director of the housing authority.

SIXTY-SEVEN FAMILIES MOVE IN

Since then 67 public housing families have moved in, 17 of them white, the rest Negro.

One of the original families who thought they would have to move discovered they could stay.

The couple, who live with their 8-month-old son in their two-bedroom apartment, had been paying $130 in rent before the authority's purchase. But because their net income of under $4,700 a year qualified them for public housing, they now pay $80 a month.

Before the authority purchased Spring Hill, rents ranged from $124 to $185. Public housing families in the complex pay from $33 to $85.

Mrs. Donna Gibson, who is white, lived in a house in Centreville with her husband and four children.

"It had a bathroom but it was cold in the winter," she said. "When I heard about this public housing, I told my husband, William, that I was moving there and if he didn't like it, he didn't have to come. He came."

TENANTS ORGANIZE

A tenants association has been organized by the authority with Mrs. Sarah Ward, a Negro mother of two, as chairman.

"If we have had any problem it may be noise," she said, explaining that the older tenants, under their leases, had to keep rugs on their floors. This is no longer required.

However, Deihl said the public housing families have been quieter than the ones who moved out.

The newest family at the complex, Mr. and Mrs. Richard Jackson, their three children and Mrs. Jackson's uncle, moved into a three-bedroom apartment Friday. The Jacksons are Negroes. "We lived in a house in Vienna that was being torn down for an office building," said Jackson, who works as a laborer. "We couldn't find any place else but here to go," he added.

Mrs. McNey said the old residents enjoyed Spring Hill "because it was just like a small town. Everybody knew each other and got along fine—and now I think it's going to stay that way."

[From the Washington Evening Star, Mar. 25, 1969]

LETTERS TO THE EDITOR—REGENCY HOUSE

SIR: Your editorial endorsing the decision of Mayor Washington for the purchase of Regency House by the National Capital Housing Authority for Public Housing set another fire of resentment. It is not against the poor who will live there, black or white, but because the city finds it desirable to house them in a luxury building rather than one less expensive and more in keeping with persons of modest means. Thousands of citizens who have lived and worked in Washington many years and are now retired cannot afford to live in new luxury buildings and are wondering why public housing, regardless of where it is located, should be so lavish.

If the compelling reason for the purchase of Regency House is to go beyond Rock Creek Park to the west, and upper Connecticut Avenue in particular, that still does not justify acquiring one of the newest and most modern properties in the area. Some other way can and should be found to accomplish this objective.

GLADYS HARLEY.

SIR: Last year the real estate taxes, the largest single source of revenue in the District, were raised. Preparations are now under way for still another increase in real estate taxes. Paying increased taxes in conjunction with many increases in the cost of living in general is a hardship for many District taxpayers and of concern to everyone.

It is therefore of the utmost importance for the taxpayers of the District to be alert and informed as to how this money is being spent and to take effective action to prevent the use of tax money in ways that are not only grossly unfair to the taxpayer, but ruinous to the community as a whole.

I write to call to the attention of your readers the economic philosophy behind the purchase of Regency House for use for public housing. Many of your readers may consider this a matter of concern primarily if not entirely for the residents of Chevy Chase. On the contrary it is a matter of vital concern to every tax payer in the District because it is in line with policies stated by public officials and reported in the public press.

Regency House is a luxury apartment: swimming pool, air conditioning, high rent location, etc., etc. Using tax money to provide luxuries for people unable to support themselves is grossly unjust to the taxpayer and ruinous to the economy of the community as a whole. Only a minute fraction of the District's taxpayers can afford to buy swimming pools for themselves. A majority of the houses in the District are not air conditioned. Most District residents live in areas less attractive and otherwise less desirable than the location of Regency House. Yet public officials advocate and implement the strange view that the taxpayer of the District should provide for those who live not by their own labors but by the taxpayer's labors with luxuries which the taxpayer in the majority of cases cannot afford to buy for himself.

ELIZABETH BRITTON.

SIR: Very seldom do I disagree with your editorials, but the one regarding the Regency House shows you see but one side of the picture. Those of the middle and lower middle class who pay taxes and have for years cannot pay $200 a month for an apartment and yet they are being told their tax money is to pay for others, who do not or have not contributed, to live in better apartments. This is enough to make anyone angry. Those who scrimped and saved to purchase homes in certain areas and build apartments for income are asked to sacrifice, for without a doubt the value of property is of less value once such a plan takes place. All one needs do is look around D.C. and see the deterioration; it is a most sickening sight for those who lived here for many years.

LILLIE.

SIR: Your editorial support for the purchase of Regency House for public housing purposes needs further elaboration before your judgment can be condemned or even accepted.

Agreed that the price is comparable to that paid for recent prior acquisitions for similar public housing. Do you contend that such price is proper? You should be aware of testimony given the D.C. government in open hearing, by representatives of the Washington Board of Realtors, that there are many apartments of better than standard quality available on the present market at a price of about half the unit cost of Regency House. For the same outlay, twice the number of indigents could be housed satisfactorily. These available apartments are not concentrated in one locality; they have adequate dispersion, if that is a factor to you, which it is not to me. Communities of persons of similar circumstances and complexions are always the more harmonious.

It seems to me that you are advocating better than standard housing for indigents, so the sensible thing to do is to become an indigent in order to qualify for appropriate quarters, at somebody else's expense. This is not a matter of charity; it is the flaw of socialism, whether Communist or fascist type does not matter. I want no part of either. I do want to live in a compatible community of my own choosing and at my expense, whatever my income. And I would expect my government to protect that way of life, not charge me for its destruction howsoever indirectly.

EDWARD U. DENISON.

SIR: I don't agree with your editorial about the Regency House.

The purchase of the Regency House is taking our hard working D.C. citizens' good tax money away from the D.C. and spending it where we don't want it spent!

The Mayor and George Romney should and could at least find or build something more suitable for the elderly (would give some people work, too!) and in an area where they might be accepted, and in turn spend our tax money on something more relevant.

VALERIE W. TOMPKINS.

SIR: I was surprised and disappointed in the Regency House editorial which appeared in The Star. I did not believe that The Star could be so callous and so insincere.

To be really honest and fair with your reading public, the people living in Chevy Chase, and others in the vicinity of Regency House, would you write another editorial explaining your motives and showing the relationship of Regency House to where you and other top officials of The Star live? It is my observation that the proponents of this scheme do not live anywhere near the affected area.

There are two other aspects to the sale of Regency House for subsidized housing. First, it removes high rate taxable property to nontaxable status, and everyone knows that the District sorely needs tax money. Our taxes have risen 60 percent in two years. Second, what about the cruelty forced upon the old people, think of the effect of forcing them to leave their present homes, surroundings, friends, and relatives to move into a totally new environment and a hostile neighborhood. All of the studies on retirement and aging show that old people cannot adjust to such a sudden wrench in their lives.

GUSTAVE BURMEISER (retired).

FUEL OIL COSTS: A GROWING BURDEN IN NEW ENGLAND

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. BOLAND. Mr. Speaker, the cost of home heating oil to New England consumers is inching upward at a rate unprecedented in this Nation's history. The giant domestic oil industry—an industry that has a veritable stranglehold on the New England market for petroleum products—has been increasing its prices at whim. Concentrating on the manufacture of lucrative products like jet fuel, the oil industry has created what can only be described as an artificial shortage in home heating oil. The industry, in turn, has used this shortage as a spurious justification for its steep and steady increase in prices.

New England—the regional market furthest from the oil industry's drilling sources—is paying the highest prices in the United States for petroleum products. These prices constitute a major financial burden for the New Engalnd consumer and threaten to drive out of business many small independent fuel oil dealers. Quite plainly, Mr. Speaker, the administration must act to rectify this situation.

Liberalizing revisions in the oil import quota system and swift approval of the proposed foreign trade zone complex near Machiasport, Maine, would go far toward achieving reasonable petroleum prices in New England. All available evidence—economic, financial, technological—demonstrates that the Machiasport plan would cut petroleum product prices by at least 10 percent throughout New England.

I, and my fellow Members of the New England congressional delegation, are continuing to urge President Nixon and Interior Secretary Hickel to take the steps necessary to put this plan into operation.

Just one index of the strong popular and legislative support for the Machiasport proposal in the resolution adopted by the Massachusetts senate this week calling for immediate approval of the plan. With permission, Mr. Speaker, I put in the RECORD at this point a copy of the resolution:

Whereas, The consumers of home heating oil in the Commonwealth, as well as those of the other New England states, have been discriminated against for the past decade because of stringent quotas relating to the imports of #2 fuel oil; and

Whereas, According to the Massachusetts Consumers' Council the consumers of Massachusetts are overcharged forty-two million dollars annually because of the imposition of such quotas under the Eisenhower Administration; and

Whereas, Said Consumer's Council and the New England Council consistently presented the facts of such discriminatory policies before the appropriate federal bodies; and

Whereas, There has been no decision to rescind the executive order establishing such quotas; and

Whereas, Secretary of the Interior Stewart Udall during his term of office reportedly indicated a willingness to recommend an allocation of 30,000 barrels a day of imported #2 fuel oil to New England; and

Whereas, The proposed Foreign Trade Zone in Portland, Maine could help to correct the inequities occasioned by the #2 fuel oil quota discrimination, by (allowing) making available an additional 90,000 to 101,000 barrels of #2 fuel oil in New England at reduced prices; and

Whereas, The establishment and operation of an oil refinery at Machiasport, Maine would relieve the shortage of No. 2 fuel oil for the consumers of heating oil in the Commonwealth in peak heating seasons and retard price increases of this necessity of life; now, therefore, be it

Resolved, That the Massachusetts Senate respectfully urges President Nixon to direct the Secretary of the Interior and Secretary of Commerce to implement forthwith the Udall recommendations relative to the allocation of additional oil imports to New England; and be it further

Resolved, That the Massachusetts Senate supports the efforts of Senator Kennedy and other members of the Massachusetts Congressional delegation to gain approval of the application by the Maine Port Authority to establish, operate and maintain a general-purpose foreign trade zone in Portland, Maine and a subzone for the purpose of oil refining in Machiasport, Maine; and be it further

Resolved, That copies of these resolutions be forwarded by the Secretary of State to the President of the United States, the presiding officer of each branch of the Congress and to the members thereof from the Commonwealth.

Senate, adopted, March 12, 1969.

NORMAN L. PIDGEON,
Clerk.

Attest:

JOHN F. X. DAVOREN,
Secretary of the Commonwealth.

CUTS IN SMALL BUSINESS PROGRAM TRULY SHOCKING

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. PHILBIN. Mr. Speaker, I am very much disturbed about the sharp cuts in the budget of Small Business Administration.

As we all know, this agency was set up some years ago as a result of the long continued, vigorous efforts of some of us in the Congress who are interested in the problems of small businessmen, with particular reference to their need for new operating capital or refinancing.

Throughout the years, the agency has helped very many small businessmen by giving them loans on reasonable terms, which, in many instances swung the balance between going out of business or

staying in business for these small concerns.

When I consider the many benefits that the Small Business Administration has brought to ambitious, hard working, imaginative small businessmen, and the valuable help that has been rendered in this regard in strengthening our free enterprise institutions, and in making it possible for many of our most ambitious citizens to take advantage of the incentive and opportunities that exist in our private economy, I am shocked that Congress should tolerate, let alone give impetus, to the cuts that have been recently made in the SBIC budget of Small Business Administration.

There has been very little funding available for this program since the beginning of the fiscal year July 1, 1968.

I am very reliably informed after careful inquiries into the situation affecting this agency that the curtailment of Government expenditures in fiscal year 1969 as a result of the Revenue and Expenditure Control Act of 1968 resulted in a reduction of planned loan level to the SBIC program from $30 million to $8.7 million.

This amount of money permitted the SBA to honor and take care of only those sound applications on hand as of June 30, 1968.

The volume of applications on hand as of June 30, 1968, resulted from funds curtailed in the fiscal year 1968 when the planned lending level was reduced from $55 million to $24 million.

This amount was $8.7 million less than requested to cover all pending approved loan applications on hand June 30, 1968, and, to my mind, this is a truly incredible and totally unjustified situation.

In an endeavor to cope with the situation, SBA itself has sought and obtained authorization to utilize a 100-percent default guarantee program to finance the SBIC loan requirements. This guarantee provides for a 7-percent-per-annum rate with no guarantee fee and with all servicing to be done by SBA.

In view of the current money market and after extended effort, as yet, I am advised that SBA has found no takers and as of the first of March or thereabouts, it has in excess of $20 million in approved loan applications awaiting funds.

Now, Mr. Speaker, I do not believe that it was ever the intention of this Congress to bring about a situation like this, and literally to starve an agency designed to serve and help small business, and to deny well-justified loans to small entrepreneurs and businessmen who have demonstrated clearly to SBA the soundness and feasibility of their loan applications.

This situation is all the more incomprehensible and incredible in the light of the experiences of the SBIC program during the past 10 years, since the last fiscal year has been its most profitable one in terms of SBIC viability and small business growth.

This has generated much interest in the SBIC program by the private sector desiring to enter the venture capital field. To think that adequate loan funds should not be available when this activity occurred is indeed most unfortunate.

I do not believe it was ever the purpose of Congress when it acted on the so-called tax package deal, to make such shocking reductions in the funds for SBA leaving it in the position where it has such a large backlog of worthy loan applications pending and thus handicapping small business enterprise, in effect, nullifying the advantages and services of the entire SBA program.

I hope and strongly urge that immediate steps be taken by the committees involved in this matter and the Government to provide adequate funding and resources for SBA to do the job that has to be done for small business, and I urge immediate action be instituted to provide supplementary funds so that this agency can function, and take care of existing meritorious loan applications.

It would be a great mistake and an anamolous situation for Congress to strangle an agency like SBA, which is performing such valuable services for our free enterprise system and worthy small businessmen of the Nation.

CONGRESSIONAL REFORM AND THE DEMANDS OF THE COMPUTER AGE

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. RUMSFELD. Mr. Speaker, the awareness of the need for legislative reorganization is growing, partly because of the realization that Congress, if it is to deal with the problems of today, must be willing to utilize new technology that can help to improve the decisionmaking process.

In an article for the December issue of "Technology Review," John Saloma, an associate professor of political science at the Massachusetts Institute of Technology, has analyzed the implications of computer-based information techniques for the Congress and the Presidency in the next decade. He is optimistic that computer analysis can help Congressmen stay on top of the information explosion and develop a more rational strategy of problem solving.

Mr. Saloma's article outlines the possible development of these techniques in the legislative and executive branches of Government as increasingly more sophisticated machines become available. His analysis suggests that Congress will be faced with continual decisions regarding the use of newer and more sophisticated equipment.

This probability makes it all the more desirable for the Congress to establish a permanent Joint Committee on Congressional Operations, which would have the charge of continual review of new data processing and information retrieval systems.

The proposed Legislative Reorganization Act of 1969—H.R. 6278—which has been cosponsored already by more than 90 Members of Congress, would establish such a joint committee.

Mr. Saloma's article follows:

SYSTEM POLITICS: THE PRESIDENCY AND CONGRESS IN THE FUTURE

(By John S. Saloma, 3d, associate professor of political science, MIT)

(NOTE.—Is the demonstrated success of new information technology in business, industry, and private institutions transferable to the arena of public policymaking? The author avers that it is and supports a case for imperative action.)

The new directors of our political destiny whom we have sent to Washington will perform their duties for us with superior dispatch and wisdom if they call into use quickly the rapidly developing resources of new information technology. It is the thesis of this presentation that the availability of comprehensive information systems can today improve the quality and rationality of decisions reached in the political process. I believe further that with responsible support some of the impressive advances forecast for computer technology can by the mid-70's be adapted for the personalized use of the President, congressmen, and a wide range of public officials.

Computer-based analysis as it is refined over the remaining decades of this century will make possible an advance in human intellectual capacity comparable to the invention of language, arabic numerals, and calculus. With his new ability to understand the dynamics of complex organizations and social processes, the congressman of tomorrow will explore a range of problems previously beyond the grasp of his predecessors.

Decision-making, by one definition, is simply the "process of converting information into action." First-quality information is intelligence that is clear, timely, reliable, valid, adequate, and wideranging. It is information that lays a solid foundation for decision and action—the kind of intelligence a conscientious legislator must have whether it is *technical* information (defining the content of a policy issue) or *political* information (concerned with the relative strength of competing claims and the consequences of alternative decisions).

Mid-1970 is only six years away—is it possible that improvements in the legislative process from wide use of advanced data systems will actually be achieved by 1975? Studies by RAND Corporation experts suggest that by the early 1970's computers will be small, powerful, plentiful, and inexpensive. Computing power will be available to anyone who needs it, or wants it, or can use it either by means of a personal console connected to some large central facility, or by a small personal machine. Additional projections foresee, by 1975, a computer that will make possible automatic libraries able to look up and reproduce copy; by 1978, automated looking up of legal information, and the widespread use of automatic decision-making at the management level for industrial and national planning. By the mid-1980's, the computer will begin to realize its potential as a research tool through modeling and experimentation, as an integral part of the educational system, and in areas such as medicine and biological sciences. The chances are that technical advance will continue to outpace political applications. The issue is not whether Congress will adapt to this potential but at what speed. The sequence of acceptance may go something like this:

First, congressional resistance to computer technology, notably the failure to fund any central computational facility for use by the Congress, the failure to budget any allowance for congressmen to utilize other facilities, and the failure to provide analyst staff for the use of the committees and/or members;

Then, limited congressional acceptance of computer facilities and analyst staff with access tightly controlled by the individual committees and/or party leadership; and

Finally, open congressional acceptance, with all members enjoying "free" use of computer facilities and full access to staff and data resources. According to our assumed projection, Congress could have moved all the way to the third situation by the mid-1970's.

THE NEW CONGRESS—1975 EDITION

What would a Congress look like in this third stage of free exchange and availability of information? We can suggest a few intriguing possibilities:

1. The contributions of the individual legislator would be considerably enhanced. Although only minority of congressmen will choose to play the role of legislative inventor or watchdog, the effectiveness of such members will be enormously increased by computer-assisted techniques of search and analysis. Members will be free to "browse" through the data archives in developing and assessing legislative alternatives. Some legislators will hire professional analysts on their office staffs or acquire analytical skills themselves. While such legislative diligence will still be the exception, one can readily foresee a congressman sitting at a console in his office pouring over computer print-out into the late evening hours or over the weekend and cutting through the paper arguments and justifications of executive programs with penetrating lines of questions. The possibility of abuse also exists, but the weight of past congressional experience suggests that most congressmen will use such new investigative power wisely. In situations that invite adversary argument, alternative positions and points of view will be more thoroughly developed and cogently presented.

2. *Ad hoc* congressional study and work groups would freely form and disperse as new and challenging tasks arose at the interstices of committee power. Warren G. Bennis, Ph.D. '55, and others have suggested that transient work groups composed of interdisciplinary teams of highly skilled specialists will replace hierarchial bureaucracy as the dominant form of organization in the post-industrial society (see Technology Review, *Apr., 1966, p. 36 and Apr., 1968, p. 37*). The congressional milieu with its weak hierarchial structure offers a logical setting for such work groups. Congressmen who might lack the requisite skills or resources to tackle a legislative problem by themselves could easily pool their efforts. The work of study groups would be "collateral" to that of the standing committees, but would introduce a "helpful and needed resilience into the congressional posture," in the words of George E. Agree, former Executive Director of the National Committee for an Effective Congress. To the extent that such work groups succeeded and posed a competitive challege to the existing committee structure, they might serve to improve the quality of committees generally. Standing committee leaders might seek to co-opt able young members, according greater weight to subject matter expertise. They might also advance talented members to subcommittee chairmanships faster than might otherwise have been the case. The committee system of Congress will still be organized in terms of the norms of specialization and reciprocity, but specialization will be much less dependent on the opportunity of one's initial committee assignment and accumulated seniority than it will be on the individual member's motivation and time commitment to mastering a given area of substantive policy and appropriate instruments for analysis.

3. While information systems afford new possibilities for specialization and increased committee power—especially in the area of legislative oversight or control of the executive bureaucracy—they should also afford possibilities to "democratize" committee power. Where limited information previously conferred important advantages on those few individuals who had the legislative seniority and central committee positions to accumulate such information, now generalized availability of information and program analyses would enable junior committee members and interested congressmen not on the committee to gain a better understanding of the issues involved. The majority would have greater opportunity to influence committee action and to prevail against the committee on the floor when its action was not representative of the views of the entire membership.

4. Generalized information systems should enable Congress to satisfy both the necessity for specialization and the goal of comprehensive policy review. Where information on executive agency activities has been compartmentalized within the executive budget and the congressional committee system, it would now be available on a comprehensive basis. The "special analyses" of the federal budget already being developed by the Bureau of the Budget are a prototype of the kind of comprehensive information that congressional committees will be able to tap. Individual congressional committees, no longer limited to information within their agency jurisdiction, could become important points for government-wide program review and co-ordination. Where the President alone has had the information to develop a measure of agency co-ordination, congressional committees would now share that information, and the authority to use it, subject to the majority support of Congress.

RECOGNIZING THE IMPERATIVE

These desirable goals are not outside realizable range—already they are within the gunsights of some forward-thinking legislators. A resonant note of anticipation can be heard on Capitol Hill. Members privately express the desire to be aware of coming problems so they can "gear up" for them. A few senators and congressmen already sense that information technology is the coming thing and are investing their own time as well as that of their committee and office staffs in developing closer familiarity with information systems.

Most articulate among spokesmen for congressional action is Representative Robert McClory of Illinois, who, during the 89th Congress, introduced the first bill in either House or Senate directly applying automatic data processing techniques to the work of Congress. In January, 1968, the legislative branch acquired its first automatic data processing installation—an on-line terminal system, installed in the American Law Division of the Legislative Reference Service, Library of Congress. It enables L.R.S. to record and store on magnetic tape descriptions of all bills and resolutions introduced in the 90th Congress. After reviewing the system, Mr. McClory anticipated that some of the next automatic data processing applications might be:

1. Daily print-outs summarizing the previous day's congressional action.

2. An automated index of congressional documents and legal periodicals.

3. Up-to-the-minute information on legislative issues scheduled for debate.

4. Vote summaries on bills already passed.

5. Status of legislation pending in committee.

6. Description of information stored on computer files in the executive departments.

Although several state legislatures have been well in advance of Congress in developing applications of the computer in the legislative process, the Washington atmosphere is now thick with interest. Committees of the Congress are giving increasing attention to A.D.P. possibilities; the Legislative Reference Service has developed several papers on the subject for congressional consideration; the General Accounting Office has installed a new Systems Analysis Section in its Office of Policy and Special Studies; several privately sponsored Washington seminars have been held on information technology including those convened by the American Enterprise Institute for Public Policy Research, the Brookings Institution, and evening panels brought together by the Washington Operations Research Council and the Institute of Management Sciences.

A number of competitive dimensions in Congress are likely to accelerate acceptance of innovations in decision-making developed in the private sector or Executive branch: the built-in tension between authorizing and appropriations committees both eager to control program decision; the publicity incentive for committee and subcommittee chairmen generally to identify themselves with innovations and to push for their implementation; the perennial congressional fear that Congress is yielding initiative and authority to the President; party competition; and the generational divide between "activist" and high seniority congressmen. While there are many factors that will reinforce traditional ways of making decisions within Congress, change is inevitable if for no other reason than that Congress cannot afford *not* to follow the rationalization of Executive decision-making.

The real change in congressional attitude and skills will probably not be felt, however, until a new generation of political talent with practical experience with computers—through universities and the private sector—begins to enter Congress. This change will come sooner than most realize. One freshman congressman, formerly employed by the International Business Machines Corporation and a candidate for the doctorate in business/government relations from the Harvard Business School, Donald W. Riegle, Jr., of Michigan, caused somewhat of a stir in Washington in the fall of 1967 by sending then Secretary of Defense Robert McNamara a request for a matrix of 85 specific data items for which he (Riegle) had written a computer program. Another freshman senator with a combined engineering and law background, Howard H. Baker, Jr., of Tennessee, lectured the Association for Computing Machinery about the impending nuclear power breakthrough in breeder reactors that could produce power at almost zero fuel cost and the need for a much broader congressional overview and plan for the technological and social revolution that this implied. Senator Baker has been an articulate spokesman for a new Senate Select Committee for Technology and the Human Environment. However impressive individual examples may be, Congress as an institution has yet *to* experience the potential of information technology.

FIRST IMPACT: THE EXECUTIVE BRANCH

Whether the Congress acts sooner or later to improve the legislative process by using new information technology, its most explosive immediate political impact will be within the Executive Branch. The rationalization of program choice through greater availability of information and a more careful and explicit statement of program objectives, alternatives, and results will move the locus of program decision toward the cabinet secretary and the President. More adequate information systems will permit some functional decentralization of subordinate program decisions although the thrust will be toward more effective policy control from the top. As the compartmentalized information resources of individual agencies are integrated into comprehensive information systems, political executives will have greater leverage over the bureaucracy. The new information technology will accentuate hierarchical control and reduce legislative bargaining within the Executive. The decision-

making process will accordingly become more closed.

The Executive Branch is already a leg up in A.D.P. on the Legislative through its recent experience with P.P.B.S. (Planning-Programming-Budgeting-System). The likely extrapolation of this experience is toward the development of a corps of highly trained professional "analyst" staffs within the Bureau of the Budget and the departmental secretary level. The power of these trained experts in the technology of information processing will pose new problems for congressional oversight. At a minimum, Congress will have to develop its own analytical staff if it is to monitor Executive decision-making. More important, it must watch for and correct new biases of specialization. Some observers question whether the new profession of systems analysis, drawing on multiple backgrounds of economics, physics, and engineering, can adequately deal with political decisions, over-all strategic planning, and public policy-making. Required instead may be more advanced professional knowledge and training that integrates the disciplines of political science and public administration with systems analysis, decision theory, and economic theory—i.e., political analysis.

Whatever their training, such well organized and technically sophisticated groups will gain power at the expense of less well-organized, less articulate groups. Political leaders who combine technical education and sophistication with good political judgment will enjoy an advantage over old-line politicians. The government bureaucracy as a whole, with continuous "inside access" to information systems, will enjoy an initial power advantage vis-à-vis the legislature, the general electorate, and nongovernmental groups. As it becomes more pervasive, the new information technology will introduce qualitative changes beginning in the Executive Branch and extending outward—in the nature of the American system. The need to make one's political objectives or goals more explicit within the budgetary process will expose more conflict and disagreement than Americans have been accustomed to. The chances are, however, that we will know much more about ourselves and our politics and that this will both ease and complicate the problem of building political consensus. If the Executive decision process limits internal bargaining, the Congress may gain an enhanced role in developing political consensus.

Three major consequences, therefore, are likely to follow increased rationalization of Executive decision-making, especially in the budget process:

1. Centralization of effective decision-making under the President and his chief cabinet officers;

2. Development of a professional "analyst" class within the government and the need to reconcile new forms of specialization with broader social and political perspectives; and

3. A more explicit, candid style of politics which may complicate the problem of achieving political consensus.

SOME PAYOFF PROJECTIONS

Let's project ourselves into the mid-70's, and beyond when advanced information technology has been widely adapted for governmental decision-making. We have suggested some of the changes this will bring at the level *systems politics* (the way decision structures are organized in both the executive and legislative branches of the federal government. What will be the gains or payoffs for the policy-maker himself? From analogies drawn largely from experience in industrial organizations, I believe the following projections of computer application to governmental decision-making to be neither exaggerated nor unrealistic for the potential of new information technology:

1. *Improved quality of information and information processing.* One of the most obvious advances that will be made possible by the new information technology is increased quality of information (including factors such as relevance, precision, completeness, and timeliness) and quality of information processing (accuracy, speed, ability to handle complex relationships, flexibility, and potential for codification in standard rules).

The resource and delay costs to the individual decision-maker who has access to governmental information systems will in time be minimal. Assuming for the time being no political restraints on access, the decision-maker should be able, through proper specification, to locate all relevant information anywhere in the system almost instantaneously. Geographical and other forms of information "isolation" will end with a nationally (and eventually internationally) integrated information system. The inefficiencies and costs of information communication within human systems will be largely eliminated as many of the information processing functions of bureaucracies are assumed by programmed machines. The elimination of middle men between top officials and data gatherers or their replacement by top level data analysts will effect a major reduction in hierarchical distortion.

A vivid example of this potential of the computer to eliminate inefficiencies in information processing and retrieval is the current congressional concern with the "government dossier." Each individual citizen leaves behind him a trail of public and private records from the time of his birth. Much of this information is retained in the files of government agencies scattered around Washington and the country: income tax returns, applications for government employment, security clearance checks, social security and unemployment benefits, census data, etc. While access to some files is limited by confidentiality restrictions and limits of disclosure, it is still technically feasible to collect an enormous amount of information on a single individual.

On the positive side, the computer will give man the capacity to interrogate and reorganize massive data files almost instantaneously for social science research. Usable information which is accessible to decision-makers acting under time pressure should be increased by several orders of magnitude.

2. *Improved channeling of information—easing the problem of information overload.* In our foreseeable future there will always be more problems calling for the attention of a congressman than he can possibly consider. But with the computer the problem of information overload will be more subject to the control of the individual decision-maker. He will have the potential to get "on top" of his work. The computer can be programmed to provide top decision-makers with "exception" information demanding attention or action. The problem of management information, according to Gilbert Burck, is "not how to get information to the top, but how to keep useless information from coming to the top." Decision-makers may specify in advance what types of information they wish to receive on given subjects of interest as new information becomes available. Central libraries or document centers can then service the individual decision-maker according to his "interest profile" through a technique of "selective dissemination of information."

The computer will enable the decision-maker to specify one or more of several information formats and to reorganize data in terms of a desired format. Instead of being a largely passive recipient of information, the decision-maker will be able to interact with the data system using it as an active search mechanism as well. Whether he uses such control to enhance his legislative performance will depend on such human factors as courage, perception, imagination, sensitivity, and achievement motivation.

3. *Improved quality of the human decision process.* The computer has already demonstrated its capacity to discipline human thought processes. It requires clear and precise instructions. It must be told in every detail what it is to do and it follows orders—even incorrect orders—with exactitude. The computer is not only enabling but forcing the modern executive to think more explicitly and analytically—to make more formal his decision-making process and specify his judgments. More advanced computer programs reduce the amount of necessary detailed instruction but reprimand the programmer when he makes an error. Eventually, as computer languages are continually simplified, men will "tell" the computer what they want and delegate to the computer the authority to "tell" them what they must do to get it.

4. *The capacity for systems thinking and systems analysis.* The analytical concepts and techniques associated with the new information technology—systems analysis, program budgeting—are not particularly new. What is new is the capacity of automatic data processing to make "operational" the concept of an organization as a total system. "Men are not good calculators of the dynamic behavior of complicated systems," according to Professor Jay W. Forrester, S.M. '45, who has pioneered research in industrial dynamics. "The intuitive judgment of even a skilled investigator is quite unreliable in anticipating the dynamic behavior of a simple information-feedback system of perhaps five or six variables," he writes. A computer can handle such a problem with relative ease.

Melvin Anshen considers this "enlargement of the total range of decision-making" as potentially the most valuable contribution of the new information technology to management practice. It is now possible for the first time for the human decision-maker to consider the total activity of an organization as "a simple integrated system. Within this system, a dynamic network of relationships can be discerned and measured, with feedback loops and forces for multiplying and dampening the effects of actions at earlier stages in the continuous process. Analytical techniques based on the programmed computer permit managers to simulate the performance of such a system and test its output under a range of changing variables within and outside the system. This technical advance is only one among many possibilities now available for extending the scope of decision-making."

5. *A lengthened time-perspective with greater opportunity for strategic planning.* The new information technology should effect important changes in the time perspective of the decision-maker. The amount of crisis decision-making, i.e., time spent in reacting to unanticipated crises, should be decreased by the development of better warning indicators and monitoring systems. Simulation will permit the economic preparation of major contingency plans. The management information cycle will be reduced significantly by real-time information systems. The concept of "feedback" defined as "the decision response to the *state* of the system" will be supplemented by a new concept of "feed-forward" relating to "decision responses to *anticipated future disturbances* of the subsystem being controlled by the decision-maker," in the words of Martin Greenberger.

The programming of routine decisions and the control of information overload through techniques of selective dissemination will both serve to free the decision-maker from the burden of repetitive operations and detailed information. The "remedial orientation" of incremental policy-making will be replaced by an orientation toward the future. The policy-making as opposed to the administrative role of the public official will be enhanced. The new information technology will draw the attention of analysts and decision-

makers to higher-level, longer-term problems.

6. *The breakthrough in collaborative research—"the on-line intellectual community."* The computer will enable or facilitate two types of significant advance in collaborative research—which in the long run may well be its greatest contribution to man's capacity for problem solving. The first of these gains in the cumulative storage and preservation of solutions—a kind of division of intellectual labor—and the second, in the potential for man-machine-man interaction.

New and more refined computer programs are constantly being developed, tested, and stored. The compiler allows the computer programmer to call, combine, co-ordinate and use routines or programs that are already perfected and stored in the computer. In theory, once a particular problem situation is solved, it is solved for all time. Other users of the computer network can draw on any approved program that is in the system. Given the virtually infallible memory of the computer, all gains or improvements in techniques of computation and analysis, no matter how incremental, are preserved until better techniques are perfected and may be retrieved, used and refined by contemporary and future generations of decision-makers.

Computers will rapidly take over most of the routine, repetitive decisions that can be programmed at the lower levels of government and other large organizations. Even in the area of nonspecifically programmed or ill-structured, novel problems, the computer will become a powerful tool. If most human decisions have an underlying structure, as disjointed, incremental, restricted in scope as that structure may be, in time computer programmers and analysts will discover and program the implicit decision techniques, rules, and coefficients. Already computer programs based on the analysis of past managerial behavior have proved more efficient than continued management practices (i.e., rules of thumb) based on experience. Most computer experts do not expect the computer to replace the human decision-maker but rather to extend his planning and decisional capacities through the continued refinement of man-machine interaction.

Even more significant than the steady development of computer programs is the advent in prototype form of "the on-line intellectual community" based on man-computer interaction and computer-facilitated co-operation among men in university setting. Carl F. J. Overhage and R. Joyce Harman, '45, describe the potential breakthrough based on the experience of Project MAC (research and development of Machine-Aided Cognition and Multiple-Access Computer systems) at M.I.T.:

"Because communication among men is fallible, and because heretofore men did not have effective ways of expressing complex ideas unambiguously—and recalling them, testing them, transferring them, and converting them from a static record into observable, dynamic behavior—the accumulation of correlatable contributions was opposed by continual erosion; and melding of contributions was hampered by divergencies of convention and format that kept one man's ideas from meshing with another's. The prospect is that, when several or many people work together within the context of an on-line, interactive, community computer network, the superior facilities of that network for expressing ideas, preserving facts, modeling processes, and information and the same behavior—those superior facilities will so foster the growth and integration of knowledge that the incidence of major achievements will be markedly increased."

Comparable networks will in time be available in business and government and between sectors of each of these communities with overlapping research interests. The promise of man-machine-man interaction for pure and applied research is one of the scarcely realized but most staggering potentials of the new information technology.

OBSTRUCTIONS TO THE INFORMATION REVOLUTION

Having thus surveyed some of the more impressive rewards that unquestionably await both managers and law-givers of government when they discover and develop the full potential of information technology, we must plant a few red flags along the computer highway. Lessening information constraints on and increasing the potency of analytical tools available to decision-makers will not remove many current dilemmas in decision-making. These limitations go well beyond information as such.

1. *The problem of values.* If we define politics as a struggle for control stemming from conflict over the direction of social life, over policy, it is clear that the central problem of politics is one of values, not information. Decision-making involves values at all stages. Choice activity especially requires levels, it may be possible to compare alternatives and choose a more efficient means for achieving an agreed upon objective such as disease control, improved maternal and child health care, or improved income maintenance. (Even this approach, it should be noted, ignores the problem of interpersonal comparison of utility.) But at higher program levels, can improved information help a decision-maker weigh major dissimilar program alternatives such as an antiballistic missile system or a domestic Marshall plan for the nation's urban centers? Only insofar as such information gives the President, the budget director, or the congressman better understanding of what X million dollars allocated to program alternative A or B will actually buy in benefits. In government, budgeting is a political activity and the problem of choice or allocation ultimately remains one of values.

The decision-maker's values will also shape his intelligence activity, i.e., finding occasions for making decisions, and his design activity—how he structures alternatives for choice. Data must be structured or organized before they become meaningful. Predetermined data-structures can help, but the decision-maker himself must constantly synthesize knowledge in an interdisciplinary fashion. He must interpret, project, and interconnect fragmented information. The political decision-maker has a natural tendency to select and adapt information and to screen out that which is "politically undigestible."

In a decision-making environment where resources are relatively plentiful (i.e., where economic criteria for resource allocation are less relevant) and where the decision-maker has the analytical and information processing capabilities to structure in advance innumerable alternative solutions, the value perspective of the decision-maker will become increasingly important. With these reservations, information can still make an effective contribution to decision-making. If we are correct in our estimate that computer-based techniques such as systems analysis and simulation will afford decision-makers in the Executive and Congress much greater understanding of complex problems, such as those of our urban centers, then the gains may be substantial. As social problems appear more susceptible to rational solution, it should be easier to develop a political consensus to do so. As to the final judgment on values, the American political system will continue to specify the goals and objectives toward which political decision-makers must move.

2. *The political use and abuse of information.* It follows from the preceding remarks that information systems in government may be used to serve the political purposes of the political actors who have the resources to control them. Information may be processed with conscious policy or partisan biases. Both information and analysis may be abused in the furtherance of specific political objectives. Bargaining and compromise will remain a principal feature of the democratic process although they may involve different participants and a new language.

Decision-making in government cannot be abstracted from the political system within which the decision-maker operates. How then can one prevent the President or program-oriented bureau chief from consciously or unconsciously biasing an information system that Congress must use? Can the same information system in Congress serve both Democrats and Republicans?

The answer lies in two directions. First, major data sources of the Federal Government, with multiple users, could be kept as "neutral" as possible through statutory control, reinforced by regular checks by inspecting authorities such as the General Accounting Office. Second, specialized users including the President, the Congress, and the party leaderships within Congress could develop their own private information systems in parallel with the central data system and in accord with their own needs. Through this differentiation it should be possible to keep the policy and partisan biases of central governmental information systems under control and to recognize explicitly the use of competing information systems for some adversary situations.

3. *Additional cost factors.* The introduction of information systems will mean some new costs as well as increased capabilities. The obvious immediate cost is that of capital, both for hardware (the basic computational facility) and software (the development of programs appropriate to the specific user). We suggest that this economic cost factor will rapidly decline in the coming decade or two and be minimal by the end of the century. A second cost factor is the need for much more highly skilled personnel. As already noted, a new profession of "analysts" will be needed in government. However, the computer will not necessarily become more "distant" from the lay-user, including the congressman. The educational and skill levels of the general population and "familiarity" with computers should also rise. And more advanced computer technology and programming should lead to the development of some computers that can be operated with relatively low skills. The decision-maker who wants to use the full potential the computer of the future will offer will probably employ and work with specialized analyst staff.

Other "technical costs" must be anticipated in adapting information systems for government. These include: (a) a natural tendency towards greater reliance upon quantifiable data, (b) programming bias that may reduce the sensitivity of the system to new types of data and significant changes in the environment, and (c) the elimination of inputs—interpretations, opinions, and statements of self-interest—previously provided by intermediate level officials replaced by the information system. All of these tendencies suggest a new need for congressional oversight or review of the Executive. The computer improperly used could well lead to new rigidities in official behavior that would be inimicable to an open system of decision-making.

4. *The problem of final payoffs.* Anthony Downs, in a searching critique of the expectation of "urban-information-systems" enthusiasts, calls into question "the intuitively plausible but actually misleading assumption" that "better data in urban decision-making would have huge final payoffs, because . . . better information would reduce both the frequency and the magnitude of planning mistakes." Downs argues that three factors make it difficult to prove that better data will lead to more effective decisions: (a)

the extreme difficulty of measuring the effectiveness of decisions; (b) variances in measurable effects caused by factors other than data inputs; and (c) the problem of whose values to use in calculating payoffs. He concludes that many urban decision-makers will be reluctant to make large initial investments for what will "probably seem like only marginal gains in final payoffs."

The basic point is well taken—one must go beyond the technical payoffs of improved information in assessing the value of information systems in government. I am more optimistic than Downs, however, on three points: (a) the assumption that capital costs to users will steadily decline; (b) the possibility for controlled simulation of systems behavior; and (c) the cumulative effect of marginal gains over time.

5. *The power consequences of information systems.* Information systems have important power payoffs as well as technical payoffs. Their introduction involves relative power shifts among political actors. These power consequences of information systems greatly influence the form in which they are adopted and how they are used. For some, the threatened loss of power may be sufficient to lead to active resistance to the new systems.

Acknowledging these reservations, I am still persuaded that the combined and cumulative impact of the new information technology suggests some radical changes in the environment of governmental decision-making. The shift will be from a negative to a positive orientation toward problem solving. The incrementalist's view that "public policy problems are too complex to be well understood, too complex to be mastered" and that decision makers develop "a strategy to cope with problems, not to solve them" will be replaced with a more optimistic perspective. The decision-maker will be "on-top" of information. He will have analytical techniques and information processing capabilities that will give him new understanding of governmental and social systems and with this a sense that he can manipulate and control them. Where the incrementalists have rejected "the impossible prescription to be comprehensive" in favor of a more manageable strategy of "outright neglect," the new information technology will enable the decision-maker to develop a *more rational* and *aggressive* strategy of problem-solving. The distinction is fundamental.

CHALLENGE TO SEPARATION OF POWERS

While the application of information technology in government will have its greatest immediate political impact *within* the Executive (with important secondary consequences, as we have observed for the Congress), the longer term consequences of better information in government raise fundamental questions about the American system of separated powers. Congress and legislative bodies generally need *not* lose power to the Executive. The potential advance in information technology is theoretically equally accessible to *both* the President and Congress, with *Congress* standing to enhance its powers versus the Executive considerably. The central dilemma of American politics—how power should be organized in the American political system—will be faced once again, but this time in its starkest form.

The policy or control functions of the President and Congress will become less distinguishable as both develop the capacity to ask program questions and undertake analyses of data from the same generalized information systems or specially developed systems for their own use. One restraint on a fully developed congressional policy role in the past has been the unwillingness of Congress to build a parallel legislative staff bureaucracy. As a result, Congress has often had to "second guess" the Executive without the information to back its hunches. Now, as technology generalizes the availability of information, Congress can tap into Executive-based information systems, establish quality controls, and develop more limited information systems for its own specific requirements. Program budgeting suggests the potential leverage that may accrue to Congress. The Executive bureaucracy, under the direction of the President and Budget Bureau, will structure program choices and undertake analysis of various alternatives. Congress will be presented with a program budget which may easily be rearranged by traditional line-item categories or into other desired formats. Congress will review program choices, evaluate analyses with its own analyst staff, and make it own determination of priorities. The process of making choices and analyses more explicit enables Congress to participate much more intelligently and vigorously, with a *limited* staff, in the decision-making process. In fact, there may even be a danger of too vigorous participation.

Will the President permit Congress to have access to the information resources and analyses of the Executive branch? Insofar as analyses are used, he will have to justify his program requests. Other background analyses and alternatives may not be presented to Congress. In such case, these would have to be duplicated by congressional analysts. (Congress would want the capacity to go beyond alternatives presented by the Executive in any event.) In fact, the effectiveness of implementation of the right of Congress to information will be a critical test in the future of the degree of congressional autonomy within a system of separated powers.

We can only speculate on the new definition of the separation of powers that will evolve. Distinctive presidential and congressional biases may soon develop in the decision-making process. We might expect the Executive to overemphasize the benefits of rationalization in program formulation and administration, to overvalue economic and technical criteria of performance. If, as some observers anticipate, the new information technology leads to "an increasing separation between operating missions, life-styles, and social roles for those institutions and individuals involved in rationalized activities compared to those involved in nonrationalized ones," Congress, representative of a society embracing both life-styles, would inherit the difficult task of mediating the impact of the former on the latter and restraining the tendency toward irrational and frustrated response. Congress would add elements of "political rationality," considerations of human costs and benefits to the decision-making process.

In this context, one rationale for the separation of powers—"systemic dissonance"—takes on new significance. We have suggested through this discussion that the revolution in information technology represents an almost immeasurable potential increase in man's knowledge—especially in his understanding of and ability to control his environment. The intelligent use of that knowledge and the power it confers is an awesome responsibility. In a political democracy it involves the democratic consideration of emerging technological possibility and consequence. The multiple perspective of the American system, the numerous points of access for developing, testing, and advancing ideas may ultimately prove to be among the greatest assets of American democracy in the future.

SPYROS P. SKOURAS: 75TH JUBILEE DINNER

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. BRADEMAS. Mr. Speaker, one of the most extraordinary living Americans is Spyros P. Skouras, whom I have had the privilege of knowing as a friend for a number of years. This year marks the retirement of Mr. Skouras after over 50 years of activity in the American film industry.

Not only has Spyros P. Skouras carved a name for himself as a pioneer of American motion pictures, but he has also given generously of his time, his extraordinary energies and his resources to the support of a wide variety of philanthropic activities, particularly those identified with his native Greece.

Spyros P. Skouras came to the United States from Greece as a young man and rose to a position of eminence as a business and civic leader in the classic American tradition.

Mr. Speaker, earlier this year I had the honor of being present at the Spyros P. Skouras 75th Jubilee Dinner held in New York City on January 28, 1969.

Outstanding persons from every walk of life, business, politics, the motion picture industry, education, and religion—were present to do honor to Mr. Skouras and to raise funds to build the Skouras Center for the Creative Arts at an institution very dear to Mr. Skouras' heart—Hellenic College in Boston.

Honorary chairman of the dinner was Mr. John J. McCloy and the honorary committee cochairmen were the following distinguished Americans:

Hon. SPIRO T. AGNEW, Hon. Nelson A. Rockefeller, Hon. William P. Rogers, Hon. John A. Volpe, Archbishop Iakovos, Rev. Dr. Leonidas Contos, Nicholas B. Macris, and Hon. John C. Pappas.

Mr. Speaker, I know that everyone present at the dinner to which I refer was moved by the eloquent remarks of the guest of honor on that occasion, and I insert at this point in the RECORD the text of the address by Mr. Skouras at his 75th jubilee dinner:

ADDRESS OF SPYROS D. SKOURAS AT THE 75TH JUBILEE DINNER, JANUARY 28, 1969

Mr. McCloy; Mr. Vice-President; Governor Rockefeller; Your Eminence, Archbishop Iakovos; Your Excellency, Archbishop Cooke; reverend clergy; Senator Javits; Senator Goodell; distinguished guests, ladies and gentlemen, your presence here tonight—and the kind words that have been spoken—have caused my heart to burst with joy and gratitude.

Just as we confess our inmost thoughts to our God—when we worship—listing them as carefully as we can—so I would like to list my reflections—very briefly—a kind of litany of thanksgiving.

AN IMMIGRANT'S LITANY OF THANKSGIVING

For the hand that led my brothers, Charles and George, and me to this land—I give thanks. Some of you in this room—not all, but some—will know what America has meant—and means—to an immigrant. The common words—*country, flag, citizenship*—have meanings and depth that cannot be expressed—but only *felt*.

Perhaps Plato most nearly expressed our feelings when he said: More honorable and righteous and sacred among the gods and wise men, above and beyond father and mother and all other ancestors—is the country . . . "Patrida."

For my noble parents, noble though poor, noble though unlettered, noble though humble—I give thanks. I can still hear my mother's voice through the years saying: "Spyros, my son—patience, perseverance—and humility." These words have been my guides throughout my life.

For two brothers—my adelphi—such as few men are blessed with—and a relationship that was truly legendary—I give thanks. When each in his turn died, a part of myself was lost. *Their* memorial consists in the many friends they earned—many of whom are here tonight—honoring *their* memory as they pay me honor.

A HEARTFELT THANKS TO AMERICA

For the generous and warm-hearted people of St. Louis, Missouri—who welcomed us to this land—and embraced us in their city—I have a special feeling. It was there that my brothers and I first experienced America's love of democracy and were given the opportunities she offers to all who come to this wonderful land.

It was there that we received first-hand knowledge of the lofty ideals and ideas of the American people—who were always ready to aid the under-privileged people of the world. In the history of mankind, no other nation has ever so devotedly and unselfishly served people everywhere as the United States has done—and is still doing. To this country, I give my heartfelt thanks.

PRAISE OF THE FILM INDUSTRY

For the high privilege of serving in one of the great guilds of our age, the film industry—I give thanks, not merely an industry, it is an art—not an art only—but an instrument of immense potential—to civilize and instruct—to elevate and refine—as well as to entertain.

To the people of 20th Century Fox—the New York office, the studio—to all those who are a part of that great company throughout the United States and in foreign areas—for their kindness and support over so many years—for their loyalty and devotion to the best interests of the company—I will be forever grateful.

DEEP APPRECIATION FOR FAMILY

For my beloved wife, Saroula—I give thanks—although she would not marry me until I had 45 theaters! We have experienced many happy moments—and some tragedies in our life—and we have shared them both—together.

For my four dear children—Daphne, Spyros, Diana, and Plato—and our 14 lovely grandchildren—I give thanks.

We are grateful to God for sending back to us our eldest grandson—George Fowler—who, after being wounded twice in Vietnam—is home again.

My wife—my children—my grandchildren—share in my happiness this evening—as they have throughout all the years.

THE BLESSINGS OF FRIENDSHIP

I give thanks for the blessing of friendship—for his eminence, Archbishop Iakovos, who enjoys my total respect as a spiritual father.

I owe, too, a profound debt to a giant of a man, a prophetic and holy figure—His Holiness, Patriarch Athenagoras—who this week marks twenty years as ecumenical patriarch in Istanbul—who is one of the two prime movers of church unity. The loving, spiritual guidance he gave me, showing the riches of my orthodox faith, have put me forever in his debt.

My thanks go, too, to the memory of the late Cardinal Spellman, who aided me in many ways and whose friendship I was proud to have. For many years we worked together for the Alfred E. Smith Memorial—on which I'm one of the trustees.

And thanks, too, to our beloved Archbishop of New York, His Excellency Terence J. Cooke, whom I have known for many years.

I think too of the late Rabbi Stephen Wise with whom I worked on many humanitarian causes, and of Rabbi Julius Mark with whom I have served on many committees.

To my dear friend, Senator Jacob Javits, I say thank you for all the work he does to make life easier for the unfortunates and for his continuous fight for the principles of democracy—and for the efforts he has put in on the Javits Committee of the Greek-Turkish Economic Cooperation Project.

And to our junior Senator from New York, Charles Goodell, I thank you for a new and what I am sure will be a long friendship.

I am honored by the friendship of our Governor, Nelson Rockefeller, and his charming Happy, who honors us here tonight by her presence. For the Governor's thoughtfulness, and for his generosity to Hellenic College, I will be forever grateful.

To Mr. Jack McCloy—for being the chairman of this drive to raise funds for Hellenic College, I am more thankful than I can say.

And to John Pappas, who conceived this event, and who has devoted so much of his time to it and to Hellenic College—and to his brother, my friend, Tom—a heartfelt thanks.

GRATITUDE WHO WORKED TO MAKE THE EVENING SUCCESSFUL

And to some of the others who have worked so hard to make this affair such a success:

His grace, Bishop Silas—Father Leonard Contos, President of Hellenic College—Father Basil Gregory of the Archdiocese.

Dore Schary, the great motion picture and theatrical producer, and the President of the Anti-Defamation League.

Eliot Hyman—Chairman of the Board of Warner Bros. 7 Arts.

Si Fabian—President of Fabian Theaters.

Harry Brandt—President of Brandt Theaters.

Louis Nizer—Attorney and friend for many years.

General James Van Fleet—who will always have a special place in the hearts of all Americans—especially those of Greek origin.

Don Miller of the Chase Manhattan Bank.

Joe Barkan of Prudential Lines and my colleagues at the United Greek Orthodox Charities—Nicholas Macris, Theodore Allis and Michael Sotirhos.

To all—and the many others—my heartfelt thanks.

A FINAL WORD

Finally, I give thanks to all of you who have honored me by coming here tonight. I have been involved with many projects—which have been a source of deep satisfaction to me—but this one is the nearest and dearest to my heart—for it symbolizes all the principles which I cherish.

I am happy because I consider the center dedicated tonight to be in the *Skouras* name—not in my name alone.

It will train the artists and craftsmen to develop the creative arts to their best potential.

My friends, this gives me satisfaction beyond any personal honor. You are helping fulfill my life's dream—to serve my industry, my country and humanity.

Thank you.

SOVIET NAVAL BUILDUP IN THE MEDITERRANEAN—PART II

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. ASHBROOK. Mr. Speaker, on March 18 I inserted in the RECORD the first part of the four-part series on the Soviet naval buildup in the Mediterranean which appeared in the Chicago Tribune and was written by Michael McGuire of the Chicago Tribune Press Service. For some time now, military experts here in the United States and in the NATO nations have expressed concern about the Soviets "peaceful" aims in this area. Distasteful though it may be, the Soviet goal of world domination is truly the motivating force behind such programs as the Mediterranean expansion. We can scan official Soviet statements to find reassurance that they are sincerely searching for peace, but one look at situations such as the present one in the Mediterranean tells the real story. One is reminded of the bank robber who extols the merits of the free enterprise system while the cashier hands him the money. Needless to say, the barrel of the bandit's gun is a thousand times more eloquent and self-explanatory than any statement he might make concerning the desirability of peaceful competition.

I place the article, "Assess Political Impact of Russian Fleet," by Michael McGuire, from the Chicago Tribune of March 17, 1969, in the RECORD at this point:

ASSESS POLITICAL IMPACT

(By Michael McGuire)

NAPLES, March 16.—Psychological and political effects of the Russian naval fleet in the Mediterranean deliver a more important impact in Europe and the middle east than does the military potential, Adm. Horatio Rivero, commander of NATO forces in south Europe, said here yesterday.

"Its presence has both political and military impact," said Rivero in an interview at his NATO headquarters. "I would say that in peacetime, however, the political and psychological aspects are the most important."

BELIEVES IT'S MANAGEABLE

"As long as we have the air superiority and total naval superiority that we have, I think this [military] threat is manageable," Rivero said. "I have more concern about the submarine threat which doesn't get publicity because you don't see submarines, you see surface ships. On the other hand, the submarines have very little political impact, but they have military impact."

Approximately 35 Russian naval vessels, including nine submarines, are in the Mediterranean at present. The presence of Russian warships in the Mediterranean started getting world attention when their numbers increased sharply after the 1967 Arab-Israeli war.

Last fall, the number of soviet naval vessels reached an all-time high of about 60, including 7 to 10 submarines, following the Czechoslovakia crisis. Later, the number gradually diminished to its present status.

COUNTERED BY 6TH FLEET

Countering the soviets in the Mediterranean are approximately 50 ships, 25,000 men, and 200 aircraft of the 6th fleet. Augmenting the 6th fleet forces are the navies of allied nations ringing the Mediterranean, which American naval authorities here said are improving constantly.

Military strategists have said the soviet surface vessels in time of war most likely would be obliterated quickly, in part because the Russians lack the air power which would allow those ships to survive. Also, it would be difficult for the Russians to deploy a large amphibious force.

First, they would have to bring such a force thru the Turkish straits, which could speedily be plugged. Second, a very large buildup of amphibious forces would still require them to have the air power in the area that they may not be able to muster.

HAVE CREATED CHANGE

In a psychological and political sense, the Russians already have created a change in the status quo thru their presence.

When the Israeli destroyer Elath was attacked by missiles fired from an Egyptian patrol boat in June, 1967, at Port Said harbor, there were Russian ships in the same harbor. Their presence prevented the Israelis from taking counter-action against the patrol boat unit if they had wanted to do so because it would have created a direct confrontation with the soviet forces.

"The mere presence of one soviet ship in a harbor causes another nation to make an evaluation of whether any move toward that harbor could cause retaliation by the soviets; thus you can see the political effect," said a senior naval officer attached to the American naval staff in Naples.

EXPECT NO U.S. ACTION

The Institute of Strategic Studies in London reported that the Red fleet rules out a repeat performance of the American landing in Lebanon in 1958 and makes unlikely American aid to Israel in case of a new Arab-Israeli clash. Soviet ships stationed in the vicinity might be a cause of confrontation.

From a psychological aspect, nations ringing the Mediterranean may have had little fear of the Russians when evidence of their power was not present.

If one of the NATO nations in the Mediterranean thought the Russian force was getting so strong, its leaders might think NATO forces would be unable to provide adequate defense. Out of fear, they might begin making friendly overtures with the soviets, resulting in increased trade and political submission.

SEE NEW KREMLIN POLICY

Some military experts predict the Russians' Mediterranean fleet is only the beginning of a new Kremlin policy aimed at challenging American naval supremacy thruout the world, a supremacy that forced the Kremlin to back down after sending missiles to Cuba and to accept Egypt's defeat by Israel in June, 1967.

"The Russians have learned that naval forces can be used as a form of diplomacy and for political pressure," Rivero said.

Many experts here believe there is a strong military basis to the Russian diplomatic interest in middle east. The Russians want the Suez canal to be open, a need that undoubtedly will not be realized so long as Israel holds Sinai.

"The Russians are highly interested in the Suez canal, their only way of passing thru to the Indian ocean, receiving supplies and reinforcements, and eventually linking up with the fleet they have at present operating in the Persian gulf," Rivero said.

"Probably, in this case, the political and diplomatic factors are largely the consequence of a military requirement," said Rivero, who is responsible for the NATO defense of Italy, Greece, and Turkey.

Also of concern to American and NATO naval forces are the auxiliary fleets [those of Yugoslavia, Syria, Egypt, and Algeria] equipped with a missile capability. Such vessels are called Osa and Komar class boats and are a speedier and more sophisticated version of the American torpedo [PT] boat of World War II.

"I believe that these two classes of vessel represent a real threat to our lines of communication," said Rivero. "This would be all the more true if Syria, Egypt, and Algeria were seriously involved against our countries.

"However," said Rivero, "these vessels' missiles have a very limited range whereby, if the vessels operate far from convoys and escorts ships, it is very easy to keep a check on them, especially by means of aerial observation, which is always intense in our units' operational area. The most important thing is never to be taken by surprise."

ALLIES WATCHED FROM AIR

Another naval officer said, however, that an Osa and Komar-type vessel could approach an allied naval warship by moving amid one of hundreds of small fishing fleets in the sea. Tho naval authorities assert their ships would operate beyond the range of the Osa and Komar boats, some officers contend the boats might be able to obtain fuel, as well as cover, from the fishing boats with which it traveled.

Steady surveillance activity by Egyptians flying Russian manufactured reconnaissance aircraft also causes concern among the allied navies.

"These planes are equipped with highly sophisticated gear," said Rivero. "Whenever there is a NATO or 6th fleet exercise, they keep watch."

Asked if Russian crews manned the planes, Rivero said:

"I can say that you can hypothesize that due to the very highly sophisticated equipment in those aircraft that at least some of the crews probably are soviet, but you can't prove it."

Tho the Russians use four Mediterranean ports (Algiers, Alexandria, Port Said, and Latakia in Syria) extensively, and one port (Tartus in Syria) to a lesser degree for repair and resupply, they depend mainly on anchorages, areas where the sea is more than 100 feet deep, across the Mediterranean.

RUSS KEEP INDEPENDENT

While tied in anchorages under relatively calm circumstances, the crews can carry out repair, load supplies, and rest. NATO authorities believe the Russian admiralty makes use of these anchorages in order to reduce to a minimum its having to depend on the good will of any other country.

The use of anchorages are said to be a great inconvenience in bad weather and rough seas, and can be a factor in limiting higher crew morale thru offering little exercise and eliminating the purchase of fresh foods in shore markets.

LACK OF BASES A PROBLEM

Among the anchorages most frequently used by the soviets are the international waters near the coast of North Africa off Alboran, Hammamot, and the Island of La Galite; one off Greece at Kithira; and one between Cyprus and the Levantine coast. An area east of Malta, known as Hurd bank, also is frequently used.

The lack of bases they can call their own poses a serious problem for the soviets. Many Europeans and American naval commanders are concerned the Russians may try to develop such a base at Mirs-el-Kebir, the large naval facility at Oran, Algeria, which was turned over to that nation by the French in 1967 after they withdrew from NATO.

"Bases are not essential for a fleet operating far from its home ports, but without doubt they can greatly facilitate operations," said Rivero. "The soviets cannot do important maintenance in the anchorages which they have in the Mediterranean area. They can do more in ports such as Port Said and Alexandria, where their ships have free access.

USE PORTS AS THEIR OWN

"But the importance of a port also depends on the equipment existing and the supplies stored there," he said. "In these two Egyptian ports there are also docks which enable the soviets to carry out work on their ships' hulls. This is of course less than what the soviets could do at home.

In any case, the soviets calmly use Port Said and Alexandria as if they were their permanent bases. It does not much matter whether these bases belong to Egypt or to the Soviet Union, because the Egyptians give them a free hand. On the other hand, the soviets do no have this possibility in the western Mediterranean.

Asked if he thought the presence of the soviets at Mers-el-Kebir would be dangerous for the defense of the Mediterranean, Rivero replied:

"I don't think it would be any more dangerous whether they were there or not. The great advantage for them would be that of being able to effect all their maintenance work and supplies in the western part of the Mediterranean, without being obliged to return to the eastern part each time. However, all this would not appreciably alter the military operation capability of the soviet fleet."

NATIONAL WILDLIFE FEDERATION

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. DINGELL. Mr. Speaker, our friend and colleague, Congressman JOHN L. OTTINGER, on March 1, 1969, made an address to the 33d annual meeting of the National Wildlife Federation in Washington, D.C. In his considered and thoughtful address, the gentleman from New York called for the creation of a Federal "environmental ombudsman" to protect our natural resources from damage and destruction by reason of actions of Federal departments and agencies.

So that my colleagues will have an opportunity to be familiar with Congressman OTTINGER'S views on this matter, I include the text of his address at this point in the CONGRESSIONAL RECORD:

ADDRESS OF THE HON. RICHARD L. OTTINGER, NATIONAL WILDLIFE FEDERATION—33D ANNUAL MEETING, STATLER-HILTON HOTEL, WASHINGTON, D.C., SATURDAY, MARCH 1, 1969

I am indeed honored to have been invited to participate in this 33d annual meeting of the National Wildlife Federation.

This is one of the really outstanding events of the year for all who are concerned with conservation of our dwindling natural resources and preservation of our threatened environment.

But this annual meeting has a particular and personal significance for me. First, because of the Federation's decision to honor the Scenic Hudson Preservation Conference as the Conservation Organization of the year. And second, because—by that action and by the agenda for this general session we are opening here this morning—the Federation is taking the lead in expanding the horizons of traditional concepts of conservation to include resource and environmental problems of the urban-suburban complex.

The honor to be paid to Scenic Hudson tonight is particularly gratifying to those of us who have been identified with that organization's long, and often seemingly hopeless, battle to save Storm King Mountain and the incomparable assets of the Hudson Gorge and Highlands.

For many years Scenic Hudson stood alone in asserting that a natural asset has a value over and above that which can be measured in terms of development potential. The Conference fought for the principle that this value is enhanced rather than diminished by the fact that the asset is a part of a growing urban complex.

Whatever the final outcome of the Storm King fight—and I am pleased to note that the odds have changed considerably over the past six years—Scenic Hudson will have made an important contribution to the national conservation effort and thereby to the quality of life in this country.

Through the decision of the Second Circuit Court, Scenic Hudson has established that the concerned public has a defendable interest in the disposition of a natural resource—and that government agencies have an affirmative responsibility to protect that interest.

Equally important, through its patient, persistent educational efforts, Scenic Hudson has created a new public awareness of importance of environmental factors in every action that we propose to take to meet the needs of our growing urban-suburban complex.

By honoring Scenic Hudson for these achievements, the National Wildlife Federation has helped to focus the attention of the conservation community on its vital problem and, as I am sure Secretary Hickel could tell you, that community has come to represent a very potent force in our society.

The environmental pollution generated by urbanization has a very direct effect upon the natural resources that have been the traditional objects of conservation concern. I doubt if there is any park, refuge or wildlife preserve that has not felt the impact in some way. It may come in a direct way from the growing volume of water pollution and air pollution. It may come from the effects of highway proposals, powerlines, industrial encroachment or just plain people pollution.

If we need justification for turning our attention to the wise conservation of urban resources, it is very simply stated: survival.

We have to face the fact now that we live in a finite environment. Perhaps there was a time when we had so much elbow room that we could ignore the limits of our resources. But now, our growing population and the tremendous technological development that is necessary to support it, are demanding so much of our environment that the end is, if not in sight, at least in mind.

Not only is our environmental system finite, it is also complex and its factors are closely inter-related. Everything we do can have a significant and unexpected impact on crucial environmental factors—often an adverse impact.

We hear a lot these days about the dangers of the "finger on the nuclear trigger" and its potential for the cataclysmic destruction of life on this planet. It is a very real danger and one that deserves a lot of attention. But I would point out that a nuclear catastrophe requires a positive, deliberate action—a decision to destroy.

Today, man has his finger on an "environmental trigger" which is, in the long run, no less real, no less dangerous to our survival than the nuclear trigger. And the environmental trigger can be pulled by accident, by indifference, by merely continuing to do the things we have always done in the same careless way. Each resource we squander, each infusion of pollution that we dump into our environment brings the apocalyptic day of reckoning closer.

Take a simple thing like transportation. One of the keys to making one of these vast new urban complexes work is the development of an efficient transportation system. Why should this be a conservation concern? Because our traditional approach to transportation, the highway, is rapidly assuming major proportions as an environmental threat.

We are caught in a vicious cycle. The more highways we build, the more we rely on cars, trucks and buses. The more we rely on cars, trucks and buses, the more highways we need to keep pace with our growing population.

In many areas, the citizenry already finds itself locked in mortal combat with this highway monster that would disrupt and even destroy their homes and communities.

In our cities the public health is seriously threatened by pollution from the internal combustion engine which accounts for two-thirds of the poison that we dump in our air. Even the most optimistic view of the effectiveness of abatement devices indicates that we would barely manage to maintain this unhealthy status quo if we stopped growing right now.

These are obvious and quite serious problems, but by no means the only ones.

Highways, for example, have a real, if unheralded, impact on water resources. Not just in run-off pollution but through actual curtailment of supply.

An important source of fresh water is the aquifer, the underground supply that is replenished largely by rain seeping into the ground. However, a growing amount of rain never gets there. It falls on highways, pavements or other run-off areas, is collected in sewers and carried directly into streams and rivers to be lost forever in the oceans. Major U.S. highways alone are estimated to cost us well over 335 *billion* gallons of water a year and the highways that are to be built by the year 2000 will cost another 1.5 *trillion* a year.

Viewed in light of the Water Resources Council's report to the President, this highway issue takes on new long-range significance. The Council warned that by the year 2010 the demand for fresh water will match the total available supply. We will then be able to expand our resources only by desalination, by a massive conservation effort, and by recycling and reuse.

The alternative to highway madness is the development of clean, fast, efficient mass transit. Yet today under pressure from the highway lobby we allocate $2.5 billion to urban highways and only 7 per cent as much, $175 million, to mass transit.

The lengths to which the modern highwaymen will go just to keep building are amazing and sometimes ridiculous. In some cities we are building highways over highways and in my own Westchester County the state highwaymen, having run out of space on land, now propose to pave a substantial stretch of the Hudson River.

Perhaps the ultimate absurdity was reported in a news item in the New York Times three months ago, which reads:

"Trenton—December 13—New Jersey's Department of Transportation is constructing an inter-state highway link that could wind up under water if the State's Department of Conservation and Economic Development goes ahead with its present plans to build a dam on the Passaic River . . .

"A spokesman for the transportation Department said its engineers had completed the designs for the highway two years ago. Conservation officials countered that plans for the development of the Passaic Valley had been under consideration for 35 years . . .

"(The) Commissioner of Transportation said that he was not completely familiar with the plans for the reservoir but it seems there will be a substantial impact on present and planned highway construction especially on Routes 78, 80 and 280.

"(The) Conservation Commissioner . . . could not be reached for comment."

Isn't that grand?

For the first time, it's the dam-builders versus the highwaymen, and the mind boggles at the consequences.

Fish ladders for commuters?

Spillways for the evening rush hour?

In the words of the late Henry Ford, "Let's you and him go fight."

Make no mistake about it. The highwaymen are no more than a modern version of the ruthless exploiters that would already have ravaged our forests and stripped our land in the name of economic progress if they had not been resisted by earlier conservationists.

Today we fight the same battle, this time in a complex new urban environment and for even higher stakes.

Of course, highways are not the only, nor even the worst, threat to our urban environment. Power plants, transmission lines, ill-considered land-use planning, industrial development, and hundreds of other actions, all pose challenges to the quality of environment that are at least equally serious.

But highways are illuminating in that they do provide a good illustration of the way thoughtless development that seems merely irritating can eventually result in quite important environmental conflicts.

Even the very actions we take to protect our environment can themselves be perverted to environmental threats in the new, highly complex, urban experience.

Take waste treatment for example.

The main thrust of our waste treatment effort has been to reduce raw sewage to a level of purity such that it could be accommodated by the natural cleansing actions of our waterways. The process produces water that is rich in nutrients but deficient in the oxygen that is essential to keeping our waterways alive.

The cumulative effect of this effluent could well be to "kill" our rivers and eventually to turn them into noxious algal breeding grounds.

The simple fact of the matter is that the demands of new urban-oriented way of life are so great that we are continually embarking on small projects which taken in themselves have only minimal effect, but which taken in the whole add up to major environmental assaults.

It's interesting how each example of the issues of new conservation reveals significant parallels with the experience of the traditional conservation.

The key to the success of the earlier effort was convincing the general public that our resources were not limitless and that only through the wise husbanding of those left in our stewardship could we assure abundance for the future. Step by painful step, a legal structure was enacted to protect timber, land, recreation and scenic assets, wildlife and the other resources that could be identified as finite and threatened.

Considering the so-called frontier psychology of Americans which viewed such resources as pouring forth from a never ending horn of plenty for the express purpose of exploitation and development by man, this was no mean achievement. Can you imagine trying to persuade a frontiersman of the early 19th Century that he had to practice selective harvesting of resources or leave some area forever wild?

We are in much the same position today with regard to the developers and the essentials of our urban environment. Obviously we face a tremendous educational effort. And, in my opinion, our most important priority is to create a new legal structure that can provide the new protections that we need. Unfortunately, this is easier said than done.

In the first place, there is a great need for more knowledge and better dissemination of knowledge about the new threats to our environment that are being discovered by the scientific community. To achieve this end I recently joined with 90 Congressmen and 97 leading environmental scientists in the formation of an Ad Hoc Committee on the Environment.

It is my hope that this committee will give the scientific community the opportunity to evaluate each new legislative proposal and to alert lawmakers to possible adverse environmental consequences. The Committee will also provide an effective vehicle through which lawmakers can be informed of environmental issues which require legislative action.

Already this program has made significant contributions. As a result of the advice from the scientific community Senator Kennedy, Congressman Moss and I recently introduced legislation proposing a major revision of the Federal Power Act which we believe proposes the first effective and comprehensive environmental protections in the important area of power generation and transmission.

One provision of this new legislation sets forth a new concept in government. It creates a National Council on the Environment to act as "devils advocate" on behalf of natural resources in Federal Power Commission proceedings. You might call it an "environ-

mental ombudsman." The Council consists of five representatives of the scientific and conservation communities appointed by the President with the advice and consent of the Senate and will be wholly independent of the Federal Power Commission.

It will have its own expert staff and independent funding. It will have the authority to suspend Power Commission actions if it finds they would have an adverse affect on the environment. If, in the end, it is overruled by the Commission it would have standing in court to challenge the Commission's decision.

As envisaged in the existing legislative proposal, this Council would only have authority over projects covered under the Federal Power Act. However, I propose to introduce legislation next week which will expand the power of the Council to cover the procedures of *all* Federal agencies insofar as they can effect the environment.

As you are all aware, there are a number of proposals before Congress now to create Councils to advise or consult on environmental problems. These are simply not adequate to meet the challenge. If such a Council is to make an effective contribution it must have meaningful enforcement powers.

I would point out for example, that a Council with such powers could well have prevented the current oil disaster off Santa Barbara, California.

As you know, the proposals for drilling in this area were opposed by many informed conservation and scientific experts. Interior Secretary Stewart Udall approved the licenses in spite of this opposition and against the advice of several of his Department's own top officials. In doing so, he bowed to pressure from the oil companies because they represent an effective constituency which can influence Interior's actions. The environment as yet has no equally powerful constituency to represent its interests.

The Interior Department, of course, is not alone in this problem. Practically every agency of the Government has a constituency that dominates its deliberations and actions. For the Federal Power Commission, it is private utilities. The Federal Highway Administration has the highway lobby: the Federal Aviation Administration, the airline industry. And so on down the list.

Each agency has a tendency to become the captive of the industry that it is to regulate.

To meet this problem an intervenor is required whose constitency is the environment and our natural resources and whose sole concern is their protection and enhancement.

The creation of a National Council on the Environment with the power to stay disputed Federal actions and to challenge adverse rulings in the courts would be an important advance to this goal.

Beyond such an intervenor, however, what is needed, in my opinion, is a broad new mandate setting the protection of environmental quality as a matter of national policy much as we set the protection of individual rights over and above all the rest of our legal structure in adopting the Bill of Rights as amendments to the Constitution.

To achieve this further goal, I have proposed a new constitutional amendment which has come to be known as the "Conservation Bill of Rights." Personally, I think it would be more accurately described as the "Environmental Bill of Rights." But by whatever name it is called, I believe that such a broad statement of national policy is an essential element needed to meet the environmental challenge of the future.

The proposal is not complicated. It merely recognizes the established and undeniable national interest in preserving and protecting the essential elements of our environment. It defines this interest as an individual "right" no less important than our rights to free speech, free assembly and due process. By declaring this as national policy we are providing the most effective protection within our power. Each law, each governmental action would be subject to test against this standard: does it diminish the common interest in a livable environment? Any action which would endanger the individual interest in such essentials as breathable air, drinkable water or any other natural resource would be against national policy and subject to the same legal challenge as any abridgement of our other constitutional rights.

This general session today offers an exciting and promising new departure. We will have an opportunity to learn in greater detail of the specific challenges facing the urban environment. Our authority will be no less than Governor Theodore McKeldin who will draw upon his extensive experience first as mayor of one of the nation's leading cities and then as governor of one of our fastest growing states.

Then one of our foremost scientific pollsters, Dr. George Gallup, will give us the invaluable guidance in planning our course of action for the future by revealing a scientific measurement of public attitudes towards environmental problems. I am not privy for the results of this study but from polls I have had taken in my own Congressional District, I feel sure that you will be both amazed and heartened at the extent of the public demand for effective action.

The noted lecturer and writer, J. Lewis Powell, and air pollution expert, Dr. John Middleton, will give us an idea of what we must do to keep abreast of the new demands of our environment in this changing world. I am convinced that each person will leave this program with a renewed sense of the urgency of the challenge of the new conservation.

It is none too soon.

One of our leading biologists has recently reminded us that of all the forms of life that existed on this earth 99 per cent are now extinct and—to take literary license with the imperatives evolutionary theory—they were all *trying* to survive.

Man alone of all the species has the capacity to exercise control over his environment. Yet, as Dr. Ernst Mayer, director of the Harvard Museum of Comparative Zoology recently noted, "almost everything we do is harmful to the species and works against our survival."

Whether we pull the environmental trigger; whether we follow the well-traveled road to extinction or blaze a new trail to a better world through the enhancement and preservation of our great environmental assets is entirely up to us.

Thank you.

"BLOCKBUSTING" IN BALTIMORE

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. FRIEDEL. Mr. Speaker, the great majority of Americans have either welcomed or peacefully accepted the movement of Negroes toward full enjoyment of equal rights. To better secure and protect these rights the last Congress passed additional legislation known as the Civil Rights Act of 1968, which includes a new Federal open housing law.

Among the many provisions of the new act of Congress is one designed to eliminate so-called "blockbusting" practices which make it illegal for anyone "for profit to induce or attempt to induce, any person to sell or rent any dwelling by representations regarding the entry, or prospective entry into a neighborhood of person or persons of a particular race, color, religion, or national origin."

In this connection, the Baltimore Sun recently carried a very illuminating and interesting article entitled, "Blockbusting in Baltimore: Less Blatant and Rapacious," written by a gifted member of the Sun of Baltimore staff, Douglas Connah, Jr. This article is based on a paper he had presented at a seminar at the Law School of the University of Maryland.

Believing this article to be of such importance and interest to my colleagues as well as the general public, I, under unanimous consent, would like it to be reprinted in the CONGRESSIONAL RECORD. The article is as follows:

BLOCKBUSTING IN BALTIMORE: LESS BLATANT AND RAPACIOUS—THE OLD PHENOMENON IS BEGINNING TO APPEAR IN SOME SUBURBS AS WELL

(By Douglas Connah, Jr.)

Between April, 1965, and July, 1966, a well-known Baltimore real estate speculator bought 25 row houses from white people along two blocks of the Alameda south of 33d street and sold or rented them to Negroes. Typical among the houses was one that was bought for $6,500 and sold two months later for $11,950.

In Baltimore county, during a six-month period in 1968, eight single-family houses were sold to Negroes in a single block of a once all-white subdivision off Liberty road.

Residents of some parts of Northwood have recently begun to notice speculators expressing renewed interest in their homes. This follows a decision by the state's attorney's office not to prosecute a speculator for admittedly breaking the city's anti-blockbusting ordinance.

RAPID TURNOVER

These are all examples of a common Baltimore phenomenon—the panic flight of white families and creation of Negro ghettos by the systematic sale of homes to Negroes only, with the encouragement of the real estate community, once the first Negro has moved into a neighborhood.

This is called blockbusting, using the term broadly. Ten years ago, a blatant, nakedly rapacious form of blockbusting flourished here and caused rapid neighborhood turnover until laws were enacted to curb it. Although this open phase of the practice seems to have passed its peak, a more patient, subtle form continues to drive out the whites, more slowly, but at a tidy profit, undisturbed by the law or real estate ethics.

Even today, when a Negro family moves in next door or across the street, Baltimoreans tend to think of the block as "broken," and real estate people regard it as fair game for stepped-up activity.

Stuffed with poor people

With the city's Negro population expanding steadily since World War II, the process of neighborhood change, and the deterioration that has often accompanied it, has tended to develop a life of its own that is hard to stop. The whites move to new suburbs, the Negroes of means follow to the abandoned older white suburbs and the poor Negroes and Appalachian whites expand the crowded inner city.

Houses once occupied by single families are bought by speculators, stuffed with poor people, and "milked"—allowed to deteriorate so badly that the neighborhood becomes ripe for urban renewal and the government pays the speculator back his original investment.

Then he takes his money and starts the process all over again in the next neighborhood up the road, into which the middle-class Negro settled when he thought he was escaping the slums.

IT IS NOT JUST AN INNER-CITY PROBLEM

This is going on today all through Baltimore, not merely in the inner city. Only a month ago, for example, the city housing commissioner, Robert C. Embry, Jr., announced an experimental program to curb blight in outer portions of the city—in Pimlico and Govans.

Furthermore, the leading edge of this process has not stopped at the city limits. Middle-class Negroes are now settling in newer Baltimore county suburbs. And although two elements of old-style block-busting seem to be missing here—the speculative buyer and the rapid depression of property values—an almost hysterical atmosphere has gripped many white people, who are preparing to leave once again.

The classic blockbuster is a real estate speculator who specializes in neighborhoods he decides are ready to "go" Negro. Instead of acting as broker between a willing buyer and a willing seller, he buys the houses himself, then resells them or rents them to Negroes.

He works best in older neighborhoods, where mortgages are likely to be low and people receptive to cash sales He makes his money by exploiting the fears and prejudices of white owners to induce them to sell for less than their houses are worth; by selling to Negroes at inflated prices; and by financing the sales himself on long-term, "buy-like-rent" land installment contracts.

Racial zoning ordinances

The blockbuster has been aided by many outside forces, beginning with the basic prejudice of fear of the white homeowner, and including the traditional, self-fulfilling, belief of the real estate community that Negroes lower property values; the reluctance of mortgage lenders to make financing available to Negroes, and the federal government's active encouragement, until relatively recent, of segregated housing.

Traditional efforts to confine Negroes included the use of racial zoning ordinances—Baltimore's, enacted in 1910, is believed to have been the nation's first—and racially restrictive covenants prohibiting successive owners from selling to Negroes and other minorities.

Although the Supreme Court quickly held racial zoning unconstitutional (in 1917), the restrictive covenant remained legally alive until 1948 and became so popular that it, more than anything else, molded today's widespread neighborhood segregation. It was reinforced by the federal government, since the Federal Housing Administration, whose creation sparked the post-depression building boom, insisted on the restrictive covenant (and even wrote a model covenant) as a condition to insuring mortgages.

"In-migrant Negroes"

Soon after new Negroes, lured by war-industry jobs, began moving into Baltimore during World War II, controversy broke out—not over whether to put them in white neighborhoods, but whether to provide housing for them at all. The following excerpt from a newspaper article of 1943 is typical:

"Washington, July 21—Senator [Millard] Tydings today joined those opposing the erection in or near Baltimore of a federally financed public housing project for 'in-migrant' Negroes, asserting there is 'no justification' for continued importation of Negro workers but on the contrary there is a 'surplus' of Negro labor in the area."

The Negroes kept coming, however, and they were faced with a housing famine. Throughout the 1940's, the Negro expansion was confined to older rowhouse neighborhoods adjacent to the ghetto, but after the racially restrictive covenant was held legally unenforceable in 1948 and Negroes began to share in the post-war prosperity, the expansion poured into the middle-class inner suburbs, particularly in West and Northwest Baltimore.

This rapid expansion, aided by the speculators, did much to terrify the white population, which began moving to the counties in earnest. In 1955, the hysteria was real enough to bring a death threat to a man who had advertised an apartment house for sale in the Afro-American.

The man answered his telephone one night and a voice said: "If you sell that house on Talbot road to a colored person, I am going to have you killed by a professional killer and I mean it."

THEY FOUGHT BACK IN ASHBURTON

This kind of atmosphere made Northwest Baltimore easy prey for speculators. A typical target of blockbusting in the 1950's was Ashburton, a tree-shaded prewar suburb above Liberty Heights avenue, west of Hilton street. In 1958, about 10 per cent of its residents were Negroes; today perhaps 10 per cent is white.

Ashburton's first Negro was a high-school principal, who moved there in 1956. He was followed, not only by more Negroes, who were engaged in a legitimate quest for better housing, but also by real estate men.

Residents were harassed by a barrage of telephone calls, soliciting sales and warning that the neighborhood was "going colored." Dealers went from door to door; they mailed cards and circulars (one firm sent 2,400 panic circulars); they put up "For Sale" and Day-Glo "Sold" signs.

"The pressure is terrific," an Ashburton resident told a newspaper reporter at the time. "Sometimes a whole block becomes a garden of 'For Sale' signs. And once a house is sold they put up one of those big fluorescent orange 'Sold' signs. It's there all day and it glows at nigh. Sold. Sold. Sold."

Beginning to resist

Ashburton residents said they were not opposed to integration but they accused real estate firms of deliberately turning the neighborhood into a black ghetto. "The problem is not that a Negro finds a home; it's what some real estate operators do after he gets it," a lawyer living there said.

In the late 1950's people realized this was happening all over Northwest Baltimore, and they began to resist. They organized, they took legal action against one alleged blockbusting partnership, and they tried to attract citywide interest in their problem.

The key to neighborhood stability seems to be the white buyer, and searching for him became the aim of neighborhood improvement associations throughout Northwest Baltimore. They said this was necessary because real estate dealers wrote off a neighborhood as available only for Negro sales, and refused to bring prospective white buyers there, after any Negroes at all had moved in.

In 1958, a group of neighborhood associations and interracial organizations asked the Greater Baltimore Committee to help work for neighborhood stability, for the long-term health of the city. From this effort, an agency was formed to promote open housing in the metropolitan area — Baltimore Neighborhoods, Inc.

The panic subsided, but the ghettoization of Northwest Baltimore continued, as it does today. "We thought we could stabilize if we could curb blockbusting and organize the neighborhood," Melvin J. Sykes, a lawyer who lived in Ashburton from 1954 to 1965, said recently. But other urban pressures followed the blockbusters: commercial land use increased; schools became overcrowded and fell victim to de facto segregation; people with children moved away, leaving large houses ripe for multi-family occupancy.

The Ashburton fight included an attempt to mount a legal counterattack against blockbusters, which produced the only Maryland court case on record with alleged blockbusting at its roots. It took place before any anti-blockbusting legislation was passed and utilized the power of the Maryland Real Estate Commission to suspend brokers' and salesmen's licenses for misconduct.

In September, 1958, members of the Ashburton neighborhood association filed a complaint with the commission against Manuel M. Bernstein and Warren S. Shaw, partners in the Manning-Shaw Realty Company and the Eutaw Realty Company. The gist of the charges was that Manning-Shaw deliberately placed a Day-Glo "Sold" sign at a house at 3800 Grantley road which Eutaw owned, but had not sold. The idea, according to the complaint, was to get real estate listings by scaring the neighborhood into thinking that Negroes had bought the house, since Manning-Shaw was widely known as a company specializing in Negro sales.

WIDELY PUBLICIZED CASE

On April 22, 1959, after a stormy series of hearings, the Maryland Real Estate Commission found Mr. Bernstein and Mr. Shaw guilty of having violated state real estate statutes against misrepresentation, bad faith and fraudulent advertising. Their licenses were suspended for three months, after the Maryland Court of Appeals sustained the commission's findings.

Although the case was widely publicized as a blockbusting case, the commission refused to consider the racial elements. The issue before it was whether, in fact, there had been a sale. At the time, there was no legislation against the common practices that constitute blockbusting—soliciting mass sales, inducing panic by telling people Negroes are "invading," and so on. But the storm of publicity generated by the Manning-Shaw case, and the realization of what was happening to the city's neighborhoods has led to a series of local ordinances.

In addition, the General Assembly enacted an anti-blockbusting statute in 1966, and Congress inserted an anti-blockbusting provision in the Civil Rights Act of 1968, as part of that statute's comprehensive open-housing laws.

Together, the local, state and federal laws seem to say:

1. Throughout Maryland, it is a misdemeanor to induce or discourage a sale on the basis of race.

2. In Baltimore city, it is generally a misdemeanor to solicit properties door-to-door, by telephone or by distributing circulars.

3. It is a federal civil offense to attempt, for profit, to induce a real estate transaction on a racial basis.

But the scope and constitutionality of these statutes are untested by court decisions, and not one in Maryland appears ever to have been held accountable for violating them.

In Baltimore, only one person has ever been indicted under the anti-blockbusting ordinance and that indictment was dismissed when the ordinance was held invalid in Baltimore Criminal Court in 1967. Last year, the City Council re-enacted the ordinance to cure the defect found by the court.

Decided not to prosecute

Upon signing the most recent bill, Mayor D'Alesandro said: "The big question will be with the enforcement of the law." That question is still unanswered.

Last September, it developed that the state's attorney's office had investigated blockbusting charges against a real estate man, had determined that he was violating the ordinance by passing out circulars and soliciting Northwood homeowners en masse, but had decided not to prosecute.

The dealer, whose offices are in Howard county, reportedly claimed ignorance of the

city ordinance. Nothing was ever said about the state statute.

The decision not to prosecute was made by Robert S. Fertitta, an assistant state's attorney, who was supported by the state's attorney, Charles E. Moylan, Jr., who compared the incident to juvenile cases in which youths are often let off with warnings.

Many persons who worry about blockbusting in Baltimore are inclined to read sinister motives into this incident. A more likely explanation, however, is probably that the blockbuster was not prosecuted because he was regarded as a "businessman," not a criminal, and the state's attorney's office has its hands full handling real criminal cases.

This is a familiar point of view in cases involving landlords and loan sharks and other persons who deal with the poor. But the decision not to crack down on the Northwood speculator is now said to have prompted other speculators to think they can return to business as usual.

THREE AREAS AND HOW THEY ARE FARING

Legally, open housing exists today, owing to last year's passage of federal housing legislation that within another year will apply to something like 80 per cent of the nation's housing, and to a Supreme Court decision last summer, which held that an 1866 federal law barred purely private discrimination in real estate transactions.

These developments deserve to be noted because for years, people have been saying that the blockbusting problem would disappear if only there were enforceable open-occupancy laws. The idea is that if there were some Negroes everywhere, there would be nowhere for scared whites to run. Whether this reflects reality remains to be seen.

Let us now see what is going on in three local neighborhoods today—the City College area, south of 33d street; Northwood; and the Liberty road area of Baltimore county. These sections represent three different aspects of the problem of neighborhood stability.

Numerous other parts of Baltimore face similar problems, however. A few weeks ago, for example, the Real Estate Commission received complaints that "unscrupulous real estate operators" are using "blockbusting tactics in an effort to scare homeowners into selling their houses in an East Baltimore neighborhood known as Ellswood Park.

South of 33d street, between Clifton Park and Memorial Stadium, is a typical old Baltimore neighborhood of row houses 40 to 50 years old. It is speculator's territory these days. Many of the houses were either fully owned by their long-time occupants or subject to low mortgages, which made them sitting ducks for the pressure of depressed-value cash sales.

White people in this kind of neighborhood are particularly vulnerable to the speculators because they often are old and alone. Their children have grown up and left. Their houses often are the only thing of value they have accumulated. When they see the black tide advancing up the hill one street at a time, it becomes easy to give in to the loud, insistent men with cash in their pockets.

Donald J. Miller, associate director of Baltimore Neighborhoods, Inc., recalls one widow in the stadium area who was visited by a speculator shortly after her husband died. He pounded on her door, screamed about "the niggers coming," offered her a price and told her it would drop by a thousand in a week. "She was really shaken because of her future," Mr. Miller said. "This was her security in life, and now she was going to lose it."

The change started at the Harford road end of the Alameda about five years ago and has worked its way row by row almost to the next major boundary—33d street. A year ago, 32d street between the Alameda and Hillen road, was just beginning to feel pressure, and there were no "For Sale" signs yet on Chilton street or 33d street. Today, 32d street is predominantly Negro, Chilton is under heavy pressure and the south side of 33d street is sprouting "For Sale" signs.

When he resells, the speculator actually gets even more than is shown, because he usually creates a ground rent where none existed before. Capitalized at 6 per cent, a $96-a-year ground rent adds another $1,600 to the purchase price. However, many poor persons have no notion that a ground rent may be redeemed for its capitalized value after five years, and even if they did, they would not have the money. So they go on paying for years and years.

Some neighborhood leadership to try and stop this sort of thing is being exerted through the churches, which have formed an organization called Homestead-Montebello Churches, Inc.

St. Bernard's Catholic Church, for example, at Gorsuch avenue and Independence street, behind Eastern High School and west of Loch Raven boulevard, is in an area still mostly white but already looking over its shoulder. Vincent Quayle, a Jesuit theology student at Woodstock College, who has been helping to organize the neighborhood, says that one investor has recently bought 23 houses in this area and is dividing them into two-family apartments.

Northwood has been edgy about Negroes for years. Thousands of row houses, built after World War II, sweep northward to the city limits between Loch Raven boulevard on the West and Hillen road and Perring parkway on the east. They are well-built, well-kept houses, with club basements, and are priced in the $10,000-$15,000 range. Curving streets, front and back yards, and plenty of trees and other greenery give Northwood a more suburban character than the city's older row house neighborhoods.

Some recent incidents

Long before there was any direct pressure from south of 33d street, Negroes were moving into the Cold Spring lane-Alameda area just west of Northwood. In the early 1960's, real estate people were predicting that Northwood would be "gone" in 10 years.

A 1966 Chamber of Commerce profile of the larger Northwood-Govans-Ramblewood area listed as its ethnic characteristic "a growing Negro market." It said the area's Negro population would rise from 7.3 per cent in 1960 to 15 per cent by 1975.

Some recent incidents in Northwood will illustrate what seems to be happening there:

1. A man advertised his house for sale and several speculators called him, offering what were described as "ridiculous" prices. The upshot of their advice was: You had better take it; "they" are coming.

2. A man went from door to door canvassing for a charity drive one night not long ago. Once inside a house, he indicated his main interest was in buying real estate, and he reminded his listeners that some Negroes had moved in down at the end of the block.

3. On one major street, a landlord bought a two-apartment house for $7,300. The tenant in the upstairs apartment, who had lived there five years and whose rent was $75 a month, was notified that the rent was being changed to $27.50 a week—an increase of about $35 a month and an indication that the new landlord wanted whites out.

Easing the pressure

Blockbusting in the Northwood vicinity started in the mid-1950's in the area around Cold Spring lane and the Alameda, where row houses built soon after the war were placed adjacent to an older Negro "island" settlement. The blockbusters went to work in the area bounded by the Alameda and Loch Raven boulevard, Cold Spring lane and Woodbourne avenue, a section of about 2,000 houses. The area today is about 80 per cent Negro.

The city's anti-blockbusting ordinance is said to have eased the pressure on Northwood after 1960 (indicating that even though there have been no prosecutions, the law has perhaps had a deterrent effect), but it has never quite gone away. It started up again after the city's only blockbusting indictment was dismissed in 1967 and is reportedly on the increase since the recent decision not to prosecute the Howard county real estate man.

Northwood seems to be betting heavily on community organization to supply political muscle to lobby for its interests, whatever they may be. Led by an interfaith group of churches, and inspired by the example of Saul Alinsky, a sociologist-organizer from Chicago, Northwood and neighboring communities are forming the North East Community Organization, a mass-base group with plans for a paid staff.

Fifty Negro families

Various sections of greater Northwood have been formed into neighborhood improvement groups, and although some of these exist on paper only, others are functioning.

The Perring-Loch Improvement Association, for example, consists of 1,800 houses between Loch Raven boulevard and Perring parkway, and between Belvedere avenue on the north and Hartsdale road on the south. This section is said now to contain about 50 Negro families.

The first Negro, a dentist, moved there in 1962. On his street, only one or two other Negro families have moved in since then, but on another street, panic struck after a Negro law student settled there about four years ago. Now his block is predominantly Negro. About 60 houses in the Perring-Loch section were sold last year, 15 of them to Negroes, according to a neighborhood real estate dealer.

COUNTY'S GHETTOS HAVE SIMILAR ROOTS

When Baltimore county's government officials stop and wonder 8 or 10 years hence how it was that a Negro gretto grew up in their western suburbs, they will not be able to say they were not warned. The beginning of that ghettoization is taking place right now and has been closely followed by the county's Human Relations Commission.

In some ways, the racial patterns now evolving in Baltimore county are the most interesting of all to observe—not because they are different from what has happened in the city, but because they are so similar: A Negro, pursuing the American dream, manages to buy a house in a county subdivision. After he moves in, real estate activity is stepped up and, one by one, the houses on the block are sold to Negroes. The more the Negroes move in, the faster the white people leave.

There are differences in the county pattern—mainly the absence of speculative blockbusting and the apparent stability of property values. But gradually—"very systematically," says a Negro suburbanite—the whole subdivision will move toward all-Negro status.

"BUT THEY'RE SCARED"

At first, the white residents try to stop it. They organize; they search for white buyers; they appeal to the county government and the real estate industry—in short, they do the same thing people in Ashburton and Windsor Hills tried to do 10 years ago. But eventually, as more and more white people move away and the number of Negroes increases, they become gun-shy and come to feel they have been sold out not only by the real estate men but also by their own neighbors.

The atmosphere generated by this sort of experience puts terrific emotional pressure on people. "The homeowners are all sus-

picious of one another," a resident of Robin Hills, a 60-house development off Liberty road, said at a public meeting conducted by the Human Relations Commission in 1967. "Some people won't tell if they are going to sell their houses. They are ashamed of what they're doing, but they're scared."

More recently, residents of a still all-white development ringed by integrated ones told county officials that as soon as the first Negro bought a house in their development, from 24 to 40 houses would go up for sale the next day.

Within the last five months, Robert M. Thomas, chairman of the Baltimore County Human Relations Commission, has warned the County Council emphatically that the county's most serious racial problem is the one of neighborhood stability and that concentrating Negroes in a few "broken areas is likely to lead to later deterioration of community services, school segregation—and all the old problems people are running from the city to avoid.

Such warnings do not seem to trouble the County Council. The Human Relations Commission has tried to keep councilmen informed of the situation for several years and, as long ago as 1966, suggested that the council ought to give it a full-time executive director, who could work with neighborhoods that were having stability problems. Last year, the commission made a budget request for a full-time executive director.

Out Liberty road

The council's response was to cut the commission's budget instead of adding to it, after groups like the National State's Rights party and the White Citizens' Council complained of the commission's work.

"I can only conclude," Mr. Thomas said in a public statement at the time, "that while the County Council wishes this commission to continue in existence to serve as a shield and buffer for the county government in the troublesome area of race relations, it does not wish this commission to have any positive, effective educational program of its own to help prepare the county for the inevitable changes of the future."

The county neighborhoods under pressure are west of the city limits, extending roughly from Woodlawn to Pikesville. Liberty road is the spine, in a logical extension of the movement out Liberty Heights avenue. (The invisible county line has proved to be no barrier, to the dismay of many people who fled across it 10 years ago.)

Negroes have moved into some subdivisions as far out as Old Court road. There are thousands of houses in these neighborhoods, typical post-war, FHA tract houses—split-level, ranch-style with few trees and many charcoal grills. So far, the relative number of Negroes is very small, but there are enough of them to make the area fair game for real estate activity.

Occasional signs of panic

One typical neighborhood of about 70 houses that was all-white in 1965 had 21 Negro families by the summer of 1968. Another, with 200 houses, was all-white in 1966 and had 20 Negro families by the spring of 1968. Still another, one of the first to get Negroes, was integrated in 1964, by last spring, 30 of its 100 houses belonged to Negroes.

This rate of change seems a good deal slower than the turnover in older city neighborhoods where speculators concentrate, but the point is that, no matter how gradually, whites eventually move away, and only Negroes take their place.

Housing integration first came to the Human Relations Commission's notice in 1964, when scattered calls began coming in—someone's window has been smashed by a brick here, someone's door smeared with paint there. Occasional signs of panic and rumors of blockbusting broke out through 1965.

At the beginning of 1966, things picked up considerably and have been increasing ever since. In one large subdivision numerous complaints were made against real estate men over what the residents felt was persistent harassment. For Sale signs went up in many areas, and many meetings were held, both with the nervous residents in an effort to ease the panic, and with real estate men to persuade them to take down the signs and stop soliciting.

THOSE WHO WAIT ARE VULNERABLE, TOO

If there is one recurring theme that runs through the descriptions of people living in subdivisions into which Negroes have moved, it is that real estate men descend like locusts wherever a Negro has settled. The common complaints are that they refuse to show houses in integrated areas to white buyers and steer whites to other neighborhoods, that they advertise for these subdivisions only in the Afro-American, that they canvass in person, send out postcards, put up rows of "For Sale" signs.

"We are experiencing much pressure from realtors," a resident of Robin Hills said at a 1967 meeting. "We have mail solicitations and telephone calls. . . . Now they are saying a house has to be sold to colored because the whites won't buy. They say we should sell immediately before the area becomes all-colored. Some of us have posted signs saying 'This house is not for sale,' but it isn't doing much good."

"I called one realtor and said, 'Stop. You're creating panic'," the president of another neighborhood association said. "She replied, 'Everyone else is doing it; all the big companies are doing it.' To us, open housing means for sale to anyone but to realtors it means colored only."

From time to time, the real estate people take down their signs and stop soliciting, after appeals have been made to them, and the panic eases for a while. They are persistent and give way to resistance, "but they always come back," says a Negro resident of a county subdivision who moved out from Ashburton two years and has watched the whites slowly but steadily move away.

PROSECUTION DIFFICULT

Last September, Samuel A. Green, Jr., the Baltimore county state's attorney, took public notice of the problem, warned real estate dealers that blockbusting "won't be tolerated" and reminded them of the state anti-blockbusting statute. He said that most complaints he had received dealt too much in "generalities" but that he was considering two specific complaints for prosecution.

In a telephone conversation almost two months later, Mr. Green said all cases so far had been too hard to substantiate. He asserted that he was sincere about prosecuting blockbusters, "if I get the necessary evidence," and that he had not been making idle threats. However, he expressed the opinion that the root of the problem was that "an overwhelming number of people don't want to live next to Negroes."

Real estate men, even thoughtful ones, are prone to lay the blame where Mr. Green did—in the lap of the prejudiced white homeowner. It seems clear that the problem does begin here, and that some talk of blockbusting is simply an expression of fear about any Negroes moving in at all.

If this were all there was to it, one could say that people who sell at a loss and run get nothing more than they deserve. But it seems equally clear that people who are not so prejudiced and are willing to rise above their fears are often afraid, not of having Negro neighbors. but of what will happen to the neighborhood once Negroes arrive.

Too many people have seen precisely what happens: Everyone eventually gives up on it—real estate dealers, mortgage lenders, local government agencies, the school system—and abandons it to the people who can profit by deliberately disrupting it.

And it also seems clear that many members of the real estate community, even if they cannot be called blockbusters themselves, encourage this fear and prejudice—by steering Negroes into and whites away from certain areas, by assuming open housing will not work and by refusing to question old assumptions about property and race.

What do they mean?

So even the least prejudiced homeowners get tired of fighting this kind of pressure. No one who has been through a neighborhood turnover once wants to go through it again.

There does not seem to be a need for new laws (unless the slums speculator could be outlawed—but an apparent attempt to do this was stricken from the 1966 state anti-blockbusting statute). The meaning of current laws is uncertain since no one is enforcing or interpreting them.

Some vigorous prosecution might help, but there is no sign of any. It may be that the stock excuses are true—it is too hard to get evidence, and the laws are easy to evade—but evidence does not seem to have been a problem in the case of the Howard county speculator.

It is not yet clear how open-housing laws are going to affect neighborhood patterns. They may cause more panic; they may be ignored.

Follow the leader

The process of neighborhood change has been a dramatic demonstration of a certain kind of black power—the power to terrify a whole population into leaving at great cost. But the power is not in the hands of the blacks, for whom the system is also costly. The power belongs to the speculators, who can choose almost at will (and apparently indefinitely) what neighborhood to "change" next.

One is tempted to conjure up a vision of a great, never-ending game of follow the leader, with the white man out in front, running as hard as he can one step ahead of the middle-class Negro in Bermuda shorts, himself one step ahead of a slum landlord dragging a fatherless welfare family along, the whole group spreading out Liberty road, out Reisterstown road, out Loch Raven boulevard, with the government man bringing up the rear, cleaning up everything with urban renewal. In time we may arrive at a condition predicted only half-jokingly by a Negro suburbanite: An all-Negro county and an all-white city.

VIETNAM VETERAN IS REFUNDED MAGAZINE SUBSCRIPTION DEPOSIT PAID TO "SWEET TALKING" SALESGIRLS IN HAWAII

HON. FRED B. ROONEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. ROONEY of Pennsylvania. Mr. Speaker, last week I described an incident involving magazine subscription sales practices in which a Vietnam combat veteran was "sweet talked" by two salesgirls in Hawaii into signing sales contracts for 8-, 10-, and 12-year magazine subscriptions.

The sales approach used by these salesgirls violated the magazine subscription sales industry's self-regulatory code of ethical practices in a number of respects but that fact did not prevent the sale from being made.

It is this type of failure of self-regulation which I am convinced cries out for correction by effective Federal legislation.

My files are literally filled with clear examples of violations going on throughout the magazine sales industry day after day after day. Although refunds are made and fines may be levied by the industry's self-policing agency, Central Registry, after the violations are exposed, this has not halted these violations from occurring again and again under slightly varied circumstances at another time and perhaps another place.

I should like to insert in the CONGRESSIONAL RECORD at this point the letter I received from the sales company involved, Publishers Continental Sales Corp., as well as a letter directed to that organization by Central Registry:

PUBLISHERS CONTINENTAL SALES CORP.,
Michigan City, Ind., March 21, 1969.

Hon. FRED B. ROONEY,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN ROONEY: Thank you for your letter of March 18th and for sending us a copy of the press release dated March 18th.

Please be advised that we have refunded in full to the American Serviceman, Stan Garis of Kunkleton, Pa.

We have instructed our crew manager in Hawaii and all other sales people that this sales practice must be discontinued immediately and should we receive any complaints similar to the above, we will refund in full.

Very truly yours,

MABEL GRAY,
Subscription Department.

CENTRAL REGISTRY OF MAGAZINE SUBSCRIPTION SOLICITORS,
New York, N.Y., March 24, 1969.

Mr. WALTER H. LAKE, Jr.,
President, Publishers Continental Sales Corp., Michigan City, Ind.

DEAR WALTER: I am sure your attention has already been called to remarks reported in the Congressional Record made by Congressman Fred B. Rooney on the House Floor last week.

I am now in receipt of a copy of the letter that Congressman Rooney has written your agency under date of March 18th, together with copies of your receipts A 855510 and A 855516, each in the amount of $259.00 of which total Stan Garis, RD #2, Kunkletown, Penn. 18058, paid the two girls $169.00. CR records show that Jacque Halgelien is registered in CR as an authorized representative of PCSC in the crew of David L. Taylor, but we do not have a registration for Michele Laurendeau.

The seriousness of this situation cannot be over-emphasized, Walter, and warrants your immediate attention.

Will you please tell us of the action taken to prevent this type of solicitation by these persons and others of the crew and of your follow-through with the manager concerned.

Since this solicitation involved stemming, a violation of the CR Standards of Fair Practice, a refund obviously is in order.

Please let us hear from you in full detail as quickly as possible.

Sincerely,

BOB,
Secretary.

DRUGS UNDER MEDICARE: HOPE FOR THE ELDERLY

HON. BERTRAM L. PODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. PODELL. Mr. Speaker, today elderly outpatients covered under medicare are faced with major drug requirements. Prices of these drugs are rising with breathless rapidity, placing major strains upon the limited incomes of these older citizens. It is a situation which must be alleviated, and can be through a natural extension of medicare to include drugs in their generically prescribed form.

Today I am introducing legislation to relieve those persons not now covered by medicare of the catastrophic burden of prescription drug costs. Under the present program, prescription drug costs for patients under continual hospital care are covered by title XVIII. They are not covered for outpatients—persons not continually housed and cared for in hospitals, but who live at home, under varying degrees of drug medication. Their lives often depend completely on drugs they must take. It has too often been revealed that because of the astronomical costs of drugs, elderly patients have often denied themselves basic necessities such as food, clothing, and housing of even a minimal nature.

In 1966, more than half of the elderly men and women living alone had income of less than $1,500. Eleven percent of elderly families and 53 percent of elderly individuals in the nation received less than $30 weekly. Another 30 percent of each category had incomes of between $30 and $60 weekly. These are the total resources our elderly citizens had to obtain food, clothing, shelter, and all other necessities, including drugs.

It is best to bear in mind that these are not people seeking a "free ride." Almost always they have lived useful, working lives, and are now attempting to make retirement income cover necessities like drugs, whose prices are being stretched like chewing gum.

Private insurance is definitely not meeting needs brought about by these rising prices. A Task Force on Prescription Drugs established by HEW in 1967 found that only 9 percent of older persons had any protection under private insurance plans. It was also found that private insurance met only 2.8 percent of all nonhospital and nonphysician medical care expenditures. We can now see that some type of protection for the elderly against rising drug prices is imperative. My legislation amends title XVIII of the Social Security Act to extend regularly provided prescription drug coverage to outpatients in the same manner as to those now covered by existing legislation.

Additionally, it requires that only drugs prescribed by their generic name be covered. This is an initial attempt at providing guidelines for physicians and drug companies in pricing drugs more equitably.

My bill in no way restricts the physician in what drugs he prescribes. It only asks that the drug be prescribed by its generic rather than commerical name. Nor does it in any way restrict the pharmacist in filling the physician-prescribed drug. Most important of all, it in no way restricts the patient in his choice of either physician or druggist.

Mr. Speaker, none of us are immune from eventually being placed in exactly this situation. The most beautiful word in our language is compassion. It is not pity. It is not meant to be patronizing. We are simply being asked to understand the realities of an unjust and unbearable situation affecting millions upon millions of older Americans. It is incumbent upon us to act.

MAN AND HIS ENVIRONMENT

HON. RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. McCARTHY. Mr. Speaker, the ABC Television Network recently broadcast a program called "Three Young Americans in Search of Survival." This program, sponsored by Minnesota Mining & Manufacturing, portrayed the activities and concerns of three young Americans in relation to their environment. One young man is a graduate student at Utah State University preparing a recreation plan for the southeast corner of Utah. A second young man is a gang worker in Philadelphia working with street gangs. A young lady is a conservationist with a special interest in the marine environment.

Each one of these young people demonstrate their concern with the negative aspects of our environment, whether inadequate education, misuse of natural resources, or contamination of our air and water. And through their activities they work to solve these problems.

This program was particularly timely. We have just witnessed a major pollution disaster off the coast of California. We also face a serious shortage of lumber needed for the construction of housing. And our youth is in turmoil, searching for better answers to our pressing problems. I insert the text of this program in the RECORD for the information of my colleagues:

THREE YOUNG AMERICANS IN SEARCH OF SURVIVAL

(Broadcast over the ABC television network, March 17, 1969)

Produced, written, and directed by Stephen Fleischman.

Narrated by Paul Newman.

PAUL NEWMAN. We are going to spend the next two hours with three young Americans involved in the search for the betterment of man and his environment. With them we are going to explore the most compelling problem facing the human race—survival. This is Gary Smith.

GARY SMITH. And I'm studying the past to see where some species have stepped out of the parade so to speak and disappeared, and extincted themselves.

PAUL NEWMAN. Gary's a graduate student at Utah State University. He's 26 years old. He has a commitment to the physical world around him at a time of crisis in the balance of life. This is Harold Haskins. He's 32. He's a gang worker. He is also Associate in Community Planning at Temple University in Philadelphia. His hope and belief in America is reflected in the work to which he is committed—making his community as good as any in the United States. This is Mary Margaret Goodwin.

MARY MARGARET GOODWIN. It's not a question of being on the verge. We have fallen off the cliff and our only hope is through a conservation program, quickly, which will hopefully land us on a ledge halfway down.

PAUL NEWMAN. Mary Margaret is 30. She's a student of marine environment and a conservationist. She is concerned about water quality and the future of aquatic and land animals threatened by man's encroachment on nature and committed to working for the survival of an endangered specie—man himself. This program has to do with the interrelationship of all life—plants, animals and the community of man. Our fate is closely linked with the fate of every living organism on this earth. There is an inner connection between the timbering of a 1000-year-old virgin redwood and a black child in a ghetto where a tree does not grow. There is a connection between a man-made system and a natural system between a city and a forest and the life within them.

MARY MARGARET GOODWIN. I love to dream dreams, but as soon as you finish the dream, you come back to reality and unless you can take a dream of, of what kind of a world you would like to live in and, make it a reality, dreams are hopeless.

HAROLD HASKINS. Maybe I have as much hope as some people and I know that I have more hope than many people now, especially many black folks, and my interest is to be able to show society some program that can make it on its own merits.

GARY SMITH. Time's run out for America, there are no more frontiers, you must kind of step back now, instead of looking toward the frontier, we must look to the interior, we must look interiorally within ourselves and with our relationship, our personal relationship with the environment around us. We must return to this old idea of the love of the earth as our mother, and must give her the necessary respect, that she can sustain us, and we can sustain her.

(Gary Smith, singing, "This Land Is Your land.")

PAUL NEWMAN. The river, once known as the Grand, now called the Colorado, is a strand of water that winds through five states and flows fourteen hundred miles to the sea. It is also a strand of history, of beauty and of controversy that has touched the lives of millions in the southwest. The states of Arizona and California have fought over its water rights. They will again. Battles have raged over the dams built on the Colorado and they will again. Its cutting edge sometimes a mile deep slices a cross-section of geologic time in the canyon walls. The Colorado River also cuts right through the middle of Gary Smith's research study area. Gary is a graduate student at Utah State University, working toward a master's degree in recreational development.

GARY SMITH. I'm basically a creative person, I think. I like to write music, I like to write articles, and work with a camera, things like this. I have a great love for nature, and a great concern for what we've done to her. Well, this is a kind of ironic thing. To get through graduate school I found it necessary to enlist in a branch of the service. The only service that would give me enough time to finish my master's degree was the Marine Corps. They granted me about eight or nine months extension. So, I enlisted in officer's training program hoping that I will be able to finish up my master's degree by this December 30. But, whether I do or not, that's another question.

PAUL NEWMAN. Gary must write a paper, a thesis on his research project. He must contribute new and creative thinking on recreational planning in his study area—the southeast corner of Utah.

GARY SMITH. The southeastern corner of Utah is one of the wildest and most remote, rugged areas in the United States. From an aerial view, from flying over it in the Canyon and looking down from an airplane, my God, it's unbelievable. The tremendous ruggedness and the tremendous amount of rock sculpture that's gone on there. When you go into a place like Chesler Park, or you go in a place like the maze or you fly along in the evening time about 50 feet off the deck the visual assault that takes place there, is just unbelievable—the colors, the shapes, the forms, the silence. That country is so big, out in the canyon country of Utah, it is so big and indescribable, that I think the sun has to sort of sit and rest on the horizon for a while before it finally goes down. After I become acquainted geographically from the air, I also like to become intimately acquainted with the area on the ground. I like to feel it. As a recreationist specialist, I have to know, for instance, how hot it is, how comfortable a particular area would be for a person who wants to camp there. So therefore that necessitates on-the-spot checking, on site analysis, as we would call it, jeeping, hiking, or driving through the area, and stopping at various points of interest, and getting out of the car and studying these areas on the site. Well, do you think people should go through there slowly or 80 miles an hour?

TEX MCCLATCHY. Well this is kind of what I'm talking about. You put a paved road through here and they'll never see what we're seeing.

GARY SMITH. Yeah, it's nice a lot of times to stop and talk to people because, essentially, that's who you're developing the area for—is people. Through past experience as a naturalist, and a wilderness patrolman for five summers, I think this is probably my greatest source of decision-making information because I kinda get an idea what people really want.

Well, you're not advocating complete grazing of the national parks system are you?

CHARLIE REDD. Of course, I would like to.

GARY SMITH. It's nice to go in and ask them questions, and perhaps see your own philosophies kind of unfold within somebody else. Maybe see either something that you believe is contradicted, or maybe supported. If at any time we start preserving attractive land in the United States, whether it's a national parks system, a recreation area, in a wilderness area, or something like this, we have to also remember that our land must supply the wants of people. Now, when you're dealing with large in-holdings of what you might call wilderness land like this and you begin developing a large recreation system within this kind of country, you have to be in tune with this environment, you have to know what you're dealing with and you have to avoid making what are called irreversible decisions. We try to govern our decisions so that we will not put a road in some place where some day we might wish that we hadn't—you want to pull it out. That is, you don't want to—in your planning you don't want to make a mistake that you're going to have to correct 100 years from now or 50 years from now.

HAROLD HASKINS. And what we're trying to do now is get into the community development in such a way that these guys have housing, develop housing for their families—mothers and fathers—black businesses, entrepreneur stuff where they can really take care of business for their own community. Service industry, export industry, meaning simply want to get some factories, or something enough to get two or three hundred people employed out of this neighborhood. You know what this neighborhood looks like, it's a shambles.

PAUL NEWMAN. Harold Haskins, gang worker, Associate in Community Planning for Temple University in Philadelphia, takes a visitor through the ghetto. Sidney Poitier, movie star, writer and film producer, is also an American involved in the problems of the urban poor and the urban black.

HAROLD HASKINS. We need some help, we need help from everybody, and I know that you're interested and we need your help too.

SIDNEY POITIER. It, yes, well I think that—the help is where the problem is. The help has to come from the established community, the establishment, and I don't think, personally, that the establishment is that interested in helping the ghettos. You see, it somehow seems to me that the establishment has the attitude, the opinion, that ghetto life is apart from the total structure of city existence. Consequently, they don't have a sense of being part of a total whole and recognizing that a portion of the total whole is diseased, and they are subject to the deteriorative process the same as the people that are standing around here.

HAROLD HASKINS. Right.

SIDNEY POITIER. You see, you can multiply this ghetto here by every major city in the country and if you take, you take New York, Chicago, Philadelphia, Washington, Cleveland, Los Angeles, Atlanta, Boston and on and on you will find that hundreds of thousands indeed millions, of people are trapped in this kind of a circumference.

PAUL NEWMAN. Philadelphia, Pennsylvania, one of America's oldest cities—first capital of the United States. One of the most historic cities in the country with some of the worst slums of any city in the country. Philadelphia has a fine program of restoration for America's historic shrines but there are dwellings that haven't been renewed since the Revolution. If blight is the current curse of America's urban centers, Philadelphia has more than its share. North Philadelphia is about the nation's largest black ghetto, and planner and landscape architect of the University of Pennsylvania, Ian McHarg, says of it:

IAN MCHARG. I think they should be described as disaster areas. I think they should be evacuated immediately. They're a blemish upon the American concept, the whole American dream, the origins of the United States cannot tolerate this indictment which is represented by Bedford Stuyvesants and Harlems and North Philadelphias. The place is scaberous, rancorous, and I mean it's permeated with unhappiness and disappointment and misery and abjectness. The place smells of fear and horror and oppression. I don't know, I don't think there is enough art, there is enough intelligence or art in all of architecture, landscape architecture and planning in the United States to be able to redeem these places. And why should we bother?

JEROME "SLACK" JOHNSON. This is where we've been living all our lives. We want to stay there. We want the people who live there to stay there also. I mean, we want our community the way it is now. We want it to stay that way. The only thing we want is better housing, better stores and so on down there. We want the same people to stay down there because they've been living there all their lives.

PAUL NEWMAN. This is a scene from a film called "The Jungle." It tells the story of gang life in a black ghetto. It was produced by a North Philadelphia fighting street gang. Harold Haskins was the "project con-

sultant." Evacuation of the ghetto may be a simple answer. But there are those who live and work in the ghetto day after day to make it viable. Harold Haskins is one of those. A city is not unlike a forest or a field or a seashore. It has its own web of life and the forces within the system are interrelated. A city is made by men. The laws which govern its functions are made by men. The principles of its life are made by nature. The least used natural resource left to man is man himself. Harold Haskins works in two worlds—from the streets of the ghetto to his office at the Health Science Center of Temple University.

HAROLD HASKINS. Community Planning. This is Harold Haskins. Hi!

PAUL NEWMAN. Harold Haskins was instrumental in turning a fighting street gang into a business corporation. He saw young men going to waste—their energies misspent.

HAROLD HASKINS. I wanted a group that's been labeled hostile, angry, and a group that really had been in trouble. And Twelfth and Oxford was the group that I picked. I got together with a number of the members of the, of the leadership hierarchy, and we sat down and talked about the possibility of making a film. They knew nothing about it and neither did I. So finally we began to shoot in the streets. And the young men, after they saw their first rushes, really became interested in film-making. For ten years, I've been working with gangs, and for eight of those years I didn't have any kind of answers. I saw a lot of futility but a lot of talent, a lot of ability, a lot of frustration, and what bothered me was I had no answers, and I was motivated, like it was an obsession with me to try to find a way to have these guys realize something that they could call their own. And this opportunity to make a film, the one we made called "The Jungle," was the beginning of it all.

JEROME "SLACK" JOHNSON. My attitude towards this film-making thing and the corporation wasn't too cool. Because I didn't like it. I mean, I was still in gang war and things. I wanted the gang war. I wanted to do, you know, a lot of things that I shouldn't have been doing, you know. And Harold Haskins convinced me that this corporation thing could work, if we stick together.

GARFIELD PEACOCK. Like and I don't know if I would be in jail the next day or in school or what, you know. But now, like you know, I have responsibilities now for the corporation. I have things to do, you know.

JAMES "COUNTRY" ROBINSON. After the movie was finished we knew that everybody couldn't be film-makers so we started coming up with more ideas about the things our neighborhood needs.

JEROME "SLACK" JOHNSON. We want playgrounds, we want nice stores, we want teenage nightclubs to keep the people off the streets, we want adequate laundromats. That's something we don't have down there. We got one laundromat. It took two days to get your clothes done. And, as far as other black people, we want to set the goal. You see, because, I mean, I'm not trying to brag on the Corporation, but people have already told me that, if we do what we say we want to do, we can set a forefront for the rest of the black people and they try the same thing.

PAUL NEWMAN. Dr. Paul Ehrlich——

Dr. PAUL EHRLICH. There are a great many places where we have raw sewage just being dumped into inland waters and into the ocean. This means that we are really very close on the margin of epidemics and things like hepatitis. And, oh, by the end of the century we're going to be very sick people by that time, should we survive that long.

PAUL NEWMAN. There is a new breed of conservationist in America. They are concerned young people, concerned about the future, concerned about the possibility of their children or their children's children having a future. One such American is Mary Margaret Goodwin. She is a conservationist, a student of marine environment, a researcher in water pollution. Her life and work revolve around water, and the range of her activities mirrors the complexity of man's relationship to this vital resource—water. Her interest extends from the purest marine environments and how to preserve them to polluted areas and what can be done to rehabilitate them. Dr. Donald Pritchard is oceanographer of the Chesapeake Bay Institute at Johns Hopkins University.

MARY MARGARET GOODWIN. Why is it, Dr. Pritchard, with our vast fund of scientific knowledge, and with our technical capabilities in our modern society, we cannot control these problems of pollution? Whose fault is it, really?

Dr. DONALD PRITCHARD. Well, I think it's your fault and my fault and the—everyone who might be watching us. Man just doesn't want to accept the responsibility or doesn't want to blame himself.

PAUL NEWMAN.—The Chesapeake Bay is one of her research areas. A major estuary, a nursery area for fish and shell-fish is threatened by the increasing pollution. Mary Margaret is also Field Director of the Caribbean Conservation Association working out of St. Thomas in the U.S. Virgin Islands. She is as much at home underwater as she is on land.

MARY MARGARET GOODWIN.—My diving is really an extension of my land ability and the fact that one cannot be concerned with island ecology and not be able to survey the underwater sites as well as the land sites. Simply, you can't separate water and land ecology when you're dealing with an island. As a conservationist, I'm particularly keen on preserving undersea life really because I love it so much. It hurts me very much to see the destruction occurring, particularly on some of the coral reefs. And the fact that man is an integral part of his environment. He has his role to play in relationship not only to plants but to animals, to the land, to the sea and to the air. When I'm in the air flying from island to island I have a very good overview of the kinds of industrial problems that are being created for pollution and destruction of marine habitats, as well as the destruction of some of the great beaches in the Caribbean, which after all is what supposedly brings the tourists. And the industrialization of these islands is going to destroy this marvelous natural environment that people come to relax in. When you land, in St. Thomas and suddenly you're hit by the sounds of tourists and the cars and so forth and it's really no different than being in any city as far as I'm concerned. When I go down-island through the Leeward Islands, the Dutch Antilles and down through Dominica St. Lucia, down towards St. Vincent and Barbados, I begin to relax a bit more because the further away from this area of St. Thomas that you get, the closer to nature you can get.

Frequently I have the opportunity in my conservation work in the Caribbean to photograph for documentary purposes some of the great wildlife scenes. In Barbuda I saw one of the greatest sights that I think I probably ever will see—the mating and nesting of the frigate birds. I'll never forget those incredible wings on those frigate birds, soaring over and over and over and around this area. I had never seen a frigate bird nesting before. I had no idea that what really appeared to be a big red balloon on their chest, like a piece that hangs down from a turkey, that this would puff up like a black speckled red balloon and this to me was the most incredible sight in the whole world. It would be my hope to get the Antiguan Government to guarantee that it will be made into a bird and wildlife sanctuary. You may never be able to come back to this spot and do this again, because within a year or two years or five years, this area, like every other area in the Caribbean is going to be developed and possibly destroyed unless people who care about nature can do something to help.

(Gary Smith sings—"Colored Crayon Morning.")

GARY SMITH. For myself I feel very fortunate that I could be raised in an area where there was less confusion. I could look out upon the world scene and at the same time I could withdraw into a rather uncluttered society like wilderness. I could withdraw, personally, into wilderness. And by simplifying, by cutting out city streets or this mass confusing pandemonium that exists around, I could withdraw to some of these areas and reflect interiorally.

PAUL EHRLICH. Ecology is the science that studies organisms in their environment. The relationship between organisms and their environment, is the way it's usually defined. And, of coures, human ecology would be the relationship of man to his environment.

PAUL NEWMAN. At Stanford University, biologist Dr. Paul Ehrlich.

Dr. PAUL EHRLICH. And one of the saddest things about Western culture is that it's based on a Judaeo-Christian idea of man dominating nature. You know, the earth was made by God for man to dominate and use. And, unfortunately, the biological facts are that man has to live within nature. We haven't risen above the very basic biological laws. We still have to eat food and breathe oxygen and depend on the nitrogen cycle and so on for our very existence.

IAN MCHARG. There's a closed cycle of oxygen, carbon dioxide, a closed cycle of water and a closed cycle of food, and the question is, is that the way the world works, and the answer is, you're damn right, that is the way the world works. Man is a plant parasite.

GARY SMITH. Ecology means the study of one's house. Ecos in Greek I believe means home, and ology means the study or science of one's house or one's surroundings. In the broader sense this entails quite a bit you see, it entails every type of relationship, every relationship you have within your environment. It deals with the plants, the animals, with your social aspects, the people you deal with, anything that you do. Each organism or species of nature has survived and existed today because it has been successful in competing for an environmental niche, or zone, or an area where it can successfully out-compete other plants or animals. In the desert it's very well illustrated where certain plants have been able to grab hold of a piece of land and hold onto it, and keep other plants from invading this, because this plant is more adapted to surviving under the environmental conditions that are found around it. As we gain in altitude, we see a great change in the types of species that we run into, plants that are used to living where there is more moisture available, we see more abundance of plants growing in closer cooperation you might say with each other, more complex plants, in some respects, high water loving plants like your firs and spruce.

IAN MCHARG. So that when one looks at a tree, looks at a plant, looks at the birds, the thing to do is to say, be, live, grow, breathe, so that we may breathe, live and grow. And the same is true—one picks up a handful of soil, a decomposer you see, that reconstitute all the wastes during life and the waste of life after death, and without them, you know, life would be impossible, because there is the return stroke in the cycle of the universe, and so one has to say to the decomposers, be and work, that we may be and live. When an organism finds an environment which is propitious and adapts that environment to make it more propitious, more fitting, and adapts itself to accomplish a creative fitting, then it's likely that organism will have over evolutionary time have been successful. It will have survived and in a shorter period of time and it will be healthy in the present. And where you

find an environment which is unfit for an organism, where the organism cannot make the environment more fitting, where it cannot adapt itself to accomplish a creative fit that that organism over evolutionary time will not have survived and will have failed, and if this is so, we can start examining cities in terms of pathology. That is if you see a place where there is a high incidence of physical social mental pathology you say this is the area of the destructive misfit, that is the environment is unfit for the organism, the organism cannot make the environment fit and so we can start from pathology you see, and I would say if you find such areas and they do exist, I'd put up markers. They're unfit for human life.

PAUL NEWMAN. The life of a city can be compared to the life of a living organism. One person trying to make the city more fitting for human life is the Director of Philadelphia's City Planning Commission, Edmund Bacon.

EDMUND BACON. I think that in terms of the city it's extremely important to make a distinction between two basic aspcts of it—the one I might call the organic structure, which is comparable in the body to the eyes, the lungs, the nervous system and so forth, which is a system with central organs that give form and function to the entire thing. In this area, are for example, the community centers, the churches, the schools, the neighborhood shopping, the branch libraries and health centers, and these are focal centers that make community life possible. And in strong contradiction to this is the flesh of the city which is the residential spread which moves through all of these organic centers, and the flesh of the city in my opinion, has got to be thought of as a series of individual cells which have their own life of creation and decay and I think this failure to think in these terms is one of the great problems, of all approach to the city problem. Every single structure in the city, whether it's your house or mine, is continually going through a simultaneous process of recreation and decay.

LARRY MORRISON. I think it's important that Ed Bacon is going to the Area-Wide Council meetings. I think it's important that Mayor Lindsay gets out and walks the streets of Harlem.

PAUL NEWMAN. Larry Morrison, City Planner in the Philadelphia Commission, is working toward getting people from all neighborhoods involved in planning their communities.

LARRY MORRISON. We can no longer afford to have the rigid separation into planning boxes throughout the city. We've gotta' have involvement across scales and across problems. We've got to orient our planning around issues, around specifics instead of around functions that no longer have any meaning. And I think that, when this happens, it'll be a lot easier for us to reconcile both the natural needs and the human needs that we face.

PAUL NEWMAN. If we are to accommodate human diversity, the community must be responsive to all of its people. Harold Haskins brought a fighting street gang into a constructive relationship with the Philadelphia Planning Commission. The film, "The Jungle" brought the 12th and Oxford Street gang and Harold Haskins to the attention of the Commission.

HAROLD HASKINS. I met some of the city planners, and they were interested in doing an experiment with me, in which we would employ, or they would employ a number of the young men from 12th and Oxford to teach them basic planning. They could be dropouts. They could be anything, in that regard. One of the very basic things that this experiment shows is that first of all, we picked a group of guys who now are working for the planning commission and who are involved in the planning of their own community. The gang in Philadelphia, in North Philadelphia in particular, is a highly organized institution, that has been overlooked by many people, especially planners. And one of the first maps they drew after we talked about community development, was this gang map, that sort of defined the areas of all the gangs in North Philadelphia—like Eighth and Diamond, Commack-Diamond, or 12th and Poplar, 10th and Thompson, because many of these boundaries have been in existence since 1930. Many of the members of this group had brothers and uncles who belonged to the same gangs. These young men have lived in the street all their lives, and frankly, have banded together because they've had to protect themselves. And one of the interesting things that I want to mention here is that, when they first talked to me, Twelfth and Oxford, they thought I was trying to break them up. They said to me, "Haskins, Social workers can't break us up, our mothers and fathers can't break us up, teachers can't break us up, the police can't break us up, so you can't break us up." So this simply means that their institution can go from the graffiti on the walls in the neighborhood to the graffiti on the walls in prison. And they come back with more status in their own group. So, in effect, my interest was to just turn this group over, intact as it was, not break it up. Each gang has a runner, and a second runner, and a third runner. They're the leaders. Then there's a war chief and a warlord, who are people who handle the mechanics of gang war.

GANG MEMBER. J. P., man. why didn't you come with us?

J. P. Oh, man, I was getting my groove again, man.

GANG MEMBER. Oh, man, shut the hell up.

HAROLD HASKINS. And then there's a council, which is a group of young men who decide on the issues that govern this group. And this council is stronger, in effect, I daresay, than the families in which these young men come from. And this hierarchy is as plain as any corporation or any kind of business or anything.

PAUL NEWMAN. A fighting street gang was transformed into a business corporation. The 12th and Oxford Street Film-makers Corporation was formed. Each week the corporation's Board of Directors meets in the board room of the Philadelphia City Planning Commission. Jim "Country" Robinson is Chairman. Decisions are made regarding the corporation's film-making, real estate, small business and community betterment concerns. Harold Haskins?

HAROLD HASKINS. You have many, many youth that you see walk on the corners who could be channeled in the same directions.

LARRY MORRISON. Harold Haskins played the most significant role in everything Twelfth and Oxford's done. He was able to help the fellows realize that the abilities and the energies that they were devoting to gang warfare and other activities, could be redirected into another area of endeavor.

HAROLD HASKINS. It's a known fact, that in Philadelphia, the ratio in terms of male Negro youths between tenth and twelfth grade—drop-out rate is about, at least forty per cent. And most of the schools in North Philadelphia, high schools and junior high schools, are controlled by gangs in terms of territorial boundaries. Then if you placed, for instance, a new school in the heart of the Zulu nation you come up with the possibility that that school will be controlled by the Zulus and the other members of the community who live in the general community, especially males, will drop out of school, and not attend that school, because they have to fight their way to get there, they have to fight their way while they're in there, and fight their way home.

LARRY MORRISON. There is one other thing in how we are going to take care of this one. One important thing is employment, at least as far as the people up there are concerned is how many of the people who work there are from the North Philadelphia area.

JEROME "SLACK" JOHNSON. Well, when we go in to talk to the owner of the building, or the manager, and they give us the number of employees they have there, we can ask him to give us an estimate of how many people they have living in the area.

LARRY MORRISON. What do you think, Country?

JAMES "COUNTRY" ROBINSON. I don't think they'd cooperate with you. You're crazy. They're not sayin' who's working for them 'cause they don't want to take the time out. You know, when people doin' their work and the people go around and ask the employer where you live.

LARRY MORRISON. If that's the situation, how're we gonna' deal with this problem?

JAMES "COUNTRY" ROBINSON. One way might be possible—if you ask the man, or catch him on lunch breaks, twelve o'clock. Colored people do not want you to disturb them at their employment while they're doin' their work. And that's a known fact.

EDMUND BACON. We've learned an enormous amount from them, simply practical things like a precise definition of the edges of the turf. They have certainly enriched and deepened our concept of the social structure of the city, and of the dynamics of neighborhood leadership, and I believe that they have learned from us something quite new to them, which was to visualize their own concern about their own environment as being a part of a bigger thing.

HERMAN FULLER. Since we started our corporation we bought a couple of properties. We own a house on Commack and Susquehanna and we have people living in there. And we are starting a laundromat in our own community.

POLICEMAN. And we've had numerous occasions to have contact with the 12th and Oxford organization, but it seemed to have improved now that they've been redeveloping the neighborhood. Everyone seems more or less taking more of an interest in their houses since all these different developments had started. It seems like it's sort of a challenge to keep up with each other's residences.

LARRY MORRISON. I was able to develop some appreciation of what the causes of the problem were. But I think it was through Harold that myself and others that have been involved with Twelfth and Oxford, have been able to see what some of the specifics, the nitty-gritty really are, of how we work ourselves out of this. And, I don't think there's any magic potion except that there's gotta be communication between the races, and there's gotta be a commitment too, once we get beyond the racial hangups, to getting down to fundamental problems of economic development and education. I think that's what Twelfth and Oxford's about. And I just consider myself very fortunate that Harold Haskins happened to think that myself and others at the planning commission were capable of relating to the guys in a way which would help them do what they wanted to do. The role that myself and other people like Riggs Parker and Jay Scherer who are in business and law, play, is that of a technical advisor. And what's evolved is, is a planning package of expertise, with no middlemen involved. I think Harold Haskins always makes the point that what he is trying to do is to get the guys on the corner in direct communication with the institutions.

PHIL GALLIGAN. By the way, Back Bay has got instructions, as per your instructions, that no one is to purchase a print of that film without your approval.

JAMES "COUNTRY" ROBINSON. That's all right, we settled that at the last Board meeting.

PHIL GALLIGAN. Okay, I'm all through. You got anything more you want to ask?

JAMES "COUNTRY" ROBINSON. We've got some showings coming up.

HAROLD HASKINS. That's a $200 showing plus $65 expenses for 3 guys. We got offers to bring the film and the young men, because one of the instrumental things I wanted to do was to make sure the guys traveled with their film, to give them exposure to the larger society, so to speak, but also to help other people understand them, because I'd like to make sure that people begin to understand each other, as much as possible. The guys got involved in traveling quite a bit. They've been to California a number of times and have been all over, and they never would have gone without making this film. This film gave these guys mobility. And, athletics gave me mobility, and I saw that I had more or less the experiences of traveling around and playing ball and meeting different people. And this gave me an opinion about people and life and, that young men who are locked in to an immediately neighborhood to protect their turf, never really get the chance to experience.

JEROME "SLACK" JOHNSON. Well, let me start with what Harold Haskins told me. Like, he was the one that came up with the idea, that, wherever the film go, some of the fellows go with it. Now, the reason why he told me this, because, he say, this is exposure. And, when you're being around people that you think is society, you get used to 'em, he said, you get used to talking to 'em, walking with 'em and being with 'em, you know. Instead of saying, this man is taller than me. I'm down here, and he up there. Now, anywhere I go—I don't care if the President of the United States—I can talk to him the way I want to talk to him, because he's just a man just like I am.

HAROLD HASKINS. Jerome Johnson, Slack, is in our book, out of sight. He's one of the first young men to go to the City Planning Commission to learn base maps and he is the planner for the group, the physical planner for the 12th and Oxford Film-makers Corporation. He's also the real estate man who negotiates.

JEROME "SLACK" JOHNSON. The status on the 1223 property. I haven't collected rent there since September 29 because of the repairs that was needed. I told the people that live there, the tenants, that rent wouldn't be collected until repairs were started.

JAMES "COUNTRY" ROBINSON. You say you told the people that no rent would be collected until repairs were made?

JEROME "SLACK" JOHNSON. No, until repairs were started.

JAMES "COUNTRY" ROBINSON. Until repairs were started. Did they agree to pay the rent when repairs do get started?

JEROME "SLACK" JOHNSON. Yes.

JAMES "COUNTRY" ROBINSON. You think that was a wise decision?

JEROME "SLACK" JOHNSON. I think it was.

HAROLD HASKINS. David Williams, Bat—they call him, Bat—is the actual leader of the group.

DAVID "BAT" WILLIAMS. Well, my job is the president. I guess my job is more than one job. My job is like going around, making sure everybody else get their jobs done, I mean, showing the film and talking to people, you know going all around, traveling all over.

HAROLD HASKINS. He's the kind of a guy who knows all of the operation of the gang. He and Country together make a beautiful combination because Country, now becoming the corporate director kind of guy, and Bat being the gang leader kind of guy, sort of get together and get business taken care of. Because, whatever the corporation cats don't take care of, they make sure the gang cats do. Country, Jimmy Robinson, is a very quiet guy, basically. He's the second runner, or the second leader of the group. They call them runners. He is basically one of the real supporting thinkers of the group, one of the guys who really gives the group its direction in certain areas, especially in this corporation. And he emerged logically as the spiritual, inspirational leader of the corporation.

JAMES "COUNTRY" ROBINSON. Most of the guys they want to do things right, and want to do something constructive. But, some of 'em, maybe now and then, you might, you know, have to get on their back, every now and then, and remind 'em, or something like this. And, in a real sense, you know, like, I might be, you know, on their back of the idea of doing something.

John Lee, you got a assignment. You say you sent that guy a letterhead? Right?

JOHN LEE. Right.

JAMES "COUNTRY" ROBINSON. The guy say he never received it.

JOHN LEE. No?

JAMES "COUNTRY" ROBINSON. The guy say he never received it.

JOHN LEE. Well, I gave it to my sister to mail off for me.

JAMES "COUNTRY" ROBINSON. You gave it to your sister to mail off. The guy say he never received it.

JOHN LEE. Well, I don't know what happened to it. It must have got lost in the mails.

JAMES "COUNTRY" ROBINSON. Must have got lost in the mail.

HAROLD HASKINS. John Lee is one of the influential guys in the group, and he's sort of a, aesthetic type of guy. He's, he's an artist. He loves to paint. Recently he's become quite active in taking over the operation of the laundromat. And this will be the first business, per se, and he's got a lot of responsibility, and he sees his role now as being manager of this corporation's laundromat. David Leach is probably one of the best fighters. He's a militant guy and, he doesn't mind defending the creed and the credo of 12th and Oxford. He, in effect, is the guy who handles the sticky business. He can do a number of things well. And we don't talk about what he can't do too much, but he's the enforcer.

DAVID LEACH. Like if another gang moves on one of our boys or a couple of our boys they come down and tell us. They scream gang war and then when the war lord take over then and tell them how to go down and what way to go down and what kind of guns and things we going to use and how to use them. Now I'm just a businessman but I'll fight if I have to.

JAMES "COUNTRY" ROBINSON. Peacock, he'll make a report.

GARFIELD PEACOCK. I have a report to make?

JAMES "COUNTRY" ROBINSON. Yeah. On that press showing.

GARFIELD PEACOCK. Who was talking? Because they had different people talking on different subjects.

HAROLD HASKINS. Garfield Peacock is a very talented young man. He's the cameraman for our film, "The Jungle." In fact, hopefully, he'll become a cameraman in the Film-makers Corporation. There's a few other guys. One of 'em's called Skinny Butch. His name is Forest Outing. He is one of the young men who took a course at Price-Waterhouse, to learn accounting. Fat Butch, or Carlton Coleman is the other accountant. So we have Fat Butch and Skinny Butch, who are the financial wizards of our group. Herman Fuller is our music man. He wrote a song that goes like this, for the new movie: "I got my shirttail out, and my hair all conked with grease. I got my khakis on, and they don't need no crease. I want to go to school to learn the Golden Rule, but I hookey every day. The teachers wonder what's wrong with me. That's why I am in Boon today."

(Herman Fuller and group singing "Shirttail.")

PAUL NEWMAN. Herman Fuller who wrote the song "Shirttail" draws on experiences from ghetto life and the language of the ghetto. His feelings and his talent are being recognized in wider circles. The establishment, in present planning, now takes into account the factors in the community that have decisive influence in making a program work, such as the strong organizational structures of street gangs. The human ecology of this city is in better balance. The man on the corner relating to the establishment—the establishment relating to the man on the corner. The impact—the potential for a new American future.

HAROLD HASKINS. I think we're really on the road now of the company, or the corporation, becoming self-sufficient. And since my role is to pull back further and further as I go along with the guys, I'm seeing that now I can get involved in the normal, everyday operation of maybe being a husband and a father as opposed to being just a father to over a hundred guys, which is a pretty difficult role to play. Community Planning. Hi. I'm being interviewed by ABC. Yeah. That's my fiancee.

YVONNE BOOKER. Oh, yes, he loves to play football. He says they get out there—they call themselves the 'has-beens' and the 'never was's'—and they all get out there on Sunday and they think they're doing something.

Mr. JOSEPH HASKINS. He always had the idea he wanted to be something. He used to always tell me, he said, "I'm going to be a good help to you someday, I'm going to be a man," and I'm proud of him, real proud of him.

Mrs. JOSEPH HASKINS. I don't understand his work too much, but I know he's doing good work. Everybody talks to me they say that he's doing wonderful work and tell me to tell him to keep it up and so he's doing real good.

PAUL NEWMAN. In the last month of President John F. Kennedy's life, he said to a college audience "Look forward to the day when we will build handsome and balanced cities . . ." The remaining years of this century hold unlimited promise for man to realize human potential. It has been a failure of our society to see our cities, our wilderness, our water and air diminished by our predacious use. The diminishing of our environment has also diminished our lives. We can invade our waters by dumping biologically active waste materials and raw sewage into them. We can uproot our trees to make way for a super highway. We can burn waste materials and envelop ourselves in unbreathable air. We can do all these things if we want to. The greater commitment, however, is an inspiring dream of a common plan to build and preside over an environment which includes and interlocks human relationships. Such is the commitment of Harold Haskins, Gary Smith and Mary Margaret Goodwin.

The land is tired, the air is used, the waters are fouled. They have aged before their time. Man has been a predator of his own environment. We damage the promise of a future with each sunrise. Tomorrows are scarce. If men are to decide their own destinies and the destinies of tomorrow's children, then shouldn't they love that which supports life? The land, the sea, the air are one—they are the gifts to man's existence. The secret suicide that we are committing by polluting our environment is no longer a secret. It's premediated self-destruction. There are seven hundred and seventy-one million acres of land in the United States owned and administered by the Federal Government. These public lands belong to all the people. A good part of this is national forest and national park land. The national park idea is a major and unique contribution by the United States to the whole concept of the preservation of natural wonders, beauty and wilderness. In this caravan on a field survey trip in a wilderness area of southeastern Utah, are representatives of the agencies responsible for our public lands.

GARY SMITH. We have so many diverse interests there and management agencies. For instance, we have, Forest Service, the Na-

tional Park Service, the Bureau of Land Management, State Highway Department of Utah, State Fish and Game Department, the Utah Parks System. We have tremendous variety of different management agencies in the area alone. This is not counting the tremendous vested interest groups that are down there. In the past we've had a lot of friction between agencies. There's been a great deal of conflict. We take a virgin area like this and we look in the past. We look at Yosemite slum, national park, we look at the bumper to bumper traffic jam in Yellowstone, and we look at the mistakes we've made in the past with regards to recreation planning, and we try to learn from these.

PAUL NEWMAN. As population and commercial interests mount, there are strong pressures from many directions on those who must make decisions about the use and management of public land. Every day in our nation, irreversible decisions are being made. Some good, some bad. All of them affect our future for generations to come. Gary Smith is here to study the making of two decisions, both irreversible, for his research project—one that has already been made, one in the process of being made.

GARY SMITH. This interagency field trip, with regards to road location in Canyon Lands National Park would make available this beautiful, lush green forest areas for people to withdraw to, providing climatic relief. And so, through this coordinated planning among agencies, you look at the recreation, or the development, for instance, of Canyon Lands, not in a vacuum, but with the outlying areas, also, trying at all times to plan your decisions in such a way that you won't regret them in the future.

PAUL NEWMAN. From his observations of overlapping and conflicting jurisdictions in the field, Gary traces the process of decision-making from its branches to its base. He makes a trip to Washington, D.C., to further his research.

(Gary Smith singing "Something Big.")

GARY SMITH. My trip to Washington helped me get a perspective about how plans that are being made out here on the ground are carried up through the channels to the final approval of the people on top. Coming from the sticks, so to speak, into a maze or a network of offices that exist in Washington, like, say, for the Department of Interior was quite staggering and at first it seemed quite impersonal and complex, quite un-understandable and unfathomable. I was amazed at the extreme complexity of our form of government. This complexity, of course, is confusing to me. I often wondered as I wandered from office to office, and talked to some of these men in high places, how anything really gets done.

Secretary STEWART UDALL. I'm a little more skeptical about roads than I was six or eight years ago. I think you've got to have them in the right places.

GARY SMITH. I didn't really expect to have had the opportunity to interview someone as busy as Secretary Udall. You see, the Secretary of Agriculture and Secretary of Interior wield a tremendous amount of power. They've been accused, sometimes of having too much power, being too unresponsive to things on the ground.

Secretary STEWART UDALL. We've made a big mess out of things, in my judgment, this century. I think the country's much less livable. It's much less inviting than it was, say, in the year 1900.

GARY SMITH. It helped me gain a perspective on how the decisions and how the information filters up to his position and what his viewpoints are, what would possibly be done to the areas I'm working in, from the command position—before a lot of irreversible decisions are made, in this area. That is, before we've made mistakes like we have in the past in our land management programs.

PAUL NEWMAN. The Glen Canyon Dam is a monument to the irreversible decision. It is one of the five major dams on the Colorado River, from Utah to Southern California. It pinches off the river at a narrow point just below the Utah State Line and backs the water up one hundred and eighty-six miles to form Lake Powell, the longest man-made lake in the world. The dam was built to generate hydro-electric power, and for flood control and water conservation. But, if in the long view of history, the Glen Canyon Dam may prove to have had only temporary economic value, since the lake is destined to be silted up eventually—then will the irreversible decision have been worth it, inundating an American scenic wonder for its other major purpose, a recreational haven for boaters, swimmers and fishermen?

GARY SMITH. Lake Powell forms what you might call the water-based recreation heart of the area. Lake Powell will provide a boater's paradise, now it's built. And yet, Lake Powell is more than a recreation area. It's a magnificent lake. It's a huge lake. Yet, at the same time, Lake Powell represents a controversy, which I was interested in.

NARRATOR. Dr. Paul Ehrlich?

Dr. PAUL EHRLICH. Do you flood beautiful valleys and so on, in order to be able to have maybe a million or two million more people somewhere, and to put off the day of reckoning one step further? Because, whatever else you know about population, you know sooner or later the growth has to stop.

Secretary STEWART UDALL. It's one of these excruciating problems where you have to, have to reconcile values. And you have to weigh the long term national interest in terms of protecting against the values that would be gained by some plan of development. This is essentially what you're confronted with. And when you, when you look at something like the Grand Canyon which is irreplaceable, I think the preservationists were essentially right. That you might do something that appeared to be good now, but if you had a dam that filled up with silt in even two hundred years, well, the people two hundred, even three hundred years from now, they have an interest in this. And what will they think if we build something that is simply an enormous silt bed and we destroy the canyon which was a unique thing in terms of the world as a whole?

GARY SMITH. Lake Powell was bitterly fought and opposed by preservation groups like, for instance, the Sierra Club. They, they felt that the dam could not be justified economically by the electricity it produced or the water it saved. And they felt that it was destroying a very beautiful, irreplaceable part of American geography, with regard to Glen Canyon.

Dr. PAUL EHRLICH. It was once said to me that the Army Engineers have a beaver complex and won't be happy until they have thrown a dam across every gutter in the United States. And one of my friends suggested that what, since we pay farmers not to grow food, that we ought to pay the Army Engineers not to build any more dams. Any dam is a stop gap measure as far as water supply is concerned, among other things, they silt up. I mean, dams are, as I think most people realize, temporary structures. And they only have a certain useful life. And, pretty much, we've dammed the areas that ought to be dammed in the United States.

PAUL NEWMAN. In Los Eden, a side canyon, flooded by the rising waters of Lake Powell, Gary Smith talked with John Flannery, an official of the Sierra Club, a preservationist group that fought the building of the Glen Canyon Dam.

GARY SMITH. I'm kind of interested in the Sierra Club's position on, in the contest for this area.

JOHN FLANNERY. Well, it's tough. We're in a battlefield where, where we took a beating. And I think if places were appropriately named, this is the closest thing we've come to a canyon today. The rest of Glen Canyon is drowned. It was a beautiful place. It's not an aquatic desert, I feel. This is destined to go underwater about what, another hundred feet?

GARY SMITH. A hundred and forty feet.

JOHN FLANNERY. And the beauty will be gone. It will be like riding through small hills, areas of small hills.

GARY SMITH. Why'd you lose it? Why'd you lose the battle?

JOHN FLANNERY. We lost it because we got into it too late. And, at the time the battle was on, we were too small. And, we pretty well agree on this. And we wouldn't let it happen again. There's the example of the loss. I think that tells the whole picture of Glen Canyon. We've lost a whole ecology. The wild life has drowned. The trees are drowning. Who knows how many forms of life, unique forms, are lost in this inundation.

GARY SMITH. Do you think that the Bureau of Reclamation doesn't think and isn't concerned?

JOHN FLANNERY. Oh, they think. Certainly. But they have one point of view, normally. They're thinking about water supply just like the Corps of Engineers is thinking about damming rivers. We're not thinking about that. We're thinking about the good for the American public in the years to come, and the losses to man. We're down to ten per cent of our country in wilderness and every compromise that we make is a loss that can't be brought back. What's going to happen here in two hundred years, when this is a mud flat? Well, the problem is, with almost all of our protected lands, our Federal lands in this country is that, when you put a road in, then the agency is not satisfied, with that road. They want to put another road off, and then soon after that they have a series of roads.

And then they want to put in camp grounds here and there and there and there. And pretty soon, that wilderness is gone; that feeling of wilderness is gone. You've got motor boats, and you've got cars running all over the place.

PAUL NEWMAN. An irreversible decision in the making. Gary Smith is an involved observer in the decision over a proposed road into the wilderness area of Dark Canyon. Should a paved highway be put through an area of wild and exquisite beauty? And if so, where, and how should it be built?

GARY SMITH. There was a lot of controversy on this trip, mainly from the fact that Canyon Lands National Park has been in existence for four and a half years and there still isn't a road into it. And the people of Utah who will derive some economic benefit from this national park are concerned because they've made investments around the area. And they were consulted, and they helped push the park proposal through Congress with regard to the original road location. They were all in favor of this original road. Now, all of a sudden, things grind to a halt. The road doesn't go in. In fact, the road's changed, in favor of a road that will take many more years to build and will come in from the south.

DICK SMITH. What it takes for people to enjoy it. I mean, some of these people might enjoy just driving in and looking around in their cars.

BATES WILSON. This is fine, Dick. They can do this. Not everybody is gonna' come in from U.S. 160 to Squaw Flat. And I think you're gonna' find you're gonna' have a lot of traffic in from the South.

PAUL NEWMAN. Bates Wilson, Superintendent of Canyonlands National Park.

BATES WILSON. As a matter of fact, may be more than you're gonna' get off of U.S. 160,

because they're gonna' be feeding in from Bryce, from Zion, from Grand Canyon, from Glen Canyon.

MAN. We can work together because this scenery doesn't stop at the park boundary.

MAN. And the visitor couldn't care less.

MAN. Well, again, we're gonna' have multiple use, but we're gonna' segregate this land as to what we think is in the best public interest as to whether we allow grazing, whether we allow hunting and so on, will be determined upon the characteristics of the country and its capabilities to provide the kinds of goods and services that people want. We can't make these projections into the distant future, but we think we know, generally, what they want now. And I don't think we should, should plan any road that would take people through this country fast. This is an unusual country, and they should spend some time and we shouldn't build speedways, in my opinion.

TEX MCCLATCHY. But the masses probably wouldn't go along with your comments, I don't think. The masses—you got to eliminate it to the per cent, like Bates says, that want to see and enjoy this kind of country. If you turned it over to the masses and asked them, they'd put that short road, just like you started now, that's right.

BATES WILSON. I think we're gonna' have something for everybody. We're gonna' have something for the guy in the pink Cadillac—a great deal. I think he's gonna' be able to drive in and get a terrific experience. But we're also gonna' have something in Canyon Lands, and you're gonna' have it here, right here, where the guy who wants to get out and get away from the carbon monoxide, and get away from the rat race, can do it.

TEX MCCLATCHY. But I'm worried about the masses.

BATES WILSON. Because you're worried about the dollar.

TEX MCCLATCHY. Right!

GARY SMITH. The original proposal had a road located in the park that was greatly favored by community interests and people like this who have an economic interest in the area. Now, Bates Wilson is Supervisor of the National Park and members of their engineering staff, and people like this from San Francisco, with the National Park Service decided that the original road proposal endangered too many of the prime park qualities. In other words, to put a road in there, they would be destroying more scenery than it would be worth to put a road in. So they began looking for an alternative road location to help avoid what they considered a bad judgment.

PAUL NEWMAN. Gary Smith has learned that our wilderness areas are fast disappearing. The pressures of population growth are putting greater demands on our national parks and forests for recreational use. Mining, ranching and timbering interests want increasing acreage for development and have opposed most of the conservationist pleas for setting aside wilderness land. Representing the Utah Mining Association, Miles Romney says:

MILES ROMNEY. It is forecast that by the year 2000 we're gonna be consuming three times the amount of minerals in this country that we're consuming today. And in the major portion they come from the land, and in the major portion they will continue to come from the land, and if the access to the land is continually blocked off, we're gonna find ourselves in real difficulty in developing the resources that are anticipated will be needed to maintain our way of life, our standard of living, and our production complex that we have in this country today.

GARY SMITH. We have to have timbering. We have to have logging. We have to have mining, grazing. And the only way that we can effectively justify locking up lands in a wilderness condition or within national parks, is that we can provide for the material wants of our people on the rest of our lands. In other words, so that the productive aspects of our lands can justify setting aside the pristine. Now, through coordination and through cooperation, and planning on a regional basis, I believe that we can achieve most of these needs.

PAUL NEWMAN. Mary Margaret Goodwin is Field Director of the Caribbean Conservation Association.

MARY MARGARET GOODWIN. What are we going to see today?

PAUL NEWMAN. Bob Brody is a marine biologist. Mary Margaret is an expert swimmer, a scuba diver and an underwater photographer—skills that she uses in her work. They are here, at Chocolate Hole, off the coast of St. John in the Virgin Islands preparing to go underwater.

MARY MARGARET GOODWIN. Loudy Bottom with little patches of sea urchins all over the place. We're hoping to make a documentary file of still photographs of the natural and wildlife resources for each of the islands.

PAUL NEWMAN. They are studying a living coral reef in the lagoon that may be threatened by future development of the area.

BOB BRODY. It's starting to happen in the harbors and in the rivers in the States and in other places in the world. It's beginning to start to happen here in the Virgins. We're destroying our natural communities to the point where they can't come back by themselves. Man is an interferer at best, in any environmental situation, and changes that environment all the time. Some of the changes are for the good and some are for the bad. And the more we change even in-shore areas like the reef areas, the more we are eventually changing the balance of nature—the chemical balance, the biological balance in the sea. But the changes that exist are frequently irreversible, or we can't say that we will ever be able to go back to where we were before or that we will be able to produce as much for our use as we had before. And how long this change can go on—probably not very much longer before we start to show some really drastic major effects.

PAUL NEWMAN. Pollution of inland waters as well as the ocean is another of Mary Margaret's concerns.

MARY MARGARET GOODWIN. I feel very embarrassed as a human being when I walk along a beach or when I fly over a harbor or when I go over a bridge and see water which is so brown with pollution that you know that no amount of major scientific creativity will ever be able to bring this water back to the living thing which it used to be. I don't really think it's possible to walk on very many beaches either in the United States or in the Caribbean without putting your foot into a mass of tar.

DR. PAUL EHRLICH. The only remaining problem as far as the water supply, at least in California goes, is whether we run out of quantity or quality first.

PAUL NEWMAN. Dr. Paul Ehrlich.

DR. PAUL EHRLICH. Two things are happening. We are exhausting water supplies that built up over a very long time in our water tables. We are lowering our water tables and using up what might be thought of as fossile water. That's one thing we're doing. And, of course, when you do this it can have permanent effects because in areas near coasts when you pull the fresh water out of the ground salt water from the sea intrudes and permanently ruins the water-bearing areas. And then, of course, we are polluting our waters in great many ways.

IAN MCHARG. In Philadelphia we drink something which I normally describe as a——

PAUL NEWMAN. Professor McHarg.

IAN MCHARG (continuing). Rather brown liquid which consists of a soup of dead bacteria in a chlorine solution. And this, of course, is what most of us drink. We really have a soup of dead bacteria.

DR. PAUL EHRLICH. In the lower Mississippi they say that every glass of water you drink has been through eight people already, and I can believe it.

IAN MCHARG. We operate on the presumption that you have to dirty water before you can drink it. Because it's dirty you have to super-chlorinate it in order to kill all the bacteria. And, you know, we are posing enormous problems to ourselves and some of these are really quite tragic.

DR. PAUL EHRLICH. Many of our pollution problems have come from too much organic matter, manure and fertilizer going into them, which creates a rather complicated process which leads to the end of the stream or lake as a source of fresh water. This is largely what has happened to Lake Erie, for instance.

IAN MCHARG. Well, Lake Erie is now commonly reported as septic. The Delaware River gets to be septic quite often, as the condition where there is simply no oxygen and where only bacteria can live. The great Florida aquater, you know this is a major source of ground water which serves all of Florida, is drying up. I was down in Po County recently and I found that lakes have fallen about ten feet in ten years. Again, this is a prodigality of unbelievable dimensions. You know, this is a geological resource of water which is being dissipated for very, very small gains.

PAUL NEWMAN. Mary Margaret Goodwin, investigating pollution by industry on the Chesapeake Bay, finds some industries are making an attempt to produce without polluting—but the results are still too little and the efforts perhaps too early to judge. She visits the Bethlehem Steel Sparrow's Point plant, one of the largest steel mills in the world. In this sensitive and controversial public relations area, the Bethlehem Steel Corporation has been willing to discuss the problems of pollution and its control frankly. Manager of Environmental Quality Control—Dr. Allen Brant.

MARY MARGARET GOODWIN. Dr. Brant, what are the major water pollution problems for the steel industry?

DR. ALLEN BRANT. In the first place, the most important pollutants in the steel industry are, first, solids, in the nature of particulate matter. They're largely scale, from the blooms and from the material that is going through the rolling mills and the rolling operations. In addition to that there is the dust that is collected in some air pollution control facilities and collected in wet collectors, which then pollute the waters, so it's very fine dust, but all being, essentially iron in nature. The second major pollutants is oil. We use a lot of oil, of course, in lubrication, and also, in some of the mills, and some of it gets into the water-courses. And thirdly is the acid. There are all varieties of acid, but principally hydrochloric and sulfuric acid. The three major problems in the steel industry. Steel is the backbone and the sinew of our society. It takes the use of 25,000 gallons of water to make a ton of it. If we want nine million new cars a year and all the trappings of an affluent society that this implies we are going to rob nature. We have not learned to afford a modern economy without polluting our bays and streams and fouling some air—at least, not yet. But nature has a way of striking back. Dr. Paul Ehrlich.

DR. PAUL EHRLICH. Ecologists have been worried for a long time about the possible consequences of an accident in our off-shore oil drilling operations. Their worst fears were confirmed on Midnight, January 30, 1969 when an oil drilling operation produced a very large leak of oil into the Santa Barbara channel off Santa Barbara, California. This leak lasted for some eleven days—it poured out roughly one-thousand gallons per hour of oil into the environment—it coated many hundreds of square miles of the sea. It befouled many, many miles of beach

and it certainly will prove to be an ecological disaster for the wildlife in the area. Unfortunately, it is not just the loss of a few birds. It is the disruption of a very important ecological system. It is one more example of how we are threatening the sea as a unit and we are threatening our ability to get food from the sea. It will be many years before the ecological balance in the area can be restored.

PAUL NEWMAN. Off Florida's coast, south toward Cuba to Puerto Rico, and down to the Northeastern coast of Venezuela are a chain of islands known as the West Indies. Hundreds of islands, large and small, some populated, some barren, form a 1,500 mile long web, with 65 principal islands supporting the 25 million native inhabitants. It is said "there are seven seas"—but for man, there is only one sea, one ocean. All the oceans of the world are interconnected.

MARY MARGARET GOODWIN. There are Dutch, there are Spanish, there are Portuguese, there are English, there are French. It's really a very international group of islands. And when you try and put all of these people together and come up with sound conservation policy it's very, very difficult.

PAUL NEWMAN. This was the first America, the America discovered by Christopher Columbus. He found a land untouched by civilization. These are the Virgin Islands, three of which are now United States territory. Since their discovery, they've had a history of exploitation and conquest. The most recent conquest of St. Thomas started with the invading tourist.

MARY MARGARET GOODWIN. Isidore Paiewonsky is a business man, an ardent conservationist, here in St. Thomas.

ISADORE PAIEWONSKY. I happen to have been a member of the planning board here for 15 or 16 years and we have always got to be a year ahead of the bulldozer and two years ahead of the subdivider, because unless we put in rules and regulations for them they violate every rule and regulation, which they could not do in places where they came from. They figure this is virgin territory and no one should stop them. And I think a real danger to these islands is not from the little shacks that you see on the hills but from these bulldozing, subdividing, so-called builders who rush into the picture to build West Indian Levittowns. And before you know it your trees are gone, and the green spaces are gone and the beaches are polluted. Here we're not aware of these things until we suddenly find they are dumping raw waste right into your harbors, and they're dumping everything that they have on board into the harbor. They make of our beautiful harbors I should say a receptacle for receiving waste. And all of the conditions that people run from they re-create in this area because your pollution comes from people and congestion.

MARY MARGARET GOODWIN. The reason I think we have to do something is because St. Thomas is going to become the key to the over-spill into all of the rest of the Caribbean. And unless we can control what's happening in St. Thomas, the same thing will just go on throughout all the islands. It's a question of American and Canadian interests coming into the Caribbean and taking everything they can in as short a period as they can, and then walking out leaving nothing but devastation in their wake and, the native people are left with nothing.

PAUL NEWMAN. Dr. Arthur Dammann of the Virgin Islands Ecological Research Station——

Dr. ARTHUR DAMMANN. It would be easy for St. Thomas to become one big mass of concrete and houses, you see, and I think if it did that it would lose all the qualities that it has that make people come here now. Well, with respect to the role of man in his environment there is really no need to separate man from the sea anymore than you separate him from the land. Man, of course, is a land animal but the relationships between the ocean and the land mass and the things that live on the land and that live in the sea are still there and man will enter the sea and take his place there the same as he has on land, probably never to the same extent because it still is a very hostile environment as far as man is concerned. But we have to remember, of course, that man probably modifies his niche and occupies the niche of other organisms more than any other organism. And this is where the problem comes, is when he eliminates a niche that some other organism occupies and that organism is gone. Economics largely dictate this. The pressures of population and the fact that people, developers in order to exist have to do things the most economical way they can, and I don't agree with that. I think that uneconomical means should be employed many times.

Dr. PAUL EHRLICH. We are going to have to get rid of the idea that a river running past somebody's back yard is something that he or an industry is free to dump any kind of garbage into. We are going to have to see to it that polluters pay to clean up their own pollution. It's really pathetic. You hear about some plant which has destroyed an entire river and after ten years of litigation it gets fined $200, you know, a huge multi-million dollar industry. Well, the fines are going to have to move up to multi-million dollar. And you take the money that you extract from the big polluters, and believe me they'll stop polluting very fast when you start hitting them with ten million dollar judgments and so on. And you pump that back into cleaning up the environment, as well. A tremendous amount can be done in the United States and elsewhere to control environmental problems.

PAUL NEWMAN. If economics is a determining factor, it can also be used to improve environments. It is the consensus of scientific opinion today, that we can use our natural resources in a rational way. We can no longer take without returning. We can no longer use without restoring. One example, the new facilities of the Bethlehem Steel Corporation. Dr. Allen Brant.

Dr. ALLEN BRANT. If we were starting with a new plant, as for example, our Burns Harbor plant, of course, it would be different. In the Burns Harbor plant, there are, for example, three different steps for treatment. Primary facilities are available directly at the sources, wherever the polluted water first flows out of an operation, there's a primary treatment operation there. All of the effluents from the primary treatment facilities then are conveyed to a common, one, central, secondary treatment plant, and then, from there, they go to a terminal lagoon, which is a seventy-five acre pond, in which all of the water flows through, very slowly. Consequently, the discharge from that is very clear. You can be sure that it'll be clean, because of the checks and balances that we have in the system.

PAUL NEWMAN. The human spirit yearns for relief from the frustrations that come with jammed living and masses of people attempting to do the same thing at the same time. The locked-in-ness of human habitation carries with it consequences of human behavior. We are building a world which is becoming unsuitable for human life. A world of concrete and steel. If the human spirit seeks nature as a place to regroup its energies then we must suffer the consequences of shrinking refuges for people. The fragments of wilderness left to man will soon not exist for our children.

MARY MARGARET GOODWIN. My heart really breaks for the children that grow up in the United States in the future, and will never know these sort of things unless we do something to conserve them. I know that my children won't be able to grow up in that kind of environment, where I can take them to vast areas of wilderness, and they can go and learn and live and have the same kinds of experiences that I had as a child in the wilderness.

Secretary STEWART UDALL. I think we all have a stake in the wilderness. And I'm all for the small wilderness near the big cities. We've done too little of that. I'm not willing to settle for the idea that somebody may get to see the Grand Canyon once in their old age. I think we have a lot of superb little grand canyons and superb scenic areas and seashores right near the big cities that we could save where people can enjoy the out-of-doors. But what we're talking about is the welfare of man, the health of man, his mental health, his well-being. The more we drive man into an environment which is unclean and noisy and we put more and more pressures on him, I think we're inviting disaster in the long run to mankind as a whole.

HAROLD HASKINS. There's a lot of lack of communication about what beauty is in this world and one of the biggest problems that everyone agrees upon is that the ghetto and the community is ugly. The Grand Canyon would be relevant if they had enlightenment to see why it is but there is no contact. There is no bridge between here and there and this is the same problem with black and white society—no bridging and great big canyons in between.

PAUL NEWMAN. Our shrinking wilderness is only a part of the ecological crisis man is facing. The Greeks saw problems as parts of a whole. They mastered the art of interrelatedness. It would seem that today we have lost touch with this reality. We view too many of these problems separately. Somehow the city and its people, the forests and their organic life, the seas and their aquatic life, share a life cycle—a balance that is the key to our common survival.

Dr. PAUL EHRLICH. I think the most important lesson to be learned from ecology in general, perhaps, for humanity in general is you don't get something for nothing. And when you disturb a situation at one point, you almost always get a reaction at some point you hadn't anticipated. We have made the world so small as an ecological system, as a human system, that we know that when you intrude at one point on it, you're gonna get reactions in another place. If you go into a situation and you put poison out to kill one animal, you'll find that, besides killing that animal, you'll do thirty-seven other things you hadn't expected, of which thirty-five are very bad. And, I think that, what we need is a systems approach, the kind that's used in systems ecology, to the entire planet. We can no longer continue pushing on one thing without thoughts about what's going to happen to the rest of the system. You can't think of pesticides simply as something which kills our competitors. You've got to think of it as something which also helps to poison us, turns down the photosynthesis in the sea, gets rid of predatious birds, all of which have other effects. And, until we can get people to do the real accounting on these problems—until you can make them see that a dam does something more than pile up water behind it—that it changes water tables, and it changes ecological situations and so on—until you can get them to looking at the entire picture, the very complex interrelationships, you're not going to win the game.

IAN MCHARG. We have got to be eternally grateful to these people who have cared enough to ensure that certain areas have not been totally destroyed, and as long as there is an enormous destructive impetus in the world, then we depend enormously upon the preservationist. In a better world instead of oscillating between these extremes of absolute preservation on the one hand, and limitless destruction on the other, one wants to find a position where you realize that man in fact can be the steward, and

again, those people who care a great deal about religious injunctions in this matter, can see in the second chapter of Genesis the injunction to dress a garden and keep it, and I think this conception of man in fact is a steward, is a husbandman of the earth, is a better one. Not a preservationist. Not a destroyer, but a husbandman.

Dr. PAUL EHRLICH. The President's Commission on the world food problem which was basically a very cheery group—they didn't, they didn't even consider environmental deterioration—said that, without population control starting now, the situation is hopeless. We have a finite planet. We have finite water supplies. We have finite food supplies. We have finite resources. We cannot, therefore, have infinite people. So, then you come down to the question, well, where do you stop your population growth? You've got to stop it sometime. Do you want to go on until the United States resembles India or China, or do you want to stop it now, while we still don't have to have eight years ahead reservations to go into Yosemite Valley, and where we still have a chance of seeing some green, and where people who would like quiet, or don't want to live in a big city, have an opportunity not to live in a big city. Let me point out to you that if current trends continue, in seventy-three years every person in the world will live in a city of a million or more. So, as population increases, you increase the chance of thermonuclear war. When you consider the ecological effects of a thermo-nuclear war, the soil sterility, the material that will be lofted into the atmosphere, the increased erosion polluting the sea, the rays of radioactivity, it's quite conceivable that mankind could become extinct. When you have the world's largest population and the world's weakest population in all of history, and you have jet airplanes that can carry sick people from one end of the earth to the other in a matter of days, you have the potential for a colossal world-wide pestilence of some sort or another. We know that viruses become more virulent when they circulate in large populations. So, you could very easily have a death rate solution to the population explosion which would consist of a massive die off of humanity from a virus plague which spread over the entire earth. Then we have the situation of the under-developed world going further and further into famine, instead of maybe ten million people a year dying of starvation as happens now, that could escalate to fifty or a hundred or two hundred million a year or even more. Now, in this country, we could probably bring our population growth to a halt very rapidly, if we wanted to. But that's the critical question. Do we want to? Do enough people recognize the problem, and are they willing to do what's necessary to solve it?

IAN MCHARG. We now exist, and we exist with the plants, the animals the other microorganisms who are the co-tenants with us in this phenomenal world today, in cooperative venture, which contains their dreams and our dreams. So we cannot preserve and we cannot destroy because this is our own inheritance. All we can do is manage, and we cannot manage very much. We can only manage insofar as we can. But man can be the enzyme of the biosphere. He can be an agent which is a constructive agent.

GARY SMITH. This love of the earth is nothing new. The Indians used to have beautiful philosophies about that. Let me see. Perhaps an extreme example would be a quote from the Nez Perce Indians. Chief Joseph is a favorite subject of mine and you might be interested in hearing what their philosophy was. Their whole religion was built around a love for the earth. These people looked at the earth as their mother. And we, in turn, as a modern society, must start looking at the earth as a mother and we must treat her with the respect as we do our mother. But these people in their earth/mother type of philosophy talked about dreams. They were great visionary people and they say here: "You ask me to plow the ground. Shall I take a knife and tear my mother's bosom?" And they say, "You ask me to dig for stones. Shall I dig under her skin for her bones?" "You ask me to cut grass and make hay and sell it and be rich like white man. But how dare I cut off my mother's hair?" And these primitive, so-called ignorant people were concerned with what the white man was doing to the earth at that time, because they had lived successfully in balance with their environment. They had taken from the land just what they needed and they put back what they needed. They saw people coming in using practices that alarmed them. So, they were a small voice at that time, the American Indian. We inundated them, we drowned them, we trounced them, we defeated them, we raped them and now we're doing the same thing to our environment.

PAUL NEWMAN. With the Apollo Eight flight, earth-man for the first time has been able to step back and physically view his world from space through human eyes. He has finally seen his world objectively. The dream of Galileo, of Copernicus, of every dreamer and scientist of the past and recent past, of Einstein, of Shapley, has become a reality—and the reality, how accurately imagined! As astronaut Jim Lovell put it at that indescribable moment from space: ". . . in the vast loneliness up here on the moon, it's awe-inspiring and it makes you realize just what you have back there on earth. The earth from here is a grand oasis in the great vastness of space." The earth, indeed, is a very small planet. Each of us can see for himself now how finite our land—our air—our water. Even the number of grains of sand in our world is a finite number. With this vision, how clear it has become that any destruction of earth resources, by war or any other destructive act, even carelessness in its use, is an act hostile to life's well-being, a crime against humanity and every other form of life on earth. We are living in an age of danger but it is against life's drive to allow our earth to become like our moon—a dead planet. There are alternatives to doom. The growing consensus accepts as imperative to man's survival, the establishment of an equilibrium between population and resources. Diversity of life in nature is a prerequisite for the continuation of man's existence on earth. The problems of having a diverse and balanced existence for man are staggering. Perhaps, just perhaps, we are capable of meeting these challenges by our commitment to the future. This is the commitment of three young Americans—and surely must be for all Americans today.

SEXUAL REVOLUTION

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. RARICK. Mr. Speaker, seemingly the academic leadership have adopted the totalitarian policy that the educable youth of the United States become the property of the State. Educating the mind in science, philosophy, and mathematics now ranks secondary to sex.

The whole sordid mess can but damage the direction of the next generation and greatly aggravate the already serious moral crisis in our country which has resulted from an overexposure of sex excitement and encouragement.

Our educators should see by now that the sex crisis was not caused by lack of knowledge but rather by our youth being prematurely exposed to lewd and sensuous movies, TV, and magazines, all of which in turn can be attributed directly to the action of the U.S. Supreme Court hampering the ability of a community to establish and maintain a wholesome moral environment.

Will sex education offer any remedy to a cause or merely serve to aggravate an effect?

Mr. Speaker, the Dan Smoot report for March 24, and a copy of the lawsuit filed by the Mattachine Society of Washington, D.C., against Internal Revenue Service follow:

[From the Dan Smoot Report, Mar. 24, 1969]

THE LUST FOR MORE IN SEX EDUCATION

An article in the September 9, 1967, issue of *The Wall Street Journal* says, in essence: Sex education is coming to the nation's schools at a rapid clip; PTA groups (national, state, and local) have asked for it; the National Education Association and the American Medical Association have endorsed it; the federal government supports it financially; SIECUS (Sex Information and Educational Council of the U.S.) has been established to promote it; big corporations are spending millions on the planning and production of teaching materials for it.

In January, 1968, the Joint Committee of the National School Boards Association and the American Association of School Administrators issued a statement saying:

"School systems throughout the United States are presently being pressured to offer courses in sex and family life education. . . . Well-intentioned groups . . . are eager to reach the school-age population of over 50,000,000 young people." [1]

The Joint Committee was not criticizing sex education, as such, but was objecting to adding it as a special, or categorical, topic to overburdened public-school curricula. The joint Committee thinks sex education should be integrated into a comprehensive program of health education in all grades from kindergarten through high school. [1]

In October, 1968, Dr. Mary Calderone estimated that SIECUS had distributed, in one year, 61,000 kits of sex-education materials to educators, PTA groups, medical associations, and others. [2]

In an article in July-August, 1967, issue of *Children* (periodical published by the U.S. Department of HEW, Dr. Eleanore Braun Luckey (special consultant to HEW's Children's Bureau) says:

"Community agencies, youth organizations, churches, and schools are all scurrying to initiate programs of sex education—sometimes called family life education, boy-girl relationships, or interpersonal development. . . .

"Nevertheless, the goals of sex education are not altogether clear. . . ."

"What's Happening," an article in the November, 1966, issue of *American Education* (periodical published by the U.S. Department of HEW) also noted the nationwide scramble for sex education *now* in the public schools. The article mentioned SIECUS, National Education Association, American Medical Association, and the National PTA as organizations which can help establish or improve sex-education programs, and provide materials for classroom use. The article cites, as the exclusive reason for the intense interest in sex education, the alarming increase in illegitimate babies born to teenage girls and young women, and the spiraling incidence of venereal diesases among teenagers, especially boys.

Footnotes at end of speech.

Doubtless, most *parents* who want sex education in schools naively believe it will help reduce sexual promiscuity among youngsters—or, at least, help them avoid some of the harmful consequences of promiscuity.

Professional sexologists sometimes *promise* that sex education in schools will help reduce premarital pregnancies, abortions, and venereal diseases among teenagers; but they also admit that the promise is false.

In an article published by *Reader's Digest*, June, 1968, SIECUS board member Lester Kirkendall, speaking of sexual activity among youngsters, says:

"And if present trends continue, premarital intercourse will almost certainly increase. The need for sex education, therefore, is that much greater."

This clearly implies the promise that sex education will help reduce the volume of premarital sex activity among young people. Elsewhere in the same article, however, Kirkendall says:

"Most people have the vague hope that it [sex education in schools] will somehow cure half of the world's ills—reduce casual sex experience, cut down on illegitimate births, eliminate venereal disease. To be perfectly blunt about it, we have no way of knowing that sex education will solve any such problems."

One pamphlet which Lester Kirkendall uses in some of his sex-education lectures is entitled "An Experiment in Sexual Communication Between Youth and Adults." He conducted the experiment at the University of Oregon, when he was on the faculty there as a sexologist. He got seven young men to sit as a panel and discuss their actual experiences in sexual intercourse—before an audience composed of men and women, teenage boys and girls.[3]

In lectures to mixed groups, Kirkendall sometimes uses a four-letter obscenity meaning sexual intercourse.[3]

Dr. Mary Calderone (executive director of SIECUS; a grandmother in her middle-sixties; niece of Carl Sandburg; daughter of Edward Steichen, a well-known photographer; graduate of Vassar; a Quaker; a member of the Family Life Committee of the National Council of Churches) also uses four-letter obscenities in lectures to mixed groups, including teenagers. Her excuse is that "euphemisms" in sex discussion are dishonest.[4] She says, for example, that it is wrong to tell five-year-old children that the father "puts" or "places" the seed of a baby in the mother. To illustrate the "correct terminology" to use with five-year-olds, she describes the sex act, in detail, using explicit terms, naming the sexual organs involved, explaining their role and use in coitus.[4 5]

Calderone and her fellow sexologists in SIECUS say children should be taught that self-gratification is a normal, expected, almost-universally practiced, and often helpful manifestation of sex.[5]

SIECUS advocates "responsible sexuality" (or "situation ethics") as a guide to sexual conduct—which means that any kind of sexual activity is good if participants feel good about it. Conversely, SIECUS holds, religious taboos and society's conventional moral codes about sexual behavior are harmful because they create repressions and feelings of shame about sex.

SIECUS sexologists must know (if gullible parents, PTA leaders, and school officials supporting school sex programs do not know) that the SIECUS kind of vulgar, permissive, amoral sex education, far from curing any of "the world's ills," can only have a debasing effect on young people. There is statistical proof of this, not only in Sweden where the SIECUS kind of sex education has been compulsory in all grades of all schools for ten years,[6] but also in the United States where such official debauchery of school children is relatively new.

The November, 1968, issue of *Today's Health* published statistics revealing that incidence of venereal disease in recent years has risen 78% in the United States, 123% in California. California has had more of the SIECUS kind of sex education than any other state.

The SIECUS sex-education program was begun in Anaheim, California (Orange County), public schools in 1965. In 1966, 300 Orange County girls had to drop out of high school because of pregnancy—30 of them from junior high schools. In 1967, the Orange County Public Adoption Agency was receiving three or four unwed mothers a day—the youngest unwed mother reported being age 13. At a home for unwed mothers in nearby Los Angeles, one out of every five was from Orange County.[7]

A line from a news article in the March 2, 1967, issue of the *Anaheim-Fullerton Independent* sums it up:

"The new sexual morality is leaving a broad trail of heartbreak in Orange County."

Jo Hindman, in a column on "School House Pornography" in the February 27, 1969, issue of *The Eagle*, sketches a picture that is beginning to emerge throughout the United States:

"An increasing flood of revoltingly crude and pornographic material, mislabeled as 'education' by some school hierarchies, continues to trigger childhood tragedies: unwed pregnancies, illegitimate births, incestuous brother-sister attacks, abortions and venereal diseases—welling from the bog created by the too young knowing too much too soon."

Leading parents to expect benefits, which SIECUS officials know sex education in schools will not produce, is only one SIECUS stratagem. There are others.

SIECUS board member Lester Kirkendall denounces opponents of sex education in schools as a "fringe group of dissidents who do not think rationally"; who "have hangups about sex" because they think sexual behavior should be guided by moral codes and religious prohibitions, not understanding that "morals are relative" and that the only valid "moral" restriction on sexual activities is concern for "exercising responsibility toward another person." He says parents become traumatic about their youngsters engaging in sexual activity, because they do not realize that premarital sexual intercourse, even for children, is all right, provided "consideration is given for the partner."[8]

Kirkendall says sexologists can, however, slip sex education into school curricula without unduly alarming parents, if they will start with the premise that all children receive some sex training by simply living. "Any school," he claims, "is fully warranted in saying that it is 'expanding and improving' rather than 'starting' a sex-education program. The public is less afraid of expanding than of innovating. . . ." He suggests weaving sex education into regular school courses, in preference to establishing it as a separate course, because, he says, "the more sex education can be set within the normal program the less it will be singled out as unusual and threatening."[9]

To school officials who want separate sex-education courses, Kirkendall says: "Don't say that you are going to start a sex-education course. Just sneak it in as an experimental course and see how people react." Once school officials sneak sex education in "experimentally," they should never retreat, Kirkendall says. He advises: "Always move forward. Say that you are going to enrich, expand, and make it better. The opposition can't stop something that you have already started."[8]

And, he urges: "Go to your PTA and get support. That's where the power lies."[8]

An insatiable lust for more seems to be trait of many sexologists. No matter how bad a sex-education program may be, there are always some sexologists agitating to make it worse.

In England, where sex education in the schools is already of the "frank" variety recommended by SIECUS in the United States, a producer of sex-education movies plans to make, for classroom use, the kind of film that, in the United States, is generally shown only at stag parties and is still outlawed in most states and barred from interstate commerce by federal law: a film showing a nude couple engaged in coitus. Frank Sandy, chief of Brodie Educational Film Strips, Ltd., which supplies educational materials to 10,000 schools, says:

"We are looking for a young, married, church-going couple of fine moral character for our film. The film is intended for an audience of 15- and 16-year-olds.

"We feel that a film like this is the best way to give sex instruction to children."[10]

Several London school authorities are "reserving judgment" on the proposed film. They do not yet know whether to use it in schools.[10]

In Sweden, sex education in schools seems to have gone the limit; but that is not far enough for some sexologists. In April, 1967, Tore Robertson, 24-year-old public school teacher in Stockholm, said every good high school needs a sex room, where teenage lovers can seek respite from the daily school grind. A powerful student organization branded the suggestion "idiotic." Robertson said this was merely a temporary setback, because "future schools will have such rooms."

What's happening in England and Sweden is a harbinger of things to come for the U.S.

IN THE U.S. DISTRICT COURT FOR THE DISTRICT OF COLUMBIA

CIVIL ACTION NO. 752–69

Franklin E. Kameny, Washington, D.C., and the Mattachine Society of Washington, Washington, D.C., and the North American Conference of Homophile Organizations, Kansas City, Mo., plaintiffs, against William H. Smith, Acting Commissioner of Internal Revenue, Internal Revenue Service, Washington, D.C., defendant.

Plaintiffs, for their complaint against defendant, herein allege:

1. Plaintiff, Franklin E. Kameny, a citizen of the United States, is a resident of the District of Columbia. Plaintiff, the Mattachine Society of Washington, is an unincorporated organization existing under the laws of the District of Columbia. Plaintiff, the North American Conference of Homophile Organizations, is an unincorporated organi-

zation existing under the laws of the State of Missouri. Defendant resides in or may be found within the District of Columbia. This action concerns questions which arise under the Constitution of the United States. The matter in controversy exceeds, exclusive of interest and costs, the sum of Ten Thousand Dollars ($10,000). Jurisdiction is based upon 28 U.S.C. §§ 1331 and 1361 and § 11–521 of the District of Columbia Code.

2. Plaintiff, Kameny, is a homosexual by inclination and by life-style. Plaintiff, The Mattachine Society of Washington, is a civil liberties, information-education, social-service organization dedicated to improving the status of homosexuals. Plaintiff, the North American Conference of Homophile Organizations, is a nationwide assocation of approximately twenty-five organizations similar to The Mattachine Society of Washington and is working in behalf of the entire United States homosexual community.

3. William H. Smith is Acting Commissioner of Internal Revenue. In accordance with policies and delegations of authority made by the Secretary, U.S. Treasury, he is responsible for the promulgation and administration of the rules of conduct for Internal Revenue Service personnel.

4. This suit is brought to compel defendant to revise § 1942.31 of the Internal Revenue Service Manual as contained in the "Rules of Conduct for Internal Revenue Service Employees" (Rev. 10–63) in order to make it clear that Internal Revenue Service employees may associate with persons believed or known to be homosexuals, whether or not in connection with official Internal Revenue Service business, without jeopardizing their employment status with the Internal Revenue Service. Because of the inhibiting effect on employees of the Internal Revenue Service of § 1942.31, plaintiff, Kameny, an admitted homosexual, is deprived of his right under the First Amendment to the United States Constitution to associate freely and openly with any person employed by the Internal Revenue Service. Also, because of the inhibiting effect on employees of the Internal Revenue Service of § 1942.31, plaintiff, The Mattachine Society of Washington, and plaintiff, The North American Conference of Homophile Organizations and its member organizations, are denied their right not to be deprived of liberty and property without due process of law as provided in the Fifth Amendment to the United States Constitution.

5. The Internal Revenue Service has a rule of conduct, which, among others, may be found in a pamphlet entitled "Rules of Conduct for Internal Revenue Service Employees" (Rev. 10–63), and which provides:

"Except in connection with official business, employees may not associate with individuals or groups when the association tends to discredit, directly or indirectly, the character, reputation, or integrity of the employee or of the Revenue Service. Unjustified association with persons who are believed, or known to be connected with illegal, immoral, or reprehensible activities, is forbidden because the association by the employee might tend to connect the employee or the Service with such activities of these persons. Employees should bear in mind that they will be held responsible in the event of adverse publicity stemming from, or connected with, their association. Section 1942–31."

The Internal Revenue Service uses § 1942.31 of its Rules of Conduct to interrogate, discipline and/or terminate the employment of Internal Revenue Service employees who are alleged or have been found to have associated (other than in connection with official business) with persons alleged or known to be homosexuals.

6. In interpreting and applying § 1942.31 of the "Rules of Conduct for Internal Revenue Service Employees" (Rev. 10–63) to preclude Internal Revenue Service employees from associating with homosexuals, except in connection with official business, with violation of such rule subjecting Internal Revenue Service employees to interrogation, disciplinary action or termination of employment with the Service, the Commissioner of Internal Revenue is effectively denying plaintiff, Kameny, a homosexual, his right to associate with any or all Internal Revenue Service employees. Internal Revenue Service employees' rights to associate with plaintiff, Kameny, are denied to them by the inhibitory and chilling effect of § 1942.31 and, *a fortiori*, plaintiff, Kameny, is denied his right to associate with such employees. In effect, the Internal Revenue Service's action results in a kind of "American Apartheid," directed not at Negroes but at homosexuals.

7. As a result of the effect of § 1942.31 (see "5" above), The Mattachine Society of Washington and the member organizations of The North American Conference of Homophile Organizations are denied the right to receive contributions from, and grant memberships to, Internal Revenue Service employees. Because The Mattachine Society of Washington and The North American Conference of Homophile Organizations and its member organizations, although being lawfully constituted and lawfully operating organizations, are dedicated to improving the status of homosexuals and contain as members numerous homosexuals as well as heterosexuals, contributions to, and membership in, the Society or any of such similar member organizations by an Internal Revenue Service employee would immediately subject such employee to interrogation, disciplinary action by, or termination of employment from the Internal Revenue Service.

Wherefore, plaintiffs pray that:

1. The Acting Commissioner of Internal Revenue be enjoined from interrogating, disciplining and/or terminating the employment of any Internal Revenue Service employee solely because he is alleged or found to have associated with a person alleged or known to be a homosexual.

2. The Acting Commissioner of Internal Revenue be ordered to revise § 1942.31 of the Internal Revenue Service Manual contained in the "Rules of Conduct for Internal Revenue Service Employees" (Rev. 10–63) to make it clear that Internal Revenue Service employees may associate with homosexuals, whether or not such association is in connection with the official business of the Internal Revenue Service.

3. Plaintiffs have such other and further relief as may be just and proper.

Dated: March 25, 1969

WILLIAM L. SOLLEE.

WHEATGROWERS THIRD ANNUAL CONGRESSIONAL BREAKFAST

HON. THOMAS S. FOLEY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. FOLEY. Mr. Speaker, this morning Mrs. MAY, my colleague from Washington and I had the very great pleasure and privilege of attending the Third Annual Wheatgrowers Congressional Breakfast sponsored by the National Association of Wheat Growers, Great Plains Wheat, Inc., and Western Wheat Associates, USA, Inc.

These annual meetings provide an excellent opportunity for wheatgrowers and Members of Congress to exchange ideas and maintain solid lines of communication and understanding, and I want to commend and congratulate these three fine organizations for making this possible.

On the program this morning was a presentation by John Thomsen of Mansfield, Wash., president of Western Wheat Associates, USA, Inc., and a member of the Washington State Wheat Commission. Mrs. MAY and I feel that Mr. Thomsen's remarks merit the attention of all our colleagues in the House, and include his statement in the RECORD for their consideration:

REMARKS BY JOHN THOMSEN, PRESIDENT, WESTERN WHEAT ASSOCIATES, USA, INC., AT THE THIRD ANNUAL CONGRESSIONAL BREAKFAST, WASHINGTON, D.C., MARCH 26, 1969

Senator Goodell, Congressmen, Guests and fellow wheat producers. I would like to make a few brief remarks which, I hope, will help emphasize the importance of our wheat market development program.

Western Wheat Associates is a regional organization directly representing the wheat producers in Washington, Oregon, Idaho, Montana, and Nebraska. Great Plains Wheat, representing six additional wheat states, contributes to our program. Our only objective is to expand and maintain the markets for U.S. wheat in Asia.

The twelve states represented by wheat growers here this morning produced 80% of the wheat grown in the U.S. last year. More than anyone else, we know how vital our wheat exports are to our economy, because of the direct relationship to our income and our personal lives.

Today, U.S. wheat exports are reeling from the effects of increased world production of wheat and other food grains, intensified competition for dollar export markets and decreased programming to PL 480 countries.

Just two years ago, there was an almost universal belief that there was not enough food to feed the hungry world. This philosophy has suddenly changed to recognize the world surplus of food grains relative to an *effective* demand. The present world oversupply of wheat can be directly related to almost ideal weather conditions, improved varieties, greater fertilizer usage, better farming practices and increased acreage.

In 1968, world wheat supplies reached 305 million tons which was 10% above the previous year and 7% over the 1966 record. Stocks are building up as import demand has slackened. The United States, Canada and Australia have been joined by Argentina and France as major wheat exporters. Even countries that were once deficit—such as the U.S.S.R., Spain, Sweden and Greece—are now exporting wheat.

Total world wheat trade this year may be the lowest since the 1962 crop year when it was under 44 million tons. World trade peaked in the 1965 crop year at over 62 million tons and has steadily decreased since then. This year it is expected to fall below 50 million tons.

These factors and others will reduce our wheat exports this year to some 80% of last year at the present rate. Obviously this is one of the major contributing factors to the disastrous level of farm income and our narrowing balance of trade position. Last year, wheat shipments were valued at $1.3 billion—one fifth of total U.S. agricultural exports. The very size of wheat exports—which normally run well over 50% of our production—indicates their importance to the domestic supply situation.

The current wave of protectionism is a definite threat to our export outlook. Such policies would almost certainly lead to retaliation from abroad—which is authorized under the General Agreement on Tariffs and

Trade. Since food imports by a majority of the countries are closely controlled by government regulations, wheat would be particularly vulnerable since tariff restrictions could be easily applied and regulated.

Clearly, we need to redouble our efforts to develop new markets and increase our share of existing markets for U.S. wheat abroad. We cannot allow other exporting countries to "skim off the cream" leaving us as residual suppliers.

The "challenge" to help ourselves was first accepted by American wheat producers some 15 years ago. The pioneers of this program, some of whom are in this room today, foresaw the need to expand foreign markets to provide an outlet for our excess production capacity. We banded together into associations, and then commissions, and assessed ourselves to raise funds in a grass roots self-help program.

Foreign wheat market development is a joint effort between all of us here today. We producers contribute our own dollars through local and regional organizations. The U.S. government contributes foreign currencies, generated by PL 480, which are administered by the Foreign Agricultural Service of the U.S.D.A.

Positive and clear cut success has been achieved in many of the world wheat markets. Wheat is one of the world's most important foods. It is by far the most widely traded food internationally, but there are many countries in the world where we have barely scratched the surface.

The per capita consumption in Thailand is only 2 pounds of wheat per year compared with our 115 pounds. Africa is a sleeping giant that is slowly awakening and must be fed. The Middle East and Eastern Europe could again become major markets for U.S. wheat once the political considerations have been settled. We must fight to maintain our position in the European Economic Community where trade barriers are hampering our efforts. Much more can and must be done if our industry is to survive.

In the meantime our priorities—which are limited by personnel and funds—must be directed toward those areas which show the greatest immediate potential. We cannot, however, afford to neglect the many countries which are slowly emerging as prospective customers for *the best wheat in the world.*

The marketing of wheat is a fluid situation. It is influenced by climate, economic and political considerations that change weekly, monthly and from year to year. The changing situation in turn influences what we can do in a specific country at a particular time in market development. The key to success is to be alert to these changes and to be equipped with the proper resources to take advantage of the circumstances.

On behalf of Western Wheat Associates, I would like to thank each of our guests for taking the time from their busy schedules to join us for breakfast this morning.

Thank you.

GARY JOB CORPS CENTER VISITED

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. PICKLE. Mr. Speaker, last week members of the House Education and Labor Committee conducted an onsite inspection of the Gary Job Corps Center in San Marcos, Tex. It was a rewarding trip, and I believe those who made the tour gained valuable insights into a highly successful operation.

Briefly, I would like to share the experiences of this trip with my colleagues; because, in the coming weeks, Congress will begin hearings that will determine the future of the Job Corps, OEO, and all programs involved in the war on poverty. Any congressional action will bear heavily on the social and economic welfare of this country. Because this program is at the threshold of crisis, I would like to briefly share the experiences of the tour of Gary.

The real story behind the congressional tour of the Gary Job Corps Center last week will be told and retold in testimony and hearings during the coming weeks in both the House and the Senate.

The congressional factfinding team, led by ranking members of the House Committee on Education and Labor, was openly enthusiastic by what they found in San Marcos.

It was, of course, a great source of pride to me and other members of the Texas delegation to host the group that visited Gary, particularly in light of the significant accomplishments of the center in regard to efforts of rehabilitation of young men.

Committee members were not hesitant to point out that they were impressed with the work of Gary officials in administering the lowest costing per Corpsman operation in the Nation. Time and time again, my colleagues confided to me that they felt the Gary operation was reason enough to see why I had been a longstanding and strong supporter of the Job Corps idea to educate and train the uneducated and unemployed. What the touring lawmakers saw was proof of the concept that it does not necessarily take a Ph. D. to be a good cook, mechanic, welder, clerk, or stone mason. They saw in fact, not policy or theory that the disadvantaged of our Nation can be turned into useful citizens; citizens, who after completion of training, become taxpayers instead of taxeaters.

Center director, Wallace Dockall, and his staff did an excellent job presenting the facts—cost figures, academic accomplishments, training procedures, and the like to the committee. These figures and the firsthand impressions of a highly efficient residential vocational training center will form the core of debate among lawmakers, whose decision it will be to continue operation of these training programs in the immediate years.

Members from the committee who made the trip were: Congressmen ROMAN PUCINSKI, WILLIAM FORD, WILLIAM CLAY, JOHN ERLENBORN, and ORVAL HANSEN. In addition to these Members, several from the delegation were in attendance: JIM WRIGHT, HENRY GONZALEZ, Senator RALPH YARBOROUGH, and a representative from Senator JOHN TOWER'S office, Paul Reeve.

Several staff members also made the tour from the Education and Labor Committee—William Gaul, Austin Sullivan, William Henderson, and John Buckley; from the Senate Labor and Welfare Committee—Bob Harris and James Guest; two Senators on that committee were also represented—Bill Bechtel, from Senator GAYLORD NELSON'S staff and Sam Culberson, from Senator GEORGE MURPHY'S staff.

In abbreviated form, Mr. Speaker, I would like to share highlights of the remarks made by Corpsmen, staff directors, and members of the inspection party. I would call your special attention to the following welcoming remarks made by two of the Corpsmen. They are the simple and honest statements of two young men who asked for—and received—help:

WELCOME—BREAKFAST, MARCH 21, 1969—REPRESENTATIVE, CORPSMAN'S ASSEMBLY

Good Morning Ladies and Gentleman: On behalf of the 3,000 Corpsmen and myself, I would like to welcome you to the Gary Job Corps Center, and I hope your stay will prove to be a pleasant one.

I am Earl Matthews of the Corpsman's General Assembly. I have been enrolled at Gary for 13 months and my vocation is Drafting.

Prior to my enrollment in Job Corps, I had to leave school with a 10th grade education. I worked several jobs as kitchen help, and the pay ranged from $1.00 to $1.25 per hour. After consideration I enrolled in Job Corps.

I now have a GED and I am working on a trade and the ability to get and maintain a job which will enable me to become a better citizen.

Just as Job Corps has helped me, it has helped thousands of others. Therefore, I sincerely believe the program should be maintained and I hope that you share my belief.

We are all so glad that you came today to visit our Center. If any Corpsmen can be of assistance to you during your tour or to answer any of your questions, please feel free to call on any of us. We are proud of the Gary Center, and we enjoy showing it to our guests—especially to such a distinguished group like you.

Thank you very much.

WELCOME—LUNCHEON, MARCH 21, 1969—CORPSMAN ARMANDO LIMA, PRESIDENT, CORPSMAN'S ASSEMBLY

In behalf of the Corpsman's Assembly and the 3,000 Corpsmen at Gary, it is my pleasure to welcome you to our Center. It is our hope that you will enjoy your visit to Gary and to the great variety of trades that, thanks to each of you, we are able to learn and prepare ourselves to face the world.

I'm a Cuban refugee who came to the United States in June, 1962, to the Catholic Welfare Bureau in Miami. It's a program for cuban children without parents—and I spent four years in it going to school from the 8th to the 11th grade. I had to drop out of school at that age because the program only goes up to the age of 18. I found a job and started going to night school to finish high school, but it became too hard for me to work 8½ hours and go to school 4 hours so I had to quit night school.

By this time I heard about Job Corps from a friend and decided to join. I did so with the idea of getting ahead and having a better future and getting my GED.

In August I was sent to Camp McCoy in Wisconsin where I took welding as my vocation. Six months later OEO closed 16 camps in which Camp McCoy was one. Because of my record of improvement in every field, I was given three choices of transfer into other camps.

I decided on the Gary Job Corps Center in San Marcos. I have now finished the welding program and have started on a second trade—Machine Shop, which I'm now planning to finish. But this is not my last goal—I am working on my GED to be able to get a scholarship for college in order to become a vocational counselor.

During this time of 19 months in Job Corps, not only have I gained knowledge in Metal

Trades, but in the complicated society of human relations and the English language. Thanks to Job Corps and the good people who run the Government of the United States, many hundreds of teenagers like me have found a second opportunity for living, have made it successfully and are now a part of that big society willing to help make this country a great nation.

For those teenagers, and myself and the 3,000 Corpsmen here at Gary, I am proud to say thank you, and hope that you find in Gary the true facts of the great need for this kind of program in our Nation.

Thank you very much.

The remarks from these young men set the stage for the tour of Gary facilities, which included the upholstery shop, advanced welding, reading lab, math lab, masonry work, heavy equipment operation, dorms, cafeterias, and other areas.

At this point, Mr. Speaker, I would like to include a brief factual summation of Gary prepared by Dr. O. J. Baker, executive secretary, Texas Educational Foundation, Inc.—the nonprofit operation behind the success of Gary:

The following information is respectfully submitted with regard to Corpsmen placements and follow-up studies from the Gary Job Corps Center.

We invite your attention to the data contained in the attached chart which reflects the percentage of those who have completed their training and are employed in the skills for which they were trained.

You will note that in Fiscal Year 1968, 83% of the 3,524 Corpsmen processed for employment were hired, and that 58% were employed in the skills for which they were trained at Gary.

In addition, 698 entered the military service, returned to school or entered colleges. While these men were not actually working within their job skills, it must be noted that their overall training here provided them with the necessary entry-level qualifications for equally worthwhile endeavor.

Also, our records show that 610 more job placements are still pending verification. This means that we have not received notification from various employment services on that number. (Center policy is to write the employment service if such verification is not received within three months after a Corpsman leaves. Other follow-up procedures are initiated every six months.)

It is entirely possible, therefore, considering the school-military placements and those pending verification, that the percentage of young men working at jobs for which they were trained at Gary in 1968 could more accurately be estimated at approximately 70%.

In the first six months of Fiscal Year 1969 our records show a total of 71% known to be employed in their job skills, with a possibility of reaching 80% or more, considering non-verifications and school-military placements.

Among those who are not working within their job skills, our surveys reflect two major causes for the change: 1) many Corpsmen enter the program at age 16 and upon completion of their training may not be acceptable to employers in certain jobs. Generally they will accept interim employment until they are a year or two older; and 2) some choose to relocate, usually nearer their hometowns, and will accept whatever employment is available to them at the time.

What appears to be of greater significance than the fact that these young men may not all be employed in the identical job skill they followed at Gary, is the fact that such large numbers of them have learned how to work and are employed.

We know you will agree that while a particular skill is important to success, equally important and often much more difficult to accomplish is the necessary motivation to achieve, proper attitude, social skills and behavior necessary to get and hold a job.

Indications are, however, that this center is making steady progress in the area of placement on jobs to utilize job skills, and we will continue to work for further improvements of this as well as in all other phases of our operation.

Two phases of our program that bear mentioning are Driver Training and General Educational Development (GED). Since opening four years ago, 4,832 Corpsmen have completed the Driver Education Program and presently over 200 Corpsmen are completing driver education each six to eight weeks. To date 1,765 Corpsmen have completed the GED program and are equipped with high school equivalency certificates. There are 592 Corpsmen presently enrolled in the GED program. Both of these programs add to the employability of the young men.

As always, we are grateful for your interest in the Gary Job Corps Center and are happy to offer any further information you might desire.

Sincerely yours,

O. J. BAKER,
Executive Director.

At this juncture, Mr. Speaker, I think it appropriate to include the remarks of Dr. Arleigh Templeton, president of TEF, and president of Sam Houston State College at Huntsville:

WELCOME TO GARY

Mr. Chairman, members of the congressional committee, staff members, members of the press, distinguished guests, ladies and gentlemen: on behalf of the Texas Educational Foundation, Inc., prime contractor for both the Gary Job Corps center for men and the McKinney Job Corps Center for women, it is my sincere pleasure to welcome you to Gary.

You are having lunch today where the first job corpsmen sat down to their first meal here at the center just a little more than four years ago on March 3, 1965.

None of us knew then, certainly not those first frightened young men who entered this building, what history would say of Job Corps—not even what the papers would say the next day.

In these four years after some 16,000 men have passed through our gates and approximately 12,000 have been placed on jobs, the papers have been full of their actions, sometimes the sensational actions—which I can tell you as a college president, are fewer per capita than in other institutions of education. Many thousand words have been written questioning the cost of training; the effectiveness of the training; staffing; members of Congress; and I suppose anyone who has ever supported the Job Corps program.

As far as what history will say about Job Corps, it is still too early to say. But I know what I would like for history to reflect. I would like first for the record to depict vividly and accurately the kind of young man or woman who enters Job Corps. (Under-privileged, under-educated, abused, health problems, dropouts, etc.)

I would like not to take any short cuts to the end of a stay in Job Corps, but to follow day by day as people daily struggle with the almost insurmountable task of turning this kind of youth around, bringing him inch by inch along the way—catching him when he slips back and starting all over again.

Then I would like very much to see a true comparison between the lad who entered this center and the one who left. In my opinion the one who came in without a skill and left here, perhaps not with the greatest job skill, able to make the most money, but with a desire to get a job for the first time in his life—any kind of job—to feel perhaps the world is not such a bad place after all, who can read better, do simple arithmetic, have respect for authority, look better, feel better—know about clean clothes, sheets on the bed and how to eat with a knife and fork. And likely he will never return to the street. I think a $4500 price tag on this is a fair price—if not a bargain.

Then I would like also for history to footnote these facts that while flower children and protesters, demonstrators and rioters are running rampant in all parts of the country, 3100 men at the Gary Center . . . and, of course, thousands more in Job Corps elsewhere, are going right on with their training with a bare minimum of disturbance—something like one-half of one percent—ever getting into any kind of trouble.

These are some of the things I would like to see counter-logged for posterity.

In closing I would like to say again that we welcome you to this center today. It has been from among such visitors that we have made our best friends—people who bother to come and see what goes on, rather than speculate from afar. Hopefully you will feel free to make any recommendations for improvement where you see a need. This is what we consider to be the finest form of support. We appreciate suggestions in any way that will in turn help us to do a better job of helping the young men and women that are out of school and out of work to become responsible and productive citizens.

As we in Congress well know, Mr. Speaker, Job Corps centers have not always been well received by their foster communities. When this happens, it is a tragedy and a waste. Fortunately, this is not the case in San Marcos. The following remarks were made by the mayor of San Marcos:

WELCOME—NOON LUNCHEON, MARCH 21, 1969—ELLIS SERUR, MAYOR, SAN MARCOS, TEX.

It is not only a pleasure but a privilege to extend official greetings from the City of San Marcos to this distinguished group of guests of the Gary Job Corps Center. While Gary's location lies beyond the legal limits of our City, I welcome you to the Job Corps Center to, for in many important respects we consider Gary a very real part of our community.

It has been four years since this fine installation opened, and we in San Marcos feel that its operation has performed a great service to the many young men who would otherwise have no opportunity to learn a trade and become useful citizens and taxpayers. Citizens of San Marcos have seen the value of this program, and we feel that the cost of operation has been government money well spent.

We have had excellent cooperation from Dr. Baker, Mr. Dockall and the entire Gary staff. They have shown a great interest in our community, and have performed many services for which the people of San Marcos are indeed grateful.

I have toured this Center a good many times in the past years, and every time I have been impressed with the type of training that is offered in the various departments, as well as the efficiency of the instructors and counselors. I have no doubt that the Gary Job Corps is the best staffed center in the nation. There is no doubt why it is considered the most outstanding of all the Job Corps Centers in the United States.

I sincerely hope that this fine Job Corps program will be continued by our government. The rehabilitation of the thousands of young men who have come here to learn a trade has been well worth the cost.

It is my pleasure to be with you.

Obviously, we had a full day. This capsule summation barely hits the high spots of the day's activities. There is much more that could be told; the in-

dividual stories of the boys, their successes upon leaving Gary, the dedication of the staff, and more. If it were possible, I would have each Member of Congress personally tour Gary before reaching a conclusion about the future of the Job Corps. Once the facts are in, the dissension diminishes in rapid order.

At the conclusion of the official trip, a separate visit was made by Members to visit President Johnson at his ranch. This was not on the official agenda; it was merely a social call. Mr. and Mrs. Johnson graciously received the group, although it meant the President had to rearrange a rather busy schedule. We found him hale and hearty and thoroughly enjoyed a drive through the hill country as only he can show it. It was a privilege and a thrill, especially for those in the party making their first visit to Texas.

RESIDENCY VOTING ACT

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. EILBERG. Mr. Speaker, today I have introduced the Residency Voting Act of 1969. This bill is designed to enable citizens who change their residences to vote in presidential elections.

Voting is a fundamental right of our democratic system of government. As a nation, we have done much to secure the right of every American to vote. The Voting Rights Act of 1965 was a milestone in securing the franchise for all our citizens.

Even though we have done much, more still needs to be done. Today there are still millions of Americans who are still deprived of their right to vote because they have moved their place of residence from one locality to another. These otherwise eligible voters are effectively disenfranchised because they are unable to satisfy the lengthy residence requirements which are now in effect in many of our States and localities.

The bill I have introduced today provides that a citizen who is otherwise qualified to vote under the laws of a State or political subdivision may not be denied his right to vote for the President and Vice President of the United States if he has been a resident of that State or political subdivision since September 1 preceding the presidential election. The citizen would, of course, have to comply with any voter registration requirements to the extent that they provide for registration after September 1.

The effect of this particular provision of my bill will be to establish September 1 as the uniform qualifying date for presidential elections. State and local residency requirements would then be limited to a maximum of about 60 days.

The September 1 qualifying date does not solve all the problems, however. It does not improve the lot of those citizens who move their residence after September 1, but before the date of the presidential election. To prevent these citizens from being disenfranchised, my bill contains a provision which states that if a citizen has begun residence in a State or political subdivision after September 1 preceding the presidential election, he shall be given the opportunity to register and vote in person or by absentee ballot in the State or political subdivision from which he moved most recently.

My bill would require that many States alter their election laws with respect to the residency requirement. However it would not in any way abrogate the legitimate interests of the States in maintaining their voting rolls up to date and preventing vote frauds.

Another section of the bill I have introduced today addresses itself to the problem of arbitrary disenfranchisement among another group of citizens—those temporarily residing abroad. All too often these citizens are denied the right to vote because of State registration requirements particularly those which call for registration in person. All but two of the States presently provide for voting by absentee ballot but only 12 States permit absentee registration for citizens unconnected with the Federal Government or the Armed Forces. Thus many private citizens such as businessmen, teachers, and students are disenfranchised because they are unable to register in person. My bill would remedy this situation by requiring any State which permits absentee voting in a presidential election to provide an absentee registration system as well. In doing so this bill will reinforce legislation enacted in the 90th Congress which amended the Federal Voting Assistance Act of 1955 to recommend to the States that they extend to their private citizens who are temporarily residing abroad the right to register and vote as absentees.

On May 25, 1967, President Johnson declared in "The Political Process in America," a message to the Congress proposing legislation to strengthen the political process:

> This nation has already assured that no man can legally be denied the right to vote because of the color of his skin or his economic condition. But we find that millions of Americans are still disenfranchised—because they have moved their residence from one state to another. The people's right to travel from state to state is constitutionally protected. The exercise of that right should not imperil the loss of another constitutionally protected right—the right to vote.

An analysis of the voting results of the 1960 presidential election, the last election for which studies are available, shows that between 5 and 8 million eligible voters were deprived of their right to vote because of unnecessarily long residency requirements in many States. Almost half the States, for example, require that a citizen be a resident for 12 months prior to qualifying to vote for the only two nationwide elective offices—the Presidency and Vice Presidency of the United States.

Public participation in government is the essence of democracy. The voting process is democracy's ceremonial, its feast, its great function. No government can survive if it does not heed the public will. The American system has endured for almost two centuries because the people have become more and more involved in the process of governing. But government has a continuing obligation to make sure that the maximum possible number of people take part in this process of governing. Mr. Speaker, my bill will take a long stride toward this goal by allowing citizens who change their residences to vote in presidential elections

SECRETARY SHULTZ CONTINUES TO WIN PRAISE

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. STEIGER of Wisconsin. Mr. Speaker, Secretary of Labor Shultz continues to win praise on his reorganization of the Manpower Administration. I would like to include as a part of my remarks the following article by Richard J. Levine which appeared in the Wall Street Journal on March 21, 1969:

GOP REORGANIZERS OFF TO A START

(By Richard J. Levine)

WASHINGTON.—Labor Secretary Schultz was greeted by good-natured laughter as he prepared to brief the White House press last week on his plans to streamline the Labor Departments cumbersome Manpower Administration.

On the Secretary's right stood an organization chart so complicated that even Mr. Shultz was forced to concede, with a grin, that the tangle of lines and boxes resembled "a wiring diagram for a perpetual motion machine."

It was an apt description. The Manpower Administration—which spends some $2 billion a year in running an ever-expanding array of job-training programs plus the U.S. Employment Service and the unemployment insurance system—has grown into a massive maze. Within are found all the ills of bureaucracy: Overlapping functions, clogged chains of command, petty jealousies, an overriding instinct for survival.

An effort last fall by Mr. Shultz's Democratic predecessor, Willard Wirtz, to alter its structure failed dismally. Yet less than two months after taking office the Republican reorganizers have revamped the Manpower Administration.

To do so, Mr. Schultz—strongly backed by the White House—moved quickly, consulted widely and compromised modestly.

It is too early, of course, to tell how well the reorganization will accomplish Mr. Schultz's primary objective: More efficient delivery of manpower services at the local level. Yet even if the bureaucrats partially succeed in frustrating this long-range goal, the streamlining itself is a substantial achievement.

Moreover, in an Administration pledged—as President Nixon has said—"to eliminate duplication, to consolidate functions (and) to bring better management to all areas of the Federal Government"—it takes on added significance. For the techniques used in the Labor Department may well be applied elsewhere.

The Nixon people eliminated the Bureau of Employment Security, an old-line agency that administered the U.S. Employment Service and the unemployment insurance program and never fully adapted itself to meeting the needs of the disadvantaged. The tax also fell on the Bureau of Work-Training Programs, which ran such efforts as the Neighborhood Youth Corps and Con-

centrated Employment Program. These and related activities will now reside in a newly established U.S. Training and Employment Service.

The reorganization went into effect March 17 at the national level, just six weeks after the Secretary ordered a review of the Manpower Administration's structure with an eye to making major changes. The speed limited the opportunity for opposition to build.

However, the key element in the reorganization was Mr. Shultz's willingness to discuss his plan with concerned individuals and groups, including governors, state employment security officials and the Advisory Commission on Intergovernmental Affairs. This was not happenstance; Mr. Shultz was well aware that last fall governors and state employment officials, fearing that abolition of the Bureau of Employment Secuirty would lessen their influence in Washington, thwarted the Wirtz plan by taking their opposition to the White House (President Johnson ordered Mr. Wirtz to abandon his reorganization after it had already been announced in a press release).

The states were "very much concerned" with the Wirtz plan because "it was sprung on them without consultation," says a source close to state manpower officials. "It was a high-handed approach to reorganization."

To allay the fears of the states, Mr. Shultz created a new post, Deputy Manpower Administrator for Employment Security, giving State Employment Security officials a high-level voice in the Department and helping the Secretary sell his plan.

While the reorganization of the Manpower Administration is hardly a headline-grabbing event, Labor Department officials consider it an important "preliminary step" to any consolidation and re-packing of individual job-training programs, and *that* would make headlines.

Indeed, as White House aide Stephen Hess observed recently, Republican administrations "seem especially fascinated by structural changes in Government. . . . It may turn out that the most important achievements of the Nixon Administration will be structural or institutional."

JACKSONVILLE, FLA.—ALL-AMERICA CITY

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. BENNETT. Mr. Speaker, my hometown of Jacksonville, Fla., in the Third Congressional District, was greatly honored when the National Municipal League and Look magazine selected the Nation's largest city as an "All-America City."

Look magazine said in announcing the honor:

The award goes to Jacksonville for the vigorous action of its citizens in bringing about major improvements in their city, and thus setting an example of good citizenship to the nation.

I congratulate the city officials and city fathers of Jacksonville on this outstanding honor. Jacksonville, to paraphrase what Paul in the Bible said of Tarsus, is "no mean city." It was Alcaeus who wrote:

Not houses finely roofed or the stones of walls well-builded, nay nor canals and dockyards, make the city, but men able to use their opportunity.

In Jacksonville, men are making their opportunity for the over 550,000 citizens, and the "Bold New City of the Nation" is facing the future with new vigor and freshness. I commend to the House of Representatives and to the Nation, the Jacksonville story, as reported in Look magazine, and also editorials from the Florida Times-Union and WJXT–TV of Jacksonville, Fla.:

[From Look Magazine, Apr. 15, 1969]

ALL AMERICA CITIES: JACKSONVILLE, FLA.

A tourist driving south along the coast, sampling the Southern charms of Charleston, S.C., and Savannah, Ga., is in for a bit of cultural shock at the next rest stop. Jacksonville seems hardly a Southern city at all. Unsoftened by storybook romance, and too far north, and too far from the Gulf Stream, to share Miami's resort climate, Jacksonville has chosen instead to vie with Atlanta as the center of commerce for the Southeast. So far, Jacksonville claims only to be "the commercial, financial, port, cultural, medical and urban heart of northeast Florida and southeast Georgia," just for starters. Surrounded by quiet countryside, with no metropolitan area of over 50,000 people within a hundred miles, the city has built a skyscraper-studded skyline and a population of half a million. Jacksonville is where the action is, all kinds of action. "If it's action you want," the man at the Chamber of Commerce purrs to visitors without specifying further, "you can find anything you want in Jacksonville."

The serious action steamed up in 1966, when a grand jury of 23 citizens indicted eight high city officials, charging them with a total of 104 separate criminal acts committed out of the line of duty: "Many of our city officials have apparently considered the city government as their private business, with a never-ending source of revenue." Bleeding Jacksonville's boom for all it was worth, the government had so starved the city's schools that they were disaccredited. Jacksonville was ready for reform. The grand jury prescribed: "Such a governmental structure must be changed." As early as 1965, 23 city leaders had called for a study of the local government. The resulting commission had recommended a completely new system, consolidating city and county under strong mayor-council leadership. Consolidation had been defeated before by suburban voters who wanted no part of the city's mess. The black community was also wary, for its near-majority in the city would be diluted by suburban whites. But this time, with scandal fresh in mind, a volunteer citizens campaign rallied the voters. On October 1, 1968, the new city of Jacksonville was born. With the whole 827-square-mile county now in city limits, it could add to its credits the title of "World's Largest City."

Mayor Hans Tanzler, who stepped down from the bench to head the reform ticket, warns that consolidation itself is no solution to Jacksonville's problems. The "World's Largest City" can hardly escape big-city problems, aggravated by Jacksonville's long history of mismanagement. But the new government is moving to meet the problems on all fronts: providing money to bring the schools back up to standard; planning a sewer system to service outlying areas and control a serious water-pollution problem; and promoting job-training programs. After almost falling apart, Jacksonville is beginning to pull together.

[From the Jacksonville (Fla.) Times-Union, Mar. 21, 1969]

AN HONOR BRINGS A CHALLENGE

Selection of Jacksonville as an All America City by The National Municipal League and Look Magazine is an honor for the community. It is also a challenge.

Already "on the spot" as a showcase of consolidation, the city now must measure up to the confidence shown by the bestowal of the "All America" accolade. Like a football team rated highly in the polls, Jacksonville will be expected to win the contests in which it is engaged.

If the community reaction is as forceful in meeting praise as it has been already in meeting adversity, then success is more than a mere probability.

The city's claim to the All America recognition was presented by J. J. Daniel who headed the committee which recommended the form of the new government and then fought for its creation.

Daniel made no attempt to gloss over the city's problems. He emphasized, however, the moves being made to meet and conquer them.

"We are," said Daniel, "a stronger people for our ordeal. We have experienced a political renaissance and the determination that flows from this rebirth will equip us well to solve the problems of urban civilization of the 21st Century."

The emphasis placed by Daniel and by the committee of judges on citizen action, on community action, was perceptive and proper. Without the active interest and participation of citizens within a community, there is no cure for community ills nor is there hope for the fulfillment of community dreams.

Not only did the case for Jacksonville include the change in government but another aspect was stressed in the presentation—neighborhood self-improvement programs, a project to upgrade skills in the labor market and the like. This is community action at the grass roots where community action bears the best results.

While on the subject, it is proper here to extend congratulations to the Georgia port city of Savannah, Jacksonville's neighbor, sometimes a commercial rival, and now fellow All America City, Savannah was honored for "pace setting programs" in the area of race relations.

Savannah, says Look Magazine, "has under way a highly-successful self-help project for cleaning up and rehabilitating its Negro slums. Originated by a local bank president, the Savannah Plan has involved thousands of citizens, black and white. . . ."

After an initial dramatic cleanup plan which involved a broad spectrum of the citizenry, the program in its long range phase is "furnishing sympathetic loans to the poor for home improvement and ownership and to small businessmen in the area."

Over the years, the two cities have been known to lift an idea or two from each other and in this instance, each might profit by finding out more about what the other is doing and perhaps emulating it.

It would indeed be ironic if Jacksonville and Savannah—so long regarded in Miami and Atlanta as stodgy and resistant to progress—were to develop new and demonstrably successful approaches to some of the core problems of the nation's cities.

That very challenge, however, is the one that has been posed by the award of the "All America City" designation.

[From WJXT–TV, Jacksonville, Fla., Mar. 20, 1969]

ALL-AMERICA CITY

Jacksonville's selection as an All-America City is recognition of a remarkable achievement in local government. With consolidation, Jacksonville has the envious opportunity of abolishing the duplication, waste and buck-passing that handicaps local governments across the country.

The All-America honor salutes the reform movement that established a government carefully designed to cope with the terrible problems that plague American cities.

As in every other city, there are a lot of things wrong with Jacksonville. Jacksonville has shameful slums and disaccredited schools,

polluted air and water, poverty, crime and almost all the other ills that have caused the crisis in our cities.

But consolidation provides Jacksonville with the unique advantage of a community-wide approach to solving problems. No longer are the too-tough-to-solve problems being blamed on the government across the street, no longer are they being swept under the rug.

That determination to right the things that are wrong with Jacksonville has made consolidation a controversial government. It will probably become even more controversial as it fulfills the promise of meaningful local reforms.

The public's willingness to approve consolidation is one of the best things that ever happened to Jacksonville. As the years go by, more and more people will realize just how necessary it was to reform the structure of our local government so we could get on with the business of improving Jacksonville.

This was a WJXT Editorial.

ATLANTIC RICHFIELD OPPOSES CONTINUANCE OF GASOLINE GAMES

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. DINGELL. Mr. Speaker, during the 90th Congress, the Subcommittee on Regulatory Agencies of the Select Committee on Small Business of the House of Representatives, held hearings on the use of games of chance in conjunction with the marketing of automotive gasoline. Subsequently, we recommended that the Federal Trade Commission take steps to correct the abuses we discovered with respect to the use of so-called gasoline games.

During the FTC hearings on this subject my distinguished colleague, Congressman SILVIO O. CONTE, the ranking member of the subcommittee, and I appeared before the Commission urging that they utilize section 5 of the Federal Trade Act to prohibit the further use of games.

We had anticipated monolithic opposition to this position from the major gasoline refiners. It was, therefore, particularly pleasing to learn that the Atlantic Richfield Co., had joined us in our position. Because of its broad interest to the Members of the House, I include the Atlantic Richfield statement, as submitted to the FTC on this subject, at the conclusion of these remarks.

Atlantic Richfield is to be commended for taking this position in behalf of the public interest.

The statement follows:

STATEMENT BY L. M. REAM, JR., ATLANTIC RICHFIELD CO., AT FEDERAL TRADE COMMISSION PUBLIC HEARINGS ON GAMES OF CHANCE IN THE FOOD RETAILING AND GASOLINE INDUSTRIES, WASHINGTON, D.C., MARCH 19, 1969

Mr. Chairman, and members of the Commission, my name is L. M. Ream, Jr. I am Executive Vice President of Atlantic Richfield Company. I am in charge of the Products Division, which is responsible for all domestic oil marketing, manufacturing, supply and transportation activities of the company.

I do not appear here today to debate the Commission's proposed trade regulation rule or the legal status of games, themselves. Earlier in this proceeding, Atlantic Richfield, through its attorneys, submitted a statement commenting on the Commission's proposed rule. At that time, the company stated that we took no position on the merits with respect to the use of games of chance as a promotional device in the marketing of gasoline, but we did criticize certain procedural features of the proposed rule.

It is Atlantic Richfield's belief now that there remains little competitive or economic justification for use of games. We believe that the interest of the public, of the Commission, and of our industry would best be served if the promotional use of all games of chance were eliminated.

I wish here to emphasize two points: *First*, I necessarily speak from the vantage of a gasoline marketer; I do not have sufficient information to judge whether the same considerations are applicable to other industries, where the use of games has also been prevalent. *Second*, I am speaking only of the type of games that have been in widespread use during the last several years and on which the Commission has focused in this proceeding. We believe that whatever action is taken by the Commission should be sharply delimited to these games only. Any broader action would place unwarranted restrictions on a wide variety of promotional activity as to which no question of legality or fairness has ever been raised.

Certain realities emerge from the current controversy: The value of games has steadily diminished; it is now doubtful whether they have any real utility for the future. Recurrent attacks have undermined the public's confidence in the fairness of games. Continued use of games will almost inevitably engage the industry in wasteful conflict with the Federal Trade Commission and state regulatory authorities. Thus, on the most pragmatic level, we conclude that some formula or procedure should be developed to phase out games of chance at the earliest practical time.

Atlantic Richfield has used games since 1966. In a very basic sense, the practice has been defensive. The competition was using games of chance; it was necessary to arm Atlantic Richfield's dealers to compete on an even basis. Any other course would have placed our dealers at a heavy competitive disadvantage. We acted in good faith; to the best of our ability and knowledge, our games have been administered fairly. Our dealers have always been free to accept or decline games. We have never, directly or indirectly, coerced our dealers or otherwise imposed any improper pressures upon them to participate in games. But recent history, we think, now records the obvious fact that the widespread use of games in gasoline marketing has become self-defeating. The impact of one company's game promotion is only to neutralize the games used by its competitors.

Very simply, Atlantic would like to give up games. We take this occasion to declare our immediate willingness to do so. But if it were feasible to achieve this result by unilateral action, we would not be here. This is an industry-wide problem and the cessation of games must be brought about by an industry-wide solution.

Because of obvious antitrust considerations, we cannot explore whether other companies also might like to dispense with games of chance. Matters so vitally touching upon inter-company competition are clearly not appropriate for discussion among competitors. Therefore, it seems apparent to us that if game promotions are to be terminated, it will require action by the Federal Trade Commission.

The proposed trade regulation rule plainly does not accomplish this—it presumes only to regulate games, not to eliminate them. While one witness in these hearings has suggested that rigorous enforcement of the proposed trade regulation rule might constructively result in a discontinuance of games, because of the difficulties of compliance, we suggest that such an oblique approach merely confounds the basic question.

Nor do we believe a trade regulation rule flatly prohibiting games is the appropriate method for accomplishing an end to games. Almost certainly this will result in lengthy litigation attacking both the reasonableness of the rule and the Commission's authority to issue it. I am advised that in connection with an earlier trade regulation rule proceeding, the Chairman of the Commission estimated such litigation might consume up to four years, during which period, of course, the rule would not be effective* and games might well continue.

We suggest that the Commission consider a different industry-wide approach to the problem, utilizing established voluntary procedures.

Based upon its staff report and the evidence generated in these hearings, the Federal Trade Commission might issue a public announcement of its policy and enforcement intention with respect to the use of games of chance. Such an announcement might state that in the Commission's view the use of games of chance as a promotional device in commerce was contrary to the public interest and should be terminated within a stated period of time. The announcement would clearly advise all companies continuing to use games after the stated date that they might be subject to proceedings under Section 5 of the Federal Trade Commission Act. Combined with the announcement would be an invitation to all those who have used games to file with the Commission, prior to a stated date, assurances of discontinuance under the Commission's established procedures.

It would then be clear that those who contemplated the continued use of games did so with the plain understanding that they might be called to account in a formal Federal Trade Commission proceeding. Any company determined to go ahead would thus have full opportunity to defend its practices. However, any such proceeding would be particularized as to that company and would not involve the different legal issues raised by the promulgation of a general trade regulation rule.

What we propose is, of course, simply suggestive of how the Commission might resolve this difficult situation expeditiously and without lengthy, tortuous litigation. Other voluntary procedures may commend themselves as well. I am advised that on a number of earlier occasions, where the Commission has concluded that a prevalent industry-wide practice should be terminated, it was able to accomplish that result through prompt, simultaneous voluntary action of industry members. Those precedents may also be instructive here.

---

*Hearings, Committee on Interstate and Foreign Commerce, House of Representatives, June 23, 1964, p. 132:

"Representative HARRIS. If you proceed with this, and a proceeding is started by the industry or anybody, what would be your estimate as to the length of time it would take to resolve the litigation?

"Chairman DIXON. If the industry or interested party should seek out the avenue of going to a district court and seeking an injunction to enjoin us from proceeding to put into effect this rule, and, accordingly the review goes up through the circuit and possibly to the Supreme Court, and if the procedure were approved by the Supreme Court, we would still have the possibility that the rule would be violated. If that rule was violated then we would start back toward the final day of cease and desist and perhaps again a review. I would think 4 years, sir."

ANTIPEACE DEMONSTRATORS

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. RARICK. Mr. Speaker, the shenanigans of the so-called antiwar militants expose their true goals as being antipeace.

With 33,000 Americans already dead and a prolonged war attributed at least in part to the vacillations created by the Ameri-cong it is becoming more and more obvious to the mothers and dads that the antipeace demonstrators are but prolonging the war perhaps in the hope of wearing down the American people, demoralizing our morale but ever encouraging the Communist enemy not to negotiate peace.

The greatest militaristic threat in our land today comes from the falsely named antiwar demonstrators.

Mr. Speaker, one such Ameri-cong war encouragement session was recently held here in the Nation's Capital promoted by a tax-exempt foundation, and I include a report by Alice Widener from Human Events for March 22, 1969, as follows:

PIG ON A PEACE PLATE

(By Alice Widener)

A disgrace happened at the First National Convocation on "The Challenge of Building Peace," held by the tax-exempt Fund for Education in World Order, at the New York Hilton this month. Not an American flag was in sight at the luncheon gathering of two thousand pacifists. But Viet Cong flags were hanging from the balconies at both ends of the Grand Ballroom all during lunch, during introductory speeches made by officers of the Fund, and during speeches made by Chet Huntley and by United States Senators J. William Fulbright, Jacob Javits and George McGovern.

Until a handful of militant demonstrators made TV news by heckling Sen. Fulbright and striding onto the dais to put a pig's head on his plate, not one of the persons on the dais, including the three U.S. Senators, said a word of protest. When they did voice objections over the microphone, it was to denounce "the poor taste" and "undemocratic behavior" and "discourtesy" of the hecklers and demonstrators. Not one of the senators demanded over the loudspeaker that the Viet Cong flags be removed from the premises.

Though the main theme of the Hilton meeting was supposed to be "peace," it actually was an anti-ABM system and anti-Viet Nam war propaganda affair. There were morning and afternoon discussions on subjects such as "Is America Becoming a Militaristic Society?" and "Can We Build an Effective Constituency for Peace?" and "Are National Self-Interest and World Peace Compatible?"

Among unchallenged statements made at the convocation panel discussions were:

Rev. William Sloan Coffin, Jr., chaplain, Yale University: "Marx was essentially right when he said religion is the opiate of the people."

Betty Goetz Lall: "We must work up enough lobby so that it becomes competitor to the defense establishment. I learned in the Soviet Union last year that they have a new approach to the international law of disarmament. They said, 'We will add treaty by treaty and the sum total will become international law.' . . . I offer it as a possible substitute for limiting offensive and defensive weapons.

Dr. Jerome B. Wiesner: "Just as we can unilaterally escalate, we can unilaterally de-escalate. I would like to invite my Russian friends to come over here and see some empty missile holes. Even if they didn't reduce, maybe we can. Maybe we can have a disarmament treaty by ourselves; maybe we can have two peace races, one between ourselves with the Armed Services Committee and one with the Soviet Union. . . . The U.S. pioneered both offensive and defensive systems. . . . The U.S. is running an arms race with itself."

Howard Zinn, professor of government at Boston University: "At this moment we are the Italians, the Japanese, the Germans, of 1936. We have the title 'robber of our time.' "

Richard M. Pfeffer, Fellow of Adlai Stevenson Institute, research Fellow at University of Chicago Law School: "America is an imperialist power. We should withdraw from Viet Nam unilaterally and immediately. We have failed to understand Mao Tse-tung, one of the great men of our century."

Well, that was about the drift of the Hilton Peace Convocation. Nobody said a word in praise of the United States, not even the United States senators, and not one of them said a word over the microphone about the absence of the American flag and presence of the Viet Cong flag.

Breathes there an America, with soul so dead, who never to itself hath said, "Can these be our own, our native sons?"

HOUSE OF REPRESENTATIVES—*Thursday, March 27, 1969*

The House met at 12 o'clock noon.

The Reverend Earl S. Cox, Colonial Beach Baptist Church, Colonial Beach, Va., offered the following prayer:

Almighty God, our Father, we come this day with grateful, but unhappy hearts. Grateful for the free land in which we live, unhappy because many still live without the freedom that we know. We ask that Thy spirit strive mightily with the leaders of all nations as they seek means whereby all men might live free and at peace with one another.

Impress upon our minds that we must first be at peace with Thee. That freedom exists only as it exists everywhere. That the strength of our Nation lies in the integrity of her people. That peace is born out of righteousness.

Lord, today is ours. Give special strength and wisdom to those who lead our Nation. Fill them with Thy spirit that Thy will might be done. We make our prayer in the name of Jesus Christ our Lord, and for His sake. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 8508. An act to increase the public debt limit set forth in section 21 of the Second Liberty Bond Act.

The message also announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 714. An act to designate the Ventana Wilderness, Los Padres National Forest, in the State of California.

THE LATE MRS. HAMILTON FISH

(Mr. WEICKER asked and was given permission to address the House for 1 minute.)

Mr. WEICKER. Mr. Speaker, we were all saddened this morning to learn of the tragic death of Julia Fish, wife of Congressman HAMILTON FISH of New York.

To our esteemed colleague and his children, may I express the heartfelt sympathy of his freshman colleagues of the 91st Club and indeed, all Members of this House. May the good Lord in whose arms Julia rests give strength to sustain him during this time of great sorrow and a time which is, indeed a time of our sorrow.

Mr. GERALD R. FORD. Mr. Speaker, will the distinguished gentleman from Connecticut yield?

Mr. WEICKER. I yield to the distinguished minority leader.

Mr. GERALD R. FORD. Mr. Speaker, I join the gentleman from Connecticut in expressing to HAM FISH and his family our deepest condolences. It was my privilege to know Mrs. Fish and to see her many times during 1968 and subsequently. She was a wonderful wife and a wonderful mother. Her loss will be deeply felt by all.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. WEICKER. I yield to the distinguished majority leader.

Mr. ALBERT. Mr. Speaker, the hearts of all of us go out to our colleague and his children who have been the victims of such a tragic accident. We were all shocked when the news of Mrs. Fish's death reached us. May God be with her family during this time of sadness.

Mr. HUNGATE. Mr. Speaker, will the gentleman yield?

Mr. WEICKER. I yield to the gentleman from Missouri.

Mr. HUNGATE. I thank the gentleman for yielding.

Mr. Speaker, as one of the colleagues of Mr. FISH in the Committee on the Judiciary, we have all quickly come to know him, and he is an extremely able man. We all extend sympathy to him at this time.

TAX BENEFITS FOR SERVICEMEN

(Mr. WOLFF asked and was given permission to address the House for 1

minute and to revise and extend his remarks and include extraneous matter.)

Mr. WOLFF. Mr. Speaker, our tax laws provide appropriate benefits to servicemen stationed in and around Vietnam. But, inexplicably, those same tax laws do not provide similar benefits to servicemen in and around Korea.

I am today introducing legislation to correct this inequity.

The unhappy fact is that Korea continues to be a hostile area in which the tenuous peace is often broken by Communist attacks near the demilitarized zone. And, of course, the ill-fated *Pueblo* mission is evidence of the potential danger that can befall servicemen on ships in the waters around Korea.

It is only appropriate, Mr. Speaker, that we accord servicemen facing danger in Korea the same benefits accorded to servicemen facing danger in Vietnam. I trust my colleagues will agree on the need for this legislation and I urge prompt action by the Congress.

PENNSYLVANIA NEARER GOAL TO LOWER VOTING AGE

(Mr. SAYLOR asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SAYLOR. Mr. Speaker, I can now report to my colleagues that Pennsylvania has taken a big step toward lowering the voting age. Last Tuesday, the Pennsylvania House of Representatives gave its overwhelming approval to a proposed constitutional amendment that would reduce the minimum voting age in Pennsylvania to 19.

The measure will now go to conference with the Pennsylvania Senate which has already passed a measure to lower the voting age to 18. Though the two measures differ as to the minimum age, the important thing to note is that both houses gave their approval to the concept of reducing the voting age.

I am confident that the compromise will result in a lower voting age in Pennsylvania in the next few years and I take this opportunity to congratulate both bodies of the Pennsylvania Legislature for their action.

THE REVEREND EARL S. COX

(Mr. SCOTT was given permission to extend his remarks at this point in the RECORD.)

Mr. SCOTT. Mr. Speaker, I appreciate the courtesy of our Chaplain, Dr. Edward Latch, in affording one of my constituents and friend, the Reverend Earl S. Cox, the opportunity to open our session today with prayer.

I have attended church services at the Colonial Beach Baptist Church of which Reverend Cox is the pastor and have spoken to the membership of his church.

These are very fine Christian people and I welcome Reverend Cox and his wife who accompanied him to our session.

RESIGNATION AS MEMBER OF U.S. DELEGATION TO THE NINTH MEXICO-UNITED STATES INTERPARLIAMENTARY CONFERENCE

The SPEAKER laid before the House the following communication:

MARCH 26, 1969.

HON. JOHN W. MCCORMACK,
The Speaker,
House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: This is to advise you that I wish to be released from my assignment as a Member of the United States Delegation to the Ninth Mexico-United States Interparliamentary Conference.

I very much appreciate receiving the appointment to be one of the delegates from the United States, but because of some unexpected circumstances which have come up, I find it would not be possible for me to attend the Conference and herewith submit my resignation.

Sincerely yours,

WILLIAM L. SPRINGER.

APPOINTMENT AS MEMBER OF THE U.S. DELEGATION OF THE MEXICO-UNITED STATES INTERPARLIAMENTARY GROUP

The SPEAKER. Pursuant to the provisions of section 1, Public Law 86–420, the Chair appoints as a member of the U.S. delegation of the Mexico-United States Interparliamentary Group the gentleman from New Mexico, Mr. LUJAN, to fill the existing vacancy thereon.

PERMISSION FOR COMMITTEE ON BANKING AND CURRENCY TO SIT TODAY DURING GENERAL DEBATE

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Committee on Banking and Currency may sit during general debate today.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

PROVIDING FOR CONSIDERATION OF H.R. 7757, SUPPLEMENTAL MILITARY PROCUREMENT AUTHORIZATION, 1969

Mr. ANDERSON of Tennessee. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 336 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 336

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 7757) to authorize appropriations during the fiscal year 1969 for procurement of aircraft for the Armed Forces, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider without the intervention of any point of order the amendment recommended by the Committee on Armed Services now printed in the bill. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER. The gentleman from Tennessee is recognized for 1 hour.

Mr. ANDERSON of Tennessee. Mr. Speaker, I yield 30 minutes to the distinguished gentleman from California (Mr. SMITH) pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 336 provides an open rule with 1 hour of general debate for consideration of H.R. 7757 to authorize supplemental appropriations in fiscal year 1969 for procurement of aircraft for the Armed Forces. The resolution also provides for waiving points of order against the committee amendment in the bill. The waiver was provided against the amendment due to the fact that the original bill had only one money item in it and there might be some question as to germaneness.

The total authorization proposed in the bill is $76 million—$62 million for the Army aircraft procurement account and $14 million for the Air Force procurement account.

Also, there is authorized to be appropriated such sums as may be necessary for the pay and allowance of not to exceed nine persons, including personnel detailed to International Military Headquarters and military organizations, at rates provided for under section 625(d)(1) of the Foreign Assistance Act of 1961, as amended.

The $62 million authorization is for procurement by the Army of aircraft related items. The legislation does not authorize any additional fixed wing airplanes or helicopters. The $14 million authorization is for tooling and development of an improved F–5 airplane which will be used primarily in the military assistance program.

Mr. Speaker, I urge the adoption of House Resolution 336 in order that H.R. 7757 may be considered.

Mr. SMITH of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the gentleman from Tennessee (Mr. ANDERSON) has very ably explained House Resolution 336, providing for 1 hour of debate and waiving points of order and the reasons therefore, for consideration of H.R. 7757.

The purpose of the bill is to authorize supplemental appropriations for fiscal 1969 for aircraft procurement and modification. The total authorization contained in the bill is $76,000,000.

Of this amount $62,000,000 is earmarked for the Army. Included are funds for the following:

[In thousands of dollars]	
Operational improvements in the design and equipment of military observation planes	6,000
For helicopter modification	1,600
For purchase of aircraft spare parts and support material	50,800
Replacement of Government-owned plant equipment	2,700

The bill also provides $14,000,000 in authorizations for the Air Force. This is to be used to upgrade and improve the F–5 airplane, now being widely used by allied nations. As Russia puts more Mig–21's in use to replace the older Mig–17's and Mig–19's, we must meet this increased threat. The improvements in the F–5 will include improved onboard avionics and armaments and an increase in engine thrust.

Finally, ths bill authorizes appropriations of "such sums as may be necessary" for pay and allowances for up to nine persons detailed for duty at the International Military Headquarters and Military Organizations. These are such operations as the NATO headquarters.

There are no minority views. The prior administration supported the bill; no letter from the present administration is included in the report.

Mr. Speaker, I know of no objection to the rule and I urge adoption of the rule.

Mr. ANDERSON of Tennessee. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PERMISSION FOR COMMITTEE ON ARMED SERVICES TO SIT DURING SESSIONS OF THE HOUSE DURING THE WEEK BEGINNING MARCH 31

Mr. RIVERS. Mr. Speaker, I ask unanimous consent that the Committee on Armed Services may have permission to sit next week during the sessions of the House.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

PERMISSION TO CONSIDER ON TUESDAY OR WEDNESDAY NEXT, H.R. 9328, PROVIDING SPECIAL PAY TO NAVAL OFFICERS IN SUBMARINE SERVICE

Mr. RIVERS. Mr. Speaker, I ask unanimous consent that it may be in order to consider under the general rules of the House on Tuesday or Wednesday of next week the bill H.R. 9328, to amend title 37, United States Code, to provide special pay to naval officers, qualified in submarines, who have the current technical qualification for duty in connection with supervision, operation, and maintenance of naval nuclear propulsion plants, who agree to remain in active submarine service for one period of 4 years beyond any other obligated active service, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

Mr. GERALD R. FORD. Mr. Speaker, reserving the right to object, is this legislation which is for all members of the crew of a nuclear submarine?

Mr. RIVERS. Only the officers.

Mr. GERALD R. FORD. Only the officers?

Mr. RIVERS. Only the officers. The others are taken care of under the variable reenlistment bonus concept, for the enlisted men.

This is vital, Mr. Speaker. It involves about $2.4 million. It is so vital to our nuclear submarine program, both the Polaris and attack submarines. That is the reason why I take this unusual procedure. It is highly important for the retention of these people and the operation of our submarine fleet.

Mr. GERALD R. FORD. Has this bill been unanimously agreed to by the committee?

Mr. RIVERS. Unanimously.

I add this: It was sent over with the highest urgency by the Department of Defense and the Navy Department.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the gentleman from Iowa.

Mr. GROSS. Will there be a report accompanying the bill, and have hearings been held?

Mr. RIVERS. We had hearings. The report will be available on Monday.

Mr. GROSS. The report will be available on Monday, and the bill might be called up on Tuesday?

Mr. RIVERS. On Tuesday or Wednesday.

Mr. GERALD R. FORD. Mr. Speaker, I withdraw my reservation.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

SUPPLEMENTAL MILITARY PROCUREMENT AUTHORIZATION, 1969

Mr. RIVERS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 7757) to authorize appropriations during the fiscal year 1969 for procurement of aircraft for the Armed Forces, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from South Carolina.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 7757, with Mr. ROSTENKOWSKI in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from South Carolina (Mr. RIVERS) will be recognized for 30 minutes, and the gentleman from Illinois (Mr. ARENDS) will be recognized for 30 minutes.

The Chair recognizes the gentleman from South Carolina.

Mr. RIVERS. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the bill before us, H.R. 7757, authorizes appropriations during the fiscal year 1969 for procurement of aircraft for the Armed Forces, and for other purposes.

It authorizes $62 million additional appropriations for procurement by the Army of aircraft related items. It does not authorize any additional fixed-wing airplanes or helicopters. It does authorize an additional $14 million for tooling and development of an improved F–5 airplane which will be used primarily in the military assistance program. So the total amount to be appropriated in this bill is $76 million.

No additional funds are authorized to be appropriated for procurement of missiles, naval vessels, or tracked combat vehicles.

The specific aircraft related items authorized are listed and explained on pages 2 and 3 of the report. The aircraft repair parts and support materiel lumped at $50.8 million is broken down further as follows; $4.3 million to support increased aircraft operations in Southeast Asia; $33 million for Army aircraft operations in Southeast Asia, to cover higher than anticipated wearout rates in some particular helicopter subassemblies; and $13.5 million necessary because of an increase in the pipeline requirement to support earlier than planned deployment of the new light observation helicopter in Southeast Asia.

You will notice in the report that the committee added $14 million to the authorization bill for modifying the F–5—Freedom Fighters—aircraft into an improved version which will be called the F–5–21. By taking advantage of the several improvements that have been funded by Canada, Norway, and the Netherlands, at a cost of more than $50 million, and by installing the increased thrust J85–21 engines, a significant increase in military effectiveness will be attained while retaining the desirable low-cost, high-utilization rates and excellent maneuverable qualities of the F–5 aircraft.

The characteristics of the F–5 offer a relevant solution to the question of essentially equipping our allies with modern fighter aircraft capable of defeating the advanced threat aircraft dispersed throughout the world by the Soviets. The need for superior fighter aircraft by the forward defense nations creates a requirement for an air-to-air fighter capable of successfully competing with the Mig–21 in large numbers but with supportable costs. The F–5–21 meets this requirement.

The F–5–21 is an aircraft that many of our allies can afford to purchase and most have the skills and resources to support. Our experience with the current F–5 in 15 foreign countries shows that even the less-developed nations will be able to support the F–5–21 with high availability rates. All of us recognize the

fact that we must leave Vietnam just as soon as we can—honorably. The acceptance of this aircraft will permit the sustaining of an effective military air capability in Southeast Asia without our presence.

The F–5–21 program will also provide an improved fighter production base for potential needs of the United States.

Title II of the bill, "General Provisions," does not involve a request for supplemental funds for Southeast Asia. It provides authorization for appropriations for nine supergrade positions for personnel allocated to NATO-related agencies currently paid at rates prescribed under the Foreign Assistance Act of 1961, as amended. The need for this authority arises from the decision to transfer the subject costs of international headquarters and organizations from the military assistance budget to the Defense budget.

This year, for the first time, the administration has included in the Department of Defense budget approximately $31 million of funding for operation and maintenance funds to support the U.S. share of the cost of the operation of NATO.

If the appropriations for this, as requested by the administration, are transferred to the Department of Defense from the military assistance program, then the authorizing legislation for these positions would no longer be valid, and the holders of these positions would have to be reduced to the level of grade 15.

I agree with the administration position that the expenses are incurred because of military functioning of our own Armed Forces and are not, in fact, of primary assistance to other participating countries. Thus the funding should be within the Department of Defense rather than as a portion of the military assistance program. We have cleared this matter with the Post Office and Civil Service Committee as is shown by our report, and there is no objection on their part for this bill to authorizing these nine positions.

Mr. Chairman, this is a request for a rather austere supplemental appropriations authorization to support our efforts in Southeast Asia. The request earlier submitted by the former Secretary of Defense, Mr. Clifford, was reviewed in detail and approved by Secretary Laird and his Deputy, Mr. Packard.

I urge the Members to support this supplemental authorization bill.

Mr. KOCH. Mr. Chairman, will the gentleman yield?

Mr. RIVERS. I yield to the gentleman for a question.

Mr. KOCH. I very much appreciate the statement of the distinguished gentleman from South Carolina. What I would like to say is this: On the floor of the House yesterday when we were debating the course of this country's action in Vietnam—I made a statement that I would not from this point on—although I am only a freshman Member of the House of Representatives—that I would not vote for a single dollar for Vietnam war appropriations.

I notice that the gentleman from South Carolina particularly emphasized the fact that these moneys would be used in Southeast Asia and I assume he includes the Vietnamese war.

If that is the situation, then I would be opposed to such appropriation in its entirety, because I am not able to separate what will be used in Vietnam and what will be used elsewhere.

I would also like to advise the distinguished gentleman that I am not opposed to defense appropriations. I support them. I served, myself, in World War II as a combat infantryman. I know how important our defense needs are. But I am opposed to the War in Vietnam. I think it is an unconscionable war; I think it is an immoral war; and I believe we cannot wait for President Nixon or his administration to get us out of it. I want this Congress, myself included, to do something to demonstrate how our opposition to the present situation as it exists in Vietnam.

Therefore, I ask the gentleman whether one single dollar of this appropriation will be used in Vietnam?

Mr. RIVERS. As sure as the gentleman has two feet to stand on I can assure the gentleman that it is going to be used in Vietnam and the gentleman is entitled to his opinion. We have over 500,000 men in Vietnam and someone has got to provide for them and I am unwilling to expose our men to the dangers in that part of the world without the proper equipment and materiel which they needed yesterday. I am sure the gentleman has got to live with his conscience and that is his business. I do not impugn the gentleman's statement, nor do I depreciate any of his efforts. But if the gentleman does not want to vote for this bill, that is his prerogative.

Mr. KOCH. Mr. Chairman, will the gentleman yield further?

Mr. RIVERS. Of course I yield further to the gentleman.

Mr. KOCH. I would like for the gentleman to know that the depth of my feelings and love for this country and the security of our soldiers are, I believe, as strong as are the feelings of the gentleman from South Carolina.

Mr. RIVERS. No question about it. I am sure of it.

Mr. KOCH. And the depth of my feelings for the defense of my country are as strong as anyone in this House. I love this country.

Mr. RIVERS. I know you are concerned about it.

Mr. KOCH. It is because I love this country that I think we ought to have a moral position. I think the war in Vietnam is immoral and unconscionable. Would not the gentleman agree with me that I ought not to vote a single dollar to be used in an immoral and unconscionable war?

Mr. RIVERS. I thank the gentleman for his contribution. But I am not going to get in any argument with the gentleman. The gentleman can do as he pleases. The gentleman has to live with his own conscience. I have no quarrel with the gentleman. I have been delighted to yield to him and I would not want him to feel for a million dollars that I do not want him to believe in what he believes. I have no quarrel with the gentleman.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. RIVERS. I yield to the distinguished gentleman from Iowa.

Mr. GROSS. Mr. Chairman, with the exception of the $14 million, I take it that this in the nature of a deficiency authorization; that is, the $62 million is in the nature of a deficiency because of the failure to appropriate enough money last year to take care of the needs set forth in the bill?

Mr. RIVERS. I would say to the gentleman from Iowa that that was not entirely the case.

Let me answer the gentleman in this way: We cannot estimate the wearing out of helicopter parts, because there is some calculated risk involved. Part of this is due to wear and tear, and part of it for modifications to improve the equipment.

Mr. GROSS. Due to unexpected aircraft losses in Vietnam, the gentleman is saying, I assume?

Mr. RIVERS. We have lost quite a bit in this offensive that is going on now. We have lost an awful lot of things that we did not anticipate, but this is not in the manner of a deficiency appropriation.

Mr. GROSS. Mr. Chairman, if the gentleman will yield further, I have been concerned—as have other members of the Committee on Post Office and Civil Service—about the transferring of nine supergrades from NATO. I am satisfied with the letter which the chairman of the House Committee on Post Office and Civil Service put into the record. I want to say only that I believe the RECORD should, at this point, show that the chairman of the House Committee on Armed Services and the chairman of the House Committee on Post Office and Civil Service are agreed that this is a unique situation, and is not to be considered in any way as a precedent for the future.

Mr. RIVERS. Absolutely. And when we saw the possible conflict in jurisdiction I immediately addressed a letter to the chairman of the distinguished Committee on Post Office and Civil Service, and received his approval before we even touched these people. And we did not want it to be considered as a precedent.

Mr. GROSS. Mr. Chairman, I commend the gentleman from South Carolina for so doing.

Mr. RIVERS. I thank the gentleman very much for his statement.

Mr. Chairman, I have no further requests for time.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. ARENDS).

Mr. ARENDS. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in support of H.R. 7757, a bill authorizing appropriations during the fiscal year 1969 for procurement of aircraft for the Armed Forces, and for other purposes. In rising in support of this bill, I do so as a substitute for the ranking minority member of the Armed Services Committee, the gentleman from Massachusetts (Mr. BATES), who presently is in the hospital and, thus, unable to be here.

After hearing the chairman's statement, I realize there is very little left for me to say because he has covered this bill

in detail. I do want you gentlemen to know, however, that even though this is a small bill, it required 2 full days of committee hearings, and was unanimously passed by the House Armed Services Committee. We feel this measure is essential to provide the support required for our troops in Vietnam.

As the chairman has explained, this bill represents $14 million more than was requested. We feel this authorization for the additional $14 million will result in solid savings to the United States in the years to come, for it will enable our allies to equip their own forces with an efficient, modern airplane to cope with the ever-growing air strength of the Soviets.

Let me try to anticipate some of the questions you may have concerning this authorization:

First. Why should the United States invest $14 million at this time in an aircraft not in the U.S. inventory?

It is in the U.S. national interest that free world nations be able to maintain military air capability adequate to counter the threat of high performance Mig's dispersed throughout the world by the Soviets. The F–5–21 is a high performance improvement of the basic F–5 introduced into the U.S. mutual security program in 1959, both for grant aid and direct export sales. There are more than 700 of the aircraft programed for 16 different U.S. allies. Major purchasers such as Canada, the Netherlands, and Norway have invested more than $50 million in improvements. By minor U.S. investment we can take advantage of these and other advances now available to modify the F–5 into an improved production version. More recently, national policy has come to recognize, as President Nixon has pointed out, that the weapon systems we supply to our Allies should enable them to serve as a buffer to separate the United States from local and immediate threats of aggression. If these weapon systems make it possible for the using nations to contain the threat, the United States may be spared involvement and the world spared the consequences of great power action.

The aim is to make deployment and involvement of U.S. Air Forces unnecessary. We seek by every means, to every extent possible, to enable indigenous forces to contain local threats. This is the policy context in which the F–5–21 weapon system was initiated in 1959. It is within the same context that these improvements should be added. A reasonable basis for establishing the market potential for this aircraft is the replacement of the 2,000 obsolete F–84, F–86, G–91 and F–100's currently being operated within the force structure of free world nations. These aircraft cannot operate successfully in an active Mig environment. Obsolescence, high operation and maintenance costs dictate that these aircraft be replaced if combat capable force levels are to be maintained.

Some of these nations may not buy the F–5–21; and it may be judged not in the best interest of the United States to make high performance aircraft available to others. Even so, it is conservatively estimated that the F–5–21 will be selected as the replacement for 20 to 50 percent of the current inventories of F–84's, F–86's, G–91's and F–100's. If it is the upper number, this would result in production of at least 1,000 aircraft. If it is the lower number, 400 aircraft would be produced or a potential dollar flow of from $800 million to $2 billion.

Second. Will the U.S. recoup its investment in the $14 million? The U.S. objective is to provide underwriting as a means of capturing a sizable portion of the market potential that has been identified. A DOD armed service procurement regulation provides policy guidance for recoupment of R. & D. investment. Under the provisions of this directive, surcharges are applied and the funds so obtained are returned to the U.S. Treasury. Military sales negotiations for this aircraft would consider terms and degree of recoupment, and it is reasonable to expect that most, if not all, would be recovered.

Third. What is the precedent for the United States to invest in a project of this nature?

The N–156—F–5—aircraft was developed by the U.S. Government for the express purpose of providing free world forces with an economic and effective weapon system under the Mutual Security Act of 1959, as well as for direct sales. To date, 405 F–5's have been sold to eight different countries. An additional 300 were provided under grant aid.

Fourth. How does Conte-Long amendment affect this program?

The Conte-Long amendment would apply. Sales or grant aid provisions of the F–5–21 to underdeveloped nations would require presidential determination.

Fifth. Why does not Northrop, the aircraft company responsible for this airplane, invest the $14 million?

U.S. foreign policy is always a predominate factor in determining the extent of military equipment sales to foreign governments. Most such sales are conducted on a government-to-government basis, and all must support foreign policy and be in the best interest of the U.S. Government. Necessary and basic government constraints limit contractor freedom in the development of foreign military business and preclude contractor investment risk to develop these markets. Government leadership in the development of major weapon systems is therefore necessary. The F–5 program has been carried out under the procedures for weapon systems development established by the Department of Defense, and the modification into F–5–21 is part of the same program.

I am hopeful that this answers any questions you may have had as far as the $14 million add-on is concerned.

Insofar as title II of the bill is concerned, we realize that this is a somewhat unique departure from the course which has been followed in the past. But both the former and present administrations have recommended funding for NATO headquarters be made from the Defense budget rather than the foreign assistance budget, beginning with fiscal year 1970. Title II is thus necessary to continue these positions to remain at their current levels if the appropriations are transferred to the Defense Department.

We very carefully checked this with and have the concurrence of the Post Office and Civil Service Committee.

I urge your support of this bill which unanimously passed our committee.

Mr. BINGHAM. Mr. Chairman, I shall vote "no" on this supplemental military procurement authorization for fiscal year 1969.

I do so, first, because a substantial proportion of this authorization is required "to support increased aircraft operations in Southeast Asia." I believe that instead of intensifying our aircraft operations in Vietnam, we should be slowing them down. As I stated on the floor yesterday during the special orders on Vietnam, I believe the recent offensive launched by Hanoi and the Vietcong was a response to our intensified operations undertaken in the last few months. The road to peace in Vietnam lies through a cease-fire, or at least deceleration of military activities, accompanied by more intensive efforts to negotiate a political settlement. The bill before us points in the wrong direction.

I am also opposed to H.R. 7757 because certain aspects of this legislation involve matters of foreign policy which should have come before the Foreign Affairs Committee for review. I refer particularly to the $14 million added to the bill, although not originally requested by the administration, for the purpose of modernizing at U.S. Government expense aircraft sold to allied countries. This clearly constitutes military assistance and should be considered as part of the foreign aid program. I refer also to title II which concerns pay and allowances for personnel performing functions under the Foreign Assistance Act of 1961, as amended. This title was proposed by the Department of Defense and reported out by the Armed Services Committee without even any notice to the chairman of the Foreign Affairs Committee.

It is essential, in my judgment, that the constant efforts of the military to take action affecting foreign affairs without adequate consultation with those responsible for the foreign policies of this country be resisted.

Mr. HORTON. Mr. Chairman, this is the first opportunity we have had in the 91st Congress to consider funds for the military. While H.R. 7757, which authorizes a supplemental military appropriation, contains no provision for new procurement, I feel this is an appropriate time to discuss the overall problems connected with the military segment of the Federal budget.

This bill comes to the floor in the midst of a flurry of public discussion of national issues. I would like to take this time to make some recommendations to the new administration on what national priorities should be followed in our foreign, domestic, and fiscal affairs.

There is no question that our economy is in dire straits. Both fiscal and monetary restraint are needed to reverse the trend.

The core of the problem, is not the reduction of domestic expenditures and domestic programs which have already been substantially reduced from authorized levels.

The American people, through taxes and through reduced Federal spending on urban, social, and environmental problems, have already undergone considerable sacrifice in an attempt to stem inflation in this wartime economy.

In large measure, these sacrifices have been borne by the American people in behalf of the people of South Vietnam. I think that the target of efforts to curtail Federal spending must be in the defense and the military field—and the emphasis must be on reducing the cost, in lives, in dollars and in frustration, of the war in Vietnam.

I believe that the Nixon administration is concentrating a great deal of effort on the solution of this war. The President's responses to questions on this subject have been forthright, accurate, and honest, as have those of his Cabinet. The picture in Southeast Asia is gloomy. But it has been gloomy since the beginning of this decade. The picture here at home grows even gloomier as the war drags on.

Many Members of this body and of the Senate have underscored the growing problem of inflation and skyrocketing interest rates in our overheated economy.

Yesterday, the President asked Congress to continue the surtax for another year, and to delay reductions in certain excise taxes, in an effort to stem the tide of inflation. He coupled his request with a pledge to recommend substantial reductions in Federal spending.

Earlier this week, it was recommended that an all-out moratorium on public works of every variety be declared as the core of a Federal attack on inflation and rising interest rates.

In the midst of high-level discussions on the necessity of making reductions in domestic spending, and on the necessity of continuing the surtax, we have not made any moves toward reduced military expenditures.

Quite the contrary, the administration has asked for minimum deployment of the "safeguard" ABM system, costing upwards of $6 to $8 billion. It is in the process of finalizing an agreement with the totalitarian government of Spain, under which we would pay Franco for permission to maintain four military bases in his country for the next 5 years.

I understand that the negotiated settlement with Franco is to cost upwards of $100 million in military aid. The bases themselves cost $50 million a year to operate.

I think that the need for these facilities, particularly when their retention hinges on our support of a totalitarian government, must be very carefully reviewed before we finalize this agreement or curtail any domestic programs.

Troop commitments in Europe and elsewhere in the world should also be carefully combed to determine their necessity. I was most encouraged by the President's stated intention to seek more equitable participation from our NATO allies which could hopefully result in some reduction in U.S. military costs in Europe.

But even careful and cost-conscious reviews of these military expenditures will produce little, without an all-out effort to end the $35 billion per year drain of the Vietnam war.

Conditions which I will allow the United States to drastically reduce its manpower commitment in Vietnam must be brought about immediately. The temper of Congress and the people of this country will tolerate no hint of the dragging escalation we have faced over the past 5 years.

The U.S. economy is about to burst. Inflation is almost uncontrollable. Interest rates are climbing past record heights. And no let up is in sight. The people of the United States are fed up with increased spending necessitated by the war. They are few up with diversion of these moneys from urgently needed domestic programs.

The people of this country are not going to allow our present prosperity to go out the window because of the exorbitant cost of this war. Strong and immediate action is indicated to resolve this problem.

Secretary Laird, in a gloomy report to the Congress on the military status of the war, said he could not foresee any early withdrawal of American ground troops.

The North Vietnamese and Vietcong have clearly violated whatever private understanding led to the cessation of our bombing in the north. Once again the cities of South Vietnam are under mortar and rocket attack. To ward off a repeat of last year's pitched battles in the streets of Saigon and Hue, United States and South Vietnamese ground action has put us on the brink of a serious escalation.

If we respond to this state of affairs by escalating our role in the ground war, we will make the Paris talks even more fruitless and hopeless.

Thirteen months ago, I returned from Vietnam, urging our Government to sit down with the South Vietnamese and set a deadline for withdrawal of U.S. troops. Their battle stations would be manned by U.S.-equipped Asian troops, mostly the ARVN. In February 1968, I suggested 6 to 12 months as a reasonable deadline for the start of gradual American troop withdrawals.

Since then, our Defense Department stepped up efforts to prepare the South Vietnamese forces for eventual takeover of the fighting, but we have made no effort to set up a firm timetable under which such a takeover would take place.

So far, this "talk and fight" waiting game has grown ever so costly in terms of American lives lost, American dollars spent, and in terms of inflation and budget acrobatics needed to remain true to commitments at home.

How long will we wait to make the judgment that the Vietnamese are ready, with our financial and equipment support, to resume their own defense? Will we wait until the level of the fighting has escalated to a point where they could not possibly step into our shoes and hold their own?

The time has arrived for curtailing U.S. involvement in this Asian land war. The time has passed for waiting and postponing.

We have already learned that we cannot rely on the North Vietnamese and their Vietcong allies to behave honorably or honestly. They serve only their own interests. If we wait until the Communists agree to make real sacrifices to achieve peace or deescalation, we may wait forever—which means losing 100 to 400 American men a week for as long as it takes. This price is intolerable.

While it is possible for the Vietnamese to fully relieve us from the ground combat responsibilities, it is far less likely that their air force and navy can be improved to the point where these forces would have the same effectiveness as our own air and sea strike, and firepower potential.

The edge that the United States has gained against the elusive Communist guerilla is largely a result of the firepower and mobility of our air and sea forces.

Our cessation of the bombing in North Vietnam was a sincere effort to bring about a deescalation of action on both sides, and to bring about meaningful peace talks. Despite our hopes and our understanding that attacks on South Vietnamese cities would be cut back by the Communists, the North Vietnamese have so far sacrificed only the air fare of their delegation to the Paris peace table. They have curtailed neither infiltration nor their attacks on South Vietnam's population centers.

My proposal is straight forward and simple. The United States immediately should withdraw one combat and one support unit from the U.S. Army or U.S. Marine contingents in South Vietnam. We should determine with the South Vietnamese, a schedule for further gradual withdrawals to reduce the total of Army and Marine units substantially by the end of this year.

Until the South Vietnamese are convinced that we really intend to pull out, they will drag their feet and try to put off our first withdrawal date as long as possible.

So far, they have successfully held us back from pursuing any plan of gradual withdrawal in earnest. They have prevented us from giving proper attention to our economic and social problems at home, and our friendships elsewhere in the world.

We should announce this initial withdrawal as a unilateral, deescalatory move on our part.

At the same time, we must openly declare that the North Vietnamese have violated the understanding of October 31, 1968, and, that we expect, if the peace talks are to be meaningful and mutual, that the North Vietnamese will make some similar move to deescalate.

The President has already issued the one and only warning he need make. He has put the North Vietnamese on notice that further escalation on their part will be responded to.

This would serve to affirm our pledge to the South Vietnamese that our air and naval forces will be ready to repel all escalatory moves by the Communists despite the fact that we plan to quickly scale down our ground war participation.

We can no longer arrest progress in America because of our heavy involvement in a war whose course is determined by the whim of our Communist enemies and by the lack of self-confidence of our South Vietnamese friends.

Their dependency on American young men for the defense of their country must end. The timetable for ending this dependency must be based on the needs and priorities of the American people and not solely on those of the South Vietnamese.

Within a few days, more young men will have been killed in Vietnam than in the Korean war. Earlier this week the names of more than 31,000 servicemen who died in this war were put before this House.

Increased casualty figures, the stagnant situation in Paris, and the unpromising report of the Secretary of Defense on the curent military situation are all discouraging.

The figures add up to the need for American initiative at this point to break the threatening cycle of escalation on the ground, and to end the continuing dependency of the South Vietnamese on American lives for their defense.

Mr. RYAN. Mr. Chairman, Congress has already appropriated $74,139,000,000 for fiscal year 1969 to the Defense Department—the largest military allocation in the history of the United States. In the debate on the military appropriations bill on September 12, 1968, I said that the size of the Department of Defense's budget was the product "of the outdated cold war mentality, the excessive growth of the military-industrial complex, and, most of all, the war in Vietnam, which is the culmination of disastrously mistaken policies." Nevertheless, the arguments of those of us who opposed this disproportionate emphasis on military spending did not prevail.

In spite of the fact that the Department of Defense's budget for fiscal year 1969 is the highest allocation by the Federal Government to a single agency in the history of the United States, the Department of Defense—or at least some of its proponents—are still not satisfied with their billions. For the bill we have before us today, H.R. 7757, asks for the authorization to appropriate an additional $76 million to the Army and the Air Force for the procurement and modification of aircraft.

Above and beyond the question of the need for this authorization, there is a serious question about what kind of planning is represented by this request for additional authorization of $76 million. This is not a request for a supplemental appropriation for funds authorized but not appropriated by Congress. The items for which authorization is sought in this bill were not even included in the Department's fiscal year 1969 budget presentation. Yet, the Department—scarcely 6 months after their budget was considered by Congress—is back again, requesting authorization for the allocation of funds which it apparently did not think important enough to include in its fiscal year 1969 budget. I think this request demands the closest scrutiny by Congress—a scrutiny this body has been far too reluctant to invoke in the past.

The Army already has an authorization of $735.4 million for the procurement of aircraft during fiscal year 1969, and was appropriated $735.2 million for that purpose.

The Air Force received an authorization of $5.2 billion and an appropriation of $3.86 billion for the procurement of aircraft during fiscal year 1969.

Why cannot the Army and the Air Force simply shift priorities within the budget appropriated to them by Congress if these items are so imperatively needed? Why do they seek additional authorization above and beyond that sought in the fiscal year 1969 budget which they submitted to Congress?

In the case of the Army, according to the hearings held on March 11 and 12, 1969, before the House Armed Services Committee, the Army is requesting $62 million in additional authorization because the need for modifications of existing aircraft became clear only "as a result of lessons learned during the Communist Tet offensive in early 1968." The effects of that offensive, General Miley testified in the course of the hearings, motivated the decision "to accelerate the improvement and modernization of the Republic of South Vietnam Armed Forces." At least part of this additional authorization is needed, however, according to the testimony of John Blandford, chief counsel for the Armed Services Committee, because the Army did not have the forethought to request the modifications now deemed necessary when it placed the order for the AH–1G light observation helicopter with Hughes Aircraft. In the words of Mr. Blandford, "the Army did not know what they wanted."

The portion of this bill which requests an additional $14 million authorization to the Air Force for the F–5 and F–5–21 aircraft was apparently not sought at any time by the Air Force—neither during its budget presentation to the Congress last year nor even, for that matter, from the Armed Services Committee 2 weeks ago. At page 535 of the hearings, Gen. Duward Crow, the director of the budget for the Air Force, said: "We are not asking for authorization, sir." The impetus for the request for the additional $14 million authorization apparently came primarily from the Chairman of the Armed Services Committee.

The money sought would be used, in Chief Counsel Blandford's words, as an "initial increment for the retooling of the Northrup Aviation plant to go from the production of F–5's to the production of the F–5–21" which entails, among other things, a new engine, better radar coverage, and the installation of two machineguns.

The Department of the Air Force, according to the testimony of General Crow, has no plans for utilizing this plane in our own aircraft inventories. In response to a question from our colleague, Congressman PIKE as to whether the Air Force intended to acquire this plane itself, General Crow replied:

We do not have an approved program for this aircraft in our inventory.

Mr. PIKE went on:

So the purpose of this expenditure is to build a plane which we can sell to other countries, under our military-assistance program.

General Crow affirmed that "that is the primary purpose"—hearings page 525.

If the Air Force does not plan to use this plane itself, it would seem that this $14 million—and the additional $62 which the chairman of the Armed Services Committee has indicated he will later seek for this plane—is nothing more than a subsidy to Northrup Aviation designed to encourage them to convert their production line so as to be able to turn out greater quantities of the F–5–21 for sale abroad.

This raises several questions. First, does this authorization mean that the Armed Services Committee, and not the Foreign Affairs Committee, now has authority over the military assistance program? Chairman RIVERS believes it does. If he is correct, I think this committee's approval of a subsidy to Northrup Aviation—for a plane which our own Air Force has no plans to utilize—should prompt Congress to question whether or not control of our military assistance program should be with the Armed Services Committee. Second, is not this appropriation inconsistent with the provisions of the Conte-Long amendment, which is designed to discourage the sale of sophisticated weaponry to underdeveloped countries? I think it is.

More importantly, however, I think both of these requests for authorization for the expenditure of more funds on weapons—and especially the $14 million sought for the manufacture of a plane which our own Air Force has no plans to incorporate into its inventory—are yet another example of the tragic imbalance of our spending priorities. While our cities rot and our air is polluted, while millions of Americans continue to suffer from inadequate educational and economic opportunities, Congress is being asked to pour still more money into the hands of the strategists who have led us into the bloody morass of the Vietnam war.

To support these requests for more money is to support our present budgetary imbalance. I urge my colleagues to vote against this bill and to turn the money requested instead to the urgent domestic needs of this country.

The CHAIRMAN. There being no further requests for time, the Clerk will read.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—PROCUREMENT

SEC. 101. In addition to the funds authorized to be appropriated under Public Law 90–500, there is hereby authorized to be appropriated during the fiscal year 1969 for the use of the Armed Forces of the United States for procurement of aircraft in amounts as follows:

AIRCRAFT

For aircraft: for the Army, $62,000,000.

COMMITTEE AMENDMENT

The CHAIRMAN. The Clerk will report the committee amendment.

The Clerk read as follows:

Committee amendment: On page 2, line 2: Strike the period, and insert a semicolon and insert "for the Air Force, $14,000,000."

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

TITLE II—GENERAL PROVISIONS

SEC. 201. There is hereby authorized to be appropriated such sums as may be necessary for the pay and allowance of not to exceed nine persons, including personnel detailed to International Military Headquarters and Military Organizations, at rates provided for under section 625(d)(1) of the Foreign Assistance Act of 1961, as amended.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. ROSTENKOWSKI, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 7757) to authorize appropriations during the fiscal year 1969 for procurement of aircraft for the Armed Forces, and for other purposes, pursuant to House Resolution 336, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. RYAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 341, nays 21, not voting 68, as follows:

[Roll No. 31]

NOT VOTING—68

Abbitt	Fallon	Rees
Alexander	Findley	Reid, N.Y.
Ashbrook	Fish	Reuss
Ayres	Fulton, Tenn.	Ronan
Bates	Gallagher	Rooney, Pa.
Bell, Calif.	Gray	Rumsfeld
Blatnik	Hébert	Ruppe
Brademas	Howard	Schadeberg
Brock	Jonas	Scheuer
Burton, Utah	Keith	Sebelius
Cahill	Kirwan	Smith, Calif.
Carey	Kluczynski	Snyder
Celler	Kuykendall	Stafford
Clark	Landrum	Teague, Tex.
Cohelan	McDonald, Mich.	Vigorito
Colmer	Mann	Waggonner
Conyers	Miller, Calif.	Watts
Cowger	Mizell	Wilson, Bob
Dawson	Morton	Wilson, Charles H.
Dent	O'Hara	Wright
Dingell	O'Neal, Ga.	Wydler
Edwards, Ala.	Powell	
Edwards, Calif.	Price, Tex.	
Evins, Tenn.		

So the bill was passed.

The Clerk announced the following pairs:

Mr. Hébert with Mr. Jonas.
Mr. Waggonner with Mr. Cowger.
Mr. Kirwan with Mr. Morton.
Mr. Brademas with Mr. Ashbrook.
Mr. Evins of Tennessee with Mr. Smith of California.
Mr. Gray with Mr. Ayres.
Mr. Reuss with Mr. Bell of California.
Mr. Ronan with Mr. Keith.
Mr. O'Neal of Georgia with Mr. Brock.
Mr. Miller of California with Mr. Stafford.
Mr. Teague of Texas with Mr. Bates.
Mr. Charles H. Wilson with Mr. Price.
Mr. Kluczynski with Mr. McDonald of Michigan.
Mr. Howard with Mr. Burton of Utah.
Mr. Carey with Mr. Reid of New York.
Mr. Dent with Mr. Findley.
Mr. Fallon with Mr. Edwards of Alabama.
Mr. Rooney of Pennsylvania with Mr. Fish.
Mr. Gallagher with Mr. Mizell.
Mr. Colmer with Mr. Kuykendall.
Mr. Vigorito with Mr. Rumsfeld.
Mr. Blatnik with Mr. Snyder.
Mr. Abbitt with Mr. Schadeberg.
Mr. O'Hara with Mr. Ruppe.
Mr. Dingell with Mr. Sebelius.
Mr. Edwards of California with Mr. Wydler.
Mr. Fulton of Tennessee with Mr. Bob Wilson.
Mr. Scheuer with Mr. Cohelan.
Mr. Rees with Mr. Conyers.
Mr. Landrum with Mr. Wright.
Mr. Alexander with Mr. Clark.
Mr. Dawson with Mr. Powell.
Mr. Watts with Mr. Mann.

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. RIVERS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days to extend their remarks on the bill, H.R. 7757, just passed.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

PERSONAL EXPLANATION

Mr. KEITH. Mr. Speaker, I was in the city of Boston this morning attending a funeral of a very close personal friend, and I had hoped to get back in time for the debate and the rollcall on the appropriations bill for aircraft.

Unfortunately I was unable to arrive at the Capitol until after the vote had been completed. Had I been present and able to vote I would have voted in favor of the bill.

PERMISSION FOR COMMITTEE ON BANKING AND CURRENCY TO SIT TODAY

Mr. PATMAN. Mr. Speaker, I ask unanimous consent that the Committee on Banking and Currency may sit this afternoon during general debate and special orders.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

A 5-YEAR LABOR CONTRACT SIGNED BY LOCAL NO. 5

(Mr. BURKE of Massachusetts asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BURKE of Massachusetts. Mr. Speaker, this morning at 11 a.m. a 5-year labor-management contract was signed between Local No. 5 of the Industrial Union of Marine and Shipbuilding Workers of America—AFL–CIO—and the Quincy, Mass. division of General Dynamics.

A similar long-term contract was signed and ratified last December by local No. 90 of the same union. Thus the 6,300 production and clerical workers of the Quincy Shipyard are covered by labor-management contracts extending to March 16, 1974.

This is an important labor-management agreement of unusual significance. It is a long-term commitment by this company and this union to the future of shipbuilding in the United States. It assures that this shipyard, with its long and distinguished history, with its outstanding technical capabilities, and its broad design and shipbuilding experience is totally devoted and committed to the marine requirements of this country.

I congratulate the union and the company on this honorable agreement and particularly on their expression of mutual confidence in what they can do together at Quincy.

I also commend the employees in both unions for their overwhelming and enthusiastic endorsement and ratification.

This is certainly good news for all concerned: The 8,500 employees, the community, the Commonwealth, the Navy, and the Maritime Administration.

Mr. McCORMACK. I welcome the statement made by my good friend and colleague from Massachusetts. This is good news not only to the southeastern section of Massachusetts but also for our Nation. It means that a labor agreement has been reached under the highest traditions of good labor-management negotiations. The officers of the Industrial Union of Marine and Shipbuilding Workers of America—AFL–CIO—and the officials of General Dynamics Division at the Fore River Shipyard in Quincy, Mass., are to be congratulated. The labor-management stability at the Fore River yard should go a long way in convincing private shipping companies, our Maritime Commission, and the Department of Defense that the Quincy Fore River Shipyard is a good place to build ships. I conclude by saying the able and hard-working Congressman from Massachusetts (Mr. BURKE) has been in the vanguard in Congress leading the fight for a strong Navy and effective merchant marine.

Mr. KEITH. Mr. Speaker, I am very pleased to join with the Speaker and the gentleman from Massachusetts (Mr. BURKE) in noting the successful resolution of differences at the General Dynamics Fore River Yard. It is most gratifying to learn that the Ship Building Workers of America—in particular, local No. 5—and General Dynamics have resolved their differences, and that stability of operations can be anticipated for at least a 5-year period.

The shipbuilders of this Nation have a long and glorious record. Much of it has been written in southeastern Massachusetts. I hope and I believe that we can recapture our preeminence in this field.

Our Nation needs not only the world's best Navy, but we also need the world's foremost merchant marine. To achieve and maintain these desirable objectives we need the capability and we need the cooperation which is evident in this new contract.

I join with JIMMY BURKE and Speaker McCORMACK in congratulating both management and labor, and especially Bob Laney and Ronnie Orcott, representing management and labor. They worked diligently and effectively to keep the Fore River Yard of General Dynamics turning out the world's finest ships.

PERSONAL TAX EXEMPTIONS MUST BE RAISED

(Mr. LONG of Louisiana asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LONG of Louisiana. Mr. Speaker, all of us here are personally familiar with the rising cost of living which has plagued our Nation almost continuously for the past two or three decades. On occasion even the Government has addressed itself to the problem of inflation, usually without much success. Meanwhile, our national tax structure continues to exact its measure from the pittance of the poor, a class created in large measure by the very taxes they are required to pay. The burden of taxes, including the silent tax we call inflation, rests most onerously upon the working man and woman, the small businessman, the aged, the disabled, the young who are just starting out in life, and all those who for whatever reason are destitute. I can think of no better way, in the absence of a complete overhaul of the Internal Revenue laws, to ease the financial burdens of these millions of citizens than by increasing the present personal and dependent exemptions. Therefore, Mr. Speaker, I am introducing a bill today to increase the individual taxpayer's personal income tax exemptions from $600 to $1,200. This increase would also apply to a spouse and dependents, and additional exemptions are provided for the aged and the blind.

I think it is important to remember that personal exemptions under the Revenue Act of 1913, which established the foundation of our present tax system, were $3,000 for a single person and $4,000 for a couple. And as late as 1939 the personal exemptions were $1,000 for a single person and $2,500 for a couple. In light of such liberal exemptions in those years when living costs were small in comparison to our present standards, my proposal certainly is not exorbitant.

It is a sad commentary on the honesty of the Federal Government when we see some of the very wealthy completely escape taxation while the Internal Revenue Service hounds the last nickel from the pockets of the worker, or when we see giant financial corporations evade taxation because they are technically nonprofit while scores of small businessmen are driven out of business each year because they cannot make a profit under our tax laws. These familiar inequities have suddenly become the Nation's greatest injustices. And I need not remind the House, Mr. Speaker, that unless we act to relieve the tax burdens of the needy, it will be fairly said of us that we saw our way clear to end our own financial hardship but that we did not have compassion enough to relieve the suffering of our fellowmen. Thank you, Mr. Speaker.

THE GREAT OIL CAPER

(Mr. PODELL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PODELL. Mr. Speaker, the Humble Oil Refining Co., domestic affiliate of Standard Oil Co. of New Jersey and largest purchaser of crude oil in the United States, has announced increases in the price it would pay for crude. This price increase was announced on Friday, March 21, 1969.

Taking note of "competitive conditions" in which many other oil companies have raised prices in recent weeks, Humble has posted increases between 5 cents and 10 cents a barrel at various points throughout the Nation. These new prices are effective right now.

This is the second round of increases recently. Marathon Oil Co. said it raised its posted prices 5 cents a barrel in Illinois and Michigan, effective March 15.

Charming. Smoothly done. Superb. The oil barons have sunk another well into the pockets of the American consumer in a way to make Machiavelli applaud.

As the largest purchaser of crude oil in the Nation, Humble has cracked the whip, and the rest of this "very competitive" industry will follow, in the name of competition. Heaven help us. But Humble is an umbrella corporation, buying crude oil from subsidiaries it owns. Please note that Standard Oil Co. is another name for Humble Oil Co. So again we see that a group of oil barons in a board room have decided to raise prices they charge themselves for crude oil, thus

allowing them to take greater oil depletion allowances. Then these altruistic, courageous, patriotic oil barons will turn to the American public with long faces, stating that because the price of crude oil has gone up, they will have to grudgingly raise prices of oil, gasoline, and related products.

We should applaud such performances. It is the shrewdest, cleverest, and most diabolical method of extortion by an industry of the consuming public ever attempted—in broad daylight. No reason in the world exists for this rise in prices. Let every consumer in America now digging so deep to pay taxes examine this. Taxes are high for lower and middle income wage earners, while they stay low or virtually nonexistent for the wealthy. All the while, major malefactors such as the oil industry gleefully add that last straw by accomplishing this latest extraction from the pockets of millions upon millions of people.

If this is public service, then so will your local sheriff dance "Swan Lake" in a tutu in the business district during rush hour. Then so do we need to give distinguished service awards to presidents of oil companies.

Standard of New Jersey is quite a giant. In 1967, it paid $166 million in Federal taxes on net income before taxes of $2,098,283,000—or 7.9 percent of its income.

Mr. Speaker, today and tonight, several hundred poor American youngsters will be arrested by police throughout the Nation for small crimes. Petty thievery, petty larceny, breaking into a place of business, and so forth. Many of these young people will be arraigned, brought to trial, convicted, and sent to reform school or jail. Yet I do ask: If we send these youngsters to reform school or jail for such crimes, what do we do about a major oil company that does what Humble has just done? Throw them a testimonial dinner and bleat about patriotism and public service? Present them with a plaque? Or perhaps it might be a silver wheelbarrow for them to use in taking home all their loot? Let the people ponder it. Let the oil barons think about it.

UNITED NATIONS SHOULD ESTABLISH RELIEF FOOD FORCE FOR NIGERIA-BIAFRA

(Mr. McCARTHY asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. McCARTHY. Mr. Speaker, I would like to speak briefly today about a matter that is increasingly bothering my conscience. I speak of the tragedy of Nigeria/Biafra where hundreds of thousands are starving because of a lack of food. Hunger and death from starvation in Nigeria/Biafra is not a matter of debate; the international relief organizations, the responsible press, members of the United States Congress have all witnessed the daily toll of children, the elderly, the sick and even mature adults.

Up until now it appeared that there might be a reasonably prompt resolution to the conflict in Nigeria. United States policy and that of the Organization of African Unity was to work only through the usual procedures of the international relief organizations to relieve the suffering of civilians in the federal and Biafran regions of Nigeria.

But it has become clear that this reliance on the usual relief procedures is not working. Already short protein food supplies being flown into Biafra are likely to decrease because of the rainy season which is about to begin and because of the aggressive actions of the federal air force. In addition, supplies of carbohydrates are dwindling, adding to the already tragic situation.

In the face of this international tragedy, I do not believe that the United States can refrain any longer from exerting its leadership. As the only major power not directly involved in this conflict, we have a responsibility to find an effective method of preventing further starvation.

I have proposed to Secretary Rogers that we use all our influence to get the United Nations to establish a relief food force for Nigeria/Biafra. As a part of that influence, I suggest that we offer transportation, food, and security forces for use by the United Nations.

Failing our attempts to get the United Nations to set up relief food centers, I suggest that the United States establish such centers with the international relief organizations or even unilaterally. I believe that we can do no less.

Some excused the failure of other nations to prevent the deaths of millions of Jews prior and during World War II on the basis that most people did not know of the situation. We know about the starvation in Nigeria/Biafra—the conscience of our citizens demands that we do something about it.

I include my letter to Secretary Rogers in the RECORD at this point:

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 27, 1969.

Hon. WILLIAM P. ROGERS,
Secretary, Department of State,
Washington, D.C.

DEAR MR. SECRETARY: Shortly after you took office I wrote to you expressing my concern about the tragedy of Nigeria/Biafra. Verified reports of massive starvation in the Biafran region of Nigeria and in the Federal area as well led me to urge that you and President Nixon place this problem high on the list of priorities for attention. I welcomed your thoughtful reply and subsequent appointment of a personal representative by President Nixon, Professor Ferguson.

I am concerned, however, that the efforts of international relief agencies to feed the starving of Nigeria/Biafra are proving totally inadequate. Even the limited protein food shipments that are now reaching Biafra via Uli Airport are probably going to be curtailed by bad weather and air action by the Federal forces. And shortages of carbohydrates, further increasing the death rate, are expected to occur in April and May. These food shortages can only increase the already appalling death rate.

I, for one find it difficult to understand the actions of the Federal and Biafran forces that stand in the way of efforts to supply emergency food. But I find even more incomprehensible the inaction of the United Nations and the Organization of African Unity in the face of this disaster. If international organizations are unable even to provide relief to non-combatants, there would appear to be little future for them. Some excused the failure to prevent the deaths of millions of Jews prior and during World War II, for example, on the basis that we did not know of the catastrophe. In Nigeria/Biafra we know—but our relief efforts remain ineffective. Is it any wonder that our young people question our commitment to the moral values that we profess?

I suggest that the United States exert the world leadership in the Nigerian/Biafran situation that falls on us as the only major world power not directly involved in this conflict. I believe that we should:

1. Ask for a meeting of the Security Council to consider a resolution establishing a relief food force in Nigeria/Biafra on the basis that failure to provide effective relief may lead to further involvement of other countries in this conflict. If necessary, ask for a special session of the General Assembly to consider the same resolution. A vote on this resolution would show clearly which countries stand in the way of attempts to resolve this conflict.

2. Offer transportation equipment, food and personnel as well as any necessary security forces to establish relief food terminals in Nigeria/Biafra under the auspices of the U.N. and the O.A.U.

3. State that we will set up such terminals in cooperation with I.C.R.C. and other international relief organizations if U.N. and O.A.U. won't sponsor them.

4. State that we find unacceptable the international failure to provide relief in face of the know tragedy and exert the strongest pressure on involved nations to see, that as a minimum, effective relief measures are taken.

I do not feel that the United States can delay strong positive actions any further. To do so would be to cast doubt on our humanity. Although there may have been some arguments for refraining from involvement in the affairs of another country when it appeared that the conflict would be resolved quickly that condition no longer seems to apply. Our international responsibility now is to the starving of Nigeria/Biafra—not to the political powers engaged in civil struggle. I believe that we can and should move to set up effective food relief centers now. I urge you, Mr. Secretary, to give these recommendations your most careful consideration.

Sincerely yours,

RICHARD D. MCCARTHY,
Member of Congress.

GOVERNMENT-IMPOSED RESTRICTIONS ON AMERICAN BUSINESS VENTURES ABROAD ARE DAMAGING ECONOMIC INTERESTS

(Mr. GIAIMO asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. GIAIMO. Mr. Speaker, there is increasing concern that Government-imposed restrictions on American business ventures abroad are damaging the economic interests of our country. Restraints on U.S. foreign direct investments were imposed in February of 1965 as a temporary measure to alleviate our balance-of-payments difficulties and the drain on our dollars.

The temporary restraints were reluctantly adopted in order to buy time to get at the root causes of our balance-of-payments problem. Our difficulties are owed mainly to large and continuing government offshore expenditures for defense purposes, foreign aid, military

assistance, and other international commitments. Our allies and trading partners are not bearing a fair share of the burdens of maintaining a defense shield for the free world nor of providing assistance to less developed countries.

U.S. exports and our dollar-earning assets abroad are the mainstay in our balance of payments. The private sector has made a net contribution of $60 billion to our international accounts since 1950 but Government outflows amounted to more than $92 billion.

Restrictions on American overseas investments are now in the fifth year. They are damaging the competitive position of American companies in world markets while mortgaging the future of our balance of payments.

The President has pledged that he will end these self-defeating controls and restore to American businessmen freedom to invest abroad. Secretary of Commerce Stans has expressed good intentions for terminating the mandatory program. The question is when.

We have been repeatedly assured the restraints would be ended "as soon as possible" but we are in the fifth year and the controls are assuming the look of permanency. Business is entitled to know now when the program will be terminated so that companies can proceed with the forward-planning essential to the expansion of our dollar-earning assets abroad. This is the proper approach for strengthening our balance of payments.

James G. Morton, director of government relations for the Manufacturing Chemists Association, astutely summed up the case for terminating the mandatory program in an appearance before the Subcommittee on Foreign Economic Policy.

I wish to enter in the CONGRESSIONAL RECORD the remarks of Mr. Morton who has earned the trust and respect of Members of Congress in both parties because of his objectivity, intellectual honesty, and grasp of economic affairs:

STATEMENT OF JAMES G. MORTON, FORMER SPECIAL ASSISTANT TO THE SECRETARY OF COMMERCE, MARCH 26, 1969

My name is James G. Morton. Before returning to private industry I served successively as special assistant to three Cabinet officers during a five and a half year period from 1962 to 1967. I was a principal assistant to Secretary of Commerce John T. Connor when the United States Government curtailed foreign direct investments in February of 1965 and am testifying as a former official involved in the program.

It is a privilege to appear before this Committee to discuss U.S. foreign economic policy and to urge adoption of the bipartisan House Concurrent Resolutions 85 and 86 calling for an end to the self-defeating restrictions on American business ventures abroad.

These resolutions offered by Representative John V. Tunney of California, together with 42 Republican and Democratic members of the House, reflect the mounting concern over the mandatory controls on foreign investments which are damaging the competitive position of American companies and mortgaging the nation's economic future.

The decade of the sixties has been an era of unparalleled economic expansion for the world. We have been following an unwise and harmful policy of restrictionism when we should be encouraging American businessmen to seize the opportunities of the times.

Restrictionism represents a confused negative, and contradictory approach to the pursuit of our economic and foreign policy objectives and to the world's needs. It offers no meaningful or durable solutions to our complicated international problems, only the crutch of expediency.

Full participation of American companies in the growth of foreign markets is fundamental to our economic well-being. The expansion of our foreign earnings is a critical factor in supporting U.S. foreign policy objectives and in attaining a favorable balance of payments.

The mandatory controls, invoked as a stopgap measure during a monetary emergency, will in the longer term reduce the foreign income needed to offset the large and continuing government offshore expenditures which are responsible for the deficits in our international accounts.

Between 1950 and 1967 the net contribution of the private sector to the balance of payments was nearly $60 billion whereas net government outflows amounted to $92.6 billion.

Dollar outflows for U.S. foreign direct investment totaled $33.7 billion from 1950 to 1968 compared with inflows in the form of earnings, royalties, and fees of $69.5 billion. Overseas investments during the period of our balance of payments difficulties bulwarked the private account with a net contribution of $35.8 billion.

It is becoming increasingly evident that the host of restrictions placed on the private sector, rather than materially improving our future balance of payments outlook, may worsen it by "killing the goose that lays the golden egg."

The time has come to call a halt to the restrictionist course that has pervaded our foreign economic policy throughout this decade and inhibited U.S. gains in the world's growth.

Long-term credits were restricted through the Interest Equalization Tax in 1963 and bank and non-bank controls by the Federal Reserve Board. President Johnson later invoked the Gore amendment to apply the tax to foreign loans by banks and other financial institutions.

Voluntary restraints were imposed on U.S. foreign direct investments and on foreign lending in 1965 and were extended and progressively tightened in the two years to follow.

There were several attempts to restrain the overseas travel of American citizens but the administration backed off in the face of bitter opposition on the part of the public and on Capitol Hill.

Within the government the possibility of restricting the overseas transfer of American technology which is of vital importance to continued world development is now being examined. This would add a new and tragic dimension to the policy of restrictionism.

The imposition of stringent mandatory controls on foreign investments with criminal penalties for violators was effected in January of 1968 by executive order based on grounds of dubious legality. While the negative effects of the mandatory program are the immediate consideration of these hearings, there is the larger fundamental question whether it is not time to reorient our foreign economic policy outward to the realities and opportunities of an expanding world economy.

The hearings before this Committee will serve to illuminate the vital importance of U.S. private investments abroad and the need for compatible, forward-looking foreign trade and investment policies which will release the creative forces of American enterprise to achieve the maximum benefits for our country.

International investment has been one of the most powerful forces for progress in the free world in the resurgent years following World War II. The dynamic growth generated by capital ventures has lifted living standards across the continents and demonstrated vast potentials for attacking hunger, poverty, ignorance, and human despair.

International investment has opened up new fields of production, employment, and income. It has broadened the flow of technology and trade. It has strengthened the economic structures which support our efforts to achieve a rational, stable, and progressive world order.

The United States has been the leader in committing capital, technology, management skills, and other private resources to world development. While benefitting our own country economically, our foreign investments are also contributing to the growth and prosperity of our free world trading partners.

U.S. private investments, along with foreign assistance programs, have been indispensable in establishing the conditions for stability and progress in the less developed areas of the world, most particularly in those nations which are our hemispheric neighbors.

American investment in other countries has provided a major stimulus to production at home and abroad; and we are mindful that production is the wellspring of wealth.

Continued restraint on these investments will inevitably affect the level and structure of world trade and retard the growth rate. Should the world's growth rate fail to stay apace of the world's growing needs, we would face problems of a magnitude that would dwarf our balance of payments difficulties. We would face not monetary crises but worldwide convulsions.

U.S. businessmen have invested some $60 billion or more outside our borders. These investments have created and expanded foreign markets, strengthened the competitive position of American companies, and increased the flow of exports.

Our offshore producers are quick to seize opportunities to create markets for the manufactures of their home-based parent companies and are constantly increasing exports by adding to product lines.

About 25 percent of all U.S. exports are shipped to foreign subsidiaries and affiliates of American corporations. In fact, shipments to affiliates account for an even more substantial percentage of the exports, up to 35 percent or more, of some of our larger international companies.

The interrelationship between trade and investment has been well established, although not in precisely quantifiable terms. It is an indisputed fact, however, that our exports expand as our foreign investments climb.

On this interaction a National Industrial Conference Board study observes, "Total foreign investment, now approaching $100 billion, with its related output which is still larger, constitutes a fundamental link between the U.S. economy and foreign economies which is not only of greater magnitude than the $40 billion of receipts and payments recorded annually in the balance of payments, but it is a phenomenon with direct implications for the world pattern of production and trade."

"The growth of production abroad," the Conference Board report notes, "has been in fact accompanied by an increasing stream of exports from the United States, reflecting not only the orientation of foreign subsidiaries to supply sources within the United States, and the importance of their location as a stimulus to and channel for other U.S. exports, but also a substantial factor in the level of output in foreign countries, and hence in the rising level of foreign demand for imports."

The United States benefits from increased foreign demand for imports to the extent that American products are competitive or

that we are the exclusive source of supply. Due to our technological superiority, capital resources, and the scale of our economy, we enjoy many advantages in satisfying demand for sophisticated products. Computers and jet aircraft are case examples.

American production abroad spurs the growth of foreign economies and incomes with the result the countries become better customers in the world market. The United States share of the market growth is translated into more jobs and rising incomes at home.

President Kennedy expressed the benefits of broadly shared growth in his memorable comment, "A rising tide lifts all the boats." That is the phenomenon of production generating wealth and buoying trade levels in both the producing country and the investing country.

The implications of production and its trade effects are difficult to quantify, but there are indications the interaction may go much farther than we realize. The benefits are at least sufficiently discernible as to remove all doubt our policies should facilitate international growth, not retard it.

It is clear, then, that restraint of capital movements committed to production depresses the level of trade. It is thus contradictory to restrict foreign investments while attempting to expand exports. That is precisely what we are doing under existing policies and serious harm can be done our exports as well as our competitive position abroad by hampering our foreign production.

The irrationality of our policies becomes more evident when one examines the business realities of the international marketplace. It is a business fact of life that after an export market reaches a certain scale the economics and other competitive factors very often dictate it be served from local production.

If we fail to establish production within a foreign market when business circumstances require it, our industrial competitors will quickly take advantage of the opportunities. More often than not, direct investment is the next logical and necessary step in developing foreign markets if the product can be manufactured economically by local production.

In exhorting American manufacturers to widen export markets we must accordingly be mindful of the realities which may at a given point require foreign direct investment, and we must fashion compatible trade and investment policies to facilitate the retention of overseas markets.

The facts of trade disprove the contention that foreign production displaces exports. There will perhaps be a shift in the kind of exports, the substitution of capital goods, raw materials, intermediates and other supplies for finished products. But we maintain export growth and potentials while deriving the added benefit of foreign income from production.

This combination of earnings constitutes the backbone of the U.S. balance of payments and we should exert every effort to build upon it rather than sap its strength.

For many reasons American companies would normally prefer to export than produce abroad. In Western Europe, for example, land costs are frequently exorbitant, skilled labor is in short supply, the margin of profitability has diminished, and numerous other business circumstances make it more desirable in many instances to produce at home.

Trade barriers and other unfair practices denying U.S. manufacturers equal access to markets, as well as the pure economics, have strongly influenced decisions to produce abroad. The prospect of common walls around the Common Market doubtlessly played an important part in the large capital outflows for investment in Western Europe.

Government policy makers are well aware that trade barriers exert this influence and they should be working energetically either to remove the obstacles to U.S. exports or to equalize the advantages for our producers.

In some countries national policies have prompted direct investments by American companies as the only means of creating and serving markets for certain manufactures such as, for example, in Australia and Mexico, both important trading partners of the United States.

When Luther H. Hodges was the Secretary of Commerce the major thrust of the department was the promotion of two-way trade, two-way travel, and two-way investment. That was a sound, realistic, and productive policy and we should go back to it.

An expanding world economy, fed by increasing flows of trade and investment, offers the only realistic prospect for stability and order and progress on which we can build a durable peace.

It is illusory to think we can restrict American capital resources which the world needs while hoping to eliminate the conditions which foment insurrection and war.

To what avail has the United States poured out $100 billion in foreign aid if we are to restrict private investment which has proved far more effective in increasing foreign production and income?

How does one rationalize the spending of billions to be the world's policeman while restricting the economic processes which will help eliminate the conditions requiring a policeman?

We may well have miscalculated the benefits of temporary measures in our haste and anxiety to deal with the balance of payments crisis. A recent survey by Jack Behrman, University of North Carolina international expert who served as assistant secretary of commerce in the Kennedy Administration, indicated that recoupments on capital outflows for production are more rapid than the minimum of five to seven years which has been assumed.

Dr. Behrman undertook a fresh calculation of the balance of payments payout period on U.S. foreign direct investment. The payout is the length of time required for an investment to generate foreign exchange returns equivalent to initial dollar outflows.

He concluded on the basis of typical investment experience, ascertained from data available in the Commerce Department, the payout period of just over two years could be justified. The data included experience in the European area.

Actual dollar outlays for new investments were calculated at 40 percent of the total expenditure, the balance being financed through funds abroad. Of the actual dollar outlay 8 percent was used for immediate equipment exports from the United States, more than 12 percent for components, raw materials, and supplies from the United States, and about 2.5 percent in remitted earnings.

Dr. Behrman's computations thus indicated the actual drain resulting from capital ventures for offshore production may be reduced to an abbreviated period with relatively unimportant effects on our external accounts.

It is the collective judgment of the American business community that the continuation of mandatory controls will damage the nation's economic interests while providing only temporary and costly nostrums for our balance of payments difficulties. That judgment is based on a great weight of experience in the practical workings of international business.

Every sign suggests we are well beyond any short-term benefits of value and are now headed down the road of diminishing returns. As President Nixon has noted, "Every dollar of investment which is blocked by administrative edict costs us more than one and one half dollars of future earnings."

We are now in the fifth year of investment restraints and they are assuming the look of permanency. Even now the massive debts incurred by American companies through costly foreign borrowings as a result of this program are being argued as a case for its continuation.

It is contended that future capital outflows to repay or refinance the huge backlog of indebtedness, estimated at $5 billion for 1968, will require regulation; and thus the program feeds on its own consequences.

Charles E. Fiero, then director of the Office of Foreign Direct Investment, testified before the Joint Economic Committee in January that the program is creating its own set of balance of payments liabilities. He said:

"Repayment of foreign borrowing used by U.S. companies and their foreign affiliates will, of course, result in reduced direct investment income or increased capital outflows in the future. In this sense, current balance of payments gains may have been made at the expense of future balance of payments reductions."

"There has been a mortgaging of future balance of payments gains and a considerable imposition upon freedom of action of the business sector," Fiero acknowledged.

The adverse effects go far beyond balance of payments considerations. American companies are being forced to take financial actions undesirable from a business standpoint—borrowings they do not need, the restricting of trade credits to foreign subsidiaries, early repayment of loans to affiliates.

The high costs of foreign borrowing are detrimental to earnings. Foreigners are gaining increasing equity in American overseas business ventures, further reducing the income flows to the United States.

The restraints inhibit our companies from building and expanding plants with the result both earnings and exports are retarded. New projects are in some cases postponed or abandoned and the opportunities they represent may be lost to foreign competitors.

The curtailment of acquisitions also reduces our future earnings potentials while fortifying the competitiveness of foreign companies through mergers which could have expanded our markets.

Situations are developing where lending sources for local borrowing by U.S. foreign affiliates are substantially exhausted, reducing working capital and hence sales. Where working capital may not be available or obtained at prohibitive cost the continued existence of these operations is brought into question.

Much of our overseas investment is in the extractive industries which supplement our own supplies of oil and ore or which supply raw materials we do not possess in this country. Reports indicate the restrictions are causing postponement or abandonment of explorations in certain countries due to the limited exemptions allowed under the law.

Prudent financial management will not permit American industry to continue indefinitely the financing and refinancing of its foreign investments without being able to meet the commitments undertaken. The regulations on retention obstruct this.

The heavy debt load incurred by American companies has severely restricted freedom of financial planning and of financial assistance to foreign affiliates. Certain affiliates are under-capitalized in relation to debt incurred. Recapitalization is prohibited by low authorizations under the mandatory program. Those companies with affiliates having high debt to equity ratios in the Schedule B and C countries are placed in an especially difficult position.

The regulations are creating a situation in which American companies are finding it

difficult to formulate rational financial plans for their foreign operations.

Perhaps the most serious consequence from a balance of payments standpoint are the trade effects. For example, a major American chemical manufacturer with world-wide operations estimates $1 million loss in sales this year, $5 million next year, and over $100 million total export losses over a protracted period.

While export losses may principally result from the curtailment of new capital investments and plant expansions abroad, and from diminished competitiveness, the shortage of working capital aggravates the situation.

Much can be said of the extra-territorial consequences of the mandatory program. Suffice it to point out the regulations have marked our foreign affiliates as aliens which will make U.S. direct investments less welcome in the future.

It is relevant to note Representative Tunney's appraisal of foreign reaction. "It is well known that though host countries recognize the need for foreign investments they also have shown some concern lest foreign investors dominate their economies or follow policies laid down by local authorities," he said. "The program for controls of direct foreign investment have given evidence the concern is not unwarranted. The assurance of local management that companies intend to be good citizens ring hollow in the light of the official U.S. view expressed in the mandatory program that the operations of these companies must be conducted subject to the overriding needs of U.S. foreign economic policy."

While some of our government policy makers have derived comfort from temporary balance of payments gains achieved by the program, it should be restrained gratification for the United States is no longer accumulating net assets in the rest of the world.

Historically de-regulation has proved extremely difficult and cumbersome in our bureaucracy. It is important that a firm date be set now—not later—for eliminating mandatory controls, recognizing that certain transitional rules will be required to phase out the program in an orderly manner which will minimize balance of payments effects.

One hopes this Committee will urge the President *to fix a firm date on which the program will be terminated;* simply relaxation of regulations would leave residual in the bureaucracy, the framework for reimposition of controls as expediency dictates.

If restraints on capital outflows should in the future be essential to the national interest in time of a declared national emergency, they should be imposed by Congressional action, not by administrative fiat.

One hopes these hearings will serve to reassert in emphatic terms the authority of the Congress, under the Constitution, to regulate foreign and domestic commerce. In the exercise of that authority the Congress ensures every citizen a voice in public policy making.

The mandatory program with its basic fallacies, burdensome restraints, high costs, and transparent failings was invoked under a fifty-year-old law relating to "Trading with the Enemy" and predicated on a national emergency declared by President Truman in response to communist aggression in Korea. It would strain credulity to maintain that dubious legal action represented the intent of Congress a half century later.

President Nixon has pledged he will end this self-defeating program and has promised, "We will reestablish the spirit of cooperation with other nations which our investment curbs have damaged, and we will encourage investments which stimulate U.S. exports and a healthy return flow of capital."

"For the greatest nation in the world to withdraw within its own shell and to stifle American commerce abroad," he said, "is economic isolationism at its worst."

The President merits the fullest support of the American people in this determination. Adoption of the bipartisan House Concurrent Resolutions 85 and 86 will express the sense of Congress that curtailment of American business abroad should cease and it will discredit the policy of restrictionism as contrary to the foreign policy objectives and the economic well-being of the United States.

END UNFAIR TREATMENT OF SINGLE TAXPAYERS

(Mr. KOCH asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, I am today introducing a bill to rectify one of the inequities now contained in our tax code. At this time when the Congress is addressing itself to closing up loopholes and making our tax code more rational and equitable, I would hope that the Members of this Congress would consider the inequitable tax burden now carried by the single individual.

Under our prevailing tax code, married individuals have one schedule of taxation, heads of households have another, and lastly, there is the single individual who pays the highest rate of tax, since neither he nor she is entitled to head of household status. To make my point more vividly: a single individual with a taxable income of $10,000 will pay $2,354. A married individual, using the joint return, with the same taxable income will pay $1,956. And the head of household individual will pay $2,150. In other words, if a single individual were given head-of-household status, he would, under my bill, pay $204 less than he is currently paying. And, indeed, a single individual is, in fact, head of his own household if he maintains his own home.

Some legislators take the position that a single person should be at least 30 or 35 years old before being favored with head-of-household tax status. I strongly disagree. Every single individual who pays over half the cost of maintaining his or her own home should be given the same tax consideration. That cost, which in my district is rising steadily, has nothing to do with age.

When this Congress, as I hope it does, revises the tax code, its goal should be that of having everyone pay his fair share and no more. So let us close the tax loopholes which the wealthy use to avoid paying their fair share, and at the same time let us end the unfair treatment of the single taxpayer.

SOIL CONSERVATION SERVICE

(Mr. POAGE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. POAGE. Mr. Speaker, I rise to honor a dear friend of Texas and the Nation—Mr. H. N. Smith of the Soil Conservation Service.

For 15 years until his death March 13, "Red" Smith served as SCS State conservationist for Texas. His modest, unassuming manner belied an unflagging zeal for solving resource problems in Americas largest conservation State.

"Red" Smith capably administered a complex conservation program that has the largest appropriation and the largest number of employees of any State in the Nation. His personable leadership literally changed the face of Texas—gullies have healed, streams flow clearer, dust storms and floods have been lessened, grass grows green and lush on tens of millions of acres of fine rangeland. Communities throughout Texas have a wealth of technical information to aid in their land-use planning.

"Red" had a remarkable ability to inspire cooperation, understanding, and teamwork among the State's nearly 200 soil and water conservation districts, scores of special purpose districts, county governing bodies, and other agencies. It can be noted especially in the small watershed programs in Texas that more than 1,400 structures have been built to retard flooding and create new water supplies for irrigation, recreation, and many other uses.

"Red" Smith quietly took on a personal vendetta against moisture-robbing brush that encroached on 88 million acres of range and pasture and threatens the cattle industry. He directed many studies of the problem, and the preparation of five publications. These publications have been hailed throughout the United States where brush is a problem as a significant milestone in the study of brush invasion, causes, effects, and remedies. But "Red" did not stop with studies—he saw to it that over the past two decades an average of a million acres a year was treated to control brush.

Mr. Smith joined the Soil Conservation Service at Dublin, Tex., in 1935, the year that agency was formed, after serving for 10 years as head of the animal husbandry department at John Tarleton Agricultural College. He advanced through several positions to acting regional director with wide-ranging technical and administrative responsibilities in Texas, Arkansas, Oklahoma, and Louisiana, and in 1954 began directing the most rapid advance in resource improvement in Texas history. He received USDA's Superior Service Award in 1960.

In all this activity and responsibility "Red" Smith remained a warm, personable individual known and respected throughout the State. He was a good friend as well as leader to the 2,000 SCS employees in Texas.

I am happy that Clyde Graham, who served under "Red" Smith for several years as assistant and deputy State conservationist, has been chosen to succeed him at the helm of conservation in Texas. Clyde for the past 2½ years has been serving as Director of the SCS Watershed Planning Division here in Washington, and brings to his new job broad experience and wide knowledge of SCS programs and activities.

"Red" Smith was a great conservationist. We will miss him and his work for Texas and the Nation.

A POLICEMAN'S RESPONSIBILITIES

(Mr. WALDIE asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. WALDIE. Mr. Speaker, recently Robert B. Murphy, the police chief of the city of Richmond, Calif., in my congressional district posted a memorandum to all of the members of the police force of the city of Richmond in which he responded to some accusations that had been directed at the conduct of policemen in that city.

I believe several paragraphs within that memo that describe the reponsibilities of police officials are so well put that it would be wise to have it shared with more than the members of the Richmond Police Department.

Although all of the statement is of value, I particularly found a great sensitivity expressed in the paragraph that states:

Most of the work of policemen is human management. We come to our job with good schooling, some experience and our personalities. Our success in our job is directly related to our ability to wisely manage ourselves, and where management of others becomes involved, to warmly manage them.

I am including a copy of Chief Murphy's memo along with my remarks.

MEMO

FEBRUARY 26, 1969.

To: All officers.

From: Robert B. Murphy, Chief of Police.

Recently our department has received some adverse publicity, expressed in generalities. I'm aware that this kind of publicity creates an atmosphere of distrust and doubt of the police. I'm also aware that most members of the department are embarrassed and/or disgusted by it.

The purpose of my writing is to encourage all of you to remain as objective as possible; to be businesslike, and continue to fulfill our responsibility in a legal manner. It takes great courage and patience to do the work expected of police officers in today's society, but in my opinion there is no more essential assignment than that of police officer.

Our purpose is worth much sacrifice. I appreciate your displayed abilities to date. You may feel you aren't understood or appreciated, but let me assure you that most of our citizens are well aware of what we are going through, and will support us heartily when we're right. We cannot expect anyone to support us when we're wrong.

I assure you that any administrative action from my office will always be based on facts, not on general or unsupported statements. To my personal knowledge, since 1960 our department has not failed to hear, investigate and properly dispose of complaints against us. We must remember that there will be complaints and that we're not perfect. We must also remember that the nature of our work creates some friction. We should help always to reduce tensions while performing our tasks.

We cannot fail or refuse to do our law enforcement tasks, but we must remember that much of our work is non-enforcement services to the community. We must be receptive to suggestions about the latter kind of services. We must be willing to account for ourselves in all our work.

Most of the work of policemen is human management. We come to our job with good schooling, some experience and our personalities. Our success in our job is directly related to our ability to wisely manage ourselves, and where management of others becomes involved, to warmly manage them.

It's my hope that we can restore and maintain a climate which will help you feel proud to be a police officer in Richmond. We have a very fine department, doing an excellent job under some very adverse conditions. It's our individual responsibility to help keep it that way and let the people know that we don't need sympathy. We need their voluntary compliance with society's acceptable rules and their support when we enforce their rules against non-conformists to law.

ROBERT B. MURPHY,
Chief of Police.

LEGISLATION WOULD INCREASE SOCIAL SECURITY BENEFITS

(Mr. MYERS asked and was given permission to address the House for 1 minutes and to revise and extend his remarks.)

Mr. MYERS. Mr. Speaker, I have today introduced a social security legislative package which would provide increases in benefits based on the cost of living as well as increase the survivors' benefits and the amount a person may earn and still receive all the benefits to which he is entitled.

This legislation would result in a major overhaul of the present Social Security Act which now requires congressional approval for each change in benefits and qualifications. It includes the following major changes in present law:

First. An automatic cost-of-living increase whenever the Consumer Price Index jumps by at least 2.5 percent during the preceding quarter. The index increased nearly 5 percent in 1968 and has climbed nearly 20 percent since 1960. This would eliminate the necessity of congressional action.

Second. Increase the amount a person may earn from $1,680 to $3,000 a year without forfeiting part or all of his social security benefits. The present law penalizes those who want to help themselves. A person should be able to receive the benefits regardless of whether he chooses to work after 65.

Third. Increase the survivors' benefits on retirement to 150 percent of the primary cash benefits for which the deceased would have qualified under social security. Under present law, the survivors' income is cut at a time when the cost of operating the household may actually increase.

These reforms are urgently needed to spare older Americans the hardship that results from inflation.

Most older Americans are defenseless against higher living costs produced by the inflationary trend. It seems only appropriate that we provide these retirees with help as soon as they are hit by a loss in the purchasing power of their pension dollar.

These people should not have to wait 1, 2, and 5 years for such relief through general amendments to the Social Security Act. This is especially so when the increases do not compensate fully for changes in living costs anyway.

I believe that compassion, equity, and commonsense demand that we stop making older people wait until some future Congress chooses to make good on campaign promises. This legislation would, in effect, remove social security from the political arena.

I have given considerable thought to this proposal, and I am convinced it is one which offers protection for our senior citizens, who through no fault of their own are in real and dire need of positive assistance against circumstances that could destroy independence, dignity, and sense of purpose.

Almost all citizens are hurt by rising living costs. Only the very wealthy escape. No single group suffers more, however, than older Americans.

I supported this type of approach in the 90th Congress but it failed. Hopefully, with the support of the Nixon administration, we will be able to remove social security from politics once and for all and provide our senior citizens with the security and peace of mind they so richly deserve.

ALL-AMERICA CITY

(Mr. MCMILLAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. MCMILLAN. Mr. Speaker, I am inserting in the RECORD a statement by Mayor David McLeod of Florence, S.C., which is my hometown, concerning an article appearing in the Sunday Star of March 23, 1969. It seems that a reporter from the Star visited Florence, S.C., for a few days recently and talked with a number of the citizens of that community. The reporter did not talk with me since I was here in Washington at the time. Also, he did not talk with Mayor McLeod.

We are all wondering what the motive of the editor of the Star was in sending reporter Donald Smith to Florence, S.C., as he prepared an unusual article that has no meaning whatsoever other than there seems to be no truth in connection with the article. I presume the reporter made a trip to Florence to see if he could find someone that would say something detrimental about me. I certainly could not make any sense out of the article as reporter Smith seemed to intentionally or unintentionally get all of his facts incorrect. We have a good prosperous city which has almost doubled in size during the past 10 years and we have 52,000 people who receive their mail at the Florence Post Office, both black and white, and they seem to get along as harmoniously as any people could anywhere in the United States. We have several excellent colored policemen and several excellent colored members of the fire department, in addition to three colored deputies in the county sheriff's office.

I didn't think any newspaper in Washington would have the gall to send a reporter to Florence or any other city where good relations exist between all people when we have so much confusion and crime here in the Nation's Capital. As chairman of the House District Committee, I have not been able to secure very much assistance from any of the news media in the Nation's Capital in connection with my efforts to solve the crime problem.

I have been successful in having the Members of the House of Representatives approve approximately 900 bills, the majority of which vitally affect the Nation's Capital: for instance, a bill we enacted last year granting $80 million to the hospitals in Washington, D.C., without any strings attached.

We are very proud of our mayor in Florence and the progress our city has made during the past 12 years. We have excellent community leaders, both colored and white, and it is refreshing to know that we do not have people of different races calling names at each other and making all types of accusations as exist here in the Nation's Capital. We have very little crime in Florence for the simple reason that law enforcement is excellent, punishment is swift and certain when a crime is committed.

Shaw Field that was mentioned in the reporter's article is not located in my congressional district and I am not acquainted with any street by the name of "Square," however, the reporter states that my residence is located on "Square" Street. The mayor, city council and other officials in the Florence community have reason to be angry over this article as it portrays anything but true facts concerning the fine city of Florence, S.C., which was recently designated as an all-American city.

I, of course, am accustomed to this type of treatment here in Washington as I have been accused of everything in the book by the news media in Washington since I have been serving as chairman of the House District Committee, simply because I do not hold the same philosophy concerning crime and the solvency of the Nation's Capital as the news media in our Capital City.

I could write a book several inches thick quoting the outright misrepresentations and other accusations that have been heaped on my shoulders for the simple reason that I do not cater to these people's way of thinking in connection with my position in making laws for the Nation's Capital. I, nor any other Congressman, has any jurisdiction over the administration of the affairs of the District of Columbia and we do not have an opportunity to make any appointments. They are all made by the Commissioner and the President of the United States and the laws are administered through the Mayor, the Attorney General and the District Corporation Counsel under the supervision of the Department of Justice.

I am making these statements for the simple reason that the people who read the CONGRESSIONAL RECORD in my hometown and in every town in the United States will understand some of the reasons why we have certain conditions in the Nation's Capital at the present time.

The article incorporating Mayor McLeod's statement follows:

WASHINGTON STAR STORY CRITICIZED

An article in the Sunday magazine section of The Washington Star was highly critical of Florence as an All-America city and was in return criticized by Mayor David McLeod.

The article, by Donald Smith, was to "discover if the All-America city might have some influence on McMillan's (Cong. John L. McMillan) manner in dealing with Washington. Cong. McMillan is chairman of the House of Representatives D.C. Committee.

The article discussed race relations in Florence and was critical of the city's action in this field.

Mayor McLeod said Tuesday "I have never seen the gentleman that wrote the story or talked with him on the telephone.

"Many statements in the story are erroneous, misleading and are not at all factual.

"It seems to me that if a reporter wrote a story on Florence and used the mayor as part of a story he should at least discuss it with him (the mayor) before writing any such misleading information."

ONE NATION, UNDER GOD

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. ROGERS of Florida. Mr. Speaker, the National Association of Broadcasters are in Washington this week. A speaker at one function was reported to be Tom Smothers, who is concerned about network and affiliate censorship of his program, broadcast by CBS.

One of the more interesting things about the Smothers show is its slip from among the top-rated programs in the Nation. It is reportedly below 40 now, indicating that perhaps there is some relationship between listener approval and ratings after all.

Last Sunday night the Smothers program began with a reservation of their own version of the pledge to the flag. Their version omits "under God." In fact, the only apparent reason for what might otherwise have been a welcome bit of patriotism was actually an affront to the traditions of this Nation.

As Senator PASTORE noted in a speech before the NAB this week, ABC and NBC have agreed to submit their own programs to the code authority of the NAB, but CBS has refused.

CBS may well be concerned about code approval, if the Smothers show is an example of what they feel is good Sunday night listening. It was a CBS affiliate in Chicago which staged a pot party, in an apparent effort to help sagging ratings there. Maybe they are trying to use a little shock value to help the Smothers' sagging ratings.

CBS has placed itself in the position of opposing regulation of networks, regulation of programing, and even self-regulation within the industry. CBS has written Senator PASTORE that—

In our society the determination of taste and propriety as to TV programing must be pluralistic. A single last word would be harmful, indeed dangerous.

What about CBS's own "last word?" If CBS continues to refuse any advice on programing from any source but its own, where does "pluralistic" come in at all? Far from accepting a pluralistic approach, CBS is saying to the National Association of Broadcasters, and to the Federal Communications Commission, and to the Congress, and to the listening public, that CBS will not listen to anyone, regardless of the violence, sex, or poor taste involved in its programs.

Well, CBS, "under God" is an important part of the pledge to the flag. One segment of the pluralistic approach you cannot long deny is the listening audience, and perhaps you had better go back and read the ratings again.

ABC and NBC are not without fault, but are to be commended for their interest in arriving at a voluntary industry solution. CBS apparently wishes to continue down the road on its own, with the likes of the Smothers show.

An increasing number of people throughout the country now demand Government intervention. I sincerely believe most Members of Congress would like to avoid that if at all possible.

Self-regulation within the broadcast industry seems to be the best answer for the present. ABC and NBC are willing. CBS is not. I suggest that the American people let CBS know what they think. This can be done by switching the channel receiver away from offending programs. And it can be done by writing product manufacturers and letting them know what the public thinks about such programs. And writing or calling the local network affiliate and letting them know. It has been my experience that local stations, which are licensed and are deeply committed to good community relations, act in a responsible and reasonable manner to public opinion. In the end, CBS will get the message. And perhaps at last there will be some industry solution to a serious problem of public concern.

DECENTRALIZATION AND RESTRUCTURING OF FEDERAL FIELD OFFICES

(Mr. GERALD R. FORD asked and was given permission to address the House for 1 minute.)

Mr. GERALD R. FORD. Mr. Speaker, the announcement today by President Nixon of his first steps toward the decentralization and restructuring of Federal field offices convincingly demonstrates that he intends to keep his campaign pledge "not to dismantle Government but to modernize it." The field offices of the five related departments and agencies which have been operating under the handicap of a crazy-quilt of different boundaries and regional headquarters will be able to serve the public more efficiently. The public will be spared a great deal of confusion and wasted time in doing business with the Government.

The President's expansion of the regional council concept to all eight of the new regional centers, and his directive to other executive agencies to study further means of decentralizing decisionmaking and bringing the administration of Federal programs closer to the people should also be welcomed by the Congress. We have long urged greater coordination and more businesslike methods upon the executive agencies that come before us for funding and support of their programs. We should now unhesitatingly back up the President's move to bring this about.

There will be temporary dislocations and discomforts for some Federal employees but the President's plan has minimized these and its implementation will be spread over the next 18 months to permit the necessary readjustments. In the end the benefits to all our citizens will far outweigh the inconvenience of making these urgent and sensible changes in a system which has, unfortunately,

grown up without a clear pattern and desperately requires reorganization.

COLUMBIA BROADCASTING SYSTEM

(Mr. GONZALEZ asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GONZALEZ. Mr. Speaker, I wonder if the gentleman from Florida (Mr. ROGERS) would be willing to answer a question in connection with what he has said. I would like to ask the gentleman this question, in view of his statements, which accurately reflect correspondence that I have had with officials of CBS, because of a highly distorted, unfair, inaccurate, and untruthful report last year with respect to the hunger question. The Nation and the world were absolutely horrified when CBS put on a show that opened up by purporting to show a child starving because of malnutrition. It was completely untrue. The child was a premature, 2-months-old child. The parents were healthy, and well nourished. That fact was established beyond any question of doubt.

CBS admitted that they did not know there was any other way, but they felt that even if a hoax containing untruth were perpetrated on the listening and viewing audience of the world, it was justified as long as they thought their cause was a good and holy one. Later the president of CBS substantiated his view that it would be perfectly all right to lie to the viewing public if, in their opinion, it was justified. So I am glad to hear the gentleman say what he has said. I think the time has come when Congress should look into this whole question. I agree with him that none of us wishes to inject regulatory authority, but if it comes to that, I think we cannot escape the clear responsibility that reposes in the Congress to do something about this vast network system that controls 93 percent or more of the prime viewing time of the American public with no restraint whatsoever.

Mr. ROGERS of Florida. Mr. Speaker, will the gentleman yield?

Mr. GONZALEZ. I yield to the gentleman from Florida.

Mr. ROGERS of Florida. I thank the gentleman. Judging from my conversations with Members of Congress, there is great concern with this problem. Chairman STAGGERS of the Interstate and Foreign Commerce Committee, of which I am a member, has said, "We are going to look into some of these problems." And I think it is very needed.

Mr. GONZALEZ. I thank the gentleman.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?

Mr. GONZALEZ. I yield to the gentleman from Illinois.

Mr. PUCINSKI. I have not seen the program in question. Certainly the gentleman from Florida and the gentleman from Texas are correct in calling to the attention of Congress the shortcomings of this network. It is particularly unfortunate that this would occur, because this particular network, CBS, did do an excellent job the last two Sundays when they brought to the attention of the American people a two-part series on the growing problem of pollution in this country.

In their 21st century series, I thought they had done one of the greatest jobs I have seen in reporting in calling to the attention of the American people the great problems that are being created for our American public in this problem of air pollution. So on the one hand they do a great job, and then on the other hand they undo the good they do with the kind of program the gentleman from Texas mentioned.

Mr. GONZALEZ. Mr. Speaker, if CBS will take care of its own pollution, I think everything will be OK.

LEGISLATIVE PROGRAM—WEEK OF MARCH 31, 1969

(Mr. ARENDS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ARENDS. Mr. Speaker, I take this time in order to ask the distinguished majority leader about the legislative program for next week.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. ARENDS. I yield to the majority leader.

Mr. ALBERT. Mr. Speaker, in response to the distinguished minority whip's inquiry, we have finished the legislative program for this week, and will ask to go over until next week.

There is no legislative business for Monday.

Tuesday is Private Calendar day.

For Tuesday and the balance of the week, we have House Resolution 270, authorizing the expenditure of certain funds for the expenses of the Committee on Internal Security, and H.R. 9328, to provide special pay to naval officers who agree to remain in active submarine service.

This announcement is made subject to the usual reservation that conference reports may be brought up at any time, and that any further program may be announced later.

ADJOURNMENT TO MONDAY, MARCH 31, 1969

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

Mr. GROSS. Mr. Speaker, I reserve the right to object.

Mr. Speaker, I wonder if the gentleman from Oklahoma could tell us, in view of the staggering workload for next week, whether he thinks it will be possible to get out of here by midnight of Wednesday? When does the gentleman think it will be possible for the House to adjourn next week, so we may have some idea as to when the Easter recess will be started?

Mr. ALBERT. Mr. Speaker, I am glad the gentleman asked that question, because we are going to try to finish the business by not later than early Wednesday afternoon.

Mr. GROSS. By Wednesday afternoon?

Mr. ALBERT. By not later than that, and hopefully Tuesday evening.

Mr. GROSS. Then it will not be Wednesday midnight or some such time as that?

Mr. ALBERT. That is true unless some unforeseen event happens. The gentleman understands the program is always announced with that reservation.

Mr. Speaker, I renew my unanimous-consent request that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY NEXT

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule be dispensed with on Wednesday next.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

RESIGNATION FROM NINTH MEXICO-UNITED STATES INTERPARLIAMENTARY GROUP

The SPEAKER laid before the House the following communication:

MARCH 26, 1969.

Hon. JOHN W. MCCORMACK,
Speaker, House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: I sincerely regret that an unexpected demand from my constituency will prevent my taking part in the Ninth Mexico-United States Interparliamentary Conference, which will be held in Mexico, beginning April 2nd through the 8th. For this reason, I am constrained to resign from the House Delegation.

With high regard, I am,

Sincerely,

F. BRADFORD MORSE,
Member of Congress.

APPOINTMENT AS MEMBER OF U.S. DELEGATION OF THE MEXICO-UNITED STATES INTERPARLIAMENTARY GROUP

The SPEAKER. Pursuant to the provisions of section 1, Public Law 86–420, the Chair appoints as a member of the U.S. delegation of the Mexico-United States Interparliamentary Group the gentleman from Utah (Mr. LLOYD), to fill the existing vacancy thereon.

ELECTION OF REPUBLICAN STATE SENATOR IN CALIFORNIA

(Mr. MCCLOSKEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MCCLOSKEY. Mr. Speaker, I noted in the RECORD yesterday that there

was some enjoyment on the other side of the aisle over an election in Tennessee which was considered to set some sort of guidelines for the election results in 1970.

I want to advise the House and my colleagues that there was also an election on that same day in California, in a State senatorial district including Contra Costa County, and coterminous with the district of our esteemed colleague (Mr. WALDIE). Our Republican senatorial candidate, John Nejedly, won in a democratic district by a 4-to-3 margin. I hope the Members on the other side of the aisle will, therefore, view with increased respect the words of our distinguished minority leader to the effect that Tuesday's elections may be an indication of things to come.

THE CASE AGAINST THE ABM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Washington (Mr. PELLY) is recognized for 20 minutes.

Mr. PELLY. Mr. Speaker, our highly respected former colleague, the able and articulate Secretary of Defense, Melvin Laird, as those of us who served many years with him know, can be a powerful and persuasive advocate of any cause he chooses to espouse. In the well of this House, he demonstrated that year after year, and as I say, his reasoning and insight are highly respected. Many times I have listened to his argument on legislation and followed his recommendations when the time came to vote.

But, Mr. Speaker, I strongly differ when Mr. Laird says, as he has recently, that the modified anti-ballistic-missile program, newly named by the Pentagon as the "Safeguard" system, is a building block for peace. On the contrary, I feel that proceeding at this time with an ABM deployment could actually result in the building of more Soviet nuclear blockbusters and accelerate the entire atomic arms race with the Russians increasing their offensive capacity and causing another tragic stepup in the spiral of the arms race.

Perhaps, Mr. Speaker, the time will come when the United States will be forced into deploying a so-called Safeguard system or perhaps indeed a thick-shield anti-Soviet missile defense. Pray God, as a deterrent to nuclear war, this country will not be forced to construct any such defense system against a Soviet capability to render our retaliatory striking power ineffective. But, as to now, as testified by Director Gerard Smith of the Arms Control and Disarmament Agency, such second-strike capability, which we presently have as a deterrent to enemy attack, would not be jeopardized by a halt in the antimissile program until after nuclear disarmament talks with the Soviet Union.

If I thought for a moment a halt in the ABM program would risk our losing our retaliatory deterrent striking strength, I would support Mr. Laird. For who will deny that until disarmament, the real deterrent is the knowledge by Moscow, and perhaps in a few years by Peking when Red China acquires nuclear missiles, that either of them if they attacked us would in truth be obliterated.

My conviction is that momentarily there is no need and no sense in initiating this program until the United States and the Soviet Union have discussed a limitation by both nations in offensive and strategic weapons. The fact is that if such talks fail, either country could overcome any ABM system by the use of multiwarheads and decoys and other penetration aids.

Mr. Speaker, I do not trust the Communist leaders in the Kremlin any more than does my distinguished friend, Mel Laird. I do not doubt his so-called firm and solid information that the Soviets are deploying the SS–9, a 20 to 25 megaton weapon which in turn might destroy a portion of our Minuteman launch sites. But, surely an attack by such a weapon would be deterred by the U.S. retaliatory capability of our Poseidon and Polaris missiles from submarines underwater.

Right now, it seems to me, there is still time for a return to commonsense and reason. From the layman's point of view, it is not easy to oppose any new means of defense, but in all sincerity, I say, let us delay and not set off another expansion in the suicidal arms race.

Mr. Speaker, last year when I voted for funds to deploy the Sentinel missile system, I felt that such action on the part of the United States would give us greater strength over the disarmament bargaining table. However, now certainly the Russians are on notice of our intentions just as much as if those Sentinel missiles were located throughout the country. They know that we will never be second in any arms competition. They know we will insist on maintaining such strategic defense and offensive weapons as are needed for our national security.

So, Mr. Speaker, I say, let us talk—talk softly as President Nixon has suggested—and not feel impelled to spend billions of dollars on a new defensive system that will be, I am sure, out of date, obsolete, and ineffective by the time it would be completed. The Safeguard missile would, in reality, be no bargaining tool for dealing with the other nuclear superpower, nor is it a building block for peace as Secretary Laird would have it.

Let us negotiate and not lay waste our strength in this $10 billion unneeded gesture in muscle flexing.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?

Mr. PELLY. I yield to the gentleman from Illinois.

Mr. PUCINSKI. I am interested in the gentleman's deep interest in this subject. He has a problem in his immediate area on this, which I am sure the gentleman is concerned about.

Mr. PELLY. If the gentleman would not mind, I will say that that problem has been removed by President Nixon's decision to remove the antiballistic missiles from the populated areas.

Mr. PUCINSKI. I am mindful of that, but here is the question I want to ask the gentleman. He said that he voted last year for this. Actually this House and the other body voted on eight different occasions for this country to move ahead with a deployment of the ABM. I would like to know if the gentleman would be good enough to tell me what has changed.

Has the Soviet Union changed in any way? Has the brutal invasion of Czechoslovakia in any way given us reason to believe that the Soviet Union is ready to start changing and behaving like a civilized nation? Has the Soviet Union in any way deterred its own research in ABM development? Has the Soviet Union stopped building the 65 ABM's around Moscow? Is there an iota of proof that the Soviet Union has in any way deterred its own development? On the contrary, the best evidence that we have is that the Soviet Union has substantially accelerated its research in an attempt to knock out the offensive deterrents that we have in this country. I am at a loss to understand why, in the face of the overwhelming evidence presented before the American people by Secretary Laird and by the President of the United States, we continue to hear those who would have us stop. Finally, is it not correct that the chairman of the Disarmament Commission stated that in his judgment our continued deployment of the ABM would in no way alter or interfere with any future discussions we may have with the Soviet Union on some form of a mutual inspection treaty?

Is not that what the chairman said?

I noted with interest the gentleman's statement that he said it would not in any way affect our deterrent power. But he also said very unequivocally that if we proceed with the deployment which we are now planning to do, it will not in any way alter the basic approach in this country to ask the Soviet Union to sit down and start talking about some meaningful inspections. However, I would like to remind my colleague that President Eisenhower proposed an open skies treaty and the Soviet Union wrecked that proposal with the phony shooting down of the U–2. Every President Nixon, has indicated that we in-Kennedy, President Johnson, and President Nixon, have indicated that we indeed want an open skies treaty. We want to come to some agreement with reference to this proliferation of the nuclear arms race, but the Soviet Union has not given one iota of evidence or hope that it is ready to start acting like a civilized nation.

Mr. PELLY. The gentleman from Illinois has presented me with a long question.

Mr. PUCINSKI. I have a 30-minute special order and I shall give the gentleman some of my time.

Mr. PELLY. I will say to the gentleman from Illinois that insofar as I am concerned there have been changes since the gentleman and I both testified before the Real Estate Subcommittee of the Committee on Appropriations on January 15, and I have changed my mind.

I will say for one thing, of course, the Soviet Union has indicated that they were interested in talks which I understand are designed to curtail the arms race. I think President Nixon has indicated that he intends to talk with representatives of the Soviet Union.

I would say further, because the gentleman from Illinois referred to the Director of the Arms Control and Disarmament Agency, Mr. Smith, he has stated and testified before a Senate Committee that a delay in deploying this program would not jeopardize our defense; otherwise, I would not be standing here in the well today.

Mr. PUCINSKI. Mr. Speaker, if the gentleman will yield further, did not the Director of the Arms Control and Disarmament Agency, Mr. Smith, also say that in proceeding with the deployment it would in no way interfere with our talks with the Soviet Union, because they have not stopped their deployment of such ABM systems?

Mr. PELLY. I would say the gentleman was correct. However, I am in favor of continuing the research aspects of this system but not actually deploying these missiles which I am sure will be out of date and obsolete at the time of their deployment.

Mr. YATES. Mr. Speaker, will the gentleman yield?

Mr. PELLY. I yield to the gentleman from Illinois.

Mr. YATES. Mr. Speaker, it is my opinion that two points have to be made. The first point that has to be made is that the gentleman from Illinois (Mr. PUCINSKI) has very cleverly sought to place those in favor of the position of the gentleman from Washington (Mr. PELLY) and the position which I espouse in opposition to the ABM in opposition also to maintaining and fostering and enhancing our national security. This is totally untrue. The fact that we oppose the ABM system does not mean that we are not seeking to promote and foster the national security of the United States.

Mr. PUCINSKI. Will the gentleman yield on that point?

Mr. PELLY. Let me say this to the gentleman, that I believe the Secretary of Defense has indicated that he has hard and firm information that the Soviet Union is proceeding to develop the SS–9.

Mr. HALL. If the gentleman will yield, that is correct.

Mr. YATES. Yes.

Mr. PUCINSKI. Will the gentleman yield?

Mr. PELLY. With 20 to 25 megaton capacity.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield? I want to comment on the remarks of my colleague.

The SPEAKER pro tempore (Mr. MATSUNAGA). The gentleman from Washington has the floor.

Mr. PELLY. I just want to finish this statement by saying that the way I feel is that if we proceed with the anti-ballistic-missile system that we are going to get hard and firm information that the Russians are proceeding with the SS–9, with multple warheads, which would overcome the "safeguard" missile defense. It would take 500 of the present SS–9's, we are told, to put out of commission half of our Minuteman installations. I believe we have time now to discuss disarmament. That is the way I see it. Otherwise I am certain that if we continue on with an antimissile defense program we may not be able to talk.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?

Mr. PELLY. The gentleman from Illinois (Mr. YATES) had been making a statement, and I will yield further to the gentleman from Illinois.

Mr. YATES. I thank the gentleman for yielding.

The second point that I wanted to make was this: that with respect to what the Russians are doing in developing their offensive strength. We are not laggard in this respect. We, too, are moving to increase the already awesome power of our ICBM's and Poseidons with MERV warheads. We are going forward with that. So that we are expanding our power and that is certainly offsetting what the Russians are doing. We are doing this without reference to deployment of the ABM.

It is true that they are going forward with the SS–9, according to Secretary Laird, and that it is a very powerful weapon, but the United States is moving forward also.

I want to associate myself with the remarks made by the gentleman from Washington. It is unfortunate that both the Soviet Union and we are going forward with such weapons when we should be trying to stop this ever-increasing buildup of nuclear arms.

Mr. Speaker, I want to make one further point.

The gentleman from Washington rightfully said that in his judgment the building of these weapons will not be building blocks for peace.

I fail to understand the rationale behind Secretary Laird's statement that if we build these ABM's that it will not be stimulating to the arms race. I am under the impression that a credible deterrent on both sides requires a balance, that there must be the ability of both sides to destroy the other. I believe that we must maintain the credibility of our deterrent force.

If we were to build an ABM system which would be successful—and there is great doubt whether that is possible at the present time—but if it were successful, and if thereby the ABM system could thwart the Russian missiles from their destructive mission, I feel quite sure the men in the Kremlin could very well be impelled to increase their offensive strength further by additional missiles to overwhelm this new defense. They would want to build additional destructive missiles in order to overcome our anti-ballistic-missile system. Therefore, I cannot see where this would be a building block for peace. I believe that instead of a building block for peace, the Soviet Union would conclude they must increase the number of their offensive missiles to balance the new advantage possessed by the United States.

Mr. PUCINSKI. If the gentleman will again yield, my colleague talks about the fact that there are those who say there is no possible ABM system that is capable of defeating the Russian missiles. That is a matter of opinion.

I believe that these are the same people who for 20 years have been taking such positions. We have tried in the Congress, and it has been a hard job to do, to maintain an effective defensive posture, because this has been the greatest containment of the Soviet Union. For 20 years the Soviet Union has embarked upon a policy of causing turmoil throughout the world.

Is there anyone who believes that they are not present in Vietnam? They are the ones who started the turmoil in Vietnam, not us. Is there anyone who is naive enough to believe that the Soviet Union is not knee deep in the Vietnam war?

We have seen the Soviet Union try to cause turmoil throughout the whole world. They started the civil war in Greece in 1947. Yet there are those who continue to be naive enough to think, even at this late date, that somehow or other we are going to be able to get the Soviet Union to sit down and behave like a civilized nation, when the record of the past two decades disproves that theory.

But more importantly, Mr. Speaker, why did the Soviet Union stop, in the last few days, putting together their fourth segment of the anti-ballistic-missile system around Moscow? The Russians have 67 ABM's over there right now. The reason they have stopped it is because, as the gentleman himself has said, and as the Secretary has said, they have developed more sophisticated weapons. They are now moving ahead with more sophisticated weaponry.

There is not an iota of proof anywhere that the Soviet Union has stopped or deaccelerated its development of its ABM system, and for me to hear responsible members of this Government and of this country say that we should put everything aside until the Soviet Union is willing to sit down and talk. Mr. Eisenhower tried desperately 12 years ago and the Soviet Union has had more than 12 years to show one iota of good faith in trying to bring this nuclear race to a halt. It has been this country that has made move after move after move to try to bring this nuclear race to an end and it has been the Soviet Union that has in every instance said, "We are not interested—we are moving ahead."

Mr. PELLY. I agree with some of the things that the gentleman has said, but he overlooks the fact that now the nuclear weapons race has accelerated so that even the Soviet Union indicates that it wants to talk about disarmament and that is a changed situation.

Mr. PUCINSKI. Listen, they could start talking right now. The first thing they can do is to get hold of Hanoi and say, "Listen, sit down in Paris and start talking like decent people and work this thing out."

But there is not one iota of proof anywhere that the Soviet Union has given up its design of ultimate conquest. I say that those who read into the Soviet Union some hope, are looking at the world through rose-colored glasses—not pink—but rose-colored glasses.

Mr. PELLY. Let me say to the gentleman that he does not have any monopoly when it comes to opposition to communism. So far as I am concerned, I think that the times are such now that we

should not continue on a suicidal arms race which is just producing a two-nation overkill capacity.

Mr. HICKS. Mr. Speaker, will the gentleman yield?

Mr. PELLY. I yield to the gentleman from Washington at this point.

Mr. HICKS. Mr. Speaker, I want to commend the gentleman for his remarks and I join the gentleman in his remarks. I will go just this one bit further and say, as the gentleman in the well knows, that our Navy is in such sad shape that I would like to see the money that is proposed to be spent on deployment of this ABM placed in Navy construction. I agree with the gentleman that we must continue with research and development of the ABM system.

Mr. YATES. Mr. Speaker, will the gentleman yield?

Mr. PELLY. I yield to the gentleman.

Mr. YATES. Mr. Speaker, the gentleman from Illinois (Mr. PUCINSKI) has again wrapped himself with the mantle of anticommunism and thereby has sought to cast aspersions on those who take the opposite position. He used the phrase about all of those who opposed military appropriations over the last 20 years.

The fact is the gentleman from Washington and the gentleman from Illinois have supported the efforts to keep our country strong all during these years.

That kind of a charge is grossly unfair.

"CLASSICAL CASE" OF NAVY CONTRACT BUNGLING EXPOSES THE WASTE IN DEFENSE SPENDING THROUGH NEGOTIATED, NONCOMPETITIVE "EMERGENCY" PROCUREMENTS

The SPEAKER pro tempore (Mr. MATSUNAGA). Under previous order of the House, the gentleman from Pennsylvania (Mr. ROONEY) is recognized for 60 minutes.

Mr. ROONEY of Pennsylvania. Mr. Speaker, last August 1 in this Chamber, I announced that I had asked both the Department of the Navy and the General Accounting Office to investigate the Navy's award of a negotiated, noncompetitive emergency procurement contract which was about to cost the American taxpayer nearly three times more than necessary.

At that time I expressed my view, based on an investigation carried out by my staff, that this particular contract was an example of "gross abuse of emergency procurement authorization."

The target of my criticism then was an "emergency procurement" contract awarded to the York, Pa., division of American Machine & Foundry Co. to produce 2,000 breechblock locks for the Mark–12 20-millimeter aircraft gun at a unit price of $97.13. This "emergency procurement" was authorized more than a month after a routine supply-replenishment contract for the identical gun-part had been awarded to Newbould Tool Co., also of York, Pa., at a unit price of only $37.75, or slightly more than one-third the price of the AMF negotiated contract price.

In my remarks at that time I cited a letter I had sent to then Secretary of the Navy Paul R. Ignatius, requesting a Navy investigation of this contract award. I quote in part from that letter:

> I submit that this entire procedure is indicative of a plan to reward York AMF with a substantial and profitable contract for some reason unknown to me. It is possible that the contract was to help York AMF offset some loss it may have suffered in the redesign of the breechblock lock, if indeed any loss was suffered under that contract.

In that same letter to Secretary Ignatius I also charged that the "emergency procurement contract was contrived as a means to carry out the—thwarted—original plan to provide York AMF with a fat profit."

Under date of August 27, 1968, the Navy Department forwarded to the General Accounting Office a report of the Navy's findings regarding its own investigation of its noncompetitive contract award to York AMF. After thorough review of the Navy's report, I again addressed my colleagues in this Chamber to label the Navy report "an attempt to whitewash a needless, an outrageous, waste of public funds for reasons which are not yet clear." I conveyed those exact words, plus a detailed dissection of the Navy's findings to Comptroller General Elmer B. Staats in a letter dated September 6, 1968. My letter to the Comptroller General included these observations:

> It is more important than ever, in view of the contradictions and inadequacies of this report, that you begin a complete investigation of this matter immediately. I earnestly urge that you do so.
>
> I anticipate that an independent investigation of the procedures followed in this instance could lead to development of specific recommendations for a thorough overhaul of contract award procedures in the Navy Department and other Defense units. Such an overhaul is long overdue and most essential to the public and the National interest.

Mr. Speaker, I am pleased to report that the General Accounting Office has now completed its independent investigation. An extensive study of the GAO report by my office has been completed, and additional questions for purposes of clarification have been submitted to GAO informally and answered during a personal briefing session in my office. I shall place the entire GAO investigative report, plus an appendix containing 14 pertinent questions I originally submitted to the Navy, the Navy's replies to each question and GAO's comments upon those replies in the RECORD with my remarks.

In view of the evidence reported by the GAO, I renew here and now the charges I made in this Chamber on August 1, 1968. The report speaks for itself. I personally find it difficult to put into words the almost unbelievable manner in which the Navy Department, in this instance, handled a small but extremely critical procurement matter.

A GAO representative who was directly associated with the investigation described the situation perfectly when he said it is "a classical case" of procurement bungling. And as always, when public funds are involved, it was the American taxpayer who was the loser.

In this instance, however, I am pleased to report that the American taxpayer may have lost an instant battle but could very well win a broader war.

The Navy's procedures in this classical case were so inept that GAO has agreed with me that a broader investigation of emergency procurement procedures is warranted.

GAO has already begun an investigation of $5 billion worth of annual emergency procurements on a Defense-wide basis. GAO's investigation will focus particular attention on those emergency procurements which involve noncompetitive negotiated contracts with so-called sole-source producers.

In this instance, the Navy Department insisted that the York Division of AMF was the sole-source capable producer of the breechblock locks for the Mark–12 aircraft gun. So ingrained within the Navy Department's procurement system was this allegiance to York AMF that various sectors of the Navy supply system specifically designated York AMF as the supplier when they issued purchase requests for the breechblock lock. The term "competitive bidding" apparently was taboo.

Nevertheless, when the Navy set out more than a year ago to replenish its almost exhausted supply of breechblock locks by entering into negotiation with sole-source York AMF, two competitors appeared on the scene and submitted bids, both of which were lower than the price proposed by AMF. Suddenly there were three potential manufacturers of the breechblock lock.

And, on January 3, 1969, the Navy opened "competitive" bids on yet another breechblock lock contract and found—undoubtedly to its surprise—that nine potential manufacturers had submitted bids. Since then, those bid proposals have been thrown out, slight revisions made to the breechblock lock specifications, and the pending contract for 4,500 locks again put out for competitive bidding. On March 13, when bids were received, fully a dozen companies had submitted proposals—the lowest of which was $22.80 per lock, or about $75 per unit cheaper than the Navy paid York AMF for 2,000 units in 1968.

GAO has estimated that about 70 percent of the $5 billion worth of Defense-wide emergency procurement contracts it plans to investigate, or nearly $3.5 billion worth, are noncompetitive contracts negotiated with so-called sole-source suppliers such as York AMF. Based on the investigation of the York AMF contract, this broader GAO investigation could produce recommendations for procurement policy changes which can save hundreds of millions of dollars, if not billions of dollars, annually. The potential for such savings clearly exists and must be made fact, in the public interest and the national interest.

I commend GAO and those GAO personnel directly responsible for the results of this "classical case" investigation for a job well done. By applying such diligence to the extraordinary investigative task before them, they will perform a public service of tremendous impact.

THE NAVY'S STRANGE RELATIONSHIP WITH AMF

While the noncompetitive "emergency procurement" contract awarded to York AMF has served as the springboard for the GAO's Defense-wide investigation of similar procurements, a great deal more remains to be said about the springboard case itself.

To define clearly the relationship between the Navy Department and the American Machine & Foundry Co., as it specifically involves York AMF, is a most difficult undertaking. Additional information gaps still exist. To overcome these gaps, I have asked the Navy Department, the General Services Administration and GAO for complete details regarding the sale in 1964 of the naval ordnance plant at York, Pa., to American Machine & Foundry Co. It is this former naval ordnance plant which is known today as the York Division of AMF.

I already have learned that a condition of that sale required that AMF maintain the production capabilities of the naval ordnance plant for 10 years from the date of the sale. I have specifically asked GAO to determine if the sale agreement, either in specific terms or by implication, obligated the Navy Department to provide York AMF with defense contracts for that same 10-year period. Commonsense would dictate that the Navy not obligate itself in such a manner, but until now I have found little in the Navy's handling of its breechblock lock procurement from AMF to indicate that sound commonsense prevails in Navy contracting.

Further, I have learned conclusively that a noncompetitive, negotiated, fixed-price $33,000 contract which the Navy Department awarded York AMF on June 3, 1966, to develop a new breechblock lock for the Mark-12 aircraft gun netted AMF a profit of some $21,000, or a profit rate of 180 percent of the actual cost to develop the new lock. GAO has confirmed this 180-percent rate of profit on that noncompetitive contract. It is a disgrace that the Navy then continues to deal with an industry which bleeds the American taxpayer in this manner.

The GAO investigation just completed has identified York AMF as a "high-cost producer," virtually incapable under its present system of operation of being able to secure Government contracts of this type on a competitive basis. Inefficiency on the production line and extraordinarily high overhead costs result in its high production costs, GAO found.

For example, in financial data submitted to justify the $97.13 per unit price it negotiated with the Navy for the 2,000-unit emergency procurement contract, York AMF cited a per-unit overhead cost which was higher than the total unit price of $37.75 bid by Newbould Tool Co. In its $37.75 bid figure, Newbould had included cost of the special miraging steel to produce the locks, its labor costs, overhead, and profit.

It is interesting, if not pertinent, to note that York AMF has submitted price quotations in both biddings held this year on a contract to supply 4,500 additional breechblock locks for the Mark-12 gun. In both instances, York AMF's bid was $59.94, or far below the $97.13 unit price it had convinced the Navy was reasonable for the emergency procurement contract last May.

GAO has determined that Newbould Tool Co., as of last November when production of its 2,400-unit contract was completed, anticipated that its profit would approximate 10 percent of the $37.75 unit price. Accordingly, Newbould's actual costs for material, labor, and production totaled about $34.30 per unit. Therefore, if AMF's production capabilities were equal to those of Newbould, the AMF unit price of $97.13 should have netted AMF a profit of approximately 200 percent, or 20 times higher than Newbould's profit.

On the other hand, even if AMF's profit actually was within the 10-to-15-percent range it has claimed, the Navy Department and all other Defense procurement agencies should immediately halt all noncompetitive purchases from AMF in the public interest. The American taxpayer frankly cannot afford to underwrite inefficiency or high overhead or whatever else might be offered as justification for its high-cost products.

For the record, I want to point out that on the basis of its investigation GAO reported to me it "could not conclude York AMF's emergency procurement contract was an illegal" contract award. AMF has received precisely such notification from GAO in writing. It must be pointed out, however, that GAO has not by any stretch of the imagination issued any commendations to either the Navy or York AMF in connection with this investigation.

It is a simple and obvious fact that by the time GAO had concluded its investigation, York AMF had completed production of 2,000 breechblock locks and the Navy had accepted delivery of most of them and probably had already subjected many of them to actual service in the combat area in Southeast Asia. To declare the contract illegal would have been a paper victory at best and would have served no useful purpose for the public good nor the national interest.

It is enough to say that the Navy needlessly wasted about $120,000 when it awarded the emergency procurement contract to York AMF last May.

UNBELIEVABLE PROCUREMENT BUNGLING BY THE NAVY

The file in my office which contains the lengthy and detailed record of the Navy Department's procurement of breechblock locks for the Mark-12 aircraft gun is nearly 2 inches thick. The incredible information it contains places this Navy Department procurement on a par with a Keystone Cops comedy.

Unfortunately, the gross abuse of sound procurement procedures involved here is not a laughing matter. I cannot dismiss this matter lightly because I cannot state with any degree of confidence that this case of bungling has not cost American lives in Southeast Asia or that it has not resulted in any loss of American aircraft.

I do know that for a period beginning in March of 1968 and continuing for approximately 6 months and possibly much longer, a critical nonsupport condition existed within the Navy's supply pipeline because the stockpile of breechblock locks for the Mark-12 aircraft gun was depleted. Neither GAO nor I has determined up to this point whether this supply depletion had a direct impact in the Southeast Asian combat zone in terms of aircraft rendered defenseless because supplies of spare parts for the Mark–12 were exhausted. I hope to get that information.

I do know that breechblock locks produced by the Navy at the naval ordnance plant at York, Pa., prior to its 1964 sale to York AMF failed to perform according to the Navy's own specifications of a service life of 2,000 gun firings. GAO's investigation report shows that the Navy-produced locks of pre-1964 vintage frequently failed after fewer than 300 rounds were fired.

These premature failures caused the destruction of Mark–12 aircraft guns both in the United States during test firings and in the combat area. In some instances, aircraft were damaged by the resultant explosions of the Mark-12 guns.

The decision to find a material capable of providing a longer service life for the breechblock lock led to the awarding of the high-profit design contract to York AMF. Changes in specifications for the breechblock lock have resulted from the premature failures.

Many circumstances which have come to light are extremely disconcerting. Among them are the following:

It took the Navy more than 3 years, from the first warning in June of 1965 that its stockpile of breechblock locks was failing prematurely, to pinpoint the cause of the failures, take steps to correct the specifications and achieve production of the first replacement parts in August of 1968.

Repeated warnings that the existing stockpile of spare breechblock locks was being exhausted rapidly were ignored.

A request from the Naval Air Systems Command in June of 1967 to proceed with a priority No. 2—second highest priority rating—procurement of spare parts for the Mark–12 was ignored until almost a year later.

The Navy Ships Parts Control Center at Mechanicsburg, Pa., initiated a routine supply replenishment—priority No. 20—procurement on December 29, 1967, 6 months after Navair requested emergency procurement, and exactly 7 days after SPCC was advised that only 166 spare breechblock locks remained in supply.

Still ignoring the 8-month-old request of Navair for an emergency procurement of breechblock locks, SPCC on February 13, 1968, issued a solicitation of bid proposal—noncompetitive—to York AMF for a routine supply replenishment procurement of 2,400 locks, setting a March 5 deadline for bid proposals.

By the March 5 bid deadline, which found two other firms submitting unrequested bid proposals in addition to that solicited from AMF, the supply of breechblock locks was exhausted and a "critical nonsupport condition existed."

Suddenly, on March 21, 1968, or 9 months after an emergency procurement had been requested and more than 2 weeks after SPCC learned that York AMF apparently had lost out on the routine procurement of the spare gun part, SPCC generated a priority No. 2

"emergency procurement" request for 2,000 additional locks.

Ignoring Newbould Tool Co.'s low bid of $37.75 on the routine procurement contract less than 3 weeks earlier, SPCC on or after March 22, 1968, entered into negotiation with York AMF for a bid proposal on the emergency procurement contract.

On May 13, 1968, 1 month after Newbould had been awarded the routine procurement contract to manufacture 2,400 breechblock locks at $37.75 each, SPCC awarded the noncompetitive emergency contract to York AMF to produce 2,000 locks at $97.13 each, still without inquiring whether Newbould would accept the additional contract work at its far more favorable cost figure.

Despite repeated claims by SPCC that its decision to negotiate the emergency contract price with York AMF was intended to save vital production time because of the part shortage, SPCC ultimately approved a contract delivery schedule for the emergency contract with a later delivery deadline than the routine contract awarded Newbould.

I could list point after point, Mr. Speaker. Instead, I invite my colleagues to read the incredible details in the GAO report itself. It will substantiate the fantastic pyramid of delay, inaction, misjudgment, indecision and lack of communication which characterize this entire case.

To assist anyone who wants to study this Navy "classic," I will include in the RECORD with the GAO report a chronology of the pertinent development dating from the introduction of the Mark-12 aircraft gun in 1951 up to and including the oral briefing in my office on March 19, 1969, by members of the GAO staff directly associated with the investigation.

As I stated, I am seeking additional details from GAO, GSA, and the Navy Department to fill the information gaps which still remain. As this becomes available, I shall enter it in the RECORD as well, in an effort to complete the documentation of the critical need for overhaul of policies and procedures affecting billions and billions of dollars worth of defense spending.

It is obvious that we can make significant strides to cut Government spending if we simply adopt sound, businesslike procurement procedures throughout the Federal Government.

Incidentally, it might also be possible to make substantial reductions in defense spending if we could simply learn how to keep track of the supplies we have contracted for.

On March 19, the date GAO representatives reviewed the GAO report orally in my office, they reported they had learned from Navy earlier in the day that a number of the breechblock locks produced by both Newbould and AMF were "lost."

According to GAO, a shipment of 300 locks from York AMF which failed to meet the specified 2,000 test-firings service life were to be returned to AMF for reworking. Of that number, GAO learned, 69 had been returned to AMF for correction and 231 were unaccounted for.

As of the same date, all Newbould locks had been accepted after two lots were reworked. However, the Navy was not able to locate one lot of 761 locks which had passed specification tests and were accepted by the Navy on December 3, 1968.

And, yes, I have urged the Comptroller General to make every possible effort to expedite the Defense-wide investigation of emergency procurement to such a degree that will not sacrifice accuracy and maximum public and national benefit. We cannot afford to lose time in correcting such incredible procurement practices

CHRONOLOGY OF EVENTS RELATING TO DEVELOPMENT OF MARK–12 AIRCRAFT GUN INCLUDING THOSE ACTIONS ASSOCIATED DIRECTLY WITH 1968 EMERGENCY PROCUREMENT OF MARK–12 BREECHBLOCK LOCKS FROM YORK DIVISION OF AMF

Approximately 1951: Mark–12 Aircraft gun designed by Navy.

Years 1951 to 1957: Mark–12 produced by Navy Gun Factory, Washington, D.C., and Naval Ordnance Plant (NOP), York, Pa.

Years 1957 to 1963: Mark–12 spare parts produced at NOP, York, Pa.

Years 1963 to 1964: NOP, York, Pa., deactivated and sold to AMF. (This facility now known as York Division, AMF.)

January 1964: Bureau of Naval Weapons received report from Naval Aviation Engineering Service Unit concerning failure of breechblock lock during air gunnery flight at Naval Air Station, Cecil Field, Fla. Failure occurred after firing of 600 rounds rather than life-expectancy of 2,000 firings or more based on Navy specifications.

Years 1964 to 1965: Navy recorded additional reports of breechblock lock malfunctions, including resultant destruction of Mark–12 guns and damage to aircraft.

June 1965: Naval Weapons Laboratory, Dahlgren, Va., (NWL) reported failure of locks was common and occurred in some cases after fewer than 300 rounds were fired.

July–August 1965: Fighter squadrons reported open-breech explosions had occurred which resulted in damage to both the gun and aircraft. Explosions were attributed to breechblock lock malfunctions and corrective action was requested.

September 1965: Bureau of Naval Weapons directed Naval Weapons Laboratory to investigate lock failures and recommend changes to assure satisfactory service life.

November 1965: Naval Weapons Laboratory decided to have a number of experimental locks manufactured of new materials and new finishes. NWL also decided to obtain the locks on noncompetitive basis from York AMF, justifying this sole-source procurement on stipulation of 1964 Naval Ordnance Plant sales agreement that AMF maintain gun production capabilities for a period of 10 years.

June 3, 1966: NWL awarded noncompetitive negotiated fixed-price ($33,000) contract to York AMF for manufacture of 45 experimental locks. August 12, 1966 was initially specified as delivery schedule but was subsequently changed to March, 1967, a delay of seven months.

July 1, 1966: Consolidated Stock Status Report obtained from Navy Ships Parts Control Center, Mechanicsburg, Pa., showed that Navy had about 3,090 breechblock locks on hand as of this date.

April 12, 1967: Navy Ships Parts Control Center initiated processing of purchase request for 188 breechblock locks for stock replenishment based on routine supply demand review.

May 4, 1967: Naval Weapons Laboratory advised SPCC that evaluation of experimental locks was completed and recommended that no purchase action be taken since revised specifications would be available in a short time.

June 1967: Naval Air Systems Command notified SPCC that spare parts to support gun system problems on aircraft in Southeast Asia (SEA) should be procured on Priority 2 (second highest priority) basis from York AMF.

August 1, 1967: Inventory records showed that number of locks on hand had diminished to 340 units in ready-for-issue condition. On basis of supply-demand review conducted then, processing of procurement of 2,220 units was initiated, and subsequently deferred "apparently in anticipation of . . . new specifications," according to GAO.

August 29, 1967: Naval Air Systems Command (NAVAIR) approved design drawing for new breechblock lock.

December 7, 1967: After nearly 18 months of research and development, and eight months after the experimental locks were obtained, Naval Weapons Laboratory notified SPCC that locks manufactured from 18 percent nickel maraging steel would satisfactorily meet service life requirements.

—In same communication, NWL also recommended SPCC immediately award contract for new locks to meet urgent fleet needs.

December 22, 1967: SPCC received letter from NAVAIR stating that stock had diminished to 166 units and recommending that contract for 2,400 of the new breechblock locks be awarded to AMF (American Machine & Foundry Company), York, Pa.

December 29, 1967: SPCC cancelled two procurement requests in process at that time (180 units and 2,220 units) and prepared purchase request for 2,400 locks of new type.

Purchase request was designated Priority 20 routine stock replenishment action, despite NAVAIR request six months earlier for Priority 2 procurement.

January 18, 1968: SPCC prepared purchase recommendation stating it was impractical to develop either a limited or unlimited purchase description for this new breechblock lock.

January 30, 1968: SPCC's Contract Review Board granted authority to negotiate procurement on basis "it is impractical to secure competition."

February 13, 1968: More than two months after Dec. 7 notice of new lock's approval, SPCC prepared solicitation for 2,400 breechblock locks and mailed copy to AMF. March 5, 1968 was specified as closing date for receipt of proposals. Solicitation was synopsized in Commerce Business Daily. Synopsis in Commerce Business Daily stated that drawings (approved by NAVAIR Aug. 29, 1967) and specifications could not be furnished by the government.

February 23, 1968: Newbould Tool Co., York, Pa., contacted SPCC, Mechanicsburg and requested drawings for the lock. Newbould was told drawings were not available and if they were, the procurement probably would be advertised.

February 26, 1968: Milo Components, Inc. contacted SPCC and requested drawing. Milo was told drawings were not available.

February 27, 1968: At insistence of Newbould and Milo, it was determined drawings were available at SPCC, Mechanicsburg, at least since January 19, 1968, almost a month prior to issuance of the solicitation of a bid from AMF. Drawings were supplied both Newbould and Milo this date.

March 5, 1968: Bids were received from Newbould at $37.75 per lock, Milo at $89.90 per lock, and York AMF at $99.79 per lock.

March 7–8, 1968: Conference held at SPCC received report that despite 2,400-unit procurement already underway, *stock of breechblock locks for the Mark-12 had been depleted thereby causing a non-support condition to exist.*

March 8, 1968: SPCC requested pre-award survey of Newbould and Milo including evaluation of technical, productive and financial capabilities, past performance record and ability to meet required delivery schedules, by Defense Contract Administra-

tion Services District (DCASD), Garden City, N.Y.

March 1968: SPCC received notice from NAVAIR (exact date uncertain) that Mark-12 gun spare parts support remained critical and that it was imperative additional action be taken to provide improved quantities of failing parts. SPCC officials informed GAO investigators that NAVAIR was concerned about November 25, 1968 delivery schedule for 2,400-unit procurement although at this point in time that contract had not been awarded and delivery schedule was not firmly established.

March 21, 1968: SPCC generated a Priority 2 purchase request for an additional 2,000 breechblock locks and established a "desired" delivery date of May 30, 1968. GAO confirmed during investigation that "not by any stretch of the imagination" could SPCC expect delivery of any quantity of breechblock locks by the desired delivery date.

March 22, 1968: SPCC purchase division received purchase request for 2,000 locks under Priority 2 procurement. Because AMF, by virtue of its earlier development contract for the new locks, was considered by SPCC to be the only proven manufacturer at this point. SPCC officials contended this fact could advance delivery by 120 days, and therefore did not contact Newbould regarding its possible capability to perform both contracts at its low bid price.

March 29, 1968: AMF submitted proposal to manufacture 2,000 locks at a unit price of $100.31, claiming the figure provided a profit of $10.03 per unit, or 11.1 percent.

March–April 1968: Upon completion of the pre-award survey at Newbould, DCASD of Reading, Pa., recommended complete award of 2,400-unit routine procurement contract to Newbould.

April 12, 1968: Routine contract awarded Newbould for 2,400 locks at $37.75 each, or a total of $90,600. Contract required delivery of two pre-production sample locks to NWL, Dahlgren, Va., for testing by July 11, 1968. The contract schedule allowed 30 days for government testing of the samples, with delivery of the 2,400 units 120 days after approval of the samples.

April 1968: During this month, DCASD, Reading, Pa., conducted review and evaluation of the $100.31 unit price quoted by AMF for the 2,000-unit emergency procurement of breechblock locks.

May 1, 1968: DCASD Reading audit report recommended acceptance of a unit price of $94,068 for AMF production of 2,000 breechblock locks.

May 1 and 2, 1968: DCASD Reading conducted negotiations with AMF on the unit price variances and ultimately reached a compromise unit price of $97.13 for the emergency contract work, including an estimated profit of $8.83 per unit, or 10 percent profit.

May 9, 1968: York AMF requested priority assistance (assignment of special "DX" rating to contract) to expedite procurement of raw materials for production.

May 13, 1968: Contract, specifying September 11, 1968, delivery date for 2,000 locks at total price of $194,260, was issued by SPCC to AMF. Delivery date represented a period of 120 days from contract award, as specified in the solicitation, or more than three months later than the "desired delivery date" of May 30 which had been established on March 21, 1968.

May 29, 1968: York AMF acknowledged receipt of the contract and took exception to the delivery schedule. AMF contended that according to the request for proposal and subsequent negotiation, deliveries were not required to be completed until December 10, 1968, and asked that the contract be so modified.

June 10, 1968: SPCC advised AMF that the contract delivery schedule was in accord with the request for proposal to which AMF had responded with its bid and that the requested modification was not acceptable.

June 21, 1968: Newbould Tool Co., Inc. delivered to Naval Weapons Laboratory, Dahlgren, Va., three sample locks for testing. Specifications required that they pass 2,000 test firings. The tests conducted submitted the samples to 3,000 firings and Newbould officials were advised orally the samples were approved and that written approval would follow.

Newbould, during manufacture of its samples for testing, discovered an error in the specified design and manufactured one of its three samples to correct that error. It was the sample based on Newbould's correction of the design error which was selected for subsequent manufacture.

On this date, Newbould also formally protested award of the 2,000 unit contract to AMF and advised SPCC that Newbould was prepared to enter a bid.

July 1 (Approximately), 1968: GAO found that NWL, Dahlgren, this week notified SPCC by phone that Newbould's sample lock had passed tests. SPCC indicated no knowledge of having received such message.

July 3, 1968: DCASD Reading advised SPCC that AMF could not produce its 2,000 units at necessary rate to complete contract by September 11, 1968. AMF contended their offer was based on the fact that 98 days was required prior to first delivery on August 10 and that thereafter AMF would deliver at the rate of 125 units per week, completing the contract December 10, 1968.

July 19, 1968: NWL confirmed telephone approval by speedletter to SPCC.

July 22, 1968: SPCC formally agreed to AMF's delivery schedule including December 10, 1968 final delivery. The delivery date for AMF which SPCC finally accepted represented a contract execution period of 211 days as compared with the 120 days specified in the contract. Further, the AMF contract completion date of December 10, 1968 actually exceeded the completion date for Newbould's routine procurement contract which was November 25, 1968.

July 26, 1968: SPCC issued Modification No. 1 to Newbould contract, advising that samples met specifications and that firm delivery date for 2,400 units was November 25, 1968. Time delay since initial approval—three weeks.

August 1–15, 1968: AMF requested waivers for dimensional variations on 1,190 breechblock locks including Lots 1 of 600 units, Lot 2 of 40 units and Lot 3 of 550 units.

August 16, 1968: SPCC recommended that requests for waiver be rejected due to critical application and current status of subject lock. Congressman Rooney formally requested Navy Department and GAO investigations under date of August 1, 1968.

August 19, 1968: Naval Weapon Service Office (NWSO) advised SPCC it agreed with rejection of waiver No. 1 but approved waiver No. 2.

August 23, 1968: NAVAIR approved waivers noting that urgency to secure Mark-12 gun spare parts dictates most expeditious production.

NWSO notified SPCC this date that due to critical supply problem, approval was given to waiver No. 3 as well.

August 28, 1968: SPCC notified AMF that all three waivers had been granted.

October 29–November 1, 1968: Newbould forwarded two sample locks from each of three production lots for test and evaluation by NWL, Dahlgren, Va. The three lots represented total production of 2,400 locks constituting Newbould contract.

November 26, 1968: York AMF made final shipment of locks under its emergency procurement contract for 2,000 units.

November 1968: NWL notified SPCC that test samples of lots 5 and 8 from AMF (300 units) did not meet specification of 2,000 round firing life requirement.

December 3, 1968: NWL notified Newbould that its Lots 1 and 3 (1,639 units) failed to meet necessary requirements. Newbould's Lot 2 (761 units) was accepted.

January 1, 1969: SPCC considered Newbould contract delinquent as of November 25, 1968, because 2,400 acceptable locks had not been delivered under contract. The problem of 1,639 unacceptable locks had not been resolved as of this date.

SPCC had taken no action as of this date regarding 300 locks produced by AMF which were unacceptable. NWL, Dahlgren, had not determined cause of test sample failure as of this date. SPCC did not, at this time, declare AMF contract delinquent, despite passage of December 10, 1968 delivery deadline for all 2,000 of AMF breechblock locks.

January 3, 1969: SPCC received "competitive" bids to supply 4,500 additional breechblock locks for the Mark-12 aircraft gun. In this instance, nine bids were reported ranging from a low of $15.29 per unit to $98.00 per unit. Newbould ranked as fifth lower bidder at $37.65 each while AMF ranked eighth at $59.94, or approximately $37 lower than its unit price under the negotiated emergency procurement of 2,000 units.

February 7, 1969: NWL, Dahlgren, Va., requested change of specifications for breechblock lock in advance of 4,500 unit procurement. As a result, bids received January 3, 1969 were rejected.

February 20, 1969: SPCC issued new invitations for bids on 4,500-unit procurement of breechblock lock based on new specifications involving dimensional changes to make the breechblock lock more reliable and durable in performance.

March 11, 1969: GAO investigation report concluded that AMF contract award was not "illegal" under existing Navy procurement procedures. However, GAO was critical of Navy procurement procedures in this instance and concurred with Congressman Rooney that broader investigation of emergency procurement was in order. GAO suggested that Rooney's request for Navy-wide investigation of emergency procurement be expanded to review such procurement on Defense-wide basis.

March 13, 1969: SPCC received bids from 12 companies on new specifications for breechblock lock, ranging upward from low of $22.80. Newbould was sixth lowest bidder at $33.70 per unit while AMF was farther from contention at $59.94.

March 19, 1969: GAO investigators conferred with Administrative Assistant to U.S. Rep. Fred B. Rooney, to review investigative report and respond to 29 comments and questions submitted by Congressman after report was received from GAO March 11, 1969.

GAO reported this date that 1,639 unacceptable locks produced by Newbould had been returned to manufacturer for adjustment and were accepted upon re-testing. However, GAO was advised this date by telephone, Navy had "lost" Lot 2 (761 units) of Newbould contract which were accepted as of December 3, 1968.

GAO reported this date that Navy had returned to AMF for adjustment 69 of its 300 units which were declared unacceptable. By telephone conversation with GAO this date, Navy also had "lost" the remaining 231 AMF locks which were unacceptable.

GAO reported this date that both Newbould and AMF were being charged for additional testing required by failure of certain lots to meet test firing specifications.

GAO, asked if this AMF contract investigation indicated the Navy Department had utilized good procurement procedures, responded with a firm "No."

GAO concluded that the SPCC contracting officer should have considered negotiations with Newbould or others for performance of the emergency contract at lower cost per unit.

GAO, asked if this emergency procurement investigation indicated possible substantial waste of public funds within Defense contracts because of neglect, unnecessary delay, poor judgment, defective business sense or other factors involving limited competence or incompetence responded with an emphatic

"Yes." Specifically because of the evidence of tax dollar waste in this contract, GAO will conduct investigation of emergency procurements totaling $5 billion annually on Defense-wide basis, with special emphasis on 70 percent of such spending which involves supposed "sole-source suppliers" such as York AMF.

[B–164978]

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, D.C., March 11, 1969.

DEAR MR. ROONEY: We refer to your letters of August 1 and September 6, 1968, requesting that the General Accounting Office investigate the circumstances spelled out in enclosures pertaining to the award of a contract on May 13, 1968, for 2,000 breechblock locks, and an apparent abuse of sound emergency procurement procedures by the Department of the Navy involving two contracts awarded at widely divergent per-unit prices to two different firms by the Navy Ships Parts Control Center.

In addition, you asked in your letter of August 1, 1968, that we seek answers to 14 questions contained in a letter which you sent to the Secretary of the Navy. In your letter of September 6, 1968, you advised us that you had received a copy of the Navy's report of its findings. You also asked that we consider issues which pertain to the Ships Parts Control Center (SPCC) comments.

Subsequently, on October 8, 1968, we met with Mr. Huber, your staff assistant, who agreed that the requests could be reviewed and reported as two separate assignments; the first, a review of the procurement of breechblock locks and the second, a review of the Navy's emergency procurement procedures.

We therefore directed our review to the procurement of breechblock locks taking into consideration related questions and comments which were made in your letters of August 1 and September 6, 1968. Our review also covered the Navy's use of emergency procedures in the instant procurement, but did not cover the Navy's general use of emergency procedures in other procurements. We plan to examine into this matter on a Defense-wide basis shortly after July 1, 1969.

On May 13, 1968, Navy awarded a sole-source negotiated contract to the American Machine and Foundry Company (AMF), York, Pennsylvania, for 2,000 breechblock locks at $97.13 each. The unit price for the locks to be fabricated by AMF was about three times the unit price of $37.75 for 2,400 of the same kind of locks to be fabricated under a competitively negotiated contract awarded on April 12, 1968, to the Newbould Tool Company (Newbould), York, Pennsylvania. A summary of the circumstances pertaining to the award of these contracts follows.

PREDECESSOR LOCKS

The breechblock lock is one of five components of the Mark 12 20mm aircraft gun breechblock assembly. The breechblock assembly is that part which loads a round into the barrel chamber, closes the breech, fires the round, and removes the empty cartridge case. Failure of any one of the five components may cause the breechblock assembly to function improperly, thereby resulting in firing failure or shell explosion outside of the barrel chamber.

This aircraft gun was designed by the Navy about 1951, and was produced until about 1957, primarily by the Navy Gun Factory, Washington, D.C., and the Naval Ordnance Plant (NOP), York, Pennsylvania. The NOP continued to produce spare parts for the gun until 1963, when the plant was deactivated and sold to AMF.

Although produced in significant quantities, this gun apparently saw limited service until the conflict in Southeast Asia (SEA) was expanded. The gun is currently being used in three different types of combat aircraft, and many of these aircraft are based in SEA.

In January 1964, the Bureau of Naval Weapons (BuWeps) received a technical report from the Naval Aviation Engineering Service Unit concerning the failure of a breechblock lock during an air gunnery flight at the Naval Air Station, Cecil Field, Florida. The report stated that a breechblock had prematurely unlocked causing it to be blown to the rear of the gun receiver with great force. The incident was attributed to a shattered breechblock lock that had failed after approximately 600 rounds of ammunition had been fired from the gun. Military specifications applicable to the gun provided that all parts should have a life expectancy of at least 2,000 rounds. The report further pointed out that although damage to the aircraft was slight, damage to the gun was sufficient to require replacement and the premature failure of the breechblock lock was considered indicative of a material deficiency.

During 1965, additional reports were received pertaining to malfunctions of breechblock locks. In June 1965, the Naval Weapons Laboratory, Dahlgren, Virginia (NWL), pointed out that failure of the locks was common and had occurred in some cases after less than 300 rounds had been fired. In July and August 1965, fighter squadrons reported that open-breech explosions had occurred which resulted in damage to both the gun and the aircraft. The reports indicated that the explosions were attributable to breechblock lock malfunctions and recommended that action be taken to prevent recurrence of such incidents. In September 1965, as a result of these reports, BuWeps directed NWL to investigate the causes of the breechblock lock failures and recommend changes that would assure a satisfactory service life.

DEVELOPMENT OF NEW LOCK

In order to obtain a satisfactory part, the NWL, in November 1965, decided to have a number of experimental locks manufactured with various types of new finishes and materials. The NWL further decided to obtain the experimental locks on a noncompetitive basis from AMF. Justification for this sole-source procurement was based on the fact that NOP, York, where the locks had been previously manufactured, was sold to AMF in 1964 with the stipulation that the company maintain gun production capabilities for a period of 10 years. Moreover, the special tooling to be furnished by the Government had been designed specifically for the NOP equipment acquired by AMF and many former NOP, York, personnel involved in the manufacture of the locks were employed by AMF. It was thus believed that the "know-how" to produce the locks was available at AMF.

NWL awarded a noncompetitive negotiated fixed-price contract to AMF on June 3, 1966, for the manufacture of 45 experimental locks. The delivery schedule was initially established as August 12, 1966, but was subsequently changed to March 1967, or a delay of approximately 7 months.

A Consolidated Stock Status Report (CSSR) obtained at SPCC showed that the Navy had about 3,090 breechblock locks on hand as of July 1, 1966. On April 12, 1967, prior to receiving notice of the status of the new lock, SPCC initiated action to process a purchase request for a quantity of 188 breechblock locks for stock replenishment. We were advised by an SPCC official that the quantity to be purchased was determined on the basis of a routine supply demand review conducted to determine future needs for items under SPCC cognizance. Shortly thereafter, on May 4, 1967, NWL advised SPCC that evaluation of the experimental locks had been completed and recommended that no purchase action be taken since revised specifications would be available in a short time. On August 1, 1967, inventory records indicated that the number of locks on hand had diminished to 340 units in ready-for-issue condition and on the basis of a supply demand review conducted at that time, a system stock replenishment action for an additional quantity of 2,220 units was initiated. This action also was deferred, apparently in anticipation of receiving the new specifications.

The drawing for the new breechblock lock was approved by the Naval Air Systems Command (NAVAIR) on August 29, 1967. However, it was not until December 7, 1967, after nearly 18 months of research and development and about 8 months after the experimental locks were obtained, that NWL notified SPCC that breechblock locks manufactured from 18 percent nickel maraging steel would satisfactorily meet service life requirements. The NWL also recommended that all future locks be fabricated in accordance with the revised drawing. We were informed that 18 percent nickel maraging steel generally provides a steel product of superior strength and durability.

PROCUREMENT OF 2,400 LOCKS FROM NEWBOULD

NWL, in its December 7, 1967, communication, recommended that SPCC immediately award a contract for the new locks in order to meet urgent fleet needs. On December 22, 1967, SPCC received a letter from NAVAIR, stating in part:

"The In-Service Breechblock Lock Buweps Dwg 851500 is to be replaced by the new procurement item. Current stock status shows 166 on hand and that a contract is in process of being awarded for 2,400. It is recommended that this contract be changed to procure 2,400 of the new Breechblock Locks, NASC–NAVAIR 2518518 and that this contract be awarded to AMF (American Machine and Foundry Company), York, Pennsylvania * * *."

On December 29, 1967, SPCC cancelled the two procurement requests in process at that time and prepared a new purchase request for a quantity of 2,400 locks to be manufactured in accordance with the revised drawing. The new purchase request was designated priority 20, stock replenishment action, even though NAVAIR had notified SPCC in June 1967 that spare parts to support gun system problems on aircraft in SEA should be procured on a priority 2 basis. The request further indicated that AMF, York, was the recommended source of supply.

During January 1968, SPCC accomplished the necessary internal processing of the purchase request and on January 30 its Contract Review Board granted authority to negotiate the procurement, because it was impracticable to obtain competition. The purchase recommendation prepared on January 18, 1968, stated that it was impracticable to develop either a limited or unlimited purchase description for this item.

SPCC made a solicitation for the 2,400 locks on February 13, 1968, more than 2 months after being notified of approval of the new lock, with March 5, 1968, established as the closing date for receipt of proposals. On the basis that AMF was the only source, a copy of the solicitation was mailed to AMF and the proposed procurement was synopsized in the Commerce Business Daily. The synopsis stated that drawings and specifications for the breechblock lock could not be furnished by the Government.

At their request, Milo Components, Inc., Newbould, and other companies were provided copies of the proposal. However, drawings were not furnished with copies of the proposal. On February 23 and 26, 1968, respectively, Newbould and Milo contacted the SPCC buyer and requested drawings for the lock. Both companies were informed that drawings were not available and that if they were, the porcurement would probably be advertised. At the insistence of Newbould and Milo, it was determined that drawings were available and had been available at SPCC since at least January 19, 1968. The lock

drawings were furnished to both Newbould and Milo on February 27, 1968.

AMF, Milo, and Newbould proposed unit prices for the 2,400 locks of $99.79, $89.90, and $37.75, respectively. On March 8, 1968, SPCC requested the cognizant Defense Contract Administration Services District (DCASD), Garden City, New York, to perform a preaward survey of these companies and evaluate their technical, productive, and financial capabilities in view of the contract requirements. This request included an evaluation of the companies' performance record and ability to meet required delivery schedules. Upon completion of the survey at Newbould, the DCASD, Reading, Pennsylvania, recommended a complete award to Newbould.

A contract was awarded to Newbould on April 12, 1968, for a quantity of 2,400 locks at a unit price of $37.75, or a total of $90,600. Delivery of two preproduction sample locks were to be submited to NWL by July 11, 1968, for first article approval. A period of 30 days was provided in the contract schedule for first article testing by the Government; delivery of the 2,400 locks was to be completed 120 days after first article approval.

On June 21, 1968, a Newbould official took the two required preproduction sample locks to the NWL and test firings were conducted from June 24 to July 1, 1968. NWL personnel informed us that the period required to complete testing of the locks was extended because of their procedure of testing several articles concurrently, thereby reducing the cost of testing. However, we were informed that if time was of the essence on any particular item, it could be tested alone.

NWL, by letter of August 16, 1968, notified SPCC that the sample locks were subsequently subjected to metallurgical examination and that SPCC had been notified by telephone, during the week of July 1, 1968, that the two sample locks had satisfactorily met test requirements. An SPCC official advised us that he had no knowledge of the telephone notice nor any information concerning the test results until receipt of written notification from the NWL on July 19, 1968. NWL officials informed us that the delay in preparation of a written notification was due to a large volume of reports under preparation at the time, a number of which were for items of a higher priority. However, they stated they considered the telephone message to be proper notification of the test results to SPCC.

On July 26, 1968, or about 3 weeks after testing was completed, SPCC advised Newbould that the first article test samples had been approved by NWL and that production units should be delivered in about 120 days, or by November 25, 1968.

PROCUREMENT OF 2,000 LOCKS FROM AMF

At a conference held at SPCC on March 7 and 8, 1968, it was reported that although a procurement for 2,400 breechblock locks was underway, stocks of the original lock had been depleted, thereby causing a nonsupport condition to exist. SPCC was also notified by NAVAIR, during March 1968, that Mark 12 gun spare parts support remained critical and that it was imperative that additional action be taken to provide improved quantities of failing parts. SPCC officials informed us that NAVAIR was concerned about the November 25, 1968, delivery schedule proposed for the procurement of the 2,400 locks, as these locks were needed as soon as possible.

SPCC on March 21, 1968, generated a priority 2 purchase request for an additional 2,000 of the new breechblock locks. SPCC officials informed us that they purchased 2,000 locks because it was an economical order quantity. A desired delivery date of May 30, 1968, was established, or about 6 months prior to the scheduled delivery of the 2,400 locks already under contract.

SPCC officials stated that when the purchase request for the 2,000 locks was received by the SPCC purchase division on March 22, 1968, AMF was the only proven manufacturer and accordingly the only manufacturer for whom first article test requirements could be waived. It was expected that waiver of first article testing would advance delivery by 120 days. SPCC officials stated, therefore, Newbould was not contacted for the additional procurement. Accordingly, the cognizant buyer recommended that SPCC negotiate solely with AMF.

Following authorization from the review board, AMF was requested to submit proposed pricing data for a quantity of 2,000 breechblock locks. In response to the request for proposal, AMF on March 29, 1968, submitted a proposal to manufacture 2,000 locks. After a review and evaluation of the pricing data included in AMF's proposal by DCASD, Reading, negotiations were conducted on May 1 and May 2, 1968, and agreement was reached on a unit price of $97.13 for the contract.

During the week of May 3, 1968, negotiation proceedings were completed and AMF, although prior to receipt of the formal award, recognized the effective date of the contract as May 1, 1968. To assure that raw material would be available to meet the required delivery dates, AMF, on May 9, 1968, requested priority assistance in expediting procurement of raw materials required by their forging vendor. DCASD, Reading, advised AMF that the receipt of materials for the forgings was only part of the vendor's problem and special priority assistance to effect earlier delivery was not recommended unless other vendor problems could be resolved.

Subsequently, the SPCC Contract Review Board approved the award to AMF for the 2,000 locks for a total price of $194,260. A contract providing for delivery by September 11, 1968, was issued to AMF on May 13, 1968. This delivery date represented a period of 120 days from the date of award, which was the required delivery stated in the request for proposal, or more than 3 months later than the desired delivery date of May 30, 1968, established by the purchase request issued in March.

In a letter dated May 29, 1968, AMF acknowledged receipt of the contract and at the same time took exception to the delivery schedule. The letter stated that according to the request for proposal submitted by AMF and discussions held during negotiations, deliveries were not required to be completed until December 10, 1968. Accordingly, AMF requested that the contract be modified. SPCC notified AMF on June 10, 1968, that the contract delivery schedule was in accordance with the RFP and that the requested change was not acceptable. Two weeks later SPCC advised AMF that failure to deliver in accordance with the contract would result in the initiation of default action.

On July 3, 1968, DCASD, Reading, forwarded a delay in delivery notice advising SPCC that AMF could not produce at the necessary rate to complete the contract by September 11, 1968. DCASD added that AMF officials stated that the delivery schedule contained in the contract was not the schedule negotiated. In order to clarify the misunderstanding regarding the contract delivery schedule AMF noted that their offer was based on the fact that 98 days would be required prior to first delivery on August 10, 1968. Thereafter, AMF would deliver at a rate of 125 units per week which would complete the contract by December 10, 1968.

AMF stated this schedule was predicated on a 10-week leadtime for the material and 4 weeks in-process time prior to first delivery. The leadtime of 10 weeks for delivery of material was apparently based on quotes from suppliers. These quotes were available at the time of negotiations. Accordingly, on July 22, 1968, SPCC formally agreed to AMF's delivery schedule.

The delivery schedule finally accepted by SPCC represented a time frame of 211 days for total delivery compared to the 120 days originally specified in the contract. Also, the December 10, 1968, completion date exceeded the completion date of November 25, 1968, established for the Newbould contract by 15 days. Although Newbould's preproduction locks had passed all testing requirements as early as the first week of July 1968, we found no evidence that SPCC contacted Newbould in an attempt to determine whether Newbould could phase delivery of the 2,400 locks over a time frame similar to the revised AMF schedule. Newbould had, on June 21, 1968, formally protested the award to AMF and advised SPCC that they were willing to bid on the 2,000 breechblock locks. SPCC officials indicated that something less than 2,000 locks were required to satisfy emergency requirements.

PROBLEMS EXPERIENCED BY BOTH NEWBOULD AND AMF

Waivers requested by AMF

During August 1968, AMF requested waivers for dimensional variations in 1,190 completed units. Waiver number one covered 600 units, waiver number two 40 units, and waiver number three 550 units. SPCC recommended to the Naval Weapon Service Office (NWSO) on August 16, 1968, that due to the critical application and current status of subject lock, AMF's request for waiver be rejected. On August 19, 1968, NWSO informed SPCC that they concurred with rejection of waiver number one but approved waiver number two. On August 23, 1968, NAVAIR approved the waivers stating that urgency of Mark 12 gun spare parts dictates the most expeditious production of parts. Further, NWSO notified SPCC on August 23, 1968, that due to the critical supply problem, approval was given to AMF's waiver request number three. SPCC notified AMF of acceptance of their waiver requests on August 28, 1968.

AMF lot samples fail to meet 2,000 round life

On November 26, 1968, AMF made the final shipment of breechblock locks under the subject contract. The NWL notified SPCC in November 1968 that test samples submitted for AMF's lots 5 and 8 (300) units did not meet the 2,000 round minimum life requirement for acceptance by the Navy. As of January 1, 1969, the NWL had not determined the exact cause for the test sample failures. Therefore, no action had been taken by SPCC at that time.

Newbould lot samples fail to meet 2,000 round life

On October 29 and November 1, 1968, Newbould forwarded two sample breechblock locks from each of three production lots to the NWL for test and evaluation. On December 3, 1968, the NWL notified SPCC that samples from production lots 1 and 3 failed to meet the necessary requirements. On the basis of the test results the NWL recommended acceptance of production lot 2 (761 units) and rejection of lots 1 and 3 (1,639 units). As a result of Newbould's inability to deliver the entire 2,400 acceptable locks by November 25, 1968, the contract was considered delinquent by SPCC; however, Newbould was not notified. As of January 1, 1969, SPCC had not resolved the problem of the 1,639 units.

PROCUREMENT OF 4,500 ADDITIONAL BREECHBLOCK LOCKS ON AN ADVERTISED BASIS

On July 22, 1968, NWSO notified SPCC that in addition to the 4,400 units currently under contract, approximately 4,500 units were required to provide for 100 percent retrofit. Accordingly, during the latter part of 1968, SPCC advertised for 4,500 breechblock locks. Nine bids were recorded on the opening date of January 3, 1969. These bids ranged from a high of $98.00 per unit to a low of $15.29 per unit. Newbould was fifth low bidder with a bid of $37.65 and AMF was eighth low bidder with a bid of $59.94.

We were informed that the Navy rejected all bids and has changed specifications for the lock.

While we believe it to be questionable that Navy gave adequate consideration to soliciting Newbould and other manufacturers prior to the award to AMF, it should be noted that the need for the locks was critical and the procurement was assigned an 02 priority designator. At the time of the award to AMF (May 13, 1968) the scheduled delivery of preproduction sample locks by NWL was still approximately 2 months away (July 11, 1968), and Navy could not be certain that such samples would satisfactorily meet the test requirements so that production runs could commence immediately thereafter, whereas AMF had produced satisfactory locks under its development contract and preproduction test requirements could therefore be waived for that firm.

Paragraph 3-202.3 of the Armed Services Procurement Regulation states that a determination and findings by the contracting officer, justifying use of the public exigency exception to formal advertising under the authority of 10 U.S.C. 2304(a)(2), need only state the existence of a priority designator of 1 through 6 in order to justify use of that exception. Further, findings in support of a determination to negotiate under the public exigency exception are made final by 10 U.S.C. 2310(b), and are therefore not subject to question by our Office. While the exception does not, in and of itself, authorize sole-source procurement, a considerable amount of discretion with respect to the use of that exception must be reserved to the contracting officer, and this Office will not overturn the contracting officer's decision to negotiate a sole-source award pursuant to the public exigency exception unless it is clear that he has abused the discretion vested in him in an arbitrary or capricious manner. See 44 Comp. Gen. 590.

It is our view that the circumstances surrounding the award to AMF do not disclose such a clear abuse of discretion by the contracting officer as to affect the legality of the contract awarded to that firm, and that there is no basis for any imputation of bad faith on his part.

The 14 questions presented in your letters, the SPCC answers, and our comments thereto are contained in appendix I to this letter.

Sincerely yours,

R. F. KELLER.
For the Comptroller General of the United States.

APPENDIX 1

YOUR ORIGINAL 14 QUESTIONS, SPCC COMMENTS AND GAO COMMENTS

QUESTION NO. 1

Why has the Navy not purchased any breechblock locks for the MK-12, 20mm Aircraft Guns for a period of more than five years preceding the contract awards of April and May of 1968? Did the Navy have an inventory of these pieces sufficient to carry it through this period.

SPCC COMMENT

Until December 1967 the Navy had adequate stocks of the original Breechblock lock (FSN 1005-713-9407, BUWEPS Drawing 851500) either on hand or under procurement to satisfy its known requirements.

In December 1967, based upon an evaluation of tests performed on a number of Locks manufactured from different materials with different finishes by the American Machine and Foundry Company (AMF), York, Pa., under contract with the Naval Weapons Laboratory (NWL), Dahlgren, Va., new specifications covering the Breechblock Locks were approved and released. The objective of this effort was to develop a Lock which would possess greater reliability and have a longer service life. A history of the design and engineering work performed to achieve this objective is contained in Attachment A.

Upon approval of the new specifications (NASC-NAVAIR Drawing 2518518), the Naval Air Systems Command on 22 December 1967 (Attachment B) recommended that a stock procurement for 2,400 Breechblock Locks then in process at SPCC be revised to obtain Locks manufactured to the new design and that AMF York be awarded the production contract.

GAO COMMENT

On April 12, 1967, SPCC initiated a purchase request for 188 locks based on a routine supply demand. However, in anticipation of receiving revised specifications, the procurement was not made. Further, on August 1, 1967, when lock inventories had diminished to 340 units in a ready to issue condition, a stock replenishment action for 2,220 locks was initiated. However, this action was also deferred, apparently in anticipation of receiving the new specifications. A contract for 2,400 locks to be built in accordance with the new specification was awarded on April 12, 1968, or one year after it was determined that additional lock supplies were required. Details of the stock status of the locks are presented on pages 3 and 4 of our letter.

ADDENDUM

In response to SPCC's comments, you questioned in your letter of September 6, 1968, the Navy's procedure of specifying a desired contractor without regard to possible cost factors. We agreed that as a general rule it is not sound policy to specify a specific contractor without giving adequate consideration to cost differentials involved.

QUESTION NO. 2

What inventory of the breechblock locks for the MK-12 does the Navy have at the present time?

SPCC COMMENT

At the present time the Navy has none of the newly designed Locks in its inventory; it still has 95 of the original Locks on hand. Contracts with the Newbould Tool Company, York, Pa., for 2,400 of the new Locks and with AMF York covering 2,000 of the new Locks are currently outstanding.

GAO COMMENT

AMF started delivery of the new locks on August 27, 1968.

QUESTION NO. 3

When was the original requisition for 2,400 breechblock locks issued by the Navy Air Systems Command? (Please supply a copy of the requisition order.)

SPCC COMMENT

Upon receipt of the NAVAIRSYSCOM letter of 22 December 1967 (Attachment B) a procurement request for 2,400 of the newly approved Breechblock Locks (NASC-NAVAIR Drawing 2158518) was prepared by the Stock Control Division of SPCC on 29 December 1967. Attachment C is a copy of this procurement request.

GAO COMMENT

Initial procurement of the new lock is covered on pages 4 through 6 of our letter.

QUESTION NO. 4

When was the requisition for emergency procurement of 2,000 breechblock locks issued and by whom? (Please supply a copy of that requisition order.) What prompted this emergency need to develop 30 days after award of a routine contract for the same item?

SPCC COMMENT

During the early months of 1968 there developed within the Navy concern over the status of repair parts for the MK12 20mm Gun, generally, and of the Breechblock Locks especially. In the case of the latter, an increasing number of the original-design Locks were failing in combat aircraft (F8, A4 and A7) operating in Southeast Asia. According to the Naval Weapons Service Office, Philadelphia, some Locks were failing after firing only 200 rounds instead of their design expectancy of 2,000 rounds. Even worse, however, was the fact that when a Lock failed, leaving an open 20mm Gun chamber, continued operation of the gun could cause extensive damage to or even loss of the aircraft. Thus the Locks became a safety-of-flight item, and early replacement with the newly designed Lock became most important.

On 20 March 1968, the NAVAIRSYSCOMHQ called SPCC to express that Headquarters' growing concern over the condition of repair parts support for the MK12 20mm Gun. Much of the information and direction provided in that call was contained also in NAVAIR message 272218Z March 68 (Attachment E). Among other things, SPCC was told that MK12 Gun spare parts support and reliability were critical, that additional action to provide improved quantities of the parts was imperative, and that the NAVAIR Program Manager intended to obtain a "DX" rating for the parts in critical supply.

On 21 March 1968, the day following the afore-mentioned telephone call from NAVAIRSYSCOMHQ, SPCC prepared and commenced processing a Priority 02 (SEA-SIA) purchase request for a quantity of 2,000 of the new-design Breechblock Locks. Attachment D is a copy of this purchase request. It should be noted that the contract for the stock replenishment quantity of 2,400 Locks had not yet been awarded as alleged.

As outlined by the Naval Weapons Services Office, Philadelphia, in Attachment F, in addition to the 4,400 Breechblock Locks presently under contract, approximately 4,500 more will be required to completely replace all of the original-design Locks in service use, a step which has been recommended in view of the current safety-of-flight classification of this item. It is expected that circumstances will permit future procurements of this item to be made on a competitive basis.

GAO COMMENT

We believe the procurement of the 2,400 locks could have been classified as a priority 2 action. NAVAIR had notified SPCC in June 1967 that spare parts to support gun system problems on F-8 aircraft in SEA should be procured on a priority 2 basis. This matter is discussed on pages 4 and 5 of our letter.

SPCC officials informed us that NAVAIR, in March 1968, became concerned about the November 25, 1968, delivery schedule proposed for the procurement of the 2,400 locks, as the locks were needed as soon as possible. It was further stated that stocks of the original lock had been depleted, thereby causing a nonsupport condition. Based on these conditions, a priority 2 action was generated for 2,000 additional locks. This matter is discussed on page 7 of our letter.

ADDENDUM

In response to SPCC comments, you questioned in your letter of September 6, 1968, whether the old stock of breechblock locks were defective in terms of the specifications. Our review disclosed this to undoubtedly be true. However, these locks had been primarily produced by Navy plants. This matter is discussed on page 2 of our letter.

You also questioned the SPCC statement that at the time the emergency requirement developed a contract had not been awarded to Newbould. You pointed out that SPCC was well aware of the bid of $37.75 made by Newbould on the 2,400 locks and concluded that because of this exceptionally favorable price Newbould should have been contacted to determine whether they were prepared to take on the additional 2,000 items at that same price and on delivery terms in keeping with the Navy's emergency.

The award to AMF for 2,000 locks was not made until May 13, 1968, about 30 days after the award to Newbould on April 12, 1968, for 2,400 locks. In view of the possibility of obtaining a substantially lower price, we question whether the Navy gave adequate consideration to soliciting Newbould or other interested suppliers prior to the award of the emergency procurement to AMF. Our position

on this matter is stated on pages 10 and 11 of our letter.

QUESTION NO. 5

If emergency procurement of the additional 2,000 pieces was justifiable, why did the Navy not cooperate with the original contractor, who was willing to produce these items for only $37.75, to expedite production of the order? This could have been done by (1) amending the original contract to cover the 2,000 additional pieces, (2) by assuring that pre-prod approval was given promptly in writing after the June 21 test-firing at Dahlgren, Virginia, and (3) by assigning "DX" status to the original contract in order to secure prompt delivery of the material for production. (Newbould could be in production now, meeting the Navy's emergency need if one exists, at the $37.75 price.)

SPCC COMMENT

At the time the high priority requirement for the additional 2,000 Breechblock Locks was generated (3/21/68), there *was no* "original contractor" other than AMF York. The SPCC stock contract for 2,400 units was not awarded to the Newbould Tool Company until 12 April 1968, some three weeks later.

At the time the important basic procurement decisions had to be made for the 2,000 Lock purchase, decisions such as the procurement method to be utilized and the sources to be solicited, every fact then available to the Contracting Officer indicated that certain delivery and earliest delivery could only be obtained from the one supplier who had previously produced the item, namely, AMF York. Only for this supplier could the First Article Test requirements of the specifications be waived, thus permitting an advancement of 120 days in the commencement date for deliveries. Not until 1 April 1968 was the DCAS report of the pre-award survey of the Newbould Tool Company to be forwarded to the SPCC Contracting Officer recommending award of the 2,400 units to that company. And not for another three months was Newbould able to demonstrate its ability to actually produce three sample Locks. Consequently, on 23 March 1968, the day after the purchase request was received in the SPCC Purchase Division, the SPCC Contract Review Board, pursuant to 10 U.S.C. 2304(a)(2), authorized negotiation of a contract with AMF York for the production of the 2,000 urgently required units.

Later amendment of Newbould's contract (after it *was* awarded on 12 April 1968) to include the additional 2,000 units, as suggested in Question No. 5, would not have assured any earlier delivery than was possible from AMF York. The 2,400 units already covered by Newbould's contract were not then scheduled to be delivered until early December 1968. There is no reason now, nor was there in March, to believe that by increasing the quantity covered by Newbould's contract from 2,400 to 4,400 earlier deliveries would have been assured.

Contract N00104–68–C–4695 required that two sample Breechblock Locks be submitted to the Naval Weapons Laboratory, Dahlgren, Va., by 11 July 1968 for First Article Testing. The contract also provided that the Contracting Officer would by written notice advise the Contractor of the results of the tests within 30 calendar days after receipt of the samples by the Government. NWL Dahlgren has advised that three sample Breechblock Locks were received from the Newbould Tool Company on 21 June 1968, that firing tests were completed on 28 June—not 21 June—and that these tests were then followed by further evaluations and metallurgical tests. By speedletter dated 19 July 1968 NWL advised SPCC that Newbould's samples had passed the required tests and recommended that the Contractor be permitted to commence production; a recommendation was also made that the method of marking the Locks with an identification number be changed. On 26 July 1968 Mod. No. 1 to the contract was issued to advise that the First Article samples submitted had passed the tests, to establish a firm delivery date for the 2,400 units of 25 November 1968, and to revise the method of marking the Locks with identification numbers.

With regard to the assignment of a "DX" rating to the two contracts for Breechblock Locks, such a rating was requested by SPCC from the NAVAIRSYSCOMHQ on 3 April 1968 (Attachment G) but not authorized. Whether or not the assignment of a "DX" rating would in fact have shortened production leadtimes for these procurements would now be largely speculation. Some information available to the Contracting Officer indicates that a limiting factor in any attempt to reduce production leadtimes would be the time to obtain the required forging dies, and that this time (six weeks) would not be affected by a "DX" rating.

GAO COMMENT

Although, because of other manufacturing problems, it is doubtful that a "DX" rating would have improved delivery schedules, we believe that the contracting officer should have cooperated with Newbould in expediting their first article testing and in arranging for a phased delivery schedule.

These matters are discussed in greater detail on pages 4 through 9 of our letter.

ADDENDUM

In response to SPCC comments, you raised questions about delivery schedules and "DX" ratings, responses for which are covered in addendum under Question No. 4 and in our comments to Question No. 5 above.

QUESTION NO. 6

How was it possible for the Navy Ships Parts Control Center at Mechanicsburg to "audit" both the Newbould and York AMF prices for the same item and declare both prices "appropriate" when the latter was more than 250 percent higher than the former?

SPCC COMMENT

The SPCC did *not* "audit" both the Newbould and the AMF York prices for the Breechblock Lock.

The award of Contract N00104–68–C–4695 to the Newbould Tool Company on 12 April 1968 followed receipt and evaluation of three competitive proposals, under which prices were offered for 2,400 units as follows:

Offeror	U/P	Total
American Machine & Foundry Co	$99.79	$239,496
Milo Components, Inc	89.90	213,600
Newbold Tool Co	37.75	90,600

In view of the significant difference between the estimated unit price of $100.00 furnished on the basic purchase request, the next low offer of $89.90 from Milo, and Newbould's price of $37.75, the Newbould Tool Company was requested by the buyer to confirm its offered price. This was done by Newbould on 18 March 1968 (Attachment H).

The Contracting Officer's determination of price reasonableness in the case of the AMF York contract for 2,000 units was based on an audit conducted by the Defense Contract Administration Services District, Reading, Pa. AMF York initially proposed a unit price of $100.31; the DCASD Reading audit report dated 1 May 1968 (Attachment I) recommended acceptance of a unit price of $94.068; and, a unit price of $97.13 was ultimately negotiated and agreed to by SPCC.

GAO COMMENT

Although settlement of the contract was not complete, it appeared at the time of our audit that AMF would make approximately 15 percent profit as opposed to the 10 percent established during negotiations. In November 1968 Newbould still expected to make a profit of about 10 percent.

QUESTION NO. 7

Why, when NSPCC began negotiations with York AMF for the original 2,400 piece contract, were Newbould and at least one other prospective bidder refused copies of the design drawing which was necessary in order to submit bids?

SPCC COMMENT

The Newbould Tool Co. and other prospective suppliers were *not* "refused" copies of drawings necessary to prepare offers to supply the 2,400 Breechblock Locks being procured by SPCC, initially to satisfy system stock requirements.

At the outset, Request for Proposals N00104–68–R–0722 dated 13 February 1968 was mailed only to AMF, in accordance with the instructions provided in Attachments B, C, and J. Attachment J indicates that, from a technical standpoint, it was then considered impracticable to develop either a limited or an unlimited purchase description of the desired Breechblock Locks but that AMF York possessed the required drawings, specifications, etc. to produce the Locks. The solicitation applicable to this procurement was publicized in the Department of Commerce *Commerce Business Daily*, with a notation pointing out that a complete tech data package was not available. A copy of the solicitation was also posted in the SPCC Bid Room.

Prior to the closing date for offers under this solicitation, namely, 5 March 1968, numerous copies of the solicitation were requested by, and were furnished to, interested suppliers. Two such suppliers were the Newbould Tool Company, and Milo Components, Inc. While the contract file is not clear as to exactly when copies of NASC–NAVAIR Drawing 2518518 were first made available to the purchasing office for distribution to interested suppliers, it was apparently some time after 23 February 1967. The record does indicate that copies of this drawing were in fact furnished by the buyer to Mr. Newbould of the Newbould Tool Company during a visit to SPCC on 27 February 1968 and to Milo Components, Inc., by mail, also on 27 February 1968.

GAO COMMENT

The drawing for the new breechblock locks was approved by the Navy on August 29, 1967, and was available at SPCC by at least January 19, 1968. However, when the request for proposals was issued on February 13, 1968, the lock drawing was unavailable. Upon insistence by representatives of the Newbould and Milo companies the buyer located the drawings and furnished copies to both Newbould and Milo. This matter is discussed on page 5 of our letter.

QUESTION NO. 8

When the emergency procurement requisition was issued, why did Capt. Larson and his staff not seek to negotiate for the production of the 2,000 additional units by the lowest bidder on the original contract?

SPCC COMMENT

As has been previously stated in response to Question No. 5, when the purchase request for the urgently required 2,000 Locks was generated in SPCC on 21 March 1968 the only previous producer/contractor was AMF York. The Newbould contract was not awarded until 12 April 1968, with the two First Article Test samples due for delivery for testing by 11 July 1968.

Based upon all the facts that were known to the contracting personnel at the time purchase action was initiated to satisfy this very critical and very urgent requirement, a judgment was made that the interests of the Government would best be served by negotiating a contract with the only supplier who had previously produced a satisfactory Breechblock Lock and for whom, therefore, First Article testing requirements could be waived and 120 days saved in obtaining first deliveries. This supplier was AMF York.

GAO COMMENT

We believe the contracting officer should have considered negotiation with the previous low bidder or others who may have been interested in the procurement. While Newbould had not met first article testing requirements by the date of the award to AMF, they had been judged under the preaward survey to be capable of producing the locks and had been awarded a contract.

QUESTION NO. 9

What is the current status of the multimillion dollar defense contracts now held by American Machine and Foundry for the manufacture of bomb casings? How many such contracts are currently being performed or have been awarded to AMF and is AMF in default on any of these contracts and to what degree?

SPCC COMMENT

AMF York currently is performing under SPCC Contract N00104–68–C–0715 covering the manufacture of MK–82 Bomb Bodies. This contract is not delinquent or in default; deliveries are ahead of schedule. AMF previously produced MK–82 Bomb Bodies under Contract N104–8358A. That contract was completed on 30 October 1967, which was 30 days ahead of schedule.

GAO COMMENT

Our review disclosed that AMF was not in default on the bomb casing contracts.

QUESTION NO. 10

If AMF is in default on contracts to supply bomb casings, and I am advised that it is, how could York AMF pass the production capability and financial stability tests to secure this additional contract?

SPCC COMMENT

As noted under Question No. 9, AMF is not delinquent or in default under any SPCC contract for Bomb Bodies.

GAO COMMENT

See Navy reply.

QUESTION NO. 11

If AMF is in default on contracts to supply bomb casings, what penalties are being applied by the Navy Department or any other federal agency or department?

SPCC COMMENT

As noted under Question No. 9, AMF is not delinquent or in default under any SPCC Bomb Body contracts.

GAO COMMENT

See Navy reply.

QUESTION NO. 12

Does York AMF have the production capability to meet the delivery terms of this breechblock lock contract without defaulting on it or on any of the other existing AMF contracts?

SPCC COMMENT

At the time of contract award, the SPCC Contracting Officer made the required (ASPR 1–904) affirmative determination that AMF was a responsible prospective contractor and could comply with the delivery schedule offered in its proposal. Such determination was based in part on an assessment of AMF's production capabilities and its existing business commitments.

GAO COMMENT

AMF met the required delivery schedule. However, the Navy granted AMF certain waivers and as of January 1, 1969, 300 units had not been accepted by the Navy. These matters are discussed on pages 9 and 10 of our letter.

QUESTION NO. 13

Capt. Larson has advised Newbould that he "deliberately" excluded them from his consideration for the emergency procurement because York AMF already had preproduction approval for its item on the basis of the earlier design contract. He contended that he was saving 120 days by negotiating with York AMF. But the fact is, no time whatever has been saved and a great deal of public money is to be lost.

SPCC COMMENT

The basis for the decision made in late March 1968 to negotiate solely with AMF York for the supply of 2,000 Breechblock Locks, which negotiations led to the award of Contract N00104–68–C–4759 on 13 May 1968, has already been covered. As of 22 August 1968 AMF had produced and offered for acceptance 391 of the 2,000 units covered by this contract.

As of 22 August 1968, the Newbould Tool Company, under Contract N00104–68–C–4695 dated 12 April 1968, had offered no units for Government acceptance. Delivery of the 2,400 units covered by this contract is not, in fact, due until 25 November 1968.

GAO COMMENT

The 120 days mentioned in SPCC's reply is that time provided Newbould for obtaining first article testing. However, the Navy made no attempt to expedite Newbould's first article testing. Further, because of the time required to negotiate with AMF and the approximately 10-week lead time AMF required before starting production, AMF's initial delivery was not required until August 10, 1968, Newbould was notified of successful first article testing on July 26, 1968. These matters are discussed in further detail on pages 6 through 9 of our letter.

Why has formal written notice of approval for Newbould's preprod samples been delayed when three sample pieces performed considerably better than contract requirements on June 21st and were orally approved at that time?

SPCC COMMENT

As has been previously stated in response to Question No. 5, by speedletter dated 19 July 1968 NWL Dahlgren notified SPCC that Newbould's First Article Test samples had satisfactorily passed the required tests and recommended authorization to commence production. The NWL speedletter also recommended a change in the marking specifications for the Locks. Following receipt of the speedletter in SPCC on or about 25 July, the technical question relative to the marking requirements was resolved and formal written notice in the form of Modification No. 1 to the contract was issued on 26 July 1968.

GAO COMMENT

NWL, Dahlgren, notified SPCC by telephone during the week of July 1, 1968, that Newbould's sample locks met test requirements. An SPCC official advised us that he had no knowledge of this telephone message nor any information concerning the test results until receipt of the July 19, 1968, letter referred to above. NWL officials advised us that preparation of the letter was delayed because of higher priority work. This matter is discussed on page 6 of our letter.

FAMILY EMERGENCY SMALL LOAN PROGRAM

The SPEAKER pro tempore. Under previous order of the House the gentleman from New York (Mr. FARBSTEIN) is recognized for 30 minutes.

Mr. FARBSTEIN. Mr. Speaker, I have today introduced the Emergency Consumer Small Loan Act of 1969. This act would make the emergency small loan program a separate program under the community action program and provide separate appropriations under the Economic Opportunity Act, thus returning it to its pre-1968 status.

I am privileged to have initiated and been instrumental in the adoption of the family emergency small loan program which first appeared as section 206(b) of the Economic Opportunity Amendments of 1966. Under this program, individuals may borrow up to $300 at 2-percent interest without collateral and with a minimum investigation.

In 15 areas throughout the country where the program is now in effect, it has proven a boon to those low-income individuals who have resorted thereto for assistance. It is not a giveaway program. It is a program which permits the individual to meet an emergency without loss of dignity. Repayments have ranged up to 75 or 80 percent although the median figure is closer to 45 percent. While this rate of repayment may not, at first glance, appear to be particularly good, it must be remembered the recipients are the abject poor who do not meet normal credit requirements. If we would compare the repayment rates of the categories of clients served by the various Small Business Administration loan programs, the repayment figures of the family emergency loan program are quite good. The comparable loss rate figures for the Small Business Administration business loans—section 7a—which serves the regular business community is 3.3 percent, while the loss rate for the Small Business Administration economic opportunity loan program which serves minority group members with limited collateral, based on character, represents a greater risk at 11.8 percent.

Administrative expenses are quite low since most of the program is administered as part of existing poverty agencies.

This is probably the only poverty program which actually returns money to the U.S. Treasury. The Rosebud Sioux Tribe in South Dakota, for example, returned $159.47 last year in interest payment on $15,000 in loan capital. Small as this amount may be, the 2-percent interest not only returns money to the Treasury, but the repaid principal is kept by the local agency and is used to make new loans—thus the principal becomes a revolving fund permitting the same appropriations to serve for many times the quantity in loaned dollars.

The types of areas served by the emergency loan program range from the urban ghettos of New York, Detroit, St. Louis, and Boston to a South Dakota Indian reservation; from seasonal farm workers in Tennessee, Alabama, and California, to Mexican-Americans in San Antonio, Tex.

Loan purposes vary, and include money for rent and utilities, house repair and reconstruction, medical expenses, job training and education, temporary unemployment, relief from high-interest-rate lenders, food stamps and emergency sustenance, tools or transportation for maintenance of employment, nonreceipt of pension, welfare or social security checks—when a primary source of income—and debt consolidation.

The best testimony to the needs served by this program is a description of the areas where it is at work. A woman in Texas, for example, obtained a loan with which to buy a special pair of shoes so that she could go to work as a nurse.

Loans in the amount of $240,000 were provided to families suffering income and property losses due to the Roxbury, Mass., riots. A lady in Jasper, Ala., obtained a loan to purchase windows, doors, and other materials for a home to replace one burnt down. And, a blind lady who was supporting five children on $176 a month, and who was living without water because of rusted pipes, was able to have work done on the pipes to restore her source of water with an emergency loan.

Incidental to the operation of the program has also been the effects of personal contact with those seeking loans in terms of counseling potential applicants regarding eligibility for other programs of which they might be unaware, finding them jobs, and providing financial counseling. The record of repayment that is established by the recipient also allows him to obtain credit in the future from regular commercial sources without having to go back to the finance company.

This is the kind of program that makes a lot of practical sense to me, for it fulfills a real basic need for small consumer loans for emergency needs. The small investment made in this program has paid many times its worth in helping the poor stand on their own two feet with personal dignity.

Unfortunately, it has run into difficulty, as a consequence of the financial squeeze on the Office of Economic Opportunity. Appropriations were provided at OEO's request for only 1 year, fiscal year 1968, after which time the program was made a discretionary function of the community action program—section 221(a)(7) by Public Law 90–222—and was provided with no separate funds. The consequence was that, except in one or two notable cases, no additional loan programs were established beyond the initial 15 "demonstration programs." After the initial funding ran out, these programs continued to operate on loan repayments and limited administrative funds. The expiration of OEO's authorization in June means that the future of this effort is at stake.

I have introduced this legislation in the hope that the program will not only be maintained and funded, but that it will be expanded to allow it to meet more of the demand that exists for small emergency consumer loans. I hope that the honorable chairman of the House Committee on Education and Labor will have an opportunity, during the committee's extensive hearings on the Office of Economic Opportunity, to examine the emergency small loan program in some detail, for I am sure that he will conclude, as I have, that it has been one of the most worthwhile OEO programs.

Text of my bill follows:

H.R. 9643

A bill to amend the Economic Opportunity Act of 1964 to establish an emergency family loan program as a national emphasis program

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 222(a) of the Economic Opportunity Act of 1964 is amended by adding to the end thereof the following:

"(8) An 'emergency family loan' program for making small loans to persons in low-income families to meet immediate and urgent family needs. The total outstanding balance of such loans made to an individual may not at any time exceed $300. Loans under this program shall bear interest at the rate of 2 per centum per annum and shall be made on such other terms and conditions as the Director may prescribe. Of the sums appropriated or allocated for programs authorized under this title, the Director shall reserve and make available not less than $15,000,000 for each fiscal year for carrying out programs under this title."

ANTI-BALLISTIC-MISSILE SYSTEM

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Illinois (Mr. PUCINSKI) is recognized for 30 minutes.

(Mr. PUCINSKI asked and was given permission to revise and extend his remarks and include charts and tables.)

Mr. PUCINSKI. Mr. Speaker, the only point I want to make with reference to the colloquy that was just concluded is that I do not ever impugn anyone's integrity or good judgment. Each Member of this House and each Member of the other body is his own best judge of his own good judgment and far be it from me to try ever to question the validity or the integrity of anyone's positions or statements.

But, unfortunately, there are in our midst many wonderful people who fail to realize that we do not have the options in this great world struggle. The United States is inherently and historically and ethnically and culturally a peace-loving nation.

We do not seek foreign territories. We do not seek foreign wars. We do not seek anyone's territory or anyone's liberty. We do not impose our own beliefs on other people. We help other nations because this is the generous spirit of the American people.

It has been the Soviet Union which has in the last 20 years kept this world in turmoil and every effort that has been made to try to solve the problem whether it has been in the Far East or whether it has been in Europe or whether it has been in the Middle East, we see the Soviet Union exercising her options of intrigue, subversion, and aggression.

We need look no farther than the Middle East. The Middle East problem could have been resolved years ago if the Arabs and Israeli were permitted to alone sit down and work the problem out. But it has been the Soviet Union that has rearmed every one of the Arab States and today is turning up the seeds of war in the Middle East and trying to keep that country in turmoil. It has been the Soviet Union that moved through the Dardanelles into the Mediterranean and is now challenging the peace of the world in that part of the world.

It has been the Soviet Union that has been supplying the Vietcong and the North Vietnamese with sinews to carry on aggression against South Vietnam and against American soldiers.

So I say that those who are pleading this cause today tragically and regretfully fail to recognize that we do not have the options; the Soviet Union is the one that has been pushing the button for world intrigue, and until the day comes when the options for freedom are on our side, we obviously are going to have to do everything humanly possible to defend ourselves.

Mr. PELLY. Mr. Speaker, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Washington.

Mr. PELLY. I just wish to inquire of the gentleman from Illinois as to whether or not he is against disarmament talks with the Soviet Union.

Mr. PUCINSKI. I am for all sorts of talks. But I learned one thing: When you deal with the Soviet Union, you had better keep your powder dry.

Mr. PELLY. I agree, but I want to know next whether you are opposed to talking with the Soviet Union and other nations about peace in the Middle East. We have got to sit down and talk.

Mr. PUCINSKI. I am opposed, I am unalterably opposed to any four-power conferences regarding the settlement of the Middle East for this reason: I do not want to see Israel become another victim of a Yalta, and that is what is going to happen. The great powers cut up Poland, Czechoslovakia, Lithuania, Estonia, and all the "captive" nations after World War II at Yalta and Potsdam. I do not want to see Israel become another victim of a Yalta.

Mr. PELLY. If the gentleman will recall, I said with other nations. I did not limit it to three others besides the Soviet Union.

Mr. PUCINSKI. If the four powers would permit the Arab States and Israel to sit as coequal partners and have an equal voice in the determination of their destiny, I would be for such talks.

Mr. YATES. Mr. Speaker, will the gentleman yield further?

Mr. PUCINSKI. I yield to the gentleman from Illinois.

Mr. YATES. Again, I repeat, the gentleman is clouding the issue.

Mr. PUCINSKI. Oh, no.

Mr. YATES. Let the gentleman from Illinois (Mr. YATES) proceed for just one moment.

Mr. PUCINSKI. Be my guest.

Mr. YATES. If the gentleman will yield further, I, too, am opposed to the proposed four-power talks in the Middle East. I believe the Israel and the Arab nations are the ones to settle this controversy if lasting peace is to come to the Near East. I, too, recognize the role the Soviet Union has played since the end of World War II, and it is a perfidious role, in creating dissension throughout the world. But these are peripheral issues to the subject on which the gentleman from Washington got up to speak. That was the question of the validity of the proposed ABM at this time, question, not the motives of the gentle- and the question whether or not it should be deployed. There are a number of reasons why it should not be deployed, and that was the subject of the debate in which we were engaged.

It seems to me the point the gentleman raised—and I have no illusions about what the Soviet Union is doing in the Middle East and throughout the world for that matter, the question under discussion is the ABM system, good or bad, for our country. It will not help our national strength. It may contribute to the contrary. I say to the gentle-

man that you and I can debate the merits and the demerits of the ABM, as we have in the past. The gentleman from Illinois (Mr. PUCINSKI) is for the ABM. I am opposed to the ABM, and that is the basis on which we should debate the question, not the motives of the gentleman from Washington or the motives of the gentleman from Illinois. I think that is the way the debate ought to be.

Mr. PUCINSKI. My colleague has been here for the last 10 years that I have been here——

Mr. YATES. I have been here 20 years.

Mr. PUCINSKI. With a brief interlude, he has been here longer. In that period my colleague has never heard me question or challenge the motives of another Member of this Congress, and I am not about to start that now. But I believe that if you are going to discuss the relevancy of the ABM, the necessity of the ABM, whether or not this country ought to proceed forward, we do have to put it into total perspective.

All I say is that it is rather ironic that many of the same voices we hear today being raised against the ABM are the same voices which were a year ago pleading to stop the bombing of the Vietnam, because once we do that the whole thing will be over and the Communists will roll over and lie down and give in and everything will be sweet and glorious and the war will be over. These are the same voices which a few years ago were denouncing us for taking a position in Elisabethville to save the Congo from Communist domination. These are the same voices which, when we see this great debate going on—and I do not challenge the patriotism or the motives of my colleagues who are Americans as I am, but I submit unfortunately they have been wrong and time and time again history has proven them wrong.

Mr. YATES. Mr. Speaker, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Illinois.

Mr. YATES. Mr. Speaker, may I point out something to the gentleman which was said by the gentleman from Washington (Mr. PELLY)? The gentleman from Washington supported the ABM last year, as the gentleman from Illinois (Mr. PUCINSKI) knows, and the gentleman from Washington (Mr. PELLY) and the gentleman from Illinois (Mr. YATES) appeared before the subcommittee headed by the gentleman from Florida (Mr. SIKES). The gentleman from Washington at that time said he supported the ABM and was opposed to the particular site that had been selected for the city of Seattle. The gentleman at the time appeared and stated he was in opposition to the position I had taken. At that time I suggested the possibility of having the site away from the city of Chicago and perhaps near the airbase, because I did not think it should be near the city and would not be effective in protecting the city. The gentleman took the position that he wanted it close to the city where it would protect the people.

The gentleman knows very well, of what President Nixon said recently, that the ABM would not protect the people of the cities, neither a thin system nor a thick system would protect them. The President recommended deployment around our ICBM sites in two places.

The Congress has never considered that. This was the recommendation of the President. What I am arguing for and what the gentleman from Washington is arguing for is that the Congress go into this question very, very carefully.

I think the arguments in opposition are as valid insofar as the missile sites are concerned and insofar as the effectiveness of the system is concerned as they might have been against the cities. But that point is something we have to investigate.

Mr. PUCINSKI. Mr. Speaker, the gentleman well knows the President has stated that this program, under the revised plan he submitted, will be under continuing review.

I see the distinguished chairman of the Armed Services Committee here. The gentleman plans to hold hearings shortly. The Senate is now holding hearings. The program is under constant review and that is as it should be, because that is the whole story of our Defense Establishment. Every one of the programs we have has that history.

This Nation has spent in the last 20 years, in the two decades, well over a trillion dollars on all sorts of defense hardware.

Mr. YATES. That is correct.

Mr. PUCINSKI. That is the price we Americans have had to pay to contain the Soviet Union from trying to take over this country and this world. Each one of these programs has been under continual review. Some we accept and some we reject.

Much of the hardware we buy, understandably, is obsolete at the time it is delivered, but at the point in time when we buy it, it is the best piece of hardware available.

If we follow the gentleman's rationale and thinking, we ought not to buy anything in defense procurement simply because each of these things has a certain built-in period of effectiveness and then technology makes them obsolete.

Mr. YATES. Mr. Speaker, the gentleman is totally incorrect when he makes that statement.

Mr. PUCINSKI. If the gentleman will permit me to finish, I do not yield, but I will yield when I have completed, and I have been yielding right along.

The fact of the matter is, if we were to break ground on the ABM system tomorrow, we would not have one unit operational for at least 4 years, assuming there will be no major breakdowns in construction—and we cannot make that assumption under today's conditions. But assuming that everything went well, we would have an ABM that would be operational in 48 months at the minimum.

Now, we have hard intelligence—not speculation, not washroom rumor or gossip, but hard intelligence that Red China, which has no regard for the peace of this world and has no regard for or fear of America's offensive or retaliatory power, is going to have 30 deliverable nuclear warhead missiles in 48 months, and has a potential industrial capability of churning them out at the rate of 200 a year thereafter.

I say to you, it is playing Russian roulette with the future of this country for us to delay a single day on this development.

That is why I am not happy with the compromise the President proposed, but I learned a long time ago, as a legislator in this body, if every one of the Members here were to wait for perfection in legislation, Government would come to a grinding halt. So I accept this compromise.

I would prefer that we move along on a greater scale. I have confidence in the system. I believe that in the next 4 years, by the time we complete the installation, we ourselves will have made tremendous progress. We ourselves will continue to improve this system. We ourselves are going to have a much more effective system.

But I say to you, the greatest tragedy the United States could ever commit is to do nothing at this crucial time, when we know that the Soviet Union is moving forward and we know that Red China is moving forward.

Where is there an iota of evidence anywhere in this world that either the Chinese Communists or the Russian Communists are ready to start living in this world with any degree of decency?

So I say to you, this debate, which has taken on monumental proportions, needs for those of us who support this program to speak out. Up to now, for the most part, it has been the opponents who have had the floor and the great exposure. It has been the opponents who have gone to the American people to say, "It is no good. You ought not do it. You ought to spend this money on schools."

I have a speech over here on schools, which I originally prepared, but I will say this: We do not have to worry about schools, and we do not have to worry about model cities, because the Soviets can have the greatest urban renewal program this country could ever have if we do not continue to check them.

There is not an iota of evidence the Soviet Union has given up its aspirations for the ultimate conquest of and domination of the world.

If I am to err, I would rather err on the side of the safety of the American people. I would rather move ahead. This $3 billion or $4 billion we are talking about is not the first time we have engaged in a program that was not pluperfect.

But at this point in time, in March of 1969, this ABM system is the best system devised by the human mind anywhere in the world. I say that Mr. Nixon and Mr. Laird are to be congratulated for having the courage to stand up against this opposition and to say, "We are going to move forward."

I say to you, by 1972, we Americans are going to say a prayer of thanks that somewhere along the line there were people who decided to move forward.

Mr. RIVERS. Mr. Speaker, will the gentleman yield?

Mr. PUCINSKI. I yield to the chairman of the Committee on Armed Services.

Mr. RIVERS. I wish that the other distinguished gentleman from Illinois were possessed of the same intelligence on Russia that I am. I believe even he might change his position. We had better get onto this ABM while time remains.

You are getting this from the horse's mouth.

The gentleman in the well is to be congratulated.

Once William Jennings Bryan said:

The humblest citizen of all the land, when clad in the armor of a righteous cause is stronger than all the hosts of Error.

We are going to get this ABM system and save America. Stick on your course. You have plenty of help.

Mr. YATES. Mr. Speaker, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Illinois.

Mr. YATES. Of course the chairman of the committee is entitled to his opinion on the ABM as I am entitled to mine. The gentleman from Illinois (Mr. PUCINSKI) had advanced the argument as though there were no weapons of any kind in our arsenal, that the ABM is the only weapon with which we were facing the aggressiveness of the Soviets and, of course, that is untrue. The facts are that we are spending $80 billion for military purposes. There is no question about that. We are buying planes, arms, guns, and ships and all of the weapons of war. As the gentleman knows, we have spent over a trillion dollars in the last 20 years. The ABM is not the only weapon that must be considered. Should it be deployed? Upon the recommendation of the Joint Chiefs of Staff, during the tenure of President Eisenhower, it was recommended that the Nike-Zeus be deployed. This was the predecessor of the Sentinel ABM. President Eisenhower turned down the Nike-Zeus. History showed that President Eisenhower was quite right. Had the Nike-Zeus been deployed at that time——

Mr. PUCINSKI. Let me interject at that point it is only fair to keep the record correct that he turned it down because he saw what was coming up on the drawing boards with relation to ABM's. This ABM did not develop yesterday. We have spent $4 billion——

Mr. YATES. I know that.

Mr. PUCINSKI. We have spent $4 billion on research over 14 years.

Mr. YATES. That is right.

Mr. PUCINSKI. That is why President Eisenhower decided not to move with the Nike-Zeus. It was because he saw the Sentinel system on the drawing board.

Mr. YATES. I question whether the Sentinel was that far advanced at that time, but that is the point. But there is a time for research and development and a time for deployment. This is not the time for deployment.

Mr. PUCINSKI. Tell me this——

Mr. YATES. Let me finish my statement.

Mr. PUCINSKI. What is on the drawing boards at this point in time, right now?

Mr. YATES. With respect to the ABM?

Mr. PUCINSKI. Now.

Mr. YATES. I will tell you what Dr. Foster said with respect to the primitive Chinese threat for which he wants to deploy the ABM.

Mr. PUCINSKI. Wait a minute. Do not say "primitive." I am talking about 1972 and not 1968.

Mr. YATES. I am telling you what Dr. Foster said.

Mr. PUCINSKI. I want to know where you will be in 1972 when the Chinese do have deliverable missiles.

Mr. YATES. Let me finish my statement, and I will tell you. Dr. Foster said two things. First of all, he said that he wanted an ABM in order to protect our cities from a primitive Chinese threat. The second thing he said is that we will not have an ABM for 4 years. Therefore, in 1972, when there is an ABM, presumably you will have a primitive Chinese threat at that time against which the ABM might be countered. Today you do not have an ABM to protect you against the primitive Chinese threat because there is none yet. They do not have an ICBM threat in being now.

Mr. PUCINSKI. The gentleman is aware, though, that, of course, of the 10 nuclear explosions and detonations that the Chinese have had, three of them were in the form of deliverable missiles. The gentleman is aware of that; is he not?

Mr. YATES. What do you mean by "explosions"?

Mr. PUCINSKI. There were 10 nuclear detonations.

Mr. YATES. They have nuclear warheads, but they do not have the means of delivering them yet.

Mr. PUCINSKI. Three of the ten were in deliverable missiles, and the gentleman ought to know that if he does not know it now.

Mr. YATES. But the gentleman does know what the Department of Defense said about that.

Mr. PUCINSKI. Yes. But let me tell you——

Mr. YATES. Let me finish my statement. You asked me about the developments in relation to the ABM. Dr. Foster also said in response to a question on what would happen if the Chinese threat became more sophisticated, that the United States will be making progress, too, in respect to sophisticating the ABM. Hopefully, it will be able to cope wtih the Chinese advances, but that is still a hope. The point that I make is that just as the gentleman himself has pointed out, the Nike-Zeus was a primitive ABM by comparison to the present Sentinel system. The present ABM, according to Dr. Foster, will be improved as time goes on. I suggest that there are eminent scientists who have said that we ought to wait, to still engage in research and development. Yes, there is a time for deployment and there is a time for research. The gentleman from Washington (Mr. PELLY) and I continue to vote for the funds for research which will perfect and better the ABM. We are for research but against deployment at the present time.

Mr. PUCINSKI. And you do not want to do anything now?

Mr. YATES. On the ABM.

Mr. PUCINSKI. The fact that the military have said——

Mr. YATES. The gentleman makes these sweeping statements—these grand statements, these huge and sweeping statements——

Mr. PUCINSKI. You do not want to build any ABM's now.

Mr. YATES. You do not say that. You say you do not want to do anything now. We told you we favored continued research, not deployment.

Mr. PUCINSKI. What the gentleman from Illinois (Mr. YATES) wants to do is study this thing and to study the country to death. I have studied this thing for 14 years and it has been at a cost of $4 billion thus far.

Mr. YATES. That is correct; but we do not have to deploy them.

Mr. PUCINSKI. We have reached the point in time where our very able and distinguished scientists state that this Sentinel system is necessary; that it was not developed by some cigar-smoking general in the basement of the Pentagon. It was developed by the Atomic Energy Commission and on that Commission we have some of the finest scientific brains in the world. These men have said that at this point in time, seeing what the potential is going to be of the Red Chinese 4 years from now—and I think I know the time it is going to take us to build a unit if we start it at this time. We cannot wait any longer, when on eight different occasions this Congress has voted for this program. So what has happened in the last 8 or 9 months to change the mind of the gentleman?

Mr. PELLY. Mr. Speaker, will the gentleman yield?

Mr. PUCINSKI. I am happy to yield to the gentleman from Washington, because he was so generous in yielding to me.

Mr. PELLY. Mr. Speaker, I ask unanimous consent to revise and extend my remarks which I made under my own special order and also in the colloquy with the gentleman from Illinois (Mr. PUCINSKI) during his special order.

The SPEAKER pro tempore (Mr. MATSUNAGA). Is there objection to the request of the gentleman from Washington?

There was no objection.

Mr. YATES. Mr. Speaker, will the gentleman yield further?

Mr. PUCINSKI. Yes. I yield further to the gentleman from Illinois.

Mr. YATES. The gentleman asked me what event has transpired that would have changed anything. I would tell the gentleman there has been a significant change. Had the deployment proceeded under last years concept, it would have been the wrong step. The President of the United States said that himself. He said the Sentinel system would not have protected the cities of this Nation. He said it must be changed. The sites selected by the Army were designed to protect the cities. Now they are to be placed in position to protect missile sites. So it would have been a mistake to proceed with that deployment. It would have been a waste of funds. It would have been a premature deployment, for a mission that according to President Nixon could not be accomplished.

Mr. PUCINSKI. Some of the people in my district come from Germany and the Scandanavian countries who state that we grow old too soon and get smart too late. What you are saying is that this has been the tragic story of defense for 20 years, but we do not stop long enough to rationalize and reason this thing through. We should not buy anything except that for our immediate

needs, because a lot of the things we buy this year—because of the fantastic technological surge which is now present with us and which I envision, but when we start building these installations and pouring the mortar and start putting together the electronics hardware, this does not mean we have stopped our pace at all. It means we have accelerated that pace.

The scientists and our military people are a lot wiser than some of us in Congress give them credit for being. They know it will not do us an iota of good to have the best system in the world in 1972 on the drawing board if it cannot be put into operation within the period of 4 months against the Chinese whom I believe will have a capability of delivering warheads upon our principal cities. In my opinion that is our basic difference of views.

Mr. YATES. If we had proceeded last year the Army would have purchased the Libertyville site.

Mr. PUCINSKI. I think the gentleman ought to make clear one thing. While President Nixon has announced for the time being the development and deployment of two ABM sites along the border of Canada, the fact of the matter is that the Defense Department has selected eight other sites.

Mr. YATES. Where?

Mr. PUCINSKI. Across the entire United States.

Mr. YATES. They have not selected them, but they have them under contemplation.

Mr. PUCINSKI. I did not rule out, and I dare say that I give the American people credit for being a lot smarter than a lot of the people around here, because 66 out of 100 of the American people are certainly in support of the President's position.

These people know what the stakes are, and they will support the President. I would not rule out the fact that at some point in time we may very well have to put up defenses around the big cities of this country if we fail to reach any kind of an agreement with the Soviet Union for a mutual inspection treaty.

Mr. PELLY. Mr. Speaker, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Washington.

Mr. PELLY. I thank the gentleman for yielding.

I believe the gentleman has dwelled at length here on the threat posed by the Red Chinese. I wonder if the gentleman recognizes that Secretary of Defense McNamara pointed out that by the time the Red Chinese get these missiles, between 1972 and 1975, we will still have second-strike capacity. So that if they ever launched any missiles at us, we could wipe their whole nation off the face of the earth. That should deter Red China.

Mr. PUCINSKI. The argument posed by the gentleman from Washington is totally fallacious, because Red China, with 800 million people, and with the population growing by leaps and bounds, the last thing in the world that the Red Chinese leaders are concerned about is nuclear retaliation. They have publicly stated—publicly stated—that perhaps the answer to their problem is to have three to four hundred million of their people destroyed by nuclear exchanges. And that is certainly no consolation to my constituents. And this Member is going to stand in the well of this House and argue as long as he can.

If we are to follow the rationale that we have a second-strike capacity, I do not want that.

I do not even want the first rocket to hit this country.

Mr. PELLY. I agree with the gentleman.

Mr. PUCINSKI. I do not want the first missile to strike our Nation.

So those who argue that we have some 1,000 or 2,000 missiles, as I heard a distinguished Member of the other body the other day, with big charts, point out how we could destroy each other, I will say to the Members that the logic for such reasoning totally escapes me.

It is my belief that it is our responsibility as duly elected Representatives of the people to make sure that we have a Defense Establishment which will preclude any missile coming to this country, first, second, or third.

Mr. PELLY. If the gentleman will yield further, is the gentleman saying that the Red Chinese are so foolish that they would commit mass suicide?

Mr. PUCINSKI. The gentleman from Illinois is saying that; yes, sir.

Mr. PELLY. That 800 million Chinese would be killed?

Mr. PUCINSKI. That is correct.

Mr. PELLY. In that case, there would be no Chinese remaining any longer, because we can literally wipe them entirely off the face of the earth.

Mr. PUCINSKI. I would say to the gentleman, no.

Mr. PELLY. That is what Secretary McNamara said.

Mr. PUCINSKI. Because if they had 30 deliverable missiles, as our intelligence assures us that they will have by 1972, any one of those 30 missiles is enough to destroy the city of Chicago, the city of New York, the city of Washington, D.C., or any other city.

Mr. Speaker, I am not going to play Russian roulette with the security and the future of my country.

I will tell the Members that anyone who believes that we have got a second-strike capacity, as we have been hearing on occasion, and that has been the thing that has contained the Soviet Union from expanding their reign of terror, is in error. We have this huge arsenal of missiles, and they have a huge arsenal of missiles, and we both realize the complete folly of trying to knock each other out of the picture, if we could. But do not believe for 1 second that the Soviet Union will hesitate for one moment if they had the advantage, and Czechoslovakia proves that.

The SPEAKER pro tempore. The time of the gentleman from Illinois has expired.

FEDERAL AID TO HELP MEET THE COST OF EDUCATING CHILDREN LIVING IN PUBLIC HOUSING—AN AMENDMENT TO H.R. 514

Mr. PUCINSKI. Mr. Speaker, I ask unanimous consent that I be permitted to extend at this point in the RECORD my original remarks on the subject relative to Federal aid for the school program, and to include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. PUCINSKI. Mr. Speaker, all across America, school districts are faced with the gravest financial crisis in their existence. In Youngstown, Ohio, the public schools were shut down last fall because of insufficient operating revenue. In Chicago, the superintendent of schools has announced that unless he receives massive State and Federal aid, he may have to shut down the entire school system. This pattern of school closures will spread across our Nation unless the State and Federal governments substantially increase their support of education.

Last week, the Committee on Education and Labor reported a bill which would give this type of meaningful assistance to our schools. H.R. 514 would extend for 5 years the Elementary and Secondary Education Act and the Impacted Aid Act. These public laws, the major commitments by the Federal Government to elementary and secondary education, provide vital support at a cost of approximately $1.5 billion to many of the school districts in our country.

But the committee in H.R. 514 went beyond a simple extension of these two laws. By a vote of 28 to 2 with broad bipartisan support, the committee initiated a major new program which would extend the benefits of the impacted aid laws to children residing in public housing projects. Under this program, local school districts would be reimbursed approximately one-half of the local cost of education for each pupil in the school district who lives in a public housing unit.

A total of 381 congressional districts would receive direct benefits for their local school districts because these congressional districts actually have public housing in their districts. But even those few districts that do not have public housing would benefit by bringing more school funds into their States.

This aid would not be earmarked for any specific programs, rather, it would go into the general operating budget of the local school district. I believe that this type of aid is vitally needed now if our school systems are to survive.

The committee added this amendment to the impacted aid laws because it believed that the Federal Government has unintentionally created a severe impact in many school districts through the public housing laws. These housing acts have as their purpose the guaranteeing of a decent home for every American regardless of income. As a direct consequence, today more than 670,000 families occupy low-rent housing constructed with the

financial assistance of the Federal Government.

But this Federal housing policy has also resulted in inadvertantly placing a crushing burden upon many school systems. Frequently, the existence of this attractive low-rent housing has lured poor, uneducated families from rural areas into our cities, both large and small. While the results of this migration are frequently most dramatically seen in our larger cities, they are, nonetheless, also present in the semirural areas of Alabama, North Carolina, and almost all other States, often causing a greater strain on these schools because of the more limited tax bases. Thus, many of our school systems across the Nation have been weighted with large numbers of disadvantaged children drawn into the school districts by the construction of federally financed public housing.

Since Federal laws exempt all public housing from State and local taxation, schools serving children from public housing are deprived of tax revenue which would make possible funds for adequate education for these children. Recognizing this gross inequity unintentionally caused by the housing acts, the Federal Government presently makes a token payment in lieu of property taxes to the local school districts.

The national annual average of this Federal payment in lieu of taxes is only $11 per child for each schoolchild. This amount is shamefully inadequate to offset the revenue lost by exempting public housing from State and local taxation. The results of this insufficient compensation by the Federal Government are inadequate education for all children within the school districts affected and an excessive burden placed upon the property owners within these school districts.

The Federal Government must assume a greater financial responsibility for the education of these children from public housing projects. Testimony presented before the General Subcommittee on Education, which I chair, has shown that enrollments in certain surveyed areas have doubled with the construction of federally financed public housing. This suddent concentration of large numbers of disadvantaged students has placed a great stress on already strained school systems.

Testimony has also shown that the property tax revenue per nonpublic housing pupil attending public schools averages $415 and that if the payment in lieu of taxes per low-rent housing pupil were deducted, an amount of $404 would be needed to close the gap between the cost of education per public housing student and the revenue produced by the housing projects. This difference of $404 per child is now being borne by other property owners in the school districts causing an excessive burden on these property owners.

Testimony presented before the Committee on Education and Labor has shown wide support from a great number of witnesses for this amendment. I would like to insert a few of their statements:

Dr. Gary N. Pottorff, board of education, Wichita, Kans.: "Our board would be in favor (of the amendment) since the Federal Government is taking existing properties from the tax rolls."

Dr. William Kottmeyer, superintendent of schools, St. Louis, Mo.: "In return for the loss of local tax revenue (which theoretically is compensated for by the in-lieu-of taxes payments) and a local cost of $15 million, the St. Louis School Board must struggle with five times the number of children massed into a highly undesirable environment and gets $11.56 per pupil instead of the $182 paid for an impact aid pupil."

Dr. William Simmons, deputy superintendent of schools, Detroit, Mich.: "This type of program would reinforce the impacted area legislation."

Dr. Joseph Manch, superintendent of schools, Buffalo, N.Y.: "I would urge the committee to extend Public Law 874 to include children from public housing. The virtual loss of public housing property from school tax rolls is one reason for such legislation. Equally important, the provision of low-rent public housing inadvertently creates high rise ghettoes wherein the cycle of cultural disadvantage is strengthened."

These witnesses and many others have demonstrated the urgent need for this legislation. The leading national educational associations have also endorsed my amendment. These associations include the following:

The National School Boards Association.

The Chief State School Officers.

The National Education Association.

The National Association of State Boards of Education.

The American Association of School Administrators.

The National Congress of Parent-Teachers Associations.

The Research Council of the Great Cities.

Some may argue that although the principle of this amendment is worthy, it should not be included under the impacted aid laws. I think that I have demonstrated that the Federal housing policy has indeed created an impact in many school districts. In fact, this impact in many instances is much greater than that caused by other Federal activity in the same community.

But let me emphasize that this amendment creates a new authorization of funds for public housing children. This separate authorization will insure that the appropriations for "A" and "B" children under the present laws will in no way be decreased.

Finally, I would urge my colleagues to consider carefully the following two tables which I am inserting into the RECORD. The first table lists the number of public housing units under operation in each congressional district in the country as of June 30, 1968.

The second table is a listing of the amount of money which each congressional district would receive if my amendment is enacted into law. These amounts were derived from a national average of the number of public school pupils in each public housing unit and the national average of half the local tax contribution for education. Since many school districts spend more than the national average on education, the amount which they would receive under my amendment would be more. And since the present law provides that no school district may receive less than either the State or National average expenditure for education, no congressional district would receive less than the amount in this table. Please note that in those congressional districts where there is no public housing, we have included either the city or the State total. The tables follow:

HOMEOWNER SWINDLE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. HALPERN) is recognized for 5 minutes.

Mr. HALPERN. Mr. Speaker, I would like to tell the Members of this distinguished body about a constituent of mine.

He sold his house. He did not mean to, and at the time, he did not know he was doing it, but nevertheless—legally, he did sell his house.

It all started when a gentleman appeared at the front door and announced that he represented a home improvement firm. He asked if the homeowner would be interested in having some obviously needed work done on his house.

The deal sounded good, so my constituent signed what he thought was a contract for the work, only briefly thinking that it was a little strange that the date, total amount of money owed, and interest charges were left blank. However, the man assured my constituent that it was standard procedure and so he signed anyway.

What happened next is one of the oldest swindles on the books.

After leaving his victim, the salesman

filled in an amount for the cost of the work which was approximately twice the price that he had quoted. Then he took the contract, and another paper that he had also asked my constituent to sign, and had them "falsely" notarized by a notary public out of the presence of the homeowner.

This other paper which had been represented to him as an application for a title search, was actually a mortgage on the man's home.

The salesman then "transferred" the note and mortgage to a credit firm for less than 60 percent of each note's face value, and the firm set up a "balloon" payment schedule, which works like this: The note calls for a total of $7,000 to be repaid at $50 a month in 60 months. Sixty months times $50 equals $3,000.

This leaves $4,000 yet to be paid. The clause in the fine print says that the full note is due and payable on the same day as the final payment.

In other words, if the victim cannot come up with the extra $4,000 on the 60th month, he will lose his home. My constituent could not and he is now homeless.

Mr. Speaker, this man is just one of many who have been preyed upon by these swindlers. Most of them have been getting away with their crooked practices for too long. Consumer losses as a result of these frauds cost the American public an estimated $750 million each year and represent roughly between 4 and 8 percent of the entire home improvement business. And invariably, home improvement frauds tend to focus upon these persons least able to afford them: the poor, the uneducated, the unsophisticated and the elderly.

I have today introduced legislation which would permit a stepped up nationwide drive against the home improvement racketeering.

The measure would provide more funds and wider authority to the Federal Trade Commission in its conduct of a 1-year comprehensive investigation of unfair practices within the home improvement industry. Further, it would enable the commission to obtain an immediate court order temporarily halting the practices while pursuing a permanent "cease and desist" order through further judicial action.

Under present law such deceptive practices cannot be stopped when they are discovered, because litigation of these cases generally takes years. In the meantime, countless more consumers are swindled.

Mr. Speaker, it is high time we had tough and meaningful laws to deal with these people. I am today introducing legislation to do so, and I urge my colleagues to join me.

MANPOWER PROGRAMS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. MICHEL) is recognized for 30 minutes.

Mr. MICHEL. Mr. Speaker, it is my understanding that the Nixon administration is going to reorganize the manpower programs in the executive branch. This is welcome news, because economy and efficiency can be brought about by the elimination of duplicating and overlapping manpower activities.

I have gone through the budget that President Johnson sent to the Congress shortly before he left the White House and am astonished and amazed at the size of the manpower programs that are administered by the various departments and agencies of the executive branch. Over $2½ billion has been allotted for manpower programs for fiscal year 1970. This huge sum does not include money to be spent by the Veterans' Administration on behalf of ex-servicemen. The actual amount will be even larger, as much of the money to be spent for retraining the unemployed cannot easily be separated from unemployment compensation, just as it is difficult to break down many of the funds to be spent for rehabilitation so as to show how much would go for manpower activities.

As many of my colleagues will be looking for places to cut when the various appropriations bills come to the floor for consideration by this body, I am inserting in the RECORD a tabulation that shows the sums obligated for manpower programs for the fiscal years 1968, 1969, and 1970:

[In thousands of dollars]

	1968 actual	1969 estimate	1970 estimate
FUNDS APPROPRIATED TO THE PRESIDENT			
Office of Economic Opportunity			
Economic opportunity program:			
Work and training programs:			
Job Corps	318,329	277,000	283,000
School and summer work program	197,700	181,400	181,400
Comprehensive employment programs	241,912	424,800	486,400
Special impact (industry incentive)	6,306	12,000	14,500
Work experience program	98,477	46,700	.....
Total	862,724	941,900	965,300

Job Corps. This provides work and training in residential centers for young people aged 14 through 21 who are out of school and out of work. The objective of conservation centers, located in rural areas and managed by the Interior and Agriculture Departments and by State governments, is to raise the enrollee's level of basic education while improving prevocational and basic work skills. Urban centers are operated under contract by private businesses, universities, and State and local nonprofit organizations. Young men and women urban center enrollees receive specialized vocational training as well as general education, counseling, and help in improving work attitudes and habits. Inner-city skill centers allow young men and women to be trained away from home while remaining in an urban environment.

School and summer work program. This assists disadvantaged students of high school age to remain in school by providing part-time and summer work experience.

Comprehensive employment programs. These programs, which the Office of Economic Opportunity delegates to the Department of Labor, offer a wide range of manpower services which include work experience, counseling, remedial education, on-the-job training, and jobs leading to career opportunities. Individuals served, in both urban and rural areas, are unemployed and underemployed low-income people needing special assistance to develop their occupational potential. Job Opportunities in the Business Sector encourages private industry to hire the hard-core unemployed by reimbursing participating firms for the extraordinary expenses connected with on-the-job training of disadvantaged persons. The Concentrated Employment Program brings together manpower programs and necessary supportive services such as day care and medical examinations in cities and rural areas with unusually heavy concentrations of poverty. Other programs provide work experience and training opportunities in Operation Mainstream, New Careers, and Out-of-School activities.

Special Impact (industry incentive). This provides monetary incentives to attract private industry to relocate plant facilities and creating additional employment opportunities in selected urban and rural depressed areas. It emphasizes hiring, training, and retraining disadvantaged workers through job promotion and stock-sharing.

Work experience program. This is being replaced by the Work Incentive Program in 1970.

	1968 actual	1969 estimate	1970 estimate
DEPARTMENT OF COMMERCE			
Promotion of industry and commerce:			
Business and Defense Services Administration:			
Advances and reimbursements:			
Department of Labor (manpower)	42	22	.....
DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE			
Consumer Protection and Environmental Health Service:			
Air pollution control:			
Manpower training:			
Grants	2,706	3,159	3,500
Direct operations	1,251	1,900	1,990

Grants. Fellowship awards support individual postgraduate training in air pollution research and control activities; training grants are awarded to universities to support the development and improvement of, primarily, graduate-level air pollution curricula and to provide student stipends.

Direct operations. Training of technical personnel for Federal, State, and local government research and control operations is carried out.

[In thousands of dollars]

	1968 actual	1969 estimate	1970 estimate
HEALTH SERVICES AND MENTAL HEALTH ADMINISTRATION			
Mental Health			
Manpower development:			
Grants:			
Training	96,518	109,046	112,500
Fellowships	10,155	10,641	10,866
Direct operations	2,532	3,094	4,583
Total	109,205	122,781	127,949

Manpower development. Grants, Training. Grants are made to training institutions for training in psychiatry, behavioral sciences, psychiatric nursing, psychiatric social work, and other mental health disciplines. Experimental and special programs and continuing

education in the mental health field are included as well as special training in such areas as alcoholism, drug abuse, and suicide prevention. *Fellowships.* Awards are made on the basis of excellence to individuals involved in mental health research.

Direct operations. Analytic studies of manpower are undertaken and the national mental health training program is coordinated and supported. Emphasis is given to the full range of manpower requirements in the field of mental health including the disciplines of psychiatry, behavioral sciences, psychiatric nursing, and social work. Also funded in this subactivity are the training activities of the National Center for Mental Health Services, Training, and Research and a program for training psychiatrists for careers in the Public Health Service.

[In thousands of dollars]

	1968 actual	1969 estimate	1970 estimate
NATIONAL INSTITUTES OF HEALTH			
Heath Manpower:			
Institutional support:			
Medical, dental, and related	32,588	66,000	96,400
Nursing	5,657	7,000	7,000
Public health	6,558	9,471	9,471
Allied health professions	8,123	10,975	10,988
Student assistance:			
Traineeships	17,135	30,958	25,620
Scholarships and opportunity grants	16,636	24,636	48,800
Loans	38,680	41,979	30,500
Manpower requirements and utilization:			
Grants	2,992	4,195	4,425
Direct operations	5,955	10,107	10,870
Program direction and management services	1,261	1,339	1,390
Total program costs, funded	135,586	206,659	245,464
Change in selected resources	25,059	----------	----------
Total obligations	160,645	206,659	245,464

Institutional support. The principal agents of this activity are grant programs directed toward enhancing the educational experience of students entering the health and allied health profession. Improving the utilization of limited resources of health professionals requires appraisal of how various types of personnel are being utilized and the identification of new categories of allied health professionals and technicians for more effective team practice.

Student assistance. This includes graduate and specialized, comprising traineeships and research fellowship; and undergraduate, comprising scholarships and student loans. Research fellowships support candidates at the predoctoral and postdoctoral levels for research training in special fields related to studies for improving nursing care. Traineeships support the graduate and specialized preparation of teachers needed to expand and improve curriculum offerings, and the advanced training needed by supervisors, administrators, and other specialists in nursing, public health, and the allied health professions. Nursing and health professions scholarships enable deserving students from low-income families to pursue their education. Schools make scholarship awards to students who, in the judgment of the school, have an exceptional financial need. The student loan programs for the health professions, including nurses, are also designed to help provide an adequate supply of health manpower and to assure that the needed supply of health professions and nursing manpower is drawn from the most capable individuals, but particularly to assure that students from low-income families can enroll for health professions training. The 1970 program concentrates these loans to students from families with annual incomes under $10,000.

Manpower requirements and utilization. Grants. Research grants support studies in the areas of the physician methods and techniques, continuing physician education, effective use of health manpower, nursing care, and methods to deliver nursing care to patients. Research training grants enable institutions to establish training programs in fields where there is unusual demand for researchers having skills in nursing specialties and in the field of educational research. *Direct operations.* Funds are provided for programs to assess requirements, availability, and quality of health discipline education; provide professional guidance and leadership to meet the goals of nursing care by means of research, consultation, application of research findings and administration of grants; develop, administer, and support grant and operational programs to increase the supply and improve the education, utilization, and effectiveness of manpower in the health occupations; for servicing training and construction grants, student loans, scholarships, and operational programs for training of personnel.

Program direction and management services. The Bureau of Health Manpower provides a national focus for health manpower activities. It guides and supports health manpower programs, designs proposals to meet needs for new or revised health manpower programs, coordinates research and program reporting activities, and provides technical guidance and coordination to Bureau activities.

[In thousands of dollars]

	1968 actual	1969 estimate	1970 estimate
Advances and reimbursements:			
Health, manpower, education, and utilization	1,810	1,979	2,110
SOCIAL AND REHABILITATION SERVICE			
Work incentives:			
Training and incentives:			
On-the-job training	13,469		33,746
Institutional and work experience training	48,131		93,254
Program direction and evaluation	4,819		8,000

On-the-job training. This provides costs of on-the-job training both coupled and full cost as well as followup (regular, intensive, and employer). Included in this activity are program service costs related to on-the-job training programs.

Institutional and work experience training. This provides for the costs of orientation of participants in priority 1 and 2 activities of the Work Incentives program. Through the orientation process, each person will be given training in basic employment skills along wtih vocational counseling and testing. Upon completion of the orientation period, some persons will go directly into employment, with the remainder going into some phase of training. This activity also provides for the classroom and/or work experience training which will be needed by the majority of persons served in this program. In addition to the categories of orientation, work sampling and internship, basic education and general development, institutional and vocational training, work experience, and relocation, in 1970, three new categories will be introduced to the program. They are: vestibule training—utilizing "company schools"; para-professional—classroom vocational training aimed toward entry in public service employment; and employment preparation—to be used for participants who have completed training but lack motivational and social behavior necessary to "sell" themselves to employers.

Program direction and evaluation. This provides for the program development, evaluation, and administration of the Work Incentives program by the Department of Labor.

[In thousands of dollars]

	1968 actual	1969 estimate	1970 estimate
Juvenile delinquency prevention and control: Training		1,300	2,600

Training. Funds are for the purpose of training personnel employed in or preparing for employment in fields related to the diagnosis, treatment, or rehabilitation of youths who are delinquent or in danger of becoming delinquent. This training will be accomplished through curriculum development, short-term institutes, and traineeship grants and projects.

[In thousands of dollars]

	1968 actual	1969 estimate	1970 estimate
Rehabilitation research and training: Training	31,177	31,717	31,700

Training. Grants and contracts support the training of personnel in professional and technical fields relating to vocational rehabilitation, including teaching grants and traineeship grants to educational institutions, and research fellowships to individuals.

[In thousands of dollars]

	1968 actual	1969 estimate	1970 estimate
Salaries and expenses: Work incentives		85	302

Work incentives. This develops comprehensive work and training programs and related child care arrangements for appropriate members of families with dependent children, who are referred to manpower agencies for work and training, to foster self-sufficiency. This includes referral through followup after placement in the labor market, work plans, policy standards, procedures development, and technical assistance to State and local agencies.

[In thousands of dollars]

Total program costs, funded	375,415	418,032	688,396
Change in selected resources	5,374		
Total obligations	380,789	418,032	688,396

Training and allowance payments. Direct program costs for occupational and basic education training programs are provided to equip the Nation's unemployed and underemployed workers with skills that will enable them to participate in productive employment. Institutional training projects are conducted by State and local vocational education agencies and on-the-job training projects are conducted by employers and other organizations. This activity provides for the costs of conducting the training and for the payment of trainee allowances to those trainees who are heads of households or who meet other provisions of the Manpower Development and Training Act of 1962, as amended. The Concentrated Employment Program is designed to insure that disadvantaged individuals receive proper training and manpower supportive services, enabling them to obtain permanent employment. The Job Opportunities in the Business Sector program is operated in conjunction with the promotional efforts of the National Association of Businessmen and is a cooperative business-Government venture to hire and train disadvantaged individuals.

Program services. This provides for services provided by the State employment security agencies in the overall development and administration of employment service activities including the identification of occupations in which shortages or potential demand exists, the selection, referral, and placement of trainees and the paying of trainee allowances. Overall supervision of the institutional program is provided by the State vocational education agencies. On-the-job project promotion, development, and supervision are also provided by cooperating State agencies and by employers, associations, and other organizations. Manpower Development and Training Activities and other manpower programs are coordinated by utilizing the interagency Cooperative Area Manpower Planning System. This activity also provides technical assistance for all manpower programs and furnishes training for all personnel involved in the administration, direction, and performance of these programs. It likewise provides for a comprehensive system of labor market information and a job matching program on a national, State, local, or other appropriate basis.

Federal institutional training services. This provides for the program development and administration of the institutional training programs by the Department of Health, Education, and Welfare.

[In thousands of dollars]

	1968 actual	1969 estimate	1970 estimate
OFFICE OF MANPOWER ADMINISTRATOR, SALARIES AND EXPENSES			
Experimental, demonstration, and research programs	27,567	18,918	21,030
Planning, research, and evaluation	4,703	4,708	4,809
Federal on-the-job training services	1,642	2,164	2,688
Federal employment security services	2,359	2,407	2,521
Executive direction:			
Office of the Administrator	823	889	920
Financial and management services	1,905	2,074	2,117
Manpower management data systems	2,518	2,975	3,546
Reports to the public on manpower programs	612	774	779
Total program costs, funded	42,129	34,909	38,410
Change in selected resources	−4,880		
Total obligations	37,249	24,909	38,410

Experimental, demonstration, and research programs. Experimental and demonstration training projects are conducted through contracts and/or grants with public or private nonprofit organizations. They are intended to improve techniques and demonstrate effectiveness of specialized methods in meeting manpower, employment, and training problems of worker groups, such as long-term unemployed, disadvantaged youth, displaced older workers, handicapped, minority groups, and others. The program provides for labor mobility demonstration and placement assistance (bonding). A wide-range manpower research program is carried on to investigate and study programs which give promise of furthering activities under the Manpower Development and Training Act and its amendments. Areas of study include appraisal of manpower requirements and resources, unemployment resulting from automation and technological advances, mobility of workers, adequacy of manpower development efforts, and manpower utilization.

Planning, research, and evaluation. The Office of the Manpower Administrator is responsible for the planning, research, and evaluation necessary to develop and implement a comprehensive manpower program. It provides leadership, coordination, and direction to the manpower research program. It provides continuing review and appraisal of operating programs. It identifies, through experimental and demonstration programs, special needs and problems of various groups of potential trainees and develops methods of solving the problems.

Federal on-the-job training services. A program of on-the-job training is administered through employers, associations, community and civic groups, and unions. Assistance is provided in the operation of inplant training programs intended to facilitate hiring of disadvantaged job applicants and to upgrade skills. Contracts are negotiated with employers to partially reimburse them for training costs. State apprenticeship agencies are called on to assist in the programs, and in turn are reimbursed for expenses incurred in developing and administering training programs. During 1969 and 1970, firms located in the ghetto areas will be offered on-the-job training contracts, and efforts will be made through the Concentrated Employment Program to place ghetto residents in the on-the-job training programs.

Federal employment security services. The Manpower Administration furnishes guidance and assistance to the States in developing, administering, and evaluating a manpower program which provides: (1) payment of relocation assistance allowances to workers who must move to new areas to find employment; (2) payment of training, travel, and subsistence training allowances to persons found to need such assistance during their training under the Manpower Development and Training Act; (3) giving basic educational and occupational training to unemployed and underemployed persons; (4) counseling and testing services to such persons before, during, and after their training, whenever needed; (5) specialized services to jobseekers who have especially difficult placement problems, such as youth, older workers, handicapped, minority groups, hardcore unemployed, and workers displaced by automation or technological change; (6) improvement in mobility of labor by providing guidance when workers must shift between geographical areas and across occupational lines; (7) surveys of characteristics of jobs to determine types of training programs needed; (8) placement services that will satisfy the need of both trainees and employers; (9) active participation in community affairs to stimulate and support expanded educational and job opportunities.

Executive direction. Office of the Administrator. This provides for the executive direction, supervision, and coordination of the manpower programs of the Department of Labor. *Financial and management services.* This furnishes the Manpower Administrator with administrative staff support. It provides budgetary, fiscal management, audit, administrative and management services, personnel, and contract services for all organizations of the Manpower Administration. *Manpower management data systems.* This designs, maintains, and operates all data systems for the work and training programs of the Manpower Administration, including (in partnership with the Office of Financial and Management Services) combined reports on finances and performance. It develops a central data bank for all Manpower Administration work-training programs, determines standards and procedures for and functional supervision of all Manpower Administration data reporting systems, and provides statistical and technical services to the Manpower Administration. *Reports to the public on manpower programs.* This office, working with the Office of Information, Publications, and Reports in the Office of the Secretary, prepares and disseminates all news of Manpower Administration activities. It fills requests for publications and provides other information concerning manpower programs. It also is the headquarters for a manpower community relations program.

OFFICE OF MANPOWER ADMINISTRATOR			
Salaries and expenses (proposed for separate transmittal, existing legislation):			
Labor mobility demonstration program		2,000	
Placement assistance (bonding)		143	
Total obligations		2,143	

Labor mobility demonstration program. This provides for assistance to meet reloca-

tion expenses in the form of grants or loans, or both, only to involuntarily unemployed individuals who cannot reasonably be expected to secure full-time employment in the community in which they reside, have bona fide offers of employment (other than temporary or seasonal employment) and are deemed qualified to perform the work for which they are being employed.

Placement assistance (bonding). This provides for payment to or contracts with employers or institutions to cover losses incurred by employees who have successfully completed or participated in federally assisted or financed training, counseling, work training, or work experience programs and have been found to be qualified for employment but may be denied employment for reasons other than ability to perform, including difficulty in securing bonds for indemnifying their employers against loss from the infidelity, dishonesty, or default of such persons.

Bureau of Apprenticeship and Training, salaries and expenses:			
Training promotion and service to industry	5,931	6,464	6,247
Administration and management services	343	382	382
Total program costs, funded	6,274	6,846	6,629
Change in selected resources	8		
Total obligations	6,282	6,846	6,629

Training promotion and service to industry. Industrial management and labor organizations are encouraged and aided to conduct apprenticeship, training, and retraining programs which will help individual workers attain and improve skill, competence, and adaptability. Apprenticeship and training programs are promoted by direct contact at national and local levels with employers and unions by use of informational media and by cooperation with State and community agencies. Such programs provide, on a nondiscriminatory basis, employee development opportunities for new labor market entrants and workers who need greater skills. Technical assistance is provided to employers directly or through labor management committees. Apprentices and journeymen participate. Skill requirements and training needs within particular industries are identified. Information is provided on training methods, apprenticeship labor standards, and basic principles applicable to training in the apprenticeable and nonapprenticeable occupations. Training programs are evaluated and pamphlets, articles, and reprints are published annually to call attention to skill needs, to indicate trends, and to describe superior apprenticeship and training programs.

BUREAU OF EMPLOYMENT SECURITY			
Trust fund limitation: U.S. Employment Service	10,397	11,987	11,887

United States Employment Service. This assists and guides State agencies in the management of their employment service in order to provide an effective and efficient manpower service for all workers and employers by: (1) furnishing all activities related to identifying and reaching out to disadvantaged individuals not readily employable and providing the kinds of assistance necessary for them to become productive members of the work force and of our society; (2) giving specialized counseling and providing job development, and placements services to youth, older workers, handicapped, minority groups, and workers displaced by automation and technological change; (3) offering counseling and placement services to veterans and stimulating employers to hire veterans; (4) counseling and testing services to assist both ready-to-work jobseekers and employers in meeting their employment needs; and (5) improving mobility of labor by guiding necessary shifts of workers between geographical areas and across occupational and industrial lines. The Employment Service also provides occupational information and support services such as: the development of various forms of foreign language and culturally unbiased occupational tests, labor area information analyses, estimates of area employment and the occupational characteristics of job opportunities, occupational analyses for employers and unions, and stimulation and support for community action to develop expanded job opportunities and to stabilize employment. Special assistance is furnished to the Nation's agricultural workers and employers by: implementing special recruitment and farm placement programs to help unemployed and underemployed farmworkers achieve maximum employment and to meet agriculture's needs for year-round and seasonal workers, providing greater job continuity by maintaining and expanding interstate migratory routes, providing assistance to local migratory committees for the extension of community services to migratory farmworkers and their families, and investigating farm and nonfarm employment offered aliens seeking permanent entry into the United States under the Immigration and Nationality Act.

Employment service. The Federal-State employment service system is a nationwide network of local employment offices financed by Federal grants and administered by the State employment security agencies. The local offices provide a community manpower service for the areas served by developing the employability of disadvantaged persons; obtaining jobs for those who are job-ready; providing workers for employers having jobs to offer; developing or carrying out programs designed to resolve the employment, unemployment, and manpower utilization problems of an area; and providing special services to employers, individuals, and community agencies or groups requiring or seeking them. These functions are supplemented by counseling and testing services to assist applicants to obtain suitable jobs or to upgrade their skills through further training; by assisting employers in analyzing their skill requirements by solving problems of recruitment and turnover; and through development of labor area information. Specialized services are offered the disadvantaged and others who are presently unsuited for available employment. These specialized services are grouped together under the Human Resources Development concept. Programs are carried on to aid communities in developing employment opportunities and to provide necessary employment services to workers and employers in areas where the establishment of full-time offices is not economically feasible. Statistical and survey operations are carried out to assist employers, local offices, and other government agencies in their considerations of manpower needs. The services outlined above are provided for both farm and nonfarm workers.

HONEY PROMOTION AND RESEARCH ACT

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Minnesota (Mr. QUIE) is recognized for 5 minutes.

Mr. QUIE. Mr. Speaker, the honey producers of America have not enjoyed the expanded markets for their product which should have resulted from the burgeoning population in the United States. As a matter of fact, the per capita consumption of honey has been cut in half since the early 1940's. At that time, per capita consumption was close to 2 pounds per person, but this dropped to 1.1 pounds per person in 1967.

Facing this adverse market situation, many of the honey producers decided that a self-help promotion project is the best answer to their situation. Consequently, I am today introducing the Honey Promotion and Research Act of 1969. The bill is considerably revised over last year's proposal.

This act authorizes the establishment of a National Honey Promotion and Research Board to develop marketing research and promotion programs. It is obvious in this day of mass media and the very effective advertising techniques used to appeal to the millions of today's consumers that promotion is an essential component of marketing procedures. The failure of the honey industry to promote its excellent product has resulted in declined per capita consumption.

This board would be comprised of nine members. Six members would be selected from persons nominated by honey producers from regions established by the Secretary of Agriculture based on honey production statistics. Three handler members would be appointed at large.

The board members would serve 3-year terms, with the exception of six members originally appointed, three of whom would serve 1 year and three of whom serve 2 years.

Funds for marketing research and promotion would come from assessments placed on honey produced and sold through commercial handlers. Beekeeping hobbyists and small producers would be excluded from the assessment procedure. The assessment rate could be no more than 15 cents per 60-pound can or equivalent.

Under the terms of the bill, the Secretary of Agriculture would be required to hold hearings on a proposed order establishing the Board and its functions. Before the order could be enforced, a referendum among honey producers would be held. Approval of the order would be given if either two-thirds of the producers favored it or at least one-half of the producers voted for it and they produced two-thirds of the honey in the representative period. If the order proved ineffective or producers later decided to discontinue the program, an election could be called by the Secretary or upon request of 10 percent of the producers. The order would be terminated by majority vote if that majority produced at least 50 percent of the honey in the representative period.

The bill also permits individual producers who do not wish to participate to have the assessments made against their honey refunded.

The bill would prohibit proxy voting.

Mr. Speaker, I believe the bill represents an honest effort by honey producers to improve the market for honey and I applaud this self-help approach. I welcome support from the House, and hope that the bill will soon be reported favorably for consideration by this body.

To provide additional details, I submit a section-by-section analysis for printing in the RECORD:

HONEY PROMOTION AND RESEARCH ACT OF 1969: SECTION-BY-SECTION ANALYSIS

SEC. 1. Short Title, cites act as the Honey Promotion and Research Act of 1969.

SEC. 2. Findings and Declaration of Policy. Declares it in the public interest to establish an orderly procedure for financing, through assessments on honey marketed in the U.S., marketing research and promotion to strengthen the competitive position of honey.

SEC. 3. Authority to Issue an Order. Gives the Secretary of Agriculture authority to issue orders pertaining to the collection of assessments and use of such assessments.

SEC. 4. Notice and Hearing. Directs the Secretary of Agriculture to hold a hearing on a proposed order when it appears it would effectuate the policy of the Act.

SEC. 5. Finding and Issuance of an Order. Directs the Secretary to issue the order, after hearings, if it will effectuate the policy of the Act.

SEC. 6. Regulations. Authorizes the Secretary to make regulations to carry out the Act.

SEC. 7. Required Terms. Defines the composition, selection, powers and duties of the National Honey Promotion and Research Board. The Board is given authority to administer the order, to make rules and regulations effectuating the order, to investigate complaints, and to recommend amendments of the order to the Secretary. The Board will be composed of nine members: six producers and three handlers. The producers shall be named from nominees selected by producers from six districts, determined by the Secretary on the basis of 1966 honey production. Handler representatives shall be at large. The terms of office shall be three years, except that initial membership shall be staggered to allow one third of the Board's membership to change each year. The Board will prepare a budget to cover marketing research, development, advertising, and promotion and present it to the Secretary. The Board will fix the assessment rate not exceeding 15¢ per sixty pound can of honey produced. Prohibits use of funds for influencing governmental policy. The Board will develop advertising or research and development plans for presentation to the Secretary. Authorizes refund of assessments upon request of producer. Requires the Board to keep records and submit report to the Secretary. Authorizes the Secretary to maintain suits for collection of unpaid assessments.

SEC. 8. Permissive Terms and Provisions. Authorizes issuance of an order containing following terms: exemption from assessment on exported honey. Reducing assessment in states where state-run programs duplicate efforts of National Board. Promoting honey on a nationwide basis or in surplus-producing area without reference to specific brand names. Providing for marketing research and development, processing, distribution, or utilization of honey projects.

SEC. 9. Assessments. Directs honey handlers to pay assessments to the Board. The handlers are authorized to collect the assessments from the producers.

SEC. 10. Petition and Review. Authorizes individuals to petition the Secretary for changes in any order. Authorizes Secretary to rule on petition. Gives district courts jurisdiction to review such ruling.

SEC. 11. Enforcement. Gives the district courts jurisdiction to enforce any order or regulation under this Act. Violation of any order subject to fine between $100 and $1,000 upon conviction.

SEC. 12. Investigation and Power to Subpoena. Authorizes Secretary to investigate possible violations of law, to issue subpoenas and compel attendance of witnesses, to invoke aid of courts to carry out this authority.

SEC. 13. Amendments. Applies provisions of this Act on orders to amendments to orders.

SEC. 14. Requirement of Referendum. Requires Secretary to hold a referendum on order among honey producers. Order would become effective only if ⅔rds of producers voting favored it or if a majority of the voters favored it and produced not less than ⅔rds of the honey in the representative period. Proxy voting would be prohibited.

SEC. 15. Suspension and Termination. Authorizes Secretary to terminate or suspend operation of an order or portion thereof which does not effectuate policy of the Act. Authorizes a referendum on request of the Board or 10% of the producers to determine if the order should be terminated. Order would be terminated by majority vote in such referendum if they produced more than 50% of the honey in the representative period.

SEC. 16. Delegation. Authorizes delegation of Secretary's authority to any officer of the Department of Agriculture.

SEC. 17. Definitions. Several definitions, the following two of which are verbatim: "Handler" means any person (except a common or contract carrier of honey owned by other persons) who handles honey, either of his own production or that of another producer or of foreign production, in a manner specified in the order or in rules and regulations issued thereunder.

"Producer" means any person within the marketing area engaged in a proprietary capacity in the production of honey for delivery to a handler or for sale by that person as a handler but excludes beekeeping hobbyists, persons who make only occasional deliveries to handlers, and such other persons as may be excluded by the order or any rules and regulations issued thereunder.

SEC. 18. Modification. Authorizes Secretary to change definitions upon basis of hearing evidence, recommendation of the Board or other information, whenever change would effectuate the Act.

SEC. 19. Separability. Retains validity of remainder of Act if any provision is held invalid.

SEC. 20. Authorization. Provides authority for appropriations.

INVESTMENT TAX CREDIT

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 10 minutes.

Mr. REUSS. Mr. Speaker, this week's issue of Newsweek magazine, March 31, 1969, contains an article by the distinguished economist Paul Samuelson in which he recommends suspension of the 7-percent investment tax credit.

I have been joined by 31 of my colleagues (Mr. MEEDS, of Washington; Mr. REES, of California; Mr. WILLIAM D. FORD, of Michigan; Mr. MOORHEAD, of Pennsylvania; Mr. ADAMS, of Washington; Mr. BINGHAM, of New York; Mr. BROWN, of California; Mr. ZABLOCKI, of Wisconsin; Mr. EDWARDS, of California; Mr. GIBBONS, of Florida; Mr. CONYERS, of Michigan; Mr. LONG, of Maryland; Mr. ST. ONGE, of Connecticut; Mr. FARBSTEIN, of New York; Mr. PODELL, of New York; Mr. BYRNE, of Pennsylvania; Mr. THOMPSON, of New Jersey; Mr. MIKVA, of Illinois; Mr. EILBERG, of Pennsylvania; Mr. YATRON, of Pennsylvania; Mr. ROSENTHAL, of New York; Mr. VIGORITO, of Pennsylvania; Mr. KOCH, of New York; Mr. NEDZI, of Michigan; Mr. DINGELL, of Michigan; Mr. MACDONALD, of Massachusetts; Mr. BLATNIK, of Minnesota; Mr. KARTH, of Minnesota; Mr. ROYBAL, of California; Mr. BRADEMAS, of Indiana; and Mr. MADDEN, of Indiana) in sponsoring H.R. 5250 and identical bills, designed to raise $9 billion annually in additional revenue by closing off 13 tax loopholes. One of the loopholes H.R. 5250 would close is the 7-percent investment tax credit Paul Samuelson discusses.

I commend this column to my colleagues and include it at this point in the RECORD:

INVESTMENT TAX CREDIT

(By Paul A. Samuelson)

Inflation watchers were rocked last week by news from the SEC and Commerce Department that businessmen intend to increase their plant and equipment investments by almost 14 per cent.

The new outlook for excessive investment spending should, in my opinion, cause President Nixon to suspend the 7 per cent investment credit temporarily. Here's why:

1. The economy is still on an inflationary binge. To bring the rate of price increase down from 4 per cent toward a more moderate figure of, say, 3 per cent, some actions are going to be needed. Every weapon counts.

2. Already the Federal Reserve is being called upon to take Draconian measures to fight inflation. This will mean not only painfully higher interest rates; it will also bring in most of the discomforts associated with the money crunch of 1966—uneven rationing of credit between new and old business, growing and stagnant business, small and large business.

3. Experience demonstrates that tight money takes for its principal casually the housing industry. When there is a scramble for more resources than the total resouces available, it is right that housing should share in the restraint. But it is not, in my judgment, good national policy to have housing starts cut by 40 to 50 per cent as happened in 1966. In the 1970s, with their bumper crop of young marrieds, we shall pay in higher rents and zooming residential costs for any serious diminution of home construction in the waning years of the Vietnam war.

4. Admittedly, inflation could be fought by adding onto the present surcharge another 5 or 10 per cent tax. But I see no evidence that this would be politically popular or feasible. Nor is it clear that consumer spending is the prime villain in the present inflationary scenario.

5. Admittedly, inflation could be fought by still further tightening of the Federal Reserve money screw. And the impact of such tightness on the housing industry could be alleviated by special financial subsidies to home construction through the Federal housing agencies, through the U.S. Treasury, or through the Federal Reserve. Since all such measures will add to the nominal public debt, I don't expect that anything but tokenism would, in fact, be politically feasible in this area.

Even if it were possible to cushion the impact of tight money on residential housing, to get the same restriction of aggregate demand from enforced reductions on plant and equipment spending would, I suspect, require very high interest rates. These will cause difficulties for our partners abroad. And they may hang on to plague us in the years to come when the winds may be blowing up deflation rather than inflation.

6. In September of 1966, to alleviate the money crunch and moderate what looked like an excessive fixed investment boom, the Johnson Administration did suspend the 7 per cent investment tax credit. Almost at once relief was felt in the money markets of the country. On the whole (despite the protests of the Treasury, which naturally found it a headache), the operation seems to have been a successful one in accomplishing its purpose—namely, ensuring against an overexuberant fixed investment boom.

So historical experience, as well as the common-sense view that firms will invest less when their returns from doing so are reduced, justifies suspending the tax credit.

What are the possible arguments against suspension of the tax credit?

1. The Nixon Administration might be regarded as a pro-business Administration. Why should it take from business this accustomed source of profit?

2. Perhaps the inflationary danger is being exaggerated. Perhaps it will involve overkill if suspension of the investment tax credit reduces investment severely.

3. Vigorous growth requires as much capital formation as we can get. Adjusting to inflation by reducing investment will reduce our future capacity to produce an enlarged total of real national product.

4. It is a bad thing to use variations in the investment tax credit as a deliberate weapon of stabilization. Why? Because it is plain immoral. Because it involves discretion by government, which is wicked. Because it disturbs business planning.

5. Suspension creates administrative problems for the Treasury.

In economics, every decision involves pros and cons. Judgment is necessary. My advice to Mr. Nixon: suspend the investment tax credit.

RURAL-URBAN IMBALANCE

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Illinois (Mr. SHIPLEY) is recognized for 10 minutes.

Mr. SHIPLEY. Mr. Speaker, some of our Nation's most pressing problems have their roots in the recent massive migration of rural people into our already overcrowded cities. The result is frequently referred to as "rural-urban imbalance," and while to some it may not seem as important as the "urban crisis" nor as immediate as "crime in the streets," it is a significant contributing factor to many of our domestic problems.

Much has been written and said about the problems of rural America, and a number of programs have been suggested and legislation proposed to solve these problems. But while there has been progress in some areas, the overall situation remains unchanged.

Why has there been so little progress? Is there general understanding of the problems of rural America? What kind of programs will do the job that needs to be done?

The National Rural Electric Co-op Association, which is the service organization of the Nation's nearly 1,000 rural electric cooperatives, sought the answers to these complex questions in a survey conducted for NRECA by an independent research organization. The survey covered a representative sample of the adult American public, with interviews conducted in major central cities, suburban areas, small towns, and rural areas. The results shed considerable light on the questions I have just raised.

For instance, the survey finds that on the whole, Americans feel there are few if any problems within rural America. In fact, the survey states that the American public—

> Looks upon rural America in very favorable terms, assigning to rural life and rural people most of the classic virtues, and few, if any, faults. These feelings extend directly to the mistaken impression that rural America faces few problems.

According to the survey findings, American citizenry believes that people who live in rural areas are much friendlier, healthier, and more honest and hard working than city dwellers. It is interesting to note that most people believe poverty and poor housing to be more prevalent in the big city than in rural areas, and that rural educational facilities are better than urban ones.

The survey report states:

> The average American does not believe rural problems to be as important as others that face the nation. He ranks them lowest in priority among seven major issues and tends to set the problems of the cities at a significantly higher level. Residents in the rural areas themselves tend to view rural problems as secondary in the national context and consider them only slightly more critical than those of the cities.

In probing for publicly acceptable solutions for rural-urban imbalance and for the problems confronting both rural and urban areas, the survey found that the average citizen believes, first, in the concept of self-help. Only slightly below this in acceptability are solutions that, although sponsored by either government or industry, involve the citizenry and become self-help projects.

The solution to rural-urban imbalance and its attendant problems is twofold. First of all, since the general public does not understand the relationship between rural and urban problems, we must exert every effort to tell that story in vivid and meaningful terms. Second, in developing programs to solve the problems of rural America, we must begin with the idea that people would rather help themselves than be the recipients of outside help. We must concentrate on helping to build a rural leadership capable of developing an economically sound and productive rural America—the kind of rural America which many city dwellers already think exists outside the city limits.

Most rural areas lack the readymade organizations of urban areas through which developmental work can be carried out. However, many of them have rural electric cooperatives, which are self-help organizations capable of providing the kind of leadership required for self-help rural development programs. Since its beginning in the depression-ridden 1930's, the rural electric program has been one of the most successful self-help programs ever undertaken in this Nation. During its 34 years, this Federal and local self-help partnership has brought not only lights and power to the farm, but economic and social benefits to all of rural America.

The NRECA survey points out that while the average American does not know very much about rural electric cooperatives, he does have sympathy for the concept and for the rural electric program.

The survey report observes:

> There is a general feeling that the rural electric cooperatives have been quite successful in electrifying rural areas and apparently consumers believe that there is little reason to change a successful formula.

Specifically, the average American believes that the Government-cooperative relationship is a good one. Seventy-six percent of those polled indicated that the Federal Government should continue loan money at a 2-percent interest rate to the rural electric systems. Seventy-three percent felt that the rural electric systems should continue, and only 13 percent believed they should be eventually taken over by the private power companies.

I would say from this that the rural electric cooperatives enjoy a high degree of national popularity as well as local trust.

In conclusion, I want to reemphasize that we must look to rural America as a means of alleviating some of our urban ills. We must establish a national awareness of the fact that while rural America has the potential of being the ideal place to live and work, which most people think it to be, the present situation there is far from ideal. We must carefully plan and implement self-help rural community development programs through which rural people can help themselves to achieve a better and more abundant life. Once the quality of life and the opportunities offered by rural America have been upgraded, we can look to a reversal of the current outmigration from rural areas.

I congratulate NRECA for sponsoring this enlightening survey on the Nation's view of rural America and rural electrification, and I salute the members, directors, and employees of our rural elec-

tric cooperatives for their continuing effort to improve rural America for the benefit of all Americans.

BROADER ACCESS TO HIGHER EDUCATION ACT OF 1969

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, it is time America faced up to the realization that its future well-being depends upon making available to all its citizens a full range of educational opportunity. Many today in our country are unable to help themselves because financial requirements close doors of educational opportunity to them. Tuition costs are appallingly high and constantly increasing. Steadily it becomes obvious that the wealthy and middle-class child gets the best educational opportunity. As the poor are left further behind, they remain uneducated and untrained, taking from society all their lives, in the form of unemployment and welfare payments, which give them a subsistence level of existence.

Today I am introducing a measure aimed at providing a chance for higher education to poorer youngsters in our society. I do this on the premise that a chance for such education in our kind of society is not a privilege, but a right.

My bill amends the educational opportunity grants program of title IV of the Higher Education Act of 1965 by expanding its grant provisions in section 402. It doubles the amount of grant money available to the student from $1,000 to $2,000 yearly, removing the stipulation from the present program that the student may receive only half the amount as a grant and the remainder as a repayable loan. Under my measure the student may receive the full amount as a grant.

Many of these youngsters avoid the challenge of college because of fear of being unable to repay the loan. We must realize that coming from underprivileged backgrounds, they have little formal understanding of the college world. A little generosity on our part would pay large dividends to our country. This would be provided for under this bill.

The bill is designed to cover tuition, student fees, and book costs up to $2,000 a year. It also cuts in half the minimum amount which may be granted from $200 to $100 a year.

It is an attempt to institutionalize the American principle of equality of opportunity for all. In these times, it is particularly apropo that we extend a tangible sign of our desire to help these young people help themselves.

ANOTHER TECHNICAL MILITARY DISASTER, THE ARMY'S MBT–70 "DREAM TANK"

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, in recent weeks I have seen fit to call into question the ABM, TFX–F–111 and other wasteful extravagances which now pass under the humorous title of new military defense systems. This has brought forth indignation and patriotic protestations from some quarters. It is precisely my love of country and capacity for indignation that requires me to call into question another massive military expenditure which has expended so much and produced so little. I have reference to the Army's proposed new main battle tank—the MBT–70 "Dream Tank."

We are now informed by press reports and congressional hearings that the Government has spent between $1 and $2 billion over the past 8 years on this project without passing beyond the prototype stage. These are figures emanating from the General Accounting Office, which has been monitoring the project. The Comptroller General gives us a $1.3 billion figure.

Mr. STRATTON, of New York, has rendered a public service to the Nation by deriding the Army's desperate attempts to hide its ineptness through calling for closed hearings and refusing to testify in public.

The armored vehicle in question was supposed to maintain a high speed while being able to fire its main armament on the move. Conditioned against fallout, it was to be able to fire missiles and conventional shells with disposable casings through the same tube. Unit cost, exclusive of research and development, was to be between $500,000 and $1 million. In tandem with West Germany, we would develop this sophisticated answer to Russian tank strength.

Obviously, German and American standards did not mesh. A powerful enough engine has defied efforts at development. The Germans dropped out, seeing how futile it was to continue. We are left holding the bag, which the Army refuses to drop. In fact, even if we had this tank in being, ready for combat, it would be questionable if it could perform effectively against what the Russians already possess in Europe on a combat-ready basis.

Presently we possess about a dozen pilot models of the MBT–70. Doubts are strong as to whether it will ever be brought to fruition as a weapons system. Now we are told that disposable ammunition casings are not disposable, and that, despite all these difficulties, the Army has continued procurement of this system.

Right now the Army is still building Sheridan training simulators that do not work. Each would cost $500 to be made workable. So far, $1 million would have to be spent on modifications, but they are still rolling off the assembly line.

The Army itself admitted to Congressman STRATTON that it put the tank into production knowing it had basic flaws, a violation of its own regulations on the subject.

So we see the Army throwing away hundreds of millions on a weapons system it knows is faulty in order to prevent loss of appropriations. This is why our cities are collapsing before our eyes and the taxpayer groans under a staggering weight.

What excuses shall we be given this time? Or shall we be called unpatriotic because we dare ask what in Heaven's name the Pentagon and America's defense industry are doing with these awesome sums of money.

I passionately believe in an adequate defense for our Nation. Yet if a mortal challenge is ever delivered, I doubt if our defense would be able to meet it. I do not begrudge profits to any contractor—even massive profit. But for the sake of all that is holy, can we not obtain weapons systems from these corporations that will function? They seem to be incapable of performance, yet the Soviets seem to quickly produce first-rate weapons in many fields.

It is becoming damningly obvious that a few major defense contractors are increasingly milking America for skyrocketing sums on the excuse that they can and will produce effective military hardware in reasonable spans of time. Never was so much taken from so many by so few, and so little given in return. Meanwhile, our social problems grow from sores to cancers, while this mad dance of death mounts to a wild crescendo of spending, profiteering, excuses, and closed hearings.

Mr. Speaker, this is not to be suffered any longer in silence. The American public not only has a right to be defended, it has a right to know what is being done with its money. People pay taxes in return for security and protection. That is the first duty of government. America's citizenry also possesses the right to demand prosecution and punishment of those who take vast sums and return us nothing. If the small thief is sent off to reform school or prison, what is to be done in the case of the major malfeasor?

THE SUPREME COURT DECISIONS SHOW DISREGARD FOR PUBLIC INTEREST

(Mr. HUNT asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HUNT. Mr. Speaker, that Supreme Court decisions are hampering law enforcement and the administration of criminal justice is hardly a debatable issue any longer. The more pertinent question these days is how far the Court will go to protect individual rights, convicted criminals no less, as against the collective rights of society and, to be sure, the ultimate right of any society, that of its own self-preservation.

One of the basic responsibilities of government is to protect the lives and property of those for whom its existence depends. Laws are enacted as binding rules of social conduct to insure the adequacy of this protection. But no law will secure to every person the unalienable rights to "life, liberty, and the pursuit of happiness" at the hands of the elite tribunal of nine men, the majority of whom appear to be bent on achieving the utopian way of life wherein laws would not be necessary.

No one denies or doubts that a criminal, too, has rights protected by the Constitution, but it is high time the Supreme Court deals in realities, viewing muck and mire of crime in the streets and realizing that the victim of crime also has rights, significantly, his

unalienable rights. No law can revive the life of a victim or erase the agonizing experience of a vicious assault against his life or property. But laws can bring to justice those who defiantly violate the laws of society, providing the courts identify the realities rather than becoming preoccupied with the abstractions of impractical idealism. There can be no more convincing evidence than the phenomenal increase in the incidence of crime which strikes at the very existence of our society.

Decisions of the Court will undoubtedly stand so long as the public and the representatives of the people have respect for its logic and reasoning. I find cause to believe, however, that such respect is diminishing, and inevitably, the Court must concede to a persistent public will lest it risk the dilution of its powers. One can only hope that day is near.

A very pertinent editorial appeared in the March 21, 1969, Wall Street Journal in which are reiterated the remarks of Chief Justice Weintraub of the New Jersey Supreme Court concerning two significant anomalies of recent Supreme Court procedural decisions. The first is the impractically ideal and abstract reasoning of the Court:

If the judiciary exerts its undoubted power to create new Constitutional doctrines, it must first learn what authority the other departments (executive and legislative) must have. The need must be found, not in abstract contemplation, but in the tumult of the streets. Clichés and slogans will not do.

The second concerns the suppression of truth in the courtroom:

It is an unhappy fact that the capacity of the judicial process to deal with the demands of law enforcement is doubted by a substantial body of responsible men. The reasons are several. One is the lengthening line of decisions which suppress the truth or block access to it.

According to the editorial:

In the case before the New Jersey court . . . no one contested the truth of the evidence the defense sought to suppress. The argument was that since the evidence had been acquired in a manner the Supreme Court has since disapproved, it should not be admitted to the courtroom. Since the police had broken the rules, the criminal should go free.

The full text of the editorial follows:

[From the Wall Street Journal, Mar. 21, 1969]

A Regard for Truth

An impressive number of prominent jurists have joined the complaints about the recent string of Supreme Court decisions on criminal procedure, which have made life easier for defendants and tougher for police and prosecutors. Some especially penetrating comments were offered recently by Chief Justice Weintraub of the New Jersey Supreme Court.

Justice Weintraub's court got its back up about a Supreme Court case declaring that requiring gamblers to buy Federal gambling stamps infringes on the Fifth Amendment protection against self-incrimination. In a 6–0 decision, the New Jersey court refused to suppress evidence arising from the law the High Court had struck down. There are troublesome aspects to such acts of judicial defiance, but Justice Weintraub's opinion certainly put a finger on two of the biggest anomalies in the recent procedural decisions.

The first of these is the ivory-tower reasoning behind most of the Supreme Court decisions. Remarking that the first duty of all branches of government is to insure the peace, Justice Weintraub added, "If the judiciary exerts its undoubted power to create new Constitutional doctrines, it must first learn what authority the other departments must have. The need must be found, not in abstract contemplation, but in the tumult of the streets. Cliches and slogans will not do."

It's bad enough that the High Court's abstract decisions may have very concrete effects in hampering law enforcement. But the decisions' contact with reality is equally tenuous with regard to the need for the reforms they proclaim. The cases before the Court have seldom if ever concerned innocent people unjustly convicted; they have concerned criminals whose guilt was mortally certain. The Court has been changing the rules not to correct demonstrated injustice, but in pursuit of some other-worldly ideal.

The second and more central anomaly is that the changes in the rules have hampered rather than advanced the search for truth in the courtroom. As Justice Weintraub puts it, "It is an unhappy fact that the capacity of the judicial process to deal with the demands of law enforcement is doubted by a substantial body of responsible men. The reasons are several. One is the lengthening line of decisions which suppress the truth or block access to it."

In the case before the New Jersey court, for example, no one contested the truth of the evidence the defense sought to suppress. The argument was that since the evidence had been acquired in a manner the Supreme Court has since disapproved, it should not be admitted to the courtroom. Since the police had broken the rules, the criminal should go free.

This is of course a standard argument in U.S. appellate courts. Reversing the criminal's conviction, or sending the case back for a new trial with access to vital evidence barred, is how the courts discipline the police. Presumably this does control police behavior. But its unhappy side effect is that so often the highly rarified rules of the game, not the objective facts of guilt or innocence, determine the outcome in the courtroom.

Now, some critics of the Supreme Court's recent procedural decisions are talking about very sweeping remedies. One prominent judge has proposed a lengthy Constitutional Amendment detailing what protection from self incrimination does and does not encompass. If remedies of this scope are being discussed, a far more elegant and penetrating solution might be an Amendment guaranteeing that courts may consider whatever relevant evidence is available.

This suggestion, we recognize, will leave many lawyers aghast. But while it is foreign to their traditions, it remains highly commended by common sense. Freeing guilty criminals is scarcely the only way to discipline transgressing policemen; they can, for one alternative, be treated like other lawbreakers. A complete end to suppression of evidence might not prove a practical or even desirable reform, of course, but serious discussion of it would starkly illustrate the problems bothering Justice Weintraub and a good many others.

To wit, the new proliferation of abstract rules is making the criminal process an increasingly stylized and therefore increasingly empty ritual. Somehow or other, it needs to be infused with a sound regard for simple truth.

Another timely report on the suppression of evidence secured through electronic eavesdropping appeared in the Evening Star on March 24 under the byline of Lyle Denniston. Contrary to existing law, which deliberately took care to guard the rights of individuals to privacy to the maximum extent feasible, while still insuring the public interest, the Supreme Court ruled in effect "that the Government will have to turn over to defense lawyers and criminal suspects all logs of eavesdropping done—without a judge's permission—whether the snooping was done for security purposes or for any other reason." Despite a rare plea by the Justice Department to have the Court review its decision, considering that it would immeasurably impair prosecution in certain criminal cases, the Court refused in a brief six words. It takes no stretch of the imagination to feel this decision will further weigh the balance of justice in favor of the criminal, suspected or convicted.

As these developments, reported in the article, the full text following, and editorialized in the preceding editorial, are most relevant to our legislative responsibilities and prerogatives, I commend them to your close attention:

[From the Washington (D.C.) Evening Star, Mar. 24, 1969]

(By Lyle Denniston)

The Supreme Court today flatly rejected the Justice Department's plea for unrestricted permission to use secret listening devices in "foreign intelligence spying."

With no dissent and with no explanation, the justices refused to reconsider their controversial March 10 ruling that any electronic snooping that was done without a judge's permission, in any kind of case, is forbidden by the Constitution's Fourth Amendment.

Last Wednesday, Solicitor General Erwin N. Griswold urged an exemption from the amendment when government agents use wiretaps or hidden microphones to gather foreign intelligence.

Griswold had argued that eavesdropping for that sole purpose was necessary "in the interest of self-preservation" for the nation.

The effect of today's six-word order denying reconsideration is that the government will have to turn over to defense lawyers and criminal suspects all logs of eavesdropping done illegally, whether the snooping was done for security purposes or for any other reason.

The Justice Department will be left with the option of giving up its criminal cases in which illegal bugging has been done, rather than hand over its secret files of bugging transcripts.

The high court, in a separate ruling today, may have eased somewhat the impact of its March 10 decision on past federal cases.

By a vote of 5–3, the court said that a key 1967 decision broadening the Fourth Amendment coverage of electronic eavesdropping will not apply to any bugging done before Dec. 18, 1967—the date of the previous decision.

This action will mean that some government eavesdropping that would be considered illegal is not unlawful because pre-1967 decision approved of it.

Thus, a suspect and his defense lawyer seeking access to government eavesdropping transcripts will not be able, at least in some cases, to claim the monitoring was illegal. Unless they can make that claim, they have no right under the March 10 decision to look at government bugging transcripts.

RECONSIDERATION ASKED

Whatever gain the Justice Department may have made because the 1967 decision was not applied retroactively is not likely to make up for its disappointment at the court's refusal to reconsider its March 10 decision.

That ruling seriously upset key department officials and resulted in the rare request by the government for the court to take another look at the decision.

Department officials were particularly disturbed that disclosure of some tapes of illegal eavesdropping would betray government secrets about the location of foreign intelligence bugs, including bugs and wiretaps of foreign embassy telephones.

The government also was concerned that some persons under suspicion for purely domestic crimes would "stumble into" foreign intelligence bugs and be overheard.

Because the government would not be willing to reveal the tapes of that overhearing the suspect would have gained "immunity from prosecution for all crimes, present or future," Griswold contended.

He asked the justices to modify their decision so that the Fourth Amendment did not apply to any use of electronic devices that had been expressly approved by the U.S. attorney general for foreign intelligence operations.

By refusing to reconsider, the court declined to make such an exception—at least for the time being. At some point in the future, the justices could take up that issue.

In the meantime, however, the March 10 decision will stand without the constitutional immunity which the government had insisted was necessary.

Following up the March 10 ruling, the high court today ordered federal judges in Chattanooga, Tenn., and Chicago to look again at two federal criminal convictions of former Teamster Union president James R. Hoffa.

The Chattanooga conviction in 1964 of jury-tampering sent Hoffa to federal prison for an eight-year term. The Chicago conviction, also in 1964, could increase his prison stay five more years.

Demonstrating further that the new decision could have a widespread impact on federal cases, the justices also returned nearly two dozen other cases to be re-examined under the March 10 decision.

Among these others was the draft-evasion conviction of former boxing champion Cassious Clay. The Justice Department has admitted that one of the five instances in which it electronically eavesdropped on Clay's conversations came when he "stumbled into" a foreign intelligence probe.

Clay is free on bail pending outcome of his appeal.

The court action in the Hoffa cases gave his lawyers at least a temporary victory. For two years, they have been attempting to get reconsideration of the jury-tampering conviction on the grounds that federal agents used illegal eavesdropping. Before today, the high court had turned aside such pleas three times.

Two years ago, the justices did require the lower court to re-examine the Chicago fraud case, because of a government admission of eavesdropping but the scope of that review was limited, since it came before the new decision widening defense lawyers' access to government bugging transcripts.

Federal judges re-examining criminal cases under the March 10 decision must go through two steps:

First, they must decide if the eavesdropping was done illegally—that is, without advance permission from a court to invade a private conversation.

Second, if the eavesdropping was illegal, the defense lawyers and their clients are to be shown all transcripts of conversations involving the defendant himself or conversations that took place on his "premises" but involving other persons.

The Supreme Court's decision today on the issue of retroactive use of the 1967 decision will figure in the first of these two steps.

Under the 1967 ruling, the justices said for the first time that it was illegal to use hidden devices to listen in on private conversation, no matter where the conversation took place, if the monitoring had not been approved in advance by a judge.

Prior to that ruling, eavesdropping was illegal only if the hidden device had intruded physically into a private place. The 1967 decision said that privacy did not belong to physical locations, but to persons.

NEW PROTECTION

This decision gave new constitutional protection to private conversations even in such places as public telephone booths.

But the court said today that it would not apply that protection to eavesdropping prior to Dec. 18, 1967. Therefore, any bugging done before that day that did not physically intrude into a private place is not considered illegal, even if it was done without the judge's approval.

The court expressly refused to apply the 1967 ruling to a criminal case in which a microphone had been placed in a hotel but did not actually penetrate the room in which the overheard conversation took place. The case involved a group of five people convicted of taking part in a $100 million heroin deal.

In a second case, the court refused to apply the 1967 decision to a New York bar owner who was overheard on a police wiretap of a public telephone. Evidence gathered by the wiretap helped police convict the man of an extortion conspiracy.

OVERSEAS MILITARY CREDIT UNIONS STILL BEST METHOD OF FIGHTING LOAN SHARKS

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, from time to time I have placed in the RECORD the reports of the progress being made by U.S. military credit unions operating in Germany.

These credit unions were brought about because of investigations conducted by the Domestic Finance Subcommittee which revealed that servicemen stationed overseas were paying interest rates as high as 60 and 70 percent to obtain loans.

A majority of the credit unions in Germany were opened about 15 months ago. Last November, a credit union was opened at Lakenheath Air Base in England and in December, a credit union was opened at Clark Air Force Base in the Philippines.

On the first of April, a military credit union will open in Seoul, Korea. Arrangements have also been made to provide a specialized type of credit union service in Rota, Spain, and in the near future, credit union facilities will be operating in Naples and Aviano, Italy.

At the end of February, the eight overseas credit unions had signed up more than 43,000 members, had received share deposits in the amount of nearly $5 million and made loans amounting to nearly $26 million. The reason the loans are higher than the shares is that the credit unions are suboffices of existing U.S. credit unions and the excess funds of the stateside credit unions are being put to use by the overseas facilities.

It should be noted that the credit unions, in addition to saving servicemen from $200 to $500 on the financing costs of a new automobile, are also helping to fight our balance-of-payments problem since the servicemen borrow money that is returned to the United States as it is repaid rather than borrowing from a foreign finance company. This availability of credit also encourages servicemen to purchase large ticket items at the military exchange facilities rather than buying such items on the economy. Formerly, these items had to be purchased on the economy if they were to be financed.

The following is a letter from Brig. Gen. Evert S. Thomas, Jr., retired, executive secretary of the Defense Credit Union Council reporting the activities of the eight credit unions now in operation. It should be noted that a vast majority of the loans are made to enlisted men, particularly those at the bottom of the pay scale. These were the servicemen who were formerly the No. 1 victims of the loan sharks. Before any serviceman receives a loan from one of the credit unions, he is fully counseled about the wise use of credit and the loan is tailored to his income.

Although it is still too early to obtain any extremely accurate loss experience on these loans, preliminary indications show that writeoffs are extremely low and in many cases are far below the average of all credit unions.

DEFENSE CREDIT UNION COUNCIL,
Washington, D.C., March 24, 1969.

Hon. WRIGHT PATMAN,
Chairman, Committee on Banking and Currency, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: The following progress report concerning the operations of credit union suboffices in Germany, England, and the Philippine Islands is submitted for your information.

Andrews Federal Credit Union began operations at Wiesbaden on 11 March 1968. It has since opened a sub-office at Frankfurt. As of 28 February these sub-offices had acquired 8,897 members, made loans in the amount of $8,051,132.62, and had received share deposits in the total amount of $2,599,886.91. During the month of February, 761 loans were made to military personnel. These loans were distributed by pay grades as follows:

	No. of loans
E-2	4
E-3	70
E-4	175
E-5	198
E-6	136
E-7	47
E-8	10
E-9	5
W-1	2
W-2	7
O-1	19
O-2	31
O-3	34
O-4	12
O-5	11

Fort Belvoir Federal Credit Union began operations at Wurzburg on 1 February 1968. As of 28 February this sub-office had 2,614 members, made loans in the amount of $1,561,878.27, and received share deposits in the total amount of $135,303.71. During the month of February, 284 loans were made to military personnel. These loans were distributed by pay grades as follows:

	No. of loans
E-1	3
E-2	9
E-3	43
E-4	76
E-5	82
E-6	41
E-7	17
E-8	2
W-O	3
O-1	1
O-2	7

Pease AFB Federal Credit Union began operations at Ramstein on 15 January 1968. It has since opened a sub-office at Baumholder. As of 28 February these sub-offices had acquired 11,691 members, made loans in the total amount of $5,725,728.59, and received share deposits in the amount of $561,331.68. During the month of February these sub-offices made 694 loans to military personnel. These loans were distributed by pay grade as follows:

	No. of loans
E-2	12
E-3	95
E-4	214
E-5	178
E-6	115
E-7	28
E-8	10
E-9	4
O-1	7
O-2	13
O-3	13
O-4	2
O-5	3

Lackland AFB Federal Credit Union began operations in Berlin on 26 December 1967. As of 28 February this sub-office had acquired 2,021 members, made loans in the total amount of $1,606,672.46, and received share deposits in the amount of $326,114.61. During the month of February this sub-office made 113 loans to military personnel distributed by pay grades as follows:

	No. of loans
E-3	10
E-4	31
E-5	32
E-6	23
E-7	4
E-8	1
W-0	1
O-1	5
O-2	2
O-3	3
O-4	1

Redstone Federal Credit Union began operations in the Mannheim-Stuttgart area on 15 February 1968. As of 28 February this sub-office had acquired 8,655 members, made loans in the total amount of $5,528,826.67, and received share deposits in the amount of $371,827.11. During the month of February this sub-office made 1,107 loans to military personnel and these loans were distributed by pay grades as follows:

	No. of loans
E-1	1
E-2	9
E-3	64
E-4	268
E-5	341
E-6	240

O-6	1

Finance Center Federal Credit Union began operations at Furth on 15 February 1968. As of 28 February this sub-office had acquired 4,191 members, made loans in the amount of $1,552,635.02, and had received share deposits in the amount of $417,058.65. During the month of February this sub-office made 256 loans to military personnel and these loans were distributed by pay grade as follows:

	No. of loans
E-2	2
E-3	23
E-4	69
E-5	69
E-6	53
E-7	13
WO-1	1
WO-2	3
O-1	8
O-2	8
O-3	7

Keesler AFB Federal Credit Union began operations at Lakenheath, England on 15 November 1968. As of 28 February this credit union had acquired 1,616 members, made loans in the amount of $627,933.44, and received share deposits in the amount of $167,114.73. During the month of February this sub-office made 230 loans to military personnel and these loans were distributed by pay grade as follows:

	No. of loans
E-2	2
E-3	29
E-4	94
E-5	57
E-6	21
E-7	7

O-2	12
O-3	24
O-4	5
O-5	3
O-6	1

As of 28 February the sub-offices had signed up 43,175 members, received share deposits in the amount of $4,986,301.14, and made loans in the amount of $25,987,819.69.

Respectfully,

EVERT S. THOMAS, Jr.,
Brigadier General, U.S.A. (retired),
Executive Secretary.

THE EXPERTS DISCOVER THAT THE FEDERAL RESERVE IS NOT INFALLIBLE

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, the Nation is slowly coming to realize that our Federal Reserve System is an unworkable hodge podge of creaking machinery that is doing tremendous damage to the entire economy.

We now have major commentators from all shades of political opinion facing the fact that the Federal Reserve and its illustrious chairman, William McChesney Martin, are not infallible.

It has taken many crises and near economic disasters to bring this realization home. It is coming none too early. The American public has long recognized the evils and the misguided policies of this ancient institution, but these facts have only recently filtered up to the leaders and the news columnists.

Mr. Speaker, there is unquestionably great disagreement about what kind of changes should be made at the Federal Reserve, but there seems to be a growing unanimity of opinion that there must be change. Fewer and fewer economists and writers are willing to suggest any longer that the Federal Reserve and William McChesney Martin have all the answers. The fallacy of allowing a monetary system to operate on its own without coordination with general economic policies is sinking home in high places. I hope that we do not have to face a general economic collapse before this administration and the Congress do something about the Federal Reserve System.

While I do not agree with all of the statements, I do urge my colleagues to read the Evans and Novak column in today's Washington Post, March 27. The Evans and Novak column outlines some of the recent criticisms which are being voiced about the collapse of our monetary policymaking.

Mr. Speaker, I place a copy of this column in the RECORD:

OVERZEALOUS FIGHT ON INFLATION BY FED FEARED

(By Rowland Evans and Robert Novak)

Even though the fires of inflation still roar with no sign they will diminish, economic policymakers in the Nixon Administration are afraid that the Federal Reserve Board will go too far in battling inflation and do grave damage to the economy.

Specifically, they fear that the brakes put on the money supply by the Fed—the Nation's central bank—might late this year trigger a business decline and rising unemployment that President Nixon feels would doom his Administration.

Nobody in the Administration is even faintly considering anything so disruptive as an open bid to bring the Federal Reserve Board under control of the White House and Treasury. Rather, they are just hoping for better coordination of future Fed moves with Administration economic policy.

The irony is that the harsh words are coming from a Republican Administration. Economic officials in the Democratic Administrations of the past eight years were circumspect in dealing with the Fed and its much respected chairman, William McChesney Martin—sacred cows of the financial establishment. The Nixon officials, supposedly the friends of the Fed, are less wary of sniping at the Fed (at least in private).

Such sniping has been growing outside Government, particularly in commercial banking circles, on grounds that the Fed has zigged when it should have zagged in recent years. A favorite target is the Fed's supertight money policy of 1966, which produced a credit crunch of nearly calamitous proportions.

Furthermore, some Administration officials feel Chairman Martin overstepped himself into politics by loudly championing President Johnson's 10 per cent surtax and then made an economic blooper by depending unduly on that tax increase to curb inflation. According to this analysis, Martin was so confident that the surtax would apply the economic brakes that the Fed let the money supply grow too rapidly last fall—inadvertently feeding inflation.

Other Nixon officials, particularly at the Treasury, share the Johnson Administration's high confidence in Martin personally and work with him harmoniously. But confidence in the other six members of the Reserve Board is considerably lower in official Washington today than it was before Jan. 20. Some Nixon policymakers view the Fed as a Tower of Babel, its members spreading a bewildering variety of political gospel about the Nation in innumerable speeches.

Thus, in February, top Administration officials read with great interest an issue of the high-priced economic report written by consultant Carter H. Golembe, a former official of the American Bankers Association, severely criticizing the operations and policies of the Federal Reserve Board.

Even if these officials did not fully concur in the scope of Golembe's criticism, they agreed with the general tenor of the memorandum that the central banking system devised in Woodrow Wilson's day is overdue for revamping. For example, one Nixon policymaker passed the Golembe report to another with this memo attached to it: "Extreme, but interesting."

Since the Golembe report, official concern about the Fed has risen. Nixon officials were basically in sympathy with a recent lead editorial of the New York Times suggesting that the Fed's crackdown on any growth in the money supply since last December has lasted too long and should now be replaced by reinforcing money reserves of the Nation's commercial banks.

The problem of the Nixon men is manifest. Attempting to kill the inflationary psychology and promote anti-inflation by every word and deed, they can scarcely take the Fed to task—in public—for adjusting the money screws too tight.

In fact, however, the Nixon economists believe that neither higher taxes nor a tight money policy can stop inflation. Only greatly reduced Federal spending is the answer, and that may prove impossible, while the Vietnam war still rages. The worry on Pennsylvania Avenue now is whether the independent Federal Reserve Board has the subtlety and expertise to weather this most difficult economic period.

Mr. Speaker, we need broad structural reforms of the Federal Reserve System. It is something that cannot be delayed. In January, I introduced H.R. 11 which is designed to bring about these reforms and to assure the fullest coordination of monetary policy with economic policy.

Mr. Speaker, H.R. 11 would:

First. Coordinate our economic policy. This would require that the Federal Reserve Board consult and work with other agencies of the Government as provided for in the Full Employment Act of 1946. In other words, the Federal Reserve would no longer be allowed to ride off in one direction while the rest of the country was moving in the opposite direction. This is basic to providing a stable economy without the disruptive ups and downs created by a "go it alone" Federal Reserve policy.

Two. Shorten the terms of the members of the Federal Reserve Board from 14 years to 5 years. This would enable the President to appoint a majority during his first term of office and would thereby make the Board more responsive to the will of the people. At the present time, the 14-year terms are staggered in such a manner as to prevent the President from appointing a majority until his very last year in office. This prevents a President from ever effectively controlling the Board at any time.

Third. Enable the President to appoint a Chairman of his own choosing. H.R. 11 would provide that the term of the Chairman be coterminous with that of the President of the United States. It would also allow the President to appoint any qualified person as Chairman. At present, the President is required to pick the Chairman from among the existing members of the Federal Reserve Board, thus narrowing his choice drastically.

Fourth. Require that the Federal Reserve seek appropriations from Congress. At the present time, the Federal Reserve does not come to Congress for appropriations. This prevents the Congress from exercising any kind of meaningful annual review of the activities of the Federal Reserve, or from checking any of its expenditures. The appropriations processes are essential to our democratic system and, in the past, have prevented bureaucrats and Federal agencies from ignoring the public interest.

Fifth. Require the Federal Reserve to submit to independent audits. The Federal Reserve's books are not audited. The General Accounting Office, which inspects the records of other Government agencies, is not allowed to look at any of the Federal Reserve's activities. As a result, there is no real knowledge of what the Federal Reserve does with all of its money.

Sixth. Abolish the Federal Open Market Committee and turn its functions over solely to the Federal Reserve Board.

Mr. Speaker, these are some of the basic highlights of H.R. 11. Overall, the bill is designed to bring the Federal Reserve System in line with the principles of our democratic government. This means designing the Federal Reserve System in such a manner that it will respond to the desires and the needs of the people and not just to the wishes of the bankers. This is not a revolutionary bill by any means. It simply makes the Federal Reserve conform to the rules and operating procedures followed by other Government agencies.

NATION MAGAZINE DENOUNCES UNIFORM CONSUMER CREDIT CODE

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, in recent weeks, there has been much confusion—some of it generated in the press—about the so-called Uniform Consumer Credit Code which is being pushed in 48 of the 50 State legislatures this year.

Therefore, I am happy to see that at least one national publication, the Nation magazine, has clearly laid out the facts in an editorial in its issue dated March 31.

The Nation magazine gives some excellent advice when it says:

It would be much wiser for all States now covered by their own consumer credit laws to reject this package that has only one easily detectable virtue—uniformity, if indeed that is a virtue.

Mr. Speaker, the Nation magazine is to be commended for so forthrightly setting out the issues in this very important controversy. Mr. Speaker, I place in the RECORD a copy of this excellent editorial:

REVOLVING CREDIT

When Congress passed the Truth in Lending Act last year, it quieted the States' rights advocates by including a provision that would exempt from federal jurisdiction any state that passed its own law offering the consumer as much protection as the federal statute. Now in a majority of states a bill called the Uniform Consumer Credit Code is being pushed. Some of its consumer protection features are pust as good as the federal law.

But buried among these positive features one finds that the proposed Code would permit 36 per cent interest on revolving bank credit-card sales and 24 per cent interest on regular department store revolving credit sales. While that is high, it does not violate the exemption requirements, because the Truth in Lending Act leaves interest rates to the states. The federal law requires only that the charges be spelled out so that people can more clearly see when and how they are being gypped.

The goal of the lobbyists for this Code sounds very plausible—equal charges throughout the land. But in fact it would be regressive to make all states adjust to this Code. Its provisions might actually improve debtors' lives in some of the more backward states, where 36 per cent and 24 per cent would sound like progress, but the Code would raise interest rates on loans in California, Illinois, New York, New Jersey, Massachusetts, Pennsylvania and a good many other states. In fact, in the states where revolving credit is regulated—which is about half the states—not one permits an interest rate as high as the Uniform Code's proposed 24 per cent.

In the first round of legislative votes, the Code has been defeated four times, but three of these losses were in thinly populated states—Montana, Wyoming, New Mexico—and the other state legislature. Indiana's, did not permanently turn it down but only put off the decision for two years. So the bulk of the arguing is still to be done, and it will come in the heavily populated states where lies the big pay-off in the $100 billion consumer credit business.

The best chance the consumer has for seeing the Code turned down is the infighting now going on between the bankers and the loan companies.

Wright Patman, chairman of the House Banking Committee, has traced $297,000 of the money (there may be more he hasn't found) that went into the drafting-lobbying campaign behind the Code. At least $75,000 of that, he says, came from the bankers. (That's why the Code gives them 36 per cent interest on purchases made with bank credit cards, while department stores get 12 per cent less for their own credit-card sales.) But when a "free entry provision" was written into the Code to allow loan companies to muscle into some of the dealings previously reserved solely for the banks, the bankers reversed themselves and opposed the Code. At least on that point. In two states where the "free entry" provision was knocked out by the legislatures, the bankers reversed themselves again and supported the Code.

Since it is a little difficult to take sides with

either the banks or the loan companies, and since, as Judge George Brunn of Berkeley has said, "this is one of the most technical and difficult to understand pieces of legislation I have ever seen, difficult even for lawyers, let alone laymen," it would be much wiser for all states now covered by their own consumer credit laws to reject this package that has only one easily detectable virtue—uniformity, if indeed that is a virtue.

INTRODUCTION OF LEGISLATION AMENDING THE ATOMIC ENERGY ACT OF 1954

(Mr. HOLIFIELD asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HOLIFIELD. Mr. Speaker, early in this session of Congress the Atomic Energy Commission submitted to the Congress a number of proposed bills which had been cleared by the outgoing administration in its final weeks in office. Neither Senator PASTORE, vice chairman of the Joint Committee on Atomic Energy, nor I, as chairman of the committee, introduced these measures at the time of their submission because the new administration had not had the opportunity to review and approve the Commission's legislative proposals.

We have now received a communication from Dr. Glenn T. Seaborg, Chairman of the Commission, informing the committee that most of these bills have received clearance from the new administration. I am therefore introducing these legislative proposals today by request, and ask unanimous consent that Dr. Seaborg's letter and the AEC's analysis of each of these measures be included in the RECORD at the conclusion of my remarks.

One other measure submitted to the Congress in the waning hours of the last administration—namely, a bill to authorize appropriations to the Commission in fiscal year 1970—has not yet received the approval of the new administration. I will therefore continue to refrain from introducing this bill, and perforce the committee will continue to defer hearings on this measure, until we have received word that the new administration has completed its review of the Commission's proposed fiscal year 1970 budget and either supports the request or has specific amendments which it wishes to recommend.

I believe it would be helpful to include in the RECORD at this point correspondence which Senator PASTORE and I exchanged with the Honorable Robert P. Mayo, Director of the Bureau of the Budget on this matter.

U.S. CONGRESS,
JOINT COMMITTEE ON ATOMIC ENERGY,
January 24, 1969.

Hon. ROBERT MAYO,
Director, Bureau of the Budget,
Washington, D.C.

DEAR MR. MAYO: As you know, the Atomic Energy Commission on January 15,, 1969 submitted to the President of the Senate and the Speaker of the House of Representatives its proposed bill to authorize appropriations to the Commission in fiscal year 1970. The proposed bills have been referred to the Joint Committee on Atomic Energy.

We fully expect that in the coming weeks the new Administration will wish to review the budget requests of the various Federal agencies and departments with a view to possibly revising some of them in accordance with the policies of the new Administration. In view of this, we believe it might well be a futile and meaningless exercise for the Joint Committee to perform its customary early, in-depth review of the Commission's authorization proposal prior to word from the new Administration that it concurs in the Commission's budget request or plans to modify the pending request. Therefore, we plan to defer hearings on this matter until we hear from you or some other appropriate person in the Executive Branch that the AEC's present budget request has been reviewed and is supported by the new Administration, or, alternatively, that the new Administration has specific amendments to the AEC request which it would like to recommend.

We appreciate your cooperation and look forward to hearing from you at your earliest opportunity.

Sincerely yours,

CHET HOLIFIELD.
JOHN O. PASTORE.

BUREAU OF THE BUDGET,
Washington, D.C., January 28, 1969.

Hon. CHET HOLIFIELD,
Vice Chairman, Joint Committee on Atomic Energy, House of Representatives, Washington, D.C.

DEAR MR. HOLIFIELD: I am writing separately to both you and Senator Pastore to thank you for your joint letter of January 24, 1969.

I appreciate both the substance and the spirit of your offer to defer hearings on the AEC authorization until we have had a chance to review the budget requests.

Although I cannot yet give you an exact date for completion of our review, I can assure that we will try to work as quickly as possible. As soon as I do know the date, I will be in touch with both you and Senator Pastore.

Again many thanks for your consideration.

Sincerely,

ROBERT P. MAYO,
Director.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., March 21, 1969.

Hon. CHET HOLIFIELD,
Chairman, Joint Committee on Atomic Energy, Congress of the United States.

DEAR MR. HOLIFIELD: The Bureau of the Budget on March 7, 1969, advised us that there would be no objection to continued support by the Atomic Energy Commission of the following draft bills:

(1) "To amend the Atomic Energy Act to provide that life imprisonment shall be the maximum criminal penalty for certain offenses, and to increase the criminal penalties for unauthorized diversion of special nuclear material and other offenses." (Submitted to the Joint Committee by my letter of January 10, 1969.)

(2) "To amend the Atomic Energy Act to authorize the Commission to enter into agreements of indemnification for ocean transport of materials." (Submitted to the Joint Committee by my letter of January 16, 1969.)

(3) "To amend Subsection 182 b. of the Atomic Energy Act modifying the requirement for mandatory review by the Advisory Committee on Reactor Safeguards of certain facility license applications." (Submitted to the Joint Committee by my letter of January 3, 1969.)

(4) "To amend the Atomic Energy Act to eliminate the requirement for a finding of practical value and abolish the distinction between commercial and certain research and development licenses for facilities." (Submitted to the Joint Committee by my letter of January 16, 1969.)

(5) "To amend the Atomic Energy Act, to provide for civil monetary penalties." (Submitted to the Joint Committee by my letter of January 17, 1969.)

Cordially,

GLENN T. SEABORG,
Chairman.

I sincerely hope that the administration can complete its review of this portion of the fiscal year 1970 budget in the very near future. Otherwise, I strongly suspect that appropriations for the AEC in fiscal 1970, which are of course dependent upon the prior enactment by Congress of legislation authorizing appropriations to the AEC, will be delayed until well into the new fiscal year which begins on July 1, 1969.

The AEC's analysis of the legislative proposals follow:

AEC ANALYSIS OF PROPOSED LEGISLATION TO PROVIDE THAT LIFE IMPRISONMENT SHALL BE MAXIMUM CRIMINAL PENALTY FOR CERTAIN OFFENSES

Sections 1 through 4 of the proposed legislation would restore life imprisonment as the maximum criminal penalty for violations of Sections 222, 224 a., 225, and 226 of the Atomic Energy Act of 1954. Section 1 would also amend Section 222 of the Act to increase the maximum criminal penalties for unauthorized diversion of special nuclear material and related offenses to imprisonment for ten years and a fine of $10,000, when the offense is committed without the intent to injure the United States or secure an advantage to any foreign nation.

Section 222 of the Atomic Energy Act provides criminal sanctions for violations of Sections 57, 92, and 101 and for unlawful interference with the Commission's recapture of special nuclear material or entry into any plant or facility under Section 108. Section 57 prohibits possession of or dealing in special nuclear material without a general or specific license issued by the Commission. Under Section 92, the unauthorized possession, manufacture or transfer of an atomic weapon is unlawful. Section 101 requires a Commission license for the possession, manufacture or transfer of a production or utilization facility. Section 108 authorizes the Commission, when a state of war or national emergency exists, to order the recapture of special nuclear material or the operation of any licensed facility and to enter any plant or facility to carry out these orders.

In the absence of intent to injure the United States or secure an advantage to any foreign nation, the maximum penalty for a violation of Section 222 is imprisonment for five years and a fine of $10,000. With such an intent, the penalty is death or imprisonment for life (if recommended by a jury) or a fine of not more than $20,000 or imprisonment for not more than 20 years, or both.

Sections 224 a., 225, and 226 of the Atomic Energy Act provide criminal penalties, respectively, for the unlawful communication of Restricted Data, the unlawful acquisition of Restricted Data, and removal or concealment of or tampering with Restricted Data. With intent to injure the United States or to secure an advantage to any foreign nation, the penalty for violation of each of these sections is death or imprisonment for life (if recommended by a jury) or a fine of not more than $20,000 or imprisonment for not more than 20 years, or both.

On April 8, 1968, the United States Supreme Court, in the case of *United States* v. *Jackson*, 390 U.S. 570, held unconstitutional the death penalty provision of the Federal Kidnaping Act. Because the language of the Kidnaping Act is comparable to the death and life imprisonment penalty provisions of Sections 222, 224 a., 225, and 226 of the Act, it is believed that these provisions might be sub-

ject to a similar constitutional attack. The maximum penalties which may now be imposed therefore appear to be imprisonment for 20 years and a fine of $20,000.

It is proposed that life imprisonment be made the maximum penalty for violating each of these sections, without regard to a jury recommendation. The Commission has concluded that the death penalty may properly be deleted and that a maximum penalty of life imprisonment is sufficiently severe, in view of the trend of opinion away from the use of capital punishment, doubt whether the death penalty serves as a substantial deterrent, the very small number of executions for any crimes in the United States during the past decade, and the views of some legal scholars and penologists that capital punishment has a harmful effect upon the administration of justice.

One of the most significant crimes punishable under section 222 is unauthorized diversion of special nuclear material, which is a violation of section 57. An unauthorized diversion by a thief or even a terrorist, insurrectionist, or criminal group might conceivably be found to lack intent to injure the United States or secure an advantage to any foreign nation. An Ad Hoc Advisory Panel on Safeguarding Special Nuclear Material recently recommended that the maximum penalty for diversion lacking the specific intent be increased. The Panel felt that the existing penalties "may not be a sufficient deterrent to illicit transactions involving materials valued in excess of millions of dollars."

An increase in the maximum penalties for a violation of Section 222 to imprisonment for ten years and a fine of $10,000 would perhaps increase the deterrent effect on a potential diverter. The increased penalties would also be comparable to those for crimes of similar gravity, such as theft of Government property (ten years' imprisonment and a $10,000 fine) and theft of property in interstate or foreign commerce (ten years' imprisonment and a $5,000 fine). No increase in the maximum fine is proposed. Because of the intrinsic value of special nuclear material, imprisonment would seem to be a more suitable deterrent than a fine.

The proposed amendments would have no budgetary effect. Enactment is not expected to result in additional man-years of employment during the first five years following its passage.

AEC Analysis of Proposed Legislation To Amend Section 170 of the Atomic Energy Act

Section 1(a) of the draft bill amends subsection 11 q. of the Atomic Energy Act of 1954, as amended [hereinafter "Act"] by adding to the definition of "nuclear incident" appropriate language broadening the scope of the definition so that it will encompass incidents to be covered by indemnity agreements authorized under new subsection 170 p. As the term "nuclear incident" is used in new subsection 170 p. it shall mean those occurrences which arise out of the transportation of source, special nuclear or byproduct material on vessels of United States registry and which take place in the course of such transportation and outside the territorial limits of the United States or any other nation, i.e., on the high seas or within some international zone not belonging to a particular government or nation, such as Antarctica. The occurrence, of course, in accordance with the present definition of nuclear incident must cause, within or outside the United States, bodily injury, sickness, disease, or death, or loss of or damage to property, or loss of use of property, arising out of or resulting from the radioactive, toxic, explosive, or other hazardous properties of the source, special nuclear, or byproduct material, in order to qualify as a nuclear incident.

While the language of subsection 11 q. is susceptible of the interpretation that the term "nuclear incident" as used in subsection 170 p. includes "extraordinary nuclear occurrence", it is the intent of the Commission that the language shall not be so interpreted. The Commission does not intend to make the concept of "extraordinary nuclear occurrence" and the waiver of defenses provisions applicable to incidents on the high seas.

Section 1(b) amends subsection 11 t. by setting forth those persons who would be indemnified under agreements entered into pursuant to subsection 170 p. The term "person indemnified" in such agreements has a more limited meaning than it does generally under Price-Anderson. As that system operates domestically, any one who may be liable is a person indemnified. With respect to indemnity agreements under subsection 170 p., the term "person indemnified" is to be limited to the person with whom an indemnity agreement is executed (licensee or contractor) and any other person who may be liable for public liability by reason of his activities within the United States (e.g., U.S. cask designer and manufacturer, a stevedore in an American port); or on board the vessel transporting the nuclear material while such vessel is on the high seas (e.g., seaman); or who may be liable in connection with his ownership or operation of such vessel (e.g., the owner or master of the vessel); and any other person who has his principal place of business in the United States or who is the agent or employee of such other person and who may be liable for public liability (e.g., employee of American cask manufacturer who may supervise loading at the foreign port).

Section 1(c) amends subsection 11 w. of the Act which defines the term "public liability". As used in new subsection 170 p. that term will not include certain liabilities. Comparable to the domestic Price-Anderson coverage which does not indemnify for the loss of the transporting vehicle, the indemnity would not cover the vessel transporting the nuclear material and its equipment, fuel and stores—which are covered by hull insurance. Also, the nuclear material being transported and the containers used would not be covered.

Section 2 amends subsection 170 e. by providing for a limitation of liability in the amount of $100 million together with the amount of financial protection (underlying commercial insurance) for nuclear incidents covered by an agreement of indemnification pursuant to a new subsection 170 p. The aggregate liability, however, shall not exceed $115 million.

Section 3 amends subsection 170 f. of the Act. That subsection authorizes the Commission to collect a fee from all persons with whom an indemnification agreement is executed. It gives some guidance as to what fee amounts should be for certain licensed activities. The amendment authorizes the Commission to establish criteria for determining an additional fee for entering into an indemnification agreement under new subsection 170 p.

Section 4 amends section 170 of the Act by adding new subsection 170 p. The new subsection would authorize the Commission until August 1, 1977 to enter into additional agreements of indemnification with its licensees and contractors engaged in activities in the United States covered by an indemnity agreement. The new agreement would indemnify and hold harmless the licensee, contractor, and other persons indemnified, from public liability in excess of the level of financial protection required, arising from nuclear incidents which arise out of the transportation of source, special nuclear or byproduct material to or from the site of such activities on a vessel of United States registry and which take place in the course of such transportation and outside the territorial limits of the United States or any other nation.

Following the pattern of domestic arrangements, with respect to licensees the Commission must, and with respect to contractors the Commission may, require that financial protection be provided. The amount of financial protection to be required would be $15 million (the amount which appears to be presently available). The Commission may establish a greater or lesser amount of financial protection, taking into consideration the amount of liability insurance available from private sources (domestic and foreign), and the cost and terms of such insurance.

The amount of indemnity for persons indemnified in connection with each nuclear incident would be $100 million including the reasonable costs of investigating and settling claims and defending suits for damage.

The amount of indemnity would be reduced by the amount that the financial protection required exceeds $15 million.

AEC Bill Analysis of Proposed Legislation To Amend Section 1825 of Atomic Energy Act

The Atomic Energy Commission's Advisory Committee on Reactor Safeguards was established by Section 29 of the Atomic Energy Act of 1954, as amended, to review safety studies and facility license applications, advise the Commission with regard to the hazards of proposed or existing reactor facilities and the adequacy of proposed reactor safety standards, and perform such other duties as the Commission may request. At present, Subsection 182 b. of the Act requires that the ACRS shall review each application under Section 103 or Subsection 104 b. for a construction permit or an operating license for a facility, any application under Subsection 104 c. for a construction permit or an operating license for a testing facility, any application under Subsections 104 a. or c. specifically referred to it by the Commission and any application for an amendment to a construction permit or an amendment to an operating license under Sections 103 or 104 a., b. or c. specifically referred to it by the Commission, and shall submit a report thereon. Thus, a mandatory review and reporting requirement exists for all power and test reactor applications for construction permits and operating licenses.

The legislation proposed would modify the mandatory review requirement of Subsection 182 b. by providing in effect that unless the Commission specifically requests a review and report on an application, the ACRS may dispense therewith by notifying the Commission in writing that ACRS review is not warranted. The proposed legislation would require that any notice from the ACRS to the effect that review is not warranted in a given case be made a part of the record of the application.

Relaxation of the mandatory review and reporting requirements will enable the Committee to concentrate its activities on the more novel and difficult questions of reactor safety. It would, moreover, place the ACRS in a better position to deal with the increasing volume of reactor applications by giving them the flexibility to review certain features of a reactor rather than the whole application. Neither the Commission nor the ACRS has felt that reactor cases coming in during the past and current year would include those for which ACRS review would not be desirable. However, as reactors are becoming more standardized, it seems appropriate and desirable to have the statutory flexibility to omit ACRS review if and when such omission appears warranted to both the Commission and the ACRS.

ANALYSIS OF PROPOSED LEGISLATION TO ELIMINATE REQUIREMENT OF FINDING OF PRACTICAL VALUE

INTRODUCTION

The basic approach of the draft amendments to eliminate the requirement for a finding of practical value and to in effect abolish the distinction between "commercial" licenses and "demonstration" licenses is relatively simple in concept. Essentially two amending actions are proposed: first, revocation of section 102 (providing for the finding of practical value), section 103 (authorizing "commercial" licenses), and subsection 104 b. (authorizing "demonstration" licenses); second, substitution of a new section (numbered "102") in place of the revoked sections and covering commercial and demonstration licenses as a single class. The new section 102 retains essentially all of the statutory qualifications and limitations applicable under present law to section 103 licenses.

While the basic concept of the amendments is simple, many different sections of the Act require revision, owing to the fact that the present Act contains numerous cross references to sections 103 and 104.

The draft amendments are contained in a proposed bill having forty separate sections. Of these forty sections, twenty-five of them [1] (and a portion of a twenty-sixth [2]) are fairly characterized as providing for no substantive changes in the Act.

Having in mind the basic scheme, the analysis of each amendatory section is as follows:

Sec. 1. Technical (cross reference) amendment to 11 b.

Sec. 2. This section constitutes a substantive amendment to the research provisions of section 31 a.(4) to delete the concept of authorizing AEC to make research arrangements to demonstrate "practical value" of reactors and to substitute in lieu thereof authority to make research arrangements to demonstrate "advances in the application of atomic energy" for industrial or commercial purposes.

Sec. 3. Technical (cross reference) amendment to 41 a.

Sec. 4. Technical (cross reference) amendment to 53 a.(3).

Sec. 5. Technical (cross reference) amendment to 53 c.(1).

Sec. 6. This section constitutes a substantive amendment to 53 c.(4) qualifying the flat requirement now contained in the Act that the Commission *shall* make a charge for special nuclear material distributed for use under a section 103 license (per 57 a.(3), which, as amended by section 4 of this draft bill now refers to a license under 102). As qualified, AEC must make the charge under a 102 license, "unless otherwise authorized by law." To unqualifiedly prevent any waiver of charges under new 102 (which, in effect, combines 103 and 104 b. facilities) would not be consistent with present 53 c.(1) which, in pertinent part provides that unless "otherwise authorized by law, the Commission shall not after December 31, 1970, distribute special nuclear material except by sale to any person who possesses or operates a utilization facility under a license issued pursuant to [103 or 104 b.] 102". In effect, Congress would be retaining authority to authorize waiver of charges on a case-by-case basis.

Sec. 7. Technical (cross reference) amendments in opening of subsection 53 d. and 53 d.(4), plus substantive (but conforming) amendment in 53 d.(4) and 53 d.(5) to recognize that with respect to 102 facilities the waiver of use and burn-up charges could be "otherwise authorized".

[1] Sections 1, 3, 4, 5, 10, 12, 16, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 33, 34, 35 and 38.

[2] Section 7.

Sec. 8. Substantive (but conforming) amendment to section 54 to recognize substantive amendment to section 56 (made by section 9 of this draft bill) which extends guaranteed purchase prices to plutonium and uranium enriched in the isotope 233 produced in 102 reactors.

Sec. 9. (See explanation under section 8.)

Sec. 10. Technical (cross reference) amendment to 63 a.(3).

Sec. 11. Substantive amendment to 63 c. to permit case-by-case waiver by Congress of otherwise unqualified requirement to charge for source material distributed under a 102 license.

Sec. 12. Technical (cross reference) amendment to section 101.

Sec. 13. This section, together with sections 14 and 15, comprise the substantive core of the bill: namely, an entirely new section 102 combining old 103 and old 104 b. and removing reference to the old "practical value" concept formerly contained in old 102 and 103. The other features of this amendment are:

A. The concept of issuance of licenses "on a non-exclusive basis" is preserved.

B. The injunction to the Commission under old 104 b. to "impose the minimum amount of such regulations and terms of license as will permit the Commission to fulfill its obligations under this Act to promote the common defense and security and to protect the health and safety of the public and will be compatible with the regulations and terms of license which would apply in the event that a commercial license were later to be issued pursuant to section 103 for that type of facility", has been deleted as unnecesary in view of the abolition of the distinction between 103 and 104 b. type facilities.

C. The requirement under old 104 b. that "priority shall be given [in the issuing of licenses] to those activities which will, in the opinion of the Commission, lead to major advances in the application of atomic energy for industrial or commercial purposes", no longer has any significance because of the uranium supply picture. It has been deleted.

D. The concept of a 40-year term (under old 103) is retained.

E. The concept of requiring information for health and safety purposes (under old 103) is retained with a clarifying proviso assuring that if AEC wants to pay extra it can use the information for such other purposes as would be specified by contract.

F. Any existing 104 b. and 103 licenses are statutorily converted to 102 licenses, as are any pending applications for such licenses. One of the purposes of this amendment is to make clear that holders of operating licenses already granted are not subject to the provisions of 105(c). Pending applications for construction permits and holders of construction permits are subject to 105(c).

Sec. 14. Substantive—revokes section 103.

Sec. 15. Substantive—revokes subsection 104 b.

Sec. 16. Technical (cross reference) amendment to 104 c. (which subsection has been redesignated "104 b." in view of revocation of present 104 b.).

Sec. 17. This section makes a substantive change to the antitrust review requirement of 105 c. It requires that all applications for a construction permit under section 102 be sent to the Attorney General for antitrust review. In the proposal, as under present law, an exception would be provided for those types or classes of licenses which would not significantly affect the application's activities under the antitrust laws. The period during which the Attorney General would conduct his antitrust review is also changed. Under present law the AEC is to notify the Attorney General when it proposes to issue any license and the Attorney General has up to 90 days within which to advice AEC whether or not the proposed license is consistent with the antitrust laws. By the time AEC proposes to issue a license, however, the application has been under health and safety review within the AEC for at least six months. In the proposal, the Attorney General is to be notified promptly of the receipt by the Commission of a license application so that his review will be simultaneous with the AEC's health and safety review. The new amendment requires that the Attorney General's advice be transmitted to the AEC not later than fifteen days after the date the Commission issues a notice of hearing (or notice of opportunity for hearing) on the license application. In addition to providing an earlier opportunity to the Attorney General to begin his antitrust review, as well as a longer period in which to do it, the proposed revision makes it possible for the parties to the licensing proceeding to receive early notification as to whether antitrust matters are to become an issue in the proceedings. In effect, the 90-day extension to the regulatory process under the present law is reduced by 75 days.

Sec. 18. Technical (cross reference) amendment to 106 a.

Sec. 19. Technical (cross reference) amendment to 108.

Sec. 20. Technical (cross reference) amendment to 123.

Sec. 21. Technical (cross reference) amendment to 124.

Sec. 22. Technical (cross reference) amendment to 125.

Sec. 23. Technical (cross reference) amendment to 145 a.

Sec. 24. Technical (cross reference) amendment to 153 c.(1).

Sec. 25. Technical (cross reference) amendment to 161 m.

Sec. 26. Technical (cross reference) amendment to 161 n.

Sec. 27. Technical (cross reference) amendment to 161 o.

Sec. 28. Technical (cross reference) amendment to 161 t.

Sec. 29. Technical (cross reference) amendment to 161 v.

Sec. 30. Technical (cross reference) amendment to 169.

Sec. 31. Technical (cross reference) amendment to 170 a.

Sec. 32. Partially-substantive amendment to subsection 170 f. to provide that fee shall be $30 per year per kwth "for facilities licensed under section [103] 102." The amendment is substantive in that by making a straight substitution of "102" for "103", former 104 b.-type licenses are now covered by section 170 f. and no reduction in the amount can be made (as it can be under existing law for 104 b.-types).

Sec. 33. Technical (cross reference) amendment to 170 k.

Sec. 34. Technical (cross reference) amendment to 182 a.

Sec. 35. Technical (cross reference) amendment to 182 b.

Sec. 36. Partially-substantive amendment to subsection 182 c. extending the notification requirements of that subsection to facilities licensed under new section 102 (which covers former 103-type licenses, as well as former 104 b.-type licenses). Formerly, the notification requirements applied only to section 103 facilities.

Sec. 37. Partially-substantive amendment to the preference provisions of subsection 182 d. extending them to facilities licensed under new section 102 (which covers former 103-type licenses, as well as former 104 b.-type licenses). Formerly, the requirements of subsection 182 d. applied only to section 103 facilities.

Sec. 38. Technical (cross reference) amendment to 189 a.

Sec. 39. Partially-substantive amendment to section 272 extending applicability of that section (which pertains to the coverage of the Federal Power Act) to facilities licensed under new section 102 (which covers former

103-type facilities, as well as former 104 b.-type facilities). Formerly, the provisions of section 272 applied only to section 103 facilities. This amendment also clarifies that no additional jurisdiction is intended to be given to the Federal Power Commission as a result of this bill.

SEC. 40. Partially-substantive amendment to section 273 (which pertains to licensing of government agencies) extending the provisions thereof to facilities licensed under new section 102 (which covers former 103-type facilities, as well as former 104 b.-type facilities). Formerly, the provisions of section 273 applied only to section 103 facilities.

AEC ANALYSIS OF PROPOSED LEGISLATION TO AMEND CHAPTER 18 OF THE ATOMIC ENERGY ACT OF 1954

The proposed legislation would amend the Atomic Energy Act by adding thereto a new Section 234 entitled "Civil Monetary Penalties for Violations of Licensing Requirements" and by changing Section 221 to make clear that "actions" to be instituted by the Attorney General do not include administrative actions by the Commission. Section 234 would authorize the Commission to impose fines of not in excess of $5,000 for each single violation and not in excess of $10,000 for continuing violations by any person licensed pursuant to sections 53, 62, 81, or 101 of the Act, of any regulations, orders or licenses issued under such sections. The same remedial authority has been conferred by statute upon other regulatory agencies, such as the Federal Communications Commission and Federal Aviation Agency, to assist them in carrying out their regulatory functions. The proposed legislation is modeled upon similar provisions in the Federal Communications Act (47 U.S.C. 503, 504) and the Federal Aviation Act (49 U.S.C. 1471). Such authority is civil only and would not bar criminal prosecution where appropriate. It would not apply to the Commission contractors or other persons who are exempt from licensing.

In accordance with the requirements of the Administrative Procedure Act and the Commission's regulations, the Commission issues notices of violation to any licensee who appears to have violated any of the Commission's regulations, orders or conditions of licenses, except in cases where the public health interests or safety require the omission of such notice or where the violations are found to be willful. Notice of the proposed imposition of a civil penalty would be made as part of this existing notification procedure or by special notice. In cases where the notice of violation is omitted, a special notice of the imposition of a civil penalty would be provided to assure that the licensee is given an opportunity to explain his conduct prior to a determination by the Commission of whether the penalty should be imposed.

If after the Commission determines that the penalty should be imposed, the licensee fails to pay the amount, the matter will be referred to the Attorney General. The Attorney General will determine whether a civil action in Federal District Court would be instituted to collect the penalty. After the Commission has referred the matter to the Attorney General for collection, he shall have full authority to compromise, mitigate or remit the civil penalty.

In addition the proposed legislation would amend Section 221 c. of the Act to make clear that this section does not require the approval of the Attorney General prior to the initiation of administrative action by the Commission not only with respect to the imposition of civil penalties, but also for any other enforcement action the Commission is now authorized to bring. Section 221 c. now provides that:

"No action shall be brought against any individual or person for any violation under this Act unless and until the Attorney General of the United States has advised the Commission with respect to such action and no such action shall be commenced except by the Attorney General of the United States . . ."

A legislative history of the Act indicates that "action" within the purview of Section 221 c. means "court action" and does not apply to administrative action by the Commission. However, the proposed amendment to Section 221 c. will prevent any possible misinterpretation of the scope of the Commission's authority to take appropriate administrative action.

WAYNE MORSE CALLS FOR A NEW AMERICAN FOREIGN POLICY

(Mr. RYAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RYAN. Mr. Speaker, every year since I have been in Congress, I have sponsored an annual conference on major issues confronting the United States. On March 22, the Ninth Annual West Side Community Conference was held at Riverside Church in New York City.

The topic of this year's conference was "World Problems and American Power." During the course of the panels and the plenary session, public figures of experience and stature in foreign affairs discussed the nature and extent of U.S. present international commitments. The substance of those discussions included an examination of our role in Africa, Latin America, Asia, and Europe as well as the present crisis in the Middle East.

At the plenary session in the afternoon, we were fortunate to have as one of our principal speakers former Oregon Senator Wayne Morse. Senator Morse, who spent 24 years in the Senate and many years on the Senate Foreign Relations Committee, spoke on the dangers that the extent of America's wealth and power pose for the future conduct of our foreign affairs, and on the need—as he put it—"for the American people to demand a foreign policy that commits us to a military withdrawal from Asia and elsewhere in the world where we are maintaining a unilateral military posture of dominance."

Senator Morse's call for a new foreign policy—one which rejects the view that America can or should manipulate events around the world to its own liking—is the kind of foreign policy for which I have long fought as a Member of Congress. If we are to prevent future Vietnams, we must heed the warning of Senator Morse to "bring the American military under the control and checks of our constitutional system based upon government by law rather than by the exercise of arbitrary power" by the multiple facets of the executive branch.

So that my colleagues may also profit from Senator Morse's counsel, I am today placing the text of his speech before the Ninth Annual West Side Community Conference in the RECORD. I commend the views expressed by Senator Morse to my colleagues and urge them to take steps to create the kind of foreign policy for which Senator Morse so persuasively argues in this speech, which follows:

THE U.S. ROLE IN FOREIGN POLICY IN RESPECT TO OUR FOREIGN COMMITMENTS

(Address by Hon. Wayne Morse)

In the closing months of the 90th Congress, there was building up in the United States Senate a clear-cut constitutional issue over the formulation and control of American foreign policy. Entwined with the constitutional part of this issue was the political ramifications of it, which saw a President elected only 3 and ½ years earlier with one of the largest margins in history, compelled to withdraw from further candidacy.

The situation in which the Johnson Administration found itself in March, 1968, was exactly the situation the framers of the Constitution had planned to avoid when they gave the war power to Congress, rather than to the President. Under Constitutional design, war is embarked upon only through joint resolution passed by both houses and signed into law by the President. It is a legislative process, not an administrative one. Its purposes and scope are plainly stated. The war policy thus becomes the law of the land, the national policy—as fully and completely as we can establish a national policy.

War waged by administrative decision leaves every aspect of that war an arguable matter. Its purpose, its scope, as well as its day to day prosecution, are left to individual discretion. All are subject to second-guessing and public dispute.

The bombing of North Vietnam has been a good example of the inadequacy of administrative war. When we began bombing North Vietnam in February of 1965, we attacked a country that had not attacked United States territory, and which had no apparent intentions of doing so. The first explanation for the bombing was that it was in retaliation for a Vietcong assault upon the barracks of U.S. troops at Pleiku in the central highlands of South Vietnam 12 hours earlier. Its purpose was explained at that time as one of "showing" the Vietcong and their friends in North Vietnam that we could levy far greater destruction upon them than they could upon us.

Within a few months, however, the Secretary of Defense began to justify the continuation of the bombing as necessary for cutting supply lines from the North into the South. Lengthy descriptions were made available to the press of infiltration routes, of bridges destroyed, of key passes closed by massive explosions delivered by our B–52's.

But the trickle of infiltration that was going on when the bombing started grew to large proportions. There were explanations that without the bombing, infiltration would have been even heavier, and not as costly to Hanoi. Yet the level of manpower and equipment that went South seems to have been determined essentially by North Vietnam and not by American airpower.

It was not until the bombing policy had been in operation for a matter of years that it was then said to have been undertaken to bolster the morale of the South Vietnamese government, which was at a low ebb in the early months of 1965.

What the real reason for the bombing may have been cannot be known yet by the American people. It is not really known by Congress. But the carrying of armed attack into the territory and population of another country, and at levels of intensity unsurpassed even in World War II, was not undertaken as a matter of a unified national policy to conduct war against North Vietnam. It was undertaken, stopped and started up again for reasons that only a few administrators knew then and even now.

These reasons for bombing, and for the various bombing pauses, were typical of our entire adventure in southeast Asia They are not a war policy. They are a use of military force to buttress and enforce a diplomatic policy that cannot succeed on its own. With a wealth of money, manpower, and weapons

that no doubt seems limitless to policy-makers, we have seen the United States come readily and easily to practice the old dictum that war is but the pursuit of diplomacy by different means.

The system is often advertised and described now as something new—a necessity in a different kind of world than Americans knew in the good old days when military force was used only to defend American territory and then upon declaration of war.

But there really is nothing new about it all. For nearly three centuries Great Britain practiced the same tactic, using military power from one end of the world to another to gain this political end and to enforce that aspect of diplomacy that could not succeed on its own.

Thus was an empire created. And then it was said that being the world's leading power, the burdens of leadership and responsibility called for even more massive involvements, in the Crimea, in South Africa, in France

Britain saw great value in sending her military forces abroad, using them to enforce her foreign policies. Part of the theory held that it was better to fight abroad on someone else's territory than to let warfare come to the British Isles. But the policy brought the expenditure of such blood and wealth in World War I that the collapse of the Empire was but a matter of years. And the technology of war brought destruction to British territory in World War II even without the landing of hostile forces.

Far from being a new concept, the amalgamation of armed forces with diplomacy is as old as the nation-state. Its merger under the executive is as old as kings. Indeed, in explaining the assignment of the war power to Congress rather than to the President, the Federalist Papers mention that in this respect our Constitution is quite different from the British Constitution, denying to the American president a power held and exercised by British kings.

Most countries are saved from the easy use of military force abroad by a scarcity of means The country that cannot afford to enforce its foreign political objectives by use of military power, does not find it necessary to do so. The country that can afford to send and maintain armies and navies around the world, seems to find reason why it must do so.

Fear of change is usually the reason that is found. Fear of a vacuum of power, fear that where America does not dominate, someone else will, fear that if we do not enforce our stated will in one part of the world it will be ignored everywhere.

The cost of our policy is considerable. National defense costs run over $80 billion a year. Weaponry is the largest single activity of our national government. In the case of Vietnam, since 1954 when we first began aiding South Vietnam in an effort to create a country where none existed, we have spent a grand total of $90 billion, first on economic aid, then on military aid as well and finally to sustain the fourth biggest war in American history

The availability of so much power has, in my opinion, sadly corrupted the administrative judgment of what is sound policy for the United States to pursue. Perhaps Vietnam is a good example of the difficulty the military establishment has in trying to make an unsound policy work through the application of force. Half a million men and the dropping of more explosives than were used in western Europe throughout World War II have not compelled North Vietnam, in the words of the Secretary of State, Rusk, to "stop doing what she is doing," which has been to aid guerrillas in the South.

But at the outset, it undoubtedly looks easier to call in the troops and send over the planes than too assess whether a pro-American government can be created to govern an area that never was a nation before.

But in addition to the warping of judgment is the loss of support at home that such use of military power entails. I think Vietnam is rightly called the most unpopular war in American history, ranking alongside of Korea in that unpopularity. Both were undeclared, foreign wars. Both were fought for what their administrators called "limited purposes." Both are described as not lending themselves to declarations of war, because our purposes in fighting did not include the destruction or occupation of either North Korea or North Vietnam. Rather, they are described as designed to force another country to stop doing something we want stopped.

It is not usually mentioned, but both of these most unpopular wars not only were undeclared by the United States but they were waged against countries that had not attacked the United States and showed no sign of doing so. They were interventions on behalf of another country.

It is, I think, the fact that the war is fought to defend someone else that American public opinion has such a hard time following. When the object of our protection changes as often as the governments in Saigon have changed, when corruption and profiteering are among their foremost qualities, it is not easy for the American people to believe for long that they deserve the American blood and money that goes into their support.

It was the expectation of the framers of the Constitution that by placing the war power in Congress, these disadvantages would not occur. For the Congress to commit the military forces would, so the Constitution assumes, require a widespread, general realization that the basic safety and interests of the nation were at stake. The object and purpose of the war would be exposed to Congressional debate and therefore to public discussion. Enactment of a resolution of war would give expression to a national unity of purpose. Despite the objections raised to a declaration of war in the current Vietnam conflict, it could set forth a limited purpose and objection that still would establish a unified national policy.

Remember that even the Administration that embarks upon the use of armed force abroad without a declaration of war is still involving the Congress. What an administration cannot do without money it cannot do without Congress. For a president to give the commands that set the fighting in motion, and then come to Congress and ask it to appropriate the money needed to pay for the fighting is simply an effort to exclude Congress from the formulation of the policy.

It has often succeeded. Congress has indeed been excluded from the formulation of the policy, and has only paid the cost of putting it into effect. But the price has been high. The price has been a Congress that quickly comes to reflect public dissatisfactions and disenchantment. It is a Congress that feels no need or obligation to explain and defend a policy it had no hand in making. But if the war contnues for long without an end in sight, the angry public dissatisfaction will become evident quickly.

On the face of it, at least, the Administration now coming into office has nothing to gain and much to lose by letting this undeclared war continue indefinitely. If it continues, the Nixon Administration stands to inherit the renewed dissension and the political turmoil that forced the Johnson Administration to forego another term. Any plans it may have for domestic programs will be lost in the competition for funds and the welter of political conflict.

A return to Constitutionalism in foreign policy and the use of military power is in the interest of both people and government. It should be sought at once.

The major role of our international relations in recent years has been in Asia. The stabilization of affairs in Europe, in spite of the invasion of Czechoslovakia, has induced the State Department—Defense Department complex that runs our international relations to turn its attention to Asia.

It has done so with no clear rationale, and with no showing of where American security interests in Asia actually lie. In fact, events, particularly military events, have dictated policy at critical turning points and have been responsible for our having backed into a full scale war in Vietnam that no policy-maker would have advised or recommended in advance.

The formal rationale of our policy in Asia was formulated at the close of World War II, when we regarded as vital to our interests certain islands in the Pacific which had served as stepping stones for Japan in launching her war against us. We sought and obtained trusteeship over them. But mainland Asia was put beyond our immediate security needs. The attitude of the United States toward Indo-China, for example, was in keeping with our attitude toward the rest of colonial Asia: Burma, the Dutch Indies, Malaya, had been easy pickings for Japan largely because they were colonies of western powers. Elliott Roosevelt quotes his father as saying of the future of Indo-China, en route to the Casablanca conference:

"The native Indochinese have been so flagrantly downtrodden that they thought to themselves: Anything must be better than to live under French colonial rule!"

Cordell Hull quotes FDR as favoring a trusteeship for Indo-China.

During World War II our ally in Indo-China was none other than Ho Chi Minh, who was supported and supplied by American intelligence units.

Roosevelt's death and the surge of the Communist Chinese across the Chinese mainland brought about a radical change in American policy, not only toward Indo-China but toward Asia generally. It is hard to say how much of the change was due to the elements of world politics and how much due to the facts of American domestic politics. Certainly the American people were shocked by the Communist takeover in China. Chiang Kai-shek had been a wartime ally. He and his family had been highly romanticized by the American press. Billions worth of American weapons and war material had been given to China to keep her in the war against Japan, and thousands of Americans had served in the Chinese theater.

Having just finished a war, the United States had no taste for going back to Asia for another. There was no American military intervention on behalf of Chiang.

The shock of China's fall to Communism was taken out instead in the domestic political arena. Probably few in this audience recall the violence of the charges that flew, blaming the Communist takeover not on the Communists, nor on the failures of the Nationalists, but upon American diplomats. It was the height of the postwar era, when we believed our military and financial power was so supreme in the world that nothing could happen anywhere without having been willed to happen, and probably planned and executed, by American authorities.

By 1950 the Democratic Administration that had been in office during the fall of China, was in headlong retreat. The Secretary of State was daily accused of sympathy and even compliance with Communist objectives. He finally found it desirable to become as royal as the king. In February of 1950 the United States recognized the French arrangement of the Bao Dai government in Indo-China, whereby France gave Indo-China the form of sovereignty without any of its substance. In May of 1950 the Secretary of State announced that we would furnish arms and money to the French to put down the independence movement led by Ho Chi Minh.

THE WAR IN KOREA

Even so, Secretary of State Acheson drew for the press a line enclosing the string of

islands lying off the Asian mainland and described it as the new perimeter of the American security interest. It embraced Japan, Okinawa, Formosa, the Philippines, Australia, and New Zealand. That chain, he said, was part of our security, the clear inference being that what lay beyond was not. It was widely assumed at the time that this press conference description served as an invitation to North Korea to invade the South, on the assumption that because Korea lay outside the Acheson line, the United States would not act.

The United States did act, of course. But we did so under our obligations as a signatory of the United Nations Charter. Like all signatories, we have obligations under it that exceed our own national security interests.

But here again, events began to dictate a change in policy. Once the United States became heavily involved in a war undertaken under the aegis of the United Nations, we began to justify it in terms of our own national interest. In a speech a few weeks ago to the National Press Club, Averill Harriman chided Americans for their bad habit of escalating their objectives in midwar. He was talking about Vietnam. But he could well have been talking about Korea.

American apprehensions about Communist China were in control. U.S. military and financial aid to France to pursue the Indo-China war was stepped up. It would add up to $2.6 billion before France finally gave up. The announcement of increased aid to France in 1950 was combined with an announcement that the Seventh Fleet would be stationed in the Formosa Strait to protect Chiang Kai-shek.

As happened with China, no amount of U.S. aid could salvage the French cause in Indo-China. Even so, there still was no American intervention. President Eisenhower vetoed all such suggestions on the ground that they would be more costly than anticipated, and secondly, because he was not willing to act without the support and participation of other allies.

What we did instead in 1954 was to set out upon a new salvage effort in South Vietnam. We installed as President a man who had sat out the war in the United States; we financed his government, equipped his army, and encouraged him to ignore the requirements of the Geneva Agreement that North and South Vietnam be united under a single government.

THE FORMOSA RESOLUTION

At almost the same time China's bombardment of islands within artillery range of the mainland induced the Administration to seek advance approval from Congress for military action against China.

The Formosa Resolution is a direct forebear of the Tonkin Gulf Resolution. It authorized the President, and I quote:

"To employ the Armed Forces of the United States as he deems necessary for the specific purpose of securing and protecting Formosa and the Pescadores against armed attack.

"This authority to include the securing and protection of such related positions and territories of that area now in friendly hands and the taking of such other measures as he (the President) judges to be required or appropriate in assuring the defense of Formosa and the Pescadores."

At issue were not Formosa and the Pescadores. They were not under assault, and China had no means of bringing them under assault. At issue were two tiny islands of Quemoy and Matsu within 3 miles of the mainland.

Senator George of Georgia presented the Resolution to the Senate. "We must commit American military power to the defense of these islands", he said, "because their abandonment would dishearten the Nationalists on Formosa." Then he said:

"If Formosa falls into unfriendly hands, it would be with the greatest difficulty that we could defend not merely Japan, nor merely the Philippines, which lie a relatively short distance from Formosa and Okinawa, but the whole of Southeast Asia clear down to the end of the great countries that lie under the Equator would be endangered. That is clear."

What is clear now from the Formosa Resolution is that American security interests were seen all across the mainland of Asia where they never had been, and an obligation to defend countries was seen where it never had been seen before. Senator Smith of New Jersey, a ranking Republican on the Senate Foreign Relations Committee, was also explicit in moving the American defense line onto the Asian mainland:

"Let us first consider a line drawn from Korea, down through China, and down through Indo-China. We see three danger spots which might well result in the entire Asiatic world being engulfed in Communism, and if that should happen, the security of the United States and the western free world would be seriously threatened . . . Unless we maintain and strengthen the defenses and solidarity of our allies, unless the program of the Administration under President Eisenhower and Secretary of State Dulles is carried out, *so that the defense of those areas is maintained,* we shall face one of the most critical periods in our history."

What was not foreseen was that the price and futility of defending those areas would itself cause one of the most critical periods in our history. In Asia, we have worked a "domino theory" in reverse. To defend the United States, we needed Pacific Islands like the Marianas put under our trusteeship; then to protect those islands, we needed Japan, Okinawa, Formosa, and the Philippines; then to defend Japan, Okinawa, Formosa, and the Philippines we needed the islands immediately off the mainland, plus Korea and South Vietnam.

It seems likely that in Asia, there is still not an end to what more we must contest in order to keep what we have. Whether or not the Vietnam war ends, this trend in our Asian policy will draw us deeper into war in Asia. Unless we repudiate the Eisenhower, Nixon, Dulles military containment policy vis a vis China initiated in 1953 we may very well become the greatest threat to peace in the world. We cannot militarily contain China without eventual war with China in 10, 25, 35, 50 years. Such a war will produce an empty victory at best and a sure loss of our constitutional system of self-government.

Now is the time to bring the American military under the control and checks of our constitutional system based upon government by law rather than by the exercise of arbitrary power by Presidents, Secretaries of State and Defense, Joint Chiefs of Staffs, CIAs, Formosa and Tonkin Bay Resolution and our blood money military industrial complex.

Now is the time for the American people to demand a foreign policy that commits us to a military withdrawal from Asia and elsewhere in the world where we are maintaining a unilateral military posture of dominance.

Now is the time for us to return to the foreign policy role of offering to abide by the binding jurisdiction of adjudication through multilateral negotiations of threats to the peace of the world conducted under the aegis of international tribunals and treaties such as the United Nations.

Yes, now is the time for us to practice our professed ideals of believing in the reinstitution of the Rules of Law, the United Nations Treaty for the Jungle Law of the Military Claw as we have come to practice it in Vietnam and threaten to practice it elsewhere in Asia.

Unless the killing of American troops in Southeast Asia is stopped quickly, domestic disunity is certain to increase because a foreign policy that conscripts our youth into military fodder to be consumed in an immoral and unjustifiable war will be repudiated by our people. It is being repudiated by increasing tens of thousands of our citizens, as it should be.

President Nixon's announcement to leave our troops in Vietnam for an indefinite time resulting in thousands more being slaughtered and wounded in further escalation of the war, his attempt to justify a scientifically unsound ABM monstrosity by playing upon the fears of our people, his military approach to foreign policy in general, bodes ill for his Administration and catastrophic for the Nation.

It would appear that on the basis of what we have seen this far from the new Administration in respect it its role in foreign policy and the military commitments we can expect from it, the only thing that will stop the military from marching our youth into a greater war is for our citizens to start marching across the country for peace.

THE NEW YORKER AND THE ELECTORAL COLLEGE

(Mr. MONAGAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MONAGAN. Mr. Speaker, the current discussion about the proposed change in the existing electoral college method of selecting our President and Vice President includes suggestions that the electoral college be abolished entirely.

A thoughtful defense of the retention of the electoral college appeared in the February 8 issue of the New Yorker.

We are accustomed to thinking of the New Yorker as a humorous magazine, but this carefully considered article presented substantial arguments for the retention of the electoral college.

Although I have not come to a final conclusion about this question and my inclination is to favor direct popular election, nevertheless I feel that the New Yorker's suggestions are worthy of careful consideration and for that reason I place them in the RECORD today:

THE TALK OF THE TOWN: NOTES AND COMMENT

Last December, as they have done every fourth year since the beginning of the Republic, the newly elected members of the electoral college assembled in every state to choose the President of the United States. This forty-sixth meeting will have been the last if those who advocate the abolition of one of our most venerable institutions win the current battle for electoral change.

The Founding Fathers provided in the Constitution that each state should elect a small group of men who, in turn, would exercise their independent judgment in selecting a President. Each of these men, called an elector, was given one vote, and each state was entitled to a number of electors equal to the combined number of its senators and representatives. As a result, representation in the electoral college, as in the Congress, was roughly proportional to population. And if no candidate received an absolute majority of electoral votes, the President was to be chosen by the House of Representatives. This system has survived to the present day, with one all-important difference. It rapidly became an established custom that all the electors of a state would automatically vote for the candidate receiving most of the state's popular vote. Today, a separate slate of candidates for the post of elector is pledged to each Presidential candidate in every state. When you vote for

President, you are in fact voting for the slate committed to your favorite. For example, any New Yorker who voted for Vice-President Humphrey was really voting for the forty-three electors of the Democratic Party. And even though Humphrey received a bare majority of New York's popular vote, he won all forty-three of its electoral votes. (Legally, of course, any of these electors could have voted for someone else, and on a few rare occasions an individual elector has dishonored his commitment.)

Under this system, it is theoretically possible for a Presidential candidate to receive a majority of the electoral votes even though his opponent is the popular victor. To see how this might happen, assume, for a perhaps uncomfortable moment, that the President was chosen by New York and California alone. If Humphrey won New York by fifty thousand votes, and Nixon won California by one hundred thousand votes, then New York's forty-three electors would go to him, and Nixon would receive California's forty. Thus, even though Nixon was fifty thousand popular votes ahead, Humphrey would be elected President, by forty-three electors to forty. The fear that this might happen on a national scale is behind the present demand to eliminate the electoral college and select a President by direct nationwide popular vote. Such a change, which is superficially appealing as a call to democratic principle, might have consequences for the practical operation of our democracy far beyond the intentions of its sponsors. There are some aspects of our present system, of course, that clearly threaten the legitimacy of the democratic process. Certainly electors should not be free to defy the electorate, nor should the House of Representatives under any circumstances be allowed to select a President, being a small group of men susceptible to deals and private pressures. Electors have sometimes acted independently, and the House has on occasion ignored both the popular and the electoral vote in selecting a President. Yet it would be relatively simple to eliminate these possibilities—by, for example, not having individuals as candidates for electors but automatically counting all of a state's electoral votes for the winner of its popular vote, and by providing that the candidate with the most electoral votes would win even if he did not have a majority. Or a runoff popular election would be held if the winning candidate received less than a certain fixed percentage of the electoral votes—say, thirty-five per cent or forty per cent.

However, eliminating the electoral college altogether is another matter. In so doing, we would exchange a clumsy mechanism, but one that has worked, for an ideal construction whose effects are conjectural. Only once in our history has the man who received the most popular votes failed to receive the highest number of electoral votes. That was in 1888, when Grover Cleveland lost the election although he ran a hundred thousand votes ahead of Benjamin Harrison. Andrew Jackson in 1824 and Samuel Tilden in 1876 were deprived of the Presidency despite a popular plurality, but Jackson's defeat came about by the decision of the House (Jackson had a plurality of electoral votes as well), and Tilden lost because disputed electoral votes were taken from him by a hostile Congress. Thus, the electoral college has failed to conform to the popular will only once in almost two centuries, and that in a contest so close that it's almost a technical quibble to say that the people's choice was defeated.

Nor do considerations of abstract democratic theory dictate a change to direct popular vote. If democracy requires that those who govern the country be chosen by a national constituency in which all citizens have equal weight, then both the Supreme Court and the Senate fail the test. Yet, on the whole, they help maintain a necessary balance between minority or regional interests and the majority will; the Senate is often more conscious of national needs than the more representative House. Therefore, before changing a system that has worked remarkably well, the American people should be fairly certain that the results will be beneficial. As we see it, the consequences of eliminating the electoral college not only are highly speculative but might be unfortunate.

First, such a reform, as Professor Ernest Brown, of Harvard, has pointed out, could well transform the frequent charges of election irregularity and fraud into demands for a nationwide recount. Since voting is now by states, such charges are usually allowed to lapse, for even if the result in a particular state should be changed, the winner would rarely lose his electoral majority. But if the popular vote alone were decisive, and the election close, there would be every incentive to demand investigations and recounts, and these would inevitably precipitate counter-demands, while the country waited to see who its leaders would be. In addition, a direct popular vote would powerfuly tempt the states to compete in lowering voting ages, liberalizing registration requirements, and so in, in order to increase their relative influence on the election.

Another, and perhaps more serious, objection to abolishing the electoral college is the threat to the stability of the two-party system, which has been a key element in the endurance of American democracy. Most third-party efforts either have never got off the ground or have proved transient, because, as Professor Alexander Bickel, of Yale, has noted, they have been unable to win electoral votes unless they operated from a regional base. In 1948, for example, Strom Thurmond and Henry Wallace received approximately the same popular vote, but Thurmond got thirty-nine electoral votes and Wallace none. Individuals with a common interest or conviction are restrained from forming an independent party by the knowledge that they cannot carry any states and therefore will not receive any electoral votes, while their activities will tend to subtract votes from the major-party candidate who is ideologically closest to them. With only the popular vote at issue, however, regional roots are irrelevant, and groups united by belief or need—from blacks and those opposed to the war in Vietnam to the John Birch Society—might fragment the electorate into new parties in search of maximum political power. They could, as the Liberal Party has done in New York, bargain with one of the major parties for concessions in return for its endorsement, or offer to withdraw in the midst of a campaign in return for concessions. Such a party might also run candidates in the hope of forcing a runoff election in which its support would be eagerly sought. Most of the election-reform proposals require at least forty per cent of the popular vote for election, with a runoff between the two top candidates if no one gets that much. And although only Harrison received a popular minority and an electoral majority, fifteen Presidents have been elected with less than a majority of the total popular vote. Therefore, almost half of our elections have been contests in which, theoretically, a third party could have held the balance of power. In two of our three last Presidential elections, the popular margin was less than a half-million votes, and in America it is possible—with money and energy—to organize a half-million people for almost anything.

Still another objection centers on the impact that eliminating the electoral college would have on the relative importance of large and small states. Both the advocates and the opponents of reform have assumed that direct popular vote would reduce the emphasis on the large states with the most electoral votes. Yet reform might well have the opposite effect. Usually, campaigns are directed at a swing vote of from ten to twenty per cent of the population, on the assumption that the rest of the voters are pretty firmly committed. Under the reform system, any candidate in search of those votes would have to concentrate his energies and his strategy on the large states, for that is where the people are, and also where the most volatile vote can be found. For example, Richard Nixon, Southern strategy and all, received about the same number of popular votes in California alone that he received in all nine states of the once solid South (roughly three and a half million). Even though Nixon ran well ahead of Vice-President Humphrey in the South, a change of little more than two per cent of his vote in favor of Humphrey in the four largest states, or a change of less than one and a half per cent in the seven largest, would have cancelled out his entire Southern margin. In fact, about half the popular vote for the two major candidates came from only seven states. No political strategist, therefore, could wisely counsel a candidate to take the slightest risk in the big states in the hope of picking up a few more Southern or border states. (In fact, exactly this kind of risk-taking helped defeat Nixon in 1960.) It is just as likely, and far more economical in terms of energy and expense, that under the new system a candidate would assume a basic minimum of Southern and border votes and shape his campaign to the demands of large-state politics. Why should a Presidential hopeful take positions calculated to win Southern states if those same positions might lose him the two or three per cent of the vote in California, New York, Illinois, and Pennsylvania that would be enough to cancel out all his gains? All this, of course, reflects only the psychology of campaigns, since in fact the electoral vote has followed the popular vote. Yet once political strategists stopped thinking in terms of states and the intricate arithmetic for the electoral college; they would tend to focus on areas where the population is concentrated and on the large television "market areas." (After all, in the nine Southern states Nixon received forty-seven electoral votes and helped keep twenty-eight more from Humphrey, while California gave him only forty electoral votes. Thus, the Southerner who voted for Nixon actually had more influence on the electoral majority than did the Californian who went Republican.)

None of these are certain consequences of change. Yet they are all possibilities, as are other results, which we cannot now foresee. (Our history is strewn with discarded democratic reforms, such as the initiative and the referendum, that frequently defeated expectations and sometimes became the instruments of those special interests they were designed to protect the country from.) In return, we will be guarded against the possibility that the popular loser will be the electoral winner. Not only is this highly unlikely (in most close elections the electoral-vote majority has far exceeded the popular margin, thus strengthening the position of a President-elect) but even if it should happen it would be in a contest so close that one would be hard put to it to claim that a firm or decisively expressed popular desire had been thwarted. One of the sources of our national stability has been our unwillingness to change the Constitution except when abuses or malfunctions have already manifested themselves. It has never been amended simply because we feared that something might go wrong at some future date. Yet that is what is now being proposed. We will find, however, no system of choosing leaders that is guaranteed to work perfectly. Certainly a great deal of skepticism and prudent hesitation should attend any effort to "perfect" a system that has worked as well as ours.

REVIEW OF ECONOMIC OPPORTUNITY PROGRAMS

(Mr. PERKINS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PERKINS. Mr. Speaker, the General Accounting Office has kindly furnished me with copies of communications from the U.S. Department of Agriculture, Forest Service, and Department of Interior, Office of the Secretary, commenting upon the preliminary draft of the review of economic opportunity programs made by the General Accounting Office and submitted in report form to Congress on March 18, 1969. I would like to submit, for the information of the Members, these communications which are addressed to Mr. Henry Eschwege, Associate Director, Civil Division, U.S. General Accounting Office, Washington, D.C.:

FOREST SERVICE,
Washington, D.C. March 14, 1969.

Mr. HENRY ESCHWEGE,
Associate Director, Civil Division, U.S. General Accounting Office, Washington, D.C.

DEAR MR. ESCHWEGE: On March 6, the General Accounting Office audit of the programs under the Economic Opportunity Act was reviewed with the concerned agencies. We participated in that review. I understand that comments on the audit should be sent to you for consideration. We would like to offer some suggestions to you regarding the overall evaluation of the Job Corps Civilian Conservation Center program.

First, I want to express our sincere appreciation for the constructive evaluation which was made of our Cispus Job Corps Civilian Conservation Center. We regret that it was not possible to inspect some of our other Centers. As expressed in our April 5, 1968 letter to Civil Division Assistant Director Richard W. Kelley, we were apprehensive that only one Forest Service Center out of the 45 we operate would not give a representative picture of our Civilian Conservation Center program. This apprehension appears to have been justified on the basis of your overall findings related to Civilian Conservation Centers.

The purpose of your evaluation of the Job Corps program was to determine its effectiveness in carrying out the intent of Congress. The Job Corps section of the Economic Opportunity Act states, "It's purpose is to assist young persons who need and can benefit from an unusually intensive program, operated in a group setting to become more responsible, employable and productive citizens; and to do so in a way that contributes, where feasible, to the development of National, State and community resources. . . ." The Act states, "enrollees will participate in intensive programs of education, vocational training, work experience, counseling, and other activities. . . ."

We have reviewed your findings, conclusions, and recommendations in relation to the defined purposes of the Economic Opportunity Act. We would like to discuss the findings in each of these areas and offer suggestions toward strengthening the report.

A highly important factor in helping disadvantaged young men become more responsible, employable, and productive citizens is to bring about social and emotional adjustment. As you know, the population we serve are from poverty backgrounds, 90 percent school dropouts, 60 percent from broken families, 61 percent functionally illiterate on enrollment and 33 percent with records of juvenile delinquency. About one-third of the staff at Civilian Conservation Centers is engaged in group living and professional counselling activities. Attitudinal and behavioral adjustment in Civilian Conservation Centers is relatively rapid, partly because the Centers are small in size, the staff has personal knowledge of each Corpsman and he receives individualized attention. Your report states that "such benefits are generally intangible, however, and not subject to precise measurements".

We believe your evaluation of the Job Corps program could be considerably strengthened by searching out indices of such intangible benefits. For instance, it is noteworthy that Conservation Centers have had little problem in maintaining Corpsman discipline and Center control during a period when youth are rioting at other institutions throughout the country. Another index of social adjustment might be found in data which indicates that Job Corpsmen have a substantially lower arrest rate than the average youth of the same age. Improvement in self-confidence which is essential to motivation is readily accomplished at Civilian Conservation Centers and has been measured through study.

Basic education is a highly important facet of the youth renewal program at Civilian Conservation Centers. As you know, the assignment policy until November, 1968 provided that enrollees with less than fifth grade reading ability be sent to Civilian Conservation Centers and the upper half be sent to Men's Urban Centers. During 1967 and 1968, about two-thirds of the new enrollees at Civilian Conservation Centers were reading at or below the third grade level upon admission. Your finding was that few Corpsmen achieved the program goals established for Conservation Centers which were equivalent to about seventh grade public school level. The short average length-of-stay was cited as one factor which precluded them from advancing to the desired level.

You may wish to update your data on education gains. Latest data shows average reading gains per terminee to be 2.8 levels as compared with 1.9 in Fiscal Year 1968. Such gains are verified by the Stanford Achievement Test. Corresponding improvements in mathematics gains have been experienced. During this time, the average length-of-stay increased from 5.3 months to 6.1 months. While we are still working to increase the average length-of-stay and educational gains, the current gains can be considered remarkable when viewed in the perspective of the group of low educational achievers assigned to Civilian Conservation Centers.

The inference that emphasis placed on accomplishing work projects adversely affected training programs and the instance cited that Corpsmen were often excused from academic courses to work on the projects is definitely not representative of the program. Training is given priority over work project accomplishment. Beginning readers are given daily reading instruction both during the education and work weeks.

The audit report puts primary emphasis on the vocational training and work experience aspect of the Job Corps Conservation Center program. In this activity it has findings and opinions and states conclusions which are grossly erroneous. In its present form the report presents a completely inaccurate picture of vocational training and work experience in Forest Service Conservation Centers. It portrays work skills training at Conservation Centers as generally projects which require the use of the most basic hand tools such as axes and shovels, providing only limited marketable skill development training. This is not factual.

We have made an analysis of work program accomplishment reported by Forest Service Centers in FY 1968 which includes the period of the audit. From this reported $12,085,000 of project value, $9,339,000 of which was conservation work, we have arrived at the following breakdown of training value:

Training value of project	Dollar value of project	Percentage
High	$9,482,000	79
Some	660,000	5
Little	1,943,000	16
Total	12,085,000	100

Examples of high training value projects include:

Type of project	Training offered	Dollar value
Road construction and reconstruction	Heavy equipment operation	$2,214,000
Bridge construction and reconstruction	Heavy equipment operation, masonry, carpentry, welding.	236,000
Building construction and reconstruction	Carpentry, masonry, painting	3,109,000
Recreation facility construction and reconstruction	Carpentry, masonry, welding, painting	2,922,000

Examples of projects with only some or little training value are:

Type of project	Training offered	Dollar value
Soil erosion control	Some heavy equipment but largely hand labor	$161,000
Reforestation and timber stand improvement	Handtools, power saws	220,000
Fence construction	Power saws, handtools, and limited heavy equipment	209,000
Landscaping and site development	Limited heavy equipment, handtools, and masonry	977,000

Enrollees are initially assigned to general work projects to learn work habits, to provide time for them to make a selection for vocational training, and to provide time to raise their reading and math ability so they can participate in higher level training.

The report recognizes that the May 2, 1968 Job Corps Civilian Conservation Centers Program Task Force Report revised some program concepts and policies for operation of academic and vocational training programs at Centers. It also states the opinion that implementation of the requirements as they relate to vocational training would have a beneficial effect on the training program. I am pleased to report that during the ten months which have elapsed since the issuance of that Task Force Report the program revisions have been implemented. Staff vocational training capabilities have been adjusted, the work program revised to offer maximum training opportunities, precise and detailed curriculums provided and a system for documenting performance achievements of Corpsmen implemented. We have not found these program improvements to increase Center operating costs.

Forest Service Job Corps Conservation Centers have a well defined work skills training program operating succesfully. This program provides skills training to the apprentice level in the occupations of carpentry, heavy equipment operation, welding, automotive service mechanic, bricklayer apprentice-cement mason, cook, and painter. Training has been further strengthened by arrangements with national labor unions for training instruction and placement assistance for heavy equipment training programs at two Centers, carpentry training programs at six Centers, and painter training programs at 20 Centers. The Civilian Conservation Center training program has the additional advantage of teaching work skills in an on-the-job

situation which makes the learned skills easily transferable to later employment.

Two other points may be worth considering which relate to the emphasis the report places on the vocational training component of the Job Corps program. The first is the finding cited in the report that only 25 percent of working terminees were working in areas in which they had received training and 75 percent were working in other areas. If this is so, then experience would indicate that social adjustment and work habits may be at least as important as vocational training. The second is that according to your sample and other more extensive studies, Civilian Conservation Center terminees are working at an average of about 10 cents per hour less than Urban Men's Center terminees. When one considers that the top half of the enrollees, educationally speaking, have been assigned to Urban Centers and the lower half to Conservation Centers, it is difficult to establish that one program is more successful than the other in the area of making Corpsmen employable.

We hope that these comments will be helpful to you in preparing your report to Congress. If possible, we would like them included in your report.

Sincerely,

EDWARD P. CLIFF,
Chief.

U.S. DEPARTMENT OF THE INTERIOR,
Washington, D.C.

MR. HENRY ESCHWEGE,
Associate Director, Civil Division, U.S. General Accounting Office, Washington, D.C.

DEAR MR. ESCHWEGE: This Department, as a participant in the Job Corps Civilian Conservation Center Program, has been informally advised of the conclusions and recommendations concerning the Civilian Conservation Center Program contained in the draft report of the audit of the programs under the Economic Opportunity Act. On the basis of the information available to us, we are prompted to offer the following comments in the belief that they are necessary to a full and fair understanding of degree to which the Program has achieved success in filling its primary purpose; that of assisting young men to become more responsible, employable and productive citizens in a way that contributes to the development of National, State and community resources.

We believe that it is important at the outset to understand that this program in its conception, and as it has existed since its inception, has been essentially a research and development effort, one which is directed toward discovering the ways and means by which a society could redeem not only its failure to a segment of its population—the uneducated, unskilled, underemployed young men—but also to redeem the individual failures of the members of that population. It has, and will continue to have, an orientation and an urgency not found in the more traditional Federal, State and local programs. This program directs its orientation toward a human resource that is multiplying itself in our ghettos, our urban and rural areas at a rate that far exceeds the availability of the dollars or the knowledge necessary to deal with it. As such, it has incurred the relatively higher costs that are attendant with research and development programs. We believe that any judgments with respect to program costs must be viewed in this light.

Further, we believe that it is essential in viewing the work experience aspects of the program to understand that we are dealing with an element of our population that has neither the aptitudes nor the attitudes that are necessary to make them employable. We know from the statistics provided to us by the Office of Economic Opportunity that upwards of 60% of our Corpsmen come from homes where the head of the household is unemployed; nearly 40% come from families on relief. Within the Conservation Center Program, we are concerned with *work skills* and *attitudes*. The report states that the work experience aspects of our program call largely for the use of common labor and basic hand tools and questions whether intensive vocational training can be provided. This statement ignores the fact that highly complex work projects offering a variety of marketable skills are being conducted in our centers. We want to say more about this, but feel it is essential at this point to draw your attention first to the values derived in terms of Corpsmen attitudes from the work experience aspects of our program. We believe that "employability" for our type of enrollee is comprised of equal parts of work skills and attitudes that are most readily acquired through the actual on-the-job training at Civilian Conservation Centers. Countless potential employees have told us "give us a boy who knows what it is to work and who is willing to work and we will provide the additional specialized training necessary so that he can hold down a job with us." For young men who come to us from backgrounds of the unemployed and the relief rolls, a realization and an acceptance of what it means to do an honest day's work for an honest wage is essential. Even if our program was largely one of basic hand tools and common labor—which it is not—the realization and acceptance of these values which take place in our Corpsmen is of immeasurable value to the Nation.

More specifically, we want to point out that our program does offer meaningful vocational training in skilled areas recognized in, and in fact based on, the Department of Labor's *Dictionary of Occupational Titles* for: Automobile-service mechanic, carpenter (construction); cook; bricklayer-cement mason; production line welder; operating engineer (heavy equipment operator). These training standards were developed with the assistance, cooperation and advice of the recognized governing bodies of the trades and crafts involved, and were issued with their endorsement. At the present time, training in automotive skills is offered in 23 of our 30 centers with a program to be implemented in 3 additional centers by July 1. Carpentry skills are offered in 27 centers with 3 additions planned. Bricklayer-cement mason skills are offered in 20 centers with 4 additions planned. Heavy equipment operator skills are offered in every center. Welding skills are offered in 19 centers with 5 additions planned. Cooking skills are offered in 24 centers with 4 additions planned.

In addition, we are conducting programs at one of our centers in cooperation with the Kentucky State Building and Construction Trades Council, AFL–CIO, and we have recently joined with the Brotherhood of Painters, Decorators, and Paperhangers of America in offering meaningful vocational training in painting skills at 18 of our centers. This training is accomplished through our work programs which provide for the teaching of work skills in an on-the-job situation. The work projects through which the skills are acquired are directed toward the conservation mission of each of the Conservation Agencies and are reviewed at the Departmental level to insure that they provide maximum skill exposure.

Thus, while acquiring skills in an occupational area, the Corpsmen contribute to the conservation of the Nation's resources and recreational areas. Our analysis of the work program accomplishment within this Department's centers from the inception of the program through FY 1969 indicates that millions of dollars worth of improvements to our natural resources and recreational areas have been returned to the public through this program. While the report questions the validity of the appraised values within the program, we believe that these values are objective. These values are determined by highly-qualified agency personnel who are not directly associated with the Conservation Center Program.

In order to provide the Corpsmen with the complete requirements for employability, the academic portion of the program is equally as important as skills and attitude training. From its inception the Civilian Conservation Center educational program was tailored to remediate the needs and/or deficiencies of the target population. The latest data indicates that the average reading gains per terminee is 2.8 levels of academic achievement. These gains are verified by the Stanford Achievement tests. Corresponding improvements in mathematics and other educational areas have been experienced. These improvements are considered remarkable in view of the low educational achievers assigned to the Conservation Center Program.

We understand that the Chief of the U.S. Forest Service has also written to you with regard to the report. We have endeavored to present additional thoughts for your consideration; however, we fully subscribe to the comments made by the Forest Service.

We feel proud of the achievements of the Civilian Conservation Center Program of the Department of the Interior and believe that it is accomplishing the purpose and intent of the Congress. We hope that these comments prove to be of benefit to you in preparing your report to Congress.

Sincerely yours,

HARRY SHOOSHAN,
Deputy Under Secretary for Programs.

THE 5-YEAR EXTENSION OF ESEA

(Mr. PERKINS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PERKINS. Mr. Speaker, I feel this is an appropriate time to call some pertinent facts to the attention of the House with regard to the legislation which has been reported out of the Committee on Education and Labor. This legislation, H.R. 514, would extend the Elementary and Secondary Education Act for a 5-year period.

The House will shortly have to act on this legislation, and these facts relate directly to the impact which this legislation has had, is having, and will continue to have—on the vast complex of educational systems throughout the Nation—an educational system which is as efficient, effective, and capable as any in the world.

It is this same education system which we hope to make even more meaningful to every individual who becomes part of it—at the State level, local level, in the school, and in the home—and the Federal role to be played in this drama is a very vital and significant one. The Federal Government has, as a result of the enactment of the Elementary and Secondary Education Act and related legislation, made great progress in its effort to come to grips with a problem ignored for too long—that is, becoming a very active partner in the job of providing adequate educational assistance to our State and local school systems throughout the country.

If there is any doubt in the minds of some of my colleagues as to why the Committee on Education and Labor has reported out a bill which extends elementary and secondary education legislation for 5 additional years, I would like to refer them to the list of witnesses who have testified before the committee this year endorsing the provisions of H.R. 514, which, among other things,

does just that. This list is a representative cross-section of the Nation's school officials from State and local systems, the professional educational associations, and many others.

As I am sure you are aware, the Elementary and Secondary Education Act and related legislation has proven to be one of the most valuable and influential pieces of educational legislation which any Congress has enacted. As I have stated in other RECORD inserts, many school superintendents attested to this fact in their comments regarding the effectiveness of this legislation. The original act, Public Law 89–10, and the amendments that have been enacted in subsequent Congresses, has had the total effect of reaching into every school in the country—making possible new and needed programs, additional facilities, more qualified personnel, new and more sophisticated equipment and materials, and professional guidance, if desired, to assist in developing new programs and curriculum.

These people traveled to Washington because they had things to say regarding the programs and activities under the ESEA which were of importance and value with their States.

The meaning and impact which this legislation has had can best be understood with the statement that the witnesses who testified on this legislation all endorsed a 5-year extension of the bill.

Mr. Speaker, for the benefit of my colleagues, so that they may see the extent to which the Committee on Education and Labor wanted views from every geographic sector of the country—as well as all the various interests in the educational community—I would like to insert in the RECORD a partial listing of the people who appeared before the committee—all of whom, I repeat, asked that the legislation which so vitally affects our elementary and secondary schools, be extended for 5 years. The list follows:

Dr. Graham Sullivan, Deputy Superintendent of Instruction, Los Angeles City Schools.

Don Richardson, District Coordinator of Compensatory Education Programs.

Dr. Tom Lawson, Office of Superintendent of Schools, Los Angeles.

Henry Boas, Administrative Analyst, Los Angeles School District.

Dr. William Kottmeyer, Superintendent of Schools, St. Louis, Missouri.

Dr. E. C. Stimbert, Superintendent of Schools, Memphis, Tenn. Accompanied by: Dr. O. Z. Stephens, Director of Research and Publications; Maurice E. Roach, Director of Federal and State Projects.

Dr. Mark R. Shedd, Superintendent of Schools, Philadelphia, Pa.

Dr. William H. Ohrenberger, Supt., Boston Public Schools, accompanied by: Mr. Paul Kennedy, Administrative Asst. to the Superintendent; Mr. Joseph F. Carey, Director, Educational Planning Center; Mr. Victor A. McInnis, Director, Title I Programs.

Dr. Joseph Manch, Superintendent, Buffalo Public Schools, accompanied by: Mr. Claude D. Clapp, Asst. Supt. for Finance & Research.

Dr. Norman Drachler, Superintendent of Schools, Detroit, Michigan accompanied by: Dr. Louis Monacel, Asst. Superintendent, Federal & State Relations; Dr. William Simmons, Deputy Supt., Federal & State Relations for Fiscal Planning.

Miss Cora Bomar, Director, Division of Educational Media, State Dept. of Public Instruction, Raleigh, N.C.

Miss Frances Hatfield, Supervisor of Instructional Materials, Board of Public Instruction, Broward County, Fla. Broward Co. Public Schools, Ft. Lauderdale, Fla.

Miss Ingrid O. Miller, School Library Consultant, Independent Schools District No. 273, Edina, Minn.

Miss Germaine Krettek, Associate Executive Director, American Library Assn.

Dr. Paul Briggs, Superintendent of Schools, Cleveland, Ohio.

Dr. Bernard Donovan, Superintendent of Schools, New York City.

William N. Ryan, Coordinator, ES–70, Breathitt County, Bd. of Educ., Jackson, Ky.

Austin H. Armitstead, Chairman, National Committee on the Education of Migrant Children, accompanied by: Miss Cassandra Stockburger, Director, Natl Committee on the Educ. of Migrant Children.

James R. Dorland, Associate Executive Secretary, National Association for Public School Adult Education.

Francis D. Murnaghan, Jr., President, Baltimore City Board of School Commissioners, also representing National School Boards Association.

Mrs. G. Theodore Mitau, Vice Chairman of the Board of Education for Independent School District No. 625, St. Paul, Minnesota.

Dr. Edward Palmason, Seattle, Washington.

Dr. Richard Ando, Honolulu, Hawaii.

Dr. Gary N. Pottorff, Vice President, Board of Education, Wichita, Kansas.

John Wagner, South Bend Community School Corporation, South Bend, Indiana.

Hazen Schumacher, Board Member and Past President, Board of Education, Ann Arbor Public Schools, Michigan.

Mrs. Michael Spicer, Member School Board, Lawrence Township, Mercer Co., N.J.

Mr. R. Winfield Smith, President, National School Boards Association and Director Upper Perikomen Board of School Directors, Pennsburg, Pa.

Mrs. Margaret Nielsen, President, Board of Education, West Bend, Wisconsin.

Mrs. Frances M. Carnochan, Chairman, NEA Legislative Commission, Trenton, N.J., accompanied by: Dr. John M. Lumley, Executive Secretary, NEA Legislative Commission and NEA Assistant Executive Secretary for Legislation and Federal Relations, Washington, D.C.

Mr. David Tankel, Director, ESEA Title I, Trenton Public Schools.

Mrs. Carol Belt, Art Coordinator, Trenton Public Schools.

Mr. William Raymond, Director ESEA Title III, Tempe Elementary School District, Tempe, Arizona.

Mr. G. Warren Phillips, Superintendent of Schools, Valparaiso, Indiana and Chairman, American Association of School Administrators, Federal Policy and Legislation Committee accompanied by: Mr. James Kirpatrick, Secretary, American Association of School Administrators; Dr. Harold H. Eibling, Superintendent, Columbus Public Schools, Columbus, Ohio.

Mrs. Bruce B. Benson, President, League of Women Voters of the United States.

Mr. William C. Geer, Executive Secretary, The Council for Exceptional Children, National Education Association.

Dr. John Melcher, Assistant State Superintendent and Director of the Bureau for Handicapped Children, State Department of Public Instruction, Madison, Wisconsin.

Mr. Fred Weintraub, on behalf of Dr. Leo Connor, Superintendent, Lexington School for the Deaf, New York, N.Y.

Dr. Maynard Reynolds, Chairman of the Department of Special Education of the University of Minnesota.

Dr. Elizabeth M. Boggs, Chairman, Committee on Government Affairs, The National Association for Retarded Children.

Mr. Irvin P. Schloss, Legislative Analyst, American Foundation for the Blind.

Dr. W. H. Moore, Associate Commissioner of Federal Programs, ESEA, State Department of Education, Little Rock, Arkansas, accompanied by: Mr. Jeff D. McGehee, Chairman, Arkansas Advisory Council on Policy.

Dr. James F. Redmond, General Superintendent, Chicago Board of Education, Chicago, Illinois, accompanied by: Dr. George Balling, Assistant Superintendent for Federal Relations and Dr. Arthur Lehne, Assistant Superintendent for Federal-State Funded Programs.

Dr. John O'Neill, President, American Speech and Hearing Association, Department of Speech Pathology and Audiology, University of Illinois, accompanied by: Dr. Kenneth O. Johnson, Executive Secretary, American Speech and Hearing Association.

Dr. William Simmons, Deputy Superintendent, Detroit Public Schools.

Dr. Ralph Hood, Superintendent of Schools, Brunswick, Georgia.

Dr. Bluford Minor, Assistant Superintendent of Schools and Business Manager, City of San Diego, California.

Dr. J. M. Hanks, Superintendent, Ysleta Public Schools, El Paso, Texas.

Dr. Reid Ross, Superintendent of Schools, Fayetteville, North Carolina.

Dr. George Membrino, Superintendent of Schools, Chicopee, Mass.

Dr. Edgar Fuller, Executive Secretary, Council of Chief State School Officers.

Dr. Jack P. Nix, Superintendent of Schools, Department of Education, Atlanta, Georgia.

Dr. James A. Sensenbaugh, State Superintendent of Schools, Baltimore, Maryland.

Dr. George Thomas, Director, Extended School Year Program, New York State Dept. of Education, New York.

Mr. John Doyle, Area Director, New Haven Public Schools, Hamden, Conn.

Mr. Donald Merryman, Project Director, Title III ESEA, Board of Education, Baltimore County, Upperco, Maryland.

Mr. Harvey Granite, Administrator, Title I, Rochester Public Schools, N.Y.

Mr. Donald E. Snodderly, Project Director, Title I ESEA, Board of Education, Baltimore County, Baltimore, Maryland.

Dr. Richard Vanhoose, Superintendent, Jefferson Co. Public Schools, Louisville, Ky.

Dr. J. O. Johnson, Assistant Superintendent for Research, Jefferson County Public Schools, Louisville, Kentucky.

Mr. Fred S. Rosengarden, Director of Visual Education, Chicago Public Schools.

Mr. Jack L. Perlin, Principal, Wadsworth Elementary School, Chicago, Ill.

Mr. Leo Lopez, Chief of Bureau Community Services & Migrant Education, California State Department of Education, Sacramento, Calif.

Mr. Westry Horne, Director, Education Program for Seasonal and Migrant Families, New Jersey State Dept. of Education, Trenton, N.J.

Professor Adalberto Guerrero, Tucson, Arizona.

Mr. Nathaniel Dixon, Director, Division of Elementary and Secondary Education, Museum of Natural History, Washington, D.C.

Dr. Reed P. Wahlquist, Principal, Kearns High School, Salt Lake City, Utah, accompanied by: Dr. Norman D. Riggs, Assistant Principal, Kearns High School; Mr. C. Michael Newman, Director, Project I.D.E.A., Kearns High School.

Dr. Charles C. Holt, Superintendent, South Bend Community Schools Corporation, South Bend, Indiana.

Mr. Morton L. Linder, President, Board of School Trustees, South Bend Community School Board, South Bend, Indiana.

Mr. Julius Truelson, Superintendent of Schools, Fort Worth Independent School District, Fort Worth, Texas.

Dr. Fred W. Kirby, Assistant Superintendent of Schools, Columbus, Ga.

Mr. Archie F. Simmons, Administrative Assistant and Coordinator of Federal Pro-

grams, Leflore County School District, Greenwood, Mississippi.

Mr. Julian D. Prince, Sr., Superintendent of Schools, McComb Municipal Separate School District, McComb, Mississippi.

Mr. Ray Brackett, Director, Title I, ESEA, Floyd County Schools, Prestonsburg, Kentucky.

Mr. Foster Meade, Superintendent, Lewis County Schools, Vanceburg, Kentucky.

Mr. Bueford Risner, Superintendent of Schools, Bath County, Owingsville, Kentucky.

Mr. Charles Straub, Jr., Superintendent of Schools, Mason County Schools, Maysville, Kentucky.

Very Rev. Msgr. James C. Donohue, Ph.D., Director, Division of Elementary and Secondary Education, United States Catholic Conference, Washington, D.C.

Reverend Louis F. Generes, Superintendent, Archdiocese of New Orleans, Louisiana.

Reverend Franklin E. Fitzpatrick, Superintendent of Schools, Roman Catholic Diocese of Brooklyn.

Reverend Harold J. Ide, Assistant Superintendent of Schools, Archdiocese of Milwaukee, Wisconsin.

Reverend Emmet Harrington, Superintendent of Schools, Archdiocese of Portland, Oregon.

Rt. Rev. Msgr. Edward T. Hughes, Superintendent for Archdiocese of Philadelphia, Pennsylvania.

Mr. C. P. Callahan, Assistant Superintendent of Schools, Department of Education, Diocese of San Diego, California.

Very Rev. Msgr. Henry Gardner, Superintendent for Archdiocese of Kansas City, Kansas.

Professor James V. Powell, Elkhorn City, Kentucky.

Dr. Ira Polley, Superintendent of Public Instruction, State Department of Education, Lansing, Michigan.

Dr. Wilson C. Riles, Director of Compensatory Education, State Department of Education, Sacramento, California.

Raymond A. Horn, Director, Division of Federal Assistance, State Department of Education, Columbus, Ohio.

Dr. Austin Haddock, Director, Title I, ESEA, State Department of Education, Salem, Oregon.

Mr. Fred Williams, Coordinator of Title I, ESEA, State Department of Education, Frankfort, Kentucky.

Dr. Alexander J. Plante, Coordinator of Title I, ESEA, State Department of Education, Hartford, Connecticut.

Dr. Joseph Johnston, Coordinator, Title I, ESEA, State Department of Public Instruction, Raleigh, North Carolina.

Mr. Jack Hanson, Title I Administrator, Minnesota Department of Education, St. Paul, Minnesota.

Louis A. Dughi, Assistant Coordinator, Federal Assistance Programs, State Department of Education, Trenton, New Jersey.

V. P. Horne, Director, Public Relations, Kentucky Education Association, Louisville, Kentucky.

Dr. Irving Ratchick, Coordinator of Title I, ESEA, New York State Education Department, Albany, New York.

Mr. Frank N. Brown, Coordinator of Title I, ESEA, State Department of Public Instruction, Madison, Wisconsin.

Dr. Noah S. Neace, Coordinator of Title I, ESEA, Office of Superintendent of Public Instruction, Springfield, Illinois.

Mr. Frank H. Vittetow, Assistant Superintendent of Public Instruction of State and Federal Relations, Department of Education, The Commonwealth of Kentucky, Frankfort, Kentucky.

CRISIS IN THE LUMBER ECONOMY

(Mr. DON H. CLAUSEN asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. DON H. CLAUSEN. Mr. Speaker, last year, California was proud to provide the Nation with another gem for its string of superlative national parks. Now we want to do more about meeting the Nation's need for wood for new homes at a reasonable cost. Also, what I am suggesting today, I hope will shed some light on the current lumber price situation and offer some constructive suggestions that will lead to a stabilization of lumber prices throughout the Nation.

At the outset let me say, that I believe we must now demonstrate that we can house our growing population while we preserve and enjoy our new Redwood National Park. Information that has recently come to my attention shows that this can be done if the Congress meets its responsibilities to assure sound management of our national forests. The information to which I refer is a statement presented in December of last year by Mr. Paul E. Neff at the Western Forestry and Conservation Association meeting in San Francisco; a copy of which is offered herewith for the RECORD.

Mr. Neff's statement, in my judgment, suggests specific opportunities for increasing the harvest of commercial timber from that area located in the counties of Humboldt, Del Norte, and Mendocino which are contiguous to the site of the Redwood National Park in California. It provides some of the details not available in the Forest Service's statement made earlier this week to the House Banking and Currency Committee.

Very briefly, Mr. Neff points out that, with the addition of just 12 employees, the Forest Service could increase the annual cut in three national forests by more than 73 million board feet. This timber would come from the salvage of dead trees that are normally lost to use and can be reached now without major road construction.

With the completion of needed access roads, these three forests could provide each year more than 400 million board feet of mortality salvage. This timber, alone, would accommodate the building of more than 40,000 new homes each year!

Such timber losses as we are now experiencing are intolerable and our performance as the custodians of this great renewable natural resource leaves much to be desired. For this reason, I believe the Congress should promptly give the Forest Service the tools it needs to expedite the movement of this lumber into the construction of homes.

Over the years, we who represent major timber regions have been urging Congress and the executive branch to accelerate the Forest Service access road development program to permit intensified timber harvest and forest management programs to go forward. As a member of the House Roads Subcommittee, I can report that my colleagues have supported our request to the $170 million level, as recommended by the Forest Service as the required amount.

Regrettably, the previous administration and the Appropriations Committee funded only $100 million toward this goal. I was also the principal author of the log export restriction bill that ultimately cleared the 90th Congress as an amendment to the foreign aid bill. I say this only to remind my colleagues that those of us familiar with forestry and lumber products, have done everything possible to alleviate the log supply problem which is partially respon sible for the excessively high lumber prices. Had our recommendations been followed fully, I do not believe we would have this problem today.

For several years, however, the forest products industry and the economy of most lumber regions have been in a very depressed condition—it's either "feast or famine." Many are just now recovering from some very lean years, and this is particularly true of the small mill owners and lumber operations. Now for the first time in years, we have the opportunity to recover following a long period of adjustment.

We can now look forward, I believe, to a leveling off of lumber prices and this, of course, will greatly benefit everyone concerned.

Therefore, I urge this Congress and the administration to do everything possible to avoid a decline in our lumber economy at this crucial time.

In summary, our goal must be:

First, to construct more forest access roads;

Second, to institute better forest management practices on public lands; and

Third, to create and maintain firm and stable timber prices.

In conclusion, Mr. Speaker, I submit that the tight lumber prices of the past have contributed to the tight money policies of the present.

If this Nation is to adequately house its people, supply the jobs needed in forested areas, and properly manage our national forests—we, in the Congress, must first make additional funds available for forest roads and other forest management practices and, secondly, develop a long-range method of finance and funding for the managers of our national forests that is sound, feasible, and certain to yield the revenues needed to constitute an "investment" in this great natural resource.

The statement mentioned follows:

TIMBER MORTALITY: FEDERAL PROGRAMS AND EXPECTED RESULTS, LIMITATIONS AND OPPORTUNITIES

A high proportion of the commercial forest land in Federal Ownership in the West supports mature or overmature timber. Such stands characteristically have higher mortality rates in merchantable stems than young growth. Unless preventive measures are carried out on a current basis, high mortality rates will continue until such time as the old growth stands are liquidated, in some cases over 60 years hence.

One of the first steps in reducing pest impacts is detection. Finding where the insects and diseases are before they become epidemic. By recognizing potential outbreaks early they often can be suppressed through timber sales or by cultural manipulation. Detection is a continuing job by State, private and Federal forest entomologists and pathologists covering all forested lands of all ownerships.

Evaluation surveys are made to appraise the significance of outbreaks and to determine whether they will be allowed to run their normal course unchecked or whether

direct suppression measures should be employed to reduce the outbreak to an endemic level.

Detection and evaluation surveys are varied; most are a combination of aerial surveys followed by ground checks. Detection and evaluation surveys are continually being refined. There have been a considerable number of changes in recent years through the development of aerial photo techniques, bark X-ray and electronic data processing. There are other improvements on the drawing board. In a few years through sensor techniques, it may become possible to detect sick trees before there are any outward symptoms.

The prevention of insect and disease outbreaks through silvicultural and biological practices will become more important in reducing pest impacts as we develop fully managed forests. Miller and Keen, years ago, pointed out in USDA Pub. #800 that "All results from applied control indicate that the killing of beetles, no matter by what method, has only a limited effect in reducing tree mortality. The trend of epidemics is only temporarily altered by direct control measures."

Present inventory statistics are inadequate to accurately pinpoint the total annual losses to mortality. Neither are accurate data available as to the exact amount of current mortality salvaged each year. Forest Service records combine the timber cut as salvage with other unregulated material cut, including thinnings and species such as lodgepole pine that have not had a dependable market in the past.

Up to now the available supply of National Forest timber sold in California has exceeded utilization. Not until fiscal year 1966 was the utilization of National Forest timber equal to the allowable cut. Between 1962 and 1968, the back log of uncut timber climbed rapidly. The present back log is two and one-half times the allowable cut. Forest Service emphasis has been aimed at marketing large quantities of timber to provide the timber industry the opportunity to cut at allowable cut levels.

It now appears that this aim has been achieved and interest in additional supplies of timber including mortality salvage will be stronger. In Region 6, the volume of timber under contract is much less in proportion to the annual allowable cut. Consequently a more vigorous salvage program has been under way in recent years.

The Forest Service, and the Bureau of Land Management are committed to sell available unregulated material, including salvage, to the extent funds will permit and market demands can utilize it.

Funds and man-power for sale preparation have not been sufficiently high to market all of the material available from federal timber lands. Perhaps they never will be. This has necessitated the establishment of priorities in programming of the various categories of timber products. These priorities for federal ownerships in the west are:

1. Market insect epidemic losses and fire salvageable material.

2. Market the regulated cut. This would include intermediate cutting where such cutting is included in the allowable cut. (Siuslaw in R–6)

3. Market thinnings in locations where small-log harvesting has become an established practice.

4. Market dead and down salvage material.

5. Market thinnings in new areas.

Large catastrophic losses from insects, wind, floods and fires have generally been successfully salvaged as a part of the regulated sale program by regular operators. For example, the Douglas-fir bark beetle attack following the Christmas floods of 1964 in California was estimated to have killed about a billion board feet during 1966 and 1967. By the end of 1968 close to 500MM board feet will have been sold. Most of the remainder is inaccessible and may not be salvaged.

The Columbus Day windstorm in 1962 damaged 2.1 billion feet of timber on the National Forests of Oregon and Washington. A good part of this was salvaged, over 1.8 billion feet.

The normal annual mortality, scattered throughout the forest areas, is another matter. Such mortality results in light volumes per acre and may or may not be attractive from a logging standpoint. This depends upon its accessibility, the economics of removal, the availability of timber from regular sales, and the availability of operators with small, highly mobile equipment needed to operate scattered salvage shows.

The three Douglas-fir Forests in northwestern California, Six Rivers, Shasta-Trinity and Klamath have studied their mortality salvage situation. The situation on these Forests is illustrative of what might be expected on other Region Five Forests.

Current inventories show the unregulated cutting objectives for these three Forests to be 28 million board feet. The average unregulated volume cut for the last three fiscal years is 9 million board feet.

New inventories and allowable cuts are in process on all three of these Forests. These will produce drastically better figures than we now have to work with.

As an interim step, pending completion of additional new inventory data, salvage opportunities have been classified into three accessibility categories and tabulated below:

Forest	Annual volume, mm. board feet, by accessibility category		
	1	2	3
Six Rivers	9.0	2.0	160.0
Klamath	7.5	25.0	32.5
Shasta-Trinity	20.0	10.0	140.0
Total	36.5	37.0	332.5

Category 1 is that dead and down sawtimber which is currently accessible without construction of specified or permanent roads.

Category 2 is reasonably accessible with the construction of additional specified roads by timber purchasers, including normal amounts of supplemental funding.

Category 3 is inaccessible and would require major government construction.

Categories 1 and 2 can be looked upon as an opportunity for increasing salvage sales during the next 10 years. Category 3 is considered completely impractical during the next 10 years.

Manning and financing for an accelerated salvage program, including categories 1 and 2 would require these increases:

Forest	Funds M dollars	Ceilings man-years
Six Rivers	58	2
Klamath	172	4
Shasta-Trinity	158	6
Total	388	12

In addition, it is impractical to believe that the above increases would result in selling the full additional volume unless the regular sale program is fully financed. For example, during the past three fiscal years all Region 5 Forests have been financed to sell, on the average 68MM board feet of unregulated material. However, they were only given 82 percent of the finances needed to sell the regular program. It would be unrealistic to reduce the regular program since more volume in more desirable sales can be prepared per dollar than is the case with unregulated sales. Also, the allowable regulated cut is considered the first priority commitment to sell, therefore, underfinancing the regular program has tended to reduce accomplishment in the unregulated program.

Long run plans for the future place major emphasis on establishing intermediate cutting in all merchantable sized stands that are accessible each decade. This will include category 1 and 2 and gradually extend to category 3. The principal difference between this approach and a salvage sale approach is that it is designed to remove in addition to accumulated dead and down trees those live trees that are expected to die withing 10 years. The major improvement expected is three fold. First, very much more attractive sales will result, including heavier cut volumes per acre and better average quality timber. Second, by removing anticipated mortality actual future mortality will be greatly reduced. Third, some relief from competition will occur in the remaining trees improving their general thrift and resistance to insects and diseases.

Implementation of this program is underway on the Six Rivers and Klamath Forests in the recalculation of allowable cut. This is a necessary first step since such a program will influence the yield from regeneration cutting.

Provisions for increased funding and manpower is a key second step and remains yet to be answered.

Let me conclude by outlining what we need to do in California:

A. Continue and improve insect detection and evaluation surveys.

B. Develop a large operational intermediate cutting program, tending each accessible commercial forest area on the National Forests including landscape management units at least once each 10 years. By this, I mean (1) thinning in young stands to improve thrift and resistance to insects and diseases. (2) In old growth Douglas-fir stands, we need to take live high risk trees in addition to dead and down to reduce or prevent mortality while the stand's turn for harvest approaches. (3) In intervening areas between release groups in the Sierras, we need to take out high risk as well as dead and down trees so that mortality is reduced during the necessary intervals between major silvicultural treatments.

C. We need a financing and man power program that will consistently make it possible to plan for and put crews in the field to prepare and administer such an intermediate program. Preparatory work must often begin three years ahead of sale date. We can't start and stop intermittently if the intermediate program is to become a part of our standard timber program.

D. To make intermediate cutting a standard operational part of our timber program, we need to include this kind of cutting in our allowable cut statements and five-year action plans. We are working on such calculations on the Six Rivers and Klamath Forests now.

E. We also need to develop logging methods for this practice with industry. Additional highly mobile tractor and cable skidding will be needed. We need to perfect equipment capable of harvesting intermediate cuts on very steep slopes.

Both the timber industry and the Federal timber selling agencies stand to benefit greatly from such a program. To be most successful a good bit of cooperation will be needed.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. PRICE of Texas (at the request of Mr. GERALD R. FORD), for today, on account of death in family.

Mr. WAGGONNER (at the request of Mr.

ALBERT), for today, on account of official business.

Mr. FISH (at the request of Mr. GERALD R. FORD), indefinitely, on account of death in family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. PUCINSKI, today, for 30 minutes; to revise and extend his remarks and to include extraneous matter.

(The following Members (at the request of Mr. HANSEN of Idaho) to revise and extend their remarks and include extraneous matter:)

Mr. HALPERN, for 5 minutes, today.
Mr. MICHEL, for 30 minutes, today.
Mr. CONTE, for 30 minutes, today.
Mr. QUIE, for 5 minutes, today.

(The following Members (at the request of Mr. DANIEL of Virginia) to address the House and to revise and extend their remarks and include extraneous matter:)

Mr. REUSS, for 10 minutes, today.
Mr. SHIPLEY, for 10 minutes, today.

EXTENSIONS OF REMARKS

By unanimous consent, permission to extend remarks was granted to:

Mr. MCCORMACK (at the request of Mr. BURKE of Massachusetts) to extend his remarks following the statement by Mr. BURKE of Massachusetts.

Mr. KEITH to extend his remarks following those of Mr. MCCORMACK.

Mr. MADDEN and to include extraneous matter.

Mr. SAYLOR in two instances and to include extraneous matter.

Mr. DON H. CLAUSEN.

Mr. YATES to revise and extend his remarks in connection with special order of Mr. PELLY.

(The following Members (at the request of Mr. HANSEN of Idaho) and to include extraneous matter:

Mr. HALPERN.
Mr. MAILLIARD in two instances.
Mr. DAVIS of Wisconsin in two instances.
Mr. HARSHA.
Mr. HANSEN of Idaho.
Mr. MORTON.
Mr. QUIE.
Mr. GROVER.
Mr. ASHBROOK.
Mr. DELLENBACK.
Mr. MILLER of Ohio in two instances.
Mr. MCCLURE.
Mr. ESHLEMAN.
Mr. STEIGER of Wisconsin.
Mr. POLLOCK.
Mr. CÓRDOVA.

(The following Members (at the request of Mr. DANIEL of Virginia) and to include extraneous matter:)

Mr. FRASER in three instances.
Mr. FULTON of Tennessee in two instances.
Mr. DINGELL.
Mr. GONZALEZ in three instances.
Mr. HAYS in two instances.
Mr. JONES of Alabama.
Mr. JARMAN in two instances.
Mr. PICKLE in two instances.
Mr. RARICK in four instances.
Mr. GARMATZ.
Mr. DORN in two instances.
Mr. JOHNSON of California.
Mr. GALLAGHER.
Mr. OLSEN in two instances.
Mr. HAWKINS in two instances.
Mr. KEE.
Mr. PEPPER in two instances.
Mr. TAYLOR.
Mr. BARING.
Mr. RYAN in four instances.
Mr. HAGAN in two instances.
Mr. FEIGHAN in three instances.
Mr. HÉBERT.
Mr. PHILBIN in four instances.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 714. An act to designate the Ventana Wilderness, Los Padres National Forest, in the State of California; to the Committee on Interior and Insular Affairs.

ENROLLED BILL SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 8508. An act to increase the public debt limit set forth in section 21 of the Second Liberty Bond Act.

ADJOURNMENT

Mr. DANIEL of Virginia. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 2 o'clock and 32 minutes p.m.), under its previous order, the House adjourned until Monday, March 31, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

629. A communication from the President of the United States, transmitting amendments to the budgets and proposed supplemental appropriations for fiscal years 1969 and 1970 (H. Doc. No. 91–94); to the Committee on Appropriations and ordered to be printed.

630. A letter from the Director, Bureau of the Budget, Executive Office of the President, transmitting a report that the appropriation to the Veterans' Administration for "Medical care," for the fiscal year 1969, has been reapportioned on a basis which indicates the necessity for a further supplemental estimate of appropriation, pursuant to the provisions of section 3679 of the Revised Statutes, as amended (31 U.S.C. 665); to the Committee on Appropriations.

631. A letter from the Administrator, General Services Administration, withdrawing a previous recommendation for prompt and favorable consideration of a draft of proposed legislation to authorize the disposal of platinum from the national stockpile and the supplemental stockpile; to the Committee on Armed Services.

632. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to amend title 5, United States Code, to authorize the payment of expenses of preparing and transporting to his home or place of interment the remains of a Federal employee who dies while performing official duties in Alaska or Hawaii, and for other purposes; to the Committee on Government Operations.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BRASCO:

H.R. 9599. A bill to provide for the redistribution of unused quota numbers; to the Committee on the Judiciary.

H.R. 9600. A bill to amend the Immigration and Nationality Act, and for other purposes; to the Committee on the Judiciary.

By Mr. BROWN of California:

H.R. 9601. A bill to amend the Immigration and Nationality Act, and for other purposes; to the Committee on the Judiciary.

By Mr. BROYHILL of Virginia:

H.R. 9602. A bill to authorize the filling of vacant positions in the National Park Service; to the Committee on Ways and Means.

By Mr. BYRNE of Pennsylvania:

H.R. 9603. A bill to amend title XVIII of the Social Security Act to remove the present limit on the number of days for which benefits may be paid thereunder to an individual on account of posthospital extended-care services; to the Committee on Ways and Means.

By Mr. CLEVELAND:

H.R. 9604. A bill to amend the Public Health Service Act to extend the program of grants for construction and modernization of hospitals and other medical facilities, to provide loans and loan guarantees for construction and modernization of such facilities, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. CUNNINGHAM:

H.R. 9605. A bill to provide a uniform allowance for certain motor vehicle maintenance employees in the postal field service; to the Committee on Post Office and Civil Service.

By Mr. DERWINSKI:

H.R. 9606. A bill to provide for the redistribution of unused quota numbers; to the Committee on the Judiciary.

By Mr. DEVINE:

H.R. 9607. A bill to amend title 18, United States Code, to prohibit the mailing of obscene matter to minors, and for other purposes; to the Committee on the Judiciary.

By Mr. EILBERG:

H.R. 9608. A bill to amend the Consumer Credit Protection Act to safeguard consumers in connection with trading stamp practices; to the Committee on Banking and Currency.

H.R. 9609. A bill to provide for improved employee-management relations in the postal service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. EILBERG (for himself, Mr. BARRETT, Mr. NIX, and Mr. BYRNE of Pennsylvania):

H.R. 9610. A bill for the elimination of health dangers to coal miners resulting from the inhalation of coal dust; to the Committee on Education and Labor.

H.R. 9611. A bill to improve the safety conditions of persons working in the coal mining industry of the United States; to the Committee on Education and Labor.

By Mr. FRASER:

H.R. 9612. A bill to amend the Internal Revenue Code of 1954 to extend the head-of-household benefits to unremarried widows and widowers and single persons who have attained age 30 and maintain their own households; to the Committee on Ways and Means.

By Mr. FULTON of Tennessee:

H.R. 9613. A bill to amend the Railroad Retirement Act of 1937 so as to increase the amount of the annuities payable thereunder to widows and widowers; to the Committee on Interstate and Foreign Commerce.

H.R. 9614. A bill to amend the act entitled "An act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon," approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

By Mr. HALEY (by request):

H.R. 9615. A bill to provide compensation to the Crow Tribe of Indians, Montana, for certain lands embraced within the present boundaries of the Crow Indian Reservation, for the validation of titles, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. HANLEY:

H.R. 9616. A bill to extend to volunteer fire companies and their auxiliaries the rates of postage on second- and third-class bulk mailings applicable to certain nonprofit organizations; to the Committee on Post Office and Civil Service.

By Mr. HARSHA:

H.R. 9617. A bill to give farmers an additional month in which to meet the requirement of filing a declaration of estimated tax by filing an income tax return for the taxable year for which the declaration is required; to the Committee on Ways and Means.

By Mr. HELSTOSKI:

H.R. 9618. A bill to provide for the redistribution of unused quota numbers; to the Committee on the Judiciary.

H.R. 9619. A bill to provide for the redistribution of unused quota numbers; to the Committee on the Judiciary.

By Mr. KOCH:

H.R. 9620. A bill to amend the Internal Revenue Code of 1954 to provide that any unmarried person who maintains his or her own home shall be entitled to be taxed at the rate provided for the head of a household; to the Committee on Ways and Means.

By Mr. LONG of Louisiana:

H.R. 9621. A bill to amend the Internal Revenue Code of 1954 to increase from $600 to $1,200 the personal income tax exemptions of a taxpayer (including the exemption for a spouse, the exemptions for a dependent, and the additional exemptions for old age and blindness); to the Committee on Ways and Means.

By Mr. MEEDS:

H.R. 9622. A bill to amend the act entitled "An act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon," approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

By Mr. MOORHEAD:

H.R. 9623. A bill to authorize the Secretary of the Interior to establish the Lincoln Home National Historic Site in the State of Illinois, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. NICHOLS:

H.R. 9624. A bill to amend chapter 44 of title 18, United States Code, to exempt ammunition from Federal regulation under the Gun Control Act of 1968; to the Committee on the Judiciary.

By Mr. PATTEN:

H.R. 9625. A bill to permit the President to authorize the sale of savings bonds yielding not more than 5 percent per annum; to the Committee on Ways and Means.

By Mr. PODELL:

H.R. 9626. A bill to amend the Higher Education Act of 1965 to base the amount of an educational opportunity grant on the student's expenses for tuition and books, to increase the maximum annual grant to $2,000, and for other purposes; to the Committee on Education and Labor.

By Mr. PRICE of Illinois:

H.R. 9627. A bill to amend the act entitled "An Act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon", approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

By Mr. ST GERMAIN:

H.R. 9628. A bill to amend the act entitled "An Act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon", approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

H.R. 9629. A bill to establish fishing zones of the United States beyond its territorial seas, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. SHIPLEY:

H.R. 9630. A bill to provide for improved employee-management relations in the postal service, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 9631. A bill to amend title XVIII of the Social Security Act to provide payment for chiropractors' services under the program of supplementary medical insurance benefits for the aged; to the Committee on Ways and Means.

By Mr. TAYLOR:

H.R. 9632. A bill to amend the Gun Control Act of 1968 to provide for an additional period of amnesty during which certain firearms may be registered with the Secretary of the Treasury; to the Committee on the Judiciary.

By Mr. TEAGUE of California:

H.R. 9633. A bill to adjust agricultural production, to provide a transitional program for farmers, and for other purposes; to the Committee on Agriculture.

By Mr. TEAGUE of Texas (by request):

H.R. 9634. A bill to amend title 38 of the United States Code in order to improve and make more effective the Veterans' Administration program of sharing specialized medical resources; to the Committee on Veterans' Affairs.

H.R. 9635. A bill to equalize the presumptions applicable to, and the rates of, disability compensation in the case of peacetime and wartime service; to the Committee on Veterans' Affairs.

By Mr. WOLFF:

H.R. 9636. A bill to amend the Internal Revenue Code of 1954 to provide the same tax exemption for servicemen in and around Korea as is presently provided for those in Vietnam; to the Committee on Ways and Means.

By Mr. BOGGS:

H.R. 9637. A bill to authorize the U.S. Commissioner of Education to make grants to elementary and secondary schools and other educational institutions for the conduct of special educational programs and activities concerning the use of drugs, and for other related educational purposes; to the Committee on Education and Labor.

By Mr. BOLLING:

H.R. 9638. A bill to provide for the appointment of an additional district judge for the western district of Missouri; to the Committee on the Judiciary.

By Mr. DENNIS:

H.R. 9639. A bill to provide that the U.S. District Court for the Indianapolis Division of the Southern District of Indiana also shall be held at Richmond, Ind., to the Committee on the Judiciary.

By Mr. DERWINSKI:

H.R. 9640. A bill to prohibit political influence with respect to appointments, promotions, assignments, transfers, and designations in the postal field service, to revise the laws governing the appointment of postmasters, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. DULSKI:

H.R. 9641. A bill to increase the maximum rate of travel allowance for postal employees assigned to road duty, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. ECKHARDT:

H.R. 9642. A bill to amend title IV of the Social Security Act to repeal the provisions limiting the number of children with respect to whom Federal payments may be made under the program of aid to families with dependent children; to the Committee on Ways and Means.

By Mr. FARBSTEIN:

H.R. 9643. A bill to amend the Economic Opportunity Act of 1964 to establish an emergency family loan program as a national emphasis program; to the Committee on Education and Labor.

By Mr. HOLIFIELD (by request):

H.R. 9644. A bill to amend the Atomic Energy Act of 1954, as amended, to provide that life imprisonment shall be the maximum criminal penalty for certain offenses, to increase the criminal penalties for unauthorized diversion of special nuclear material and related offenses, and for other purposes; to the Joint Committee on Atomic Energy.

H.R. 9645. A bill to amend section 170 of the Atomic Energy Act of 1954, as amended, and for other purposes; to the Joint Committee on Atomic Energy.

H.R. 9646. A bill to amend section 182 of the Atomic Energy Act of 1954, as amended, and for other purposes; to the Joint Committee on Atomic Energy.

H.R. 9647. A bill to amend the Atomic Energy Act of 1954, as amended, to eliminate the requirement for a finding of practical value and abolish the distinction between commercial licenses for facilities and certain research and development licenses for facilities, and for other purposes; to the Joint Committee on Atomic Energy.

H.R. 9648. A bill to amend chapter 18 of the Atomic Energy Act of 1954, as amended, and for other purposes; to the Joint Committee on Atomic Energy.

By Mr. KARTH:

H.R. 9649. A bill to amend the Merchant Marine Act, 1936, to encourage shipbuilding, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. KEE:

H.R. 9650. A bill to amend title II of the Social Security Act to provide disability insurance benefits thereunder for any individual who is blind and has at least six quarters of coverage, and for other purposes; to the Committee on Ways and Means.

By Mr. McCLURE:

H.R. 9651. A bill to provide a mechanism for equitable adjustments in the price of gold, and for other purposes; to the Committee on Banking and Currency.

By Mr. MURPHY of New York:

H.R. 9652. A bill to increase the penalties for the illegal use or possession of explosives; to the Committee on the Judiciary.

By Mr. MYERS:

H.R. 9653. A bill to amend title II of the Social Security Act to provide for cost-of-living increases in benefits, to increase the minimum survivor's benefit, and to liberalize the retirement test; to the Committee on Ways and Means.

By Mr. PRICE of Illinois:

H.R. 9654. A bill to authorize subsistence, without charge, to certain air evacuation patients; to the Committee on Armed Services.

By Mr. QUIE (for himself, Mr. ASPINALL, Mr. DE LA GARZA, Mr. HANSEN of Idaho, Mr. KLEPPE, Mr. NELSEN, Mr. SISK, Mr. STUCKEY, Mr. TEAGUE of Texas, and Mr. ZWACH):

H.R. 9655. A bill to enable honey producers to finance a nationally coordinated research and promotion program to improve their competitive position and expand their markets for honey; to the Committee on Agriculture.

By Mr. ROGERS of Florida (for himself and Mr. GIBBONS) (by request):

H.R. 9656. A bill to provide for orderly

trade in fresh fruits and vegetables, and for other purposes; to the Committee on Ways and Means.

By Mr. TIERNAN:

H.R. 9657. A bill to amend title 39, United States Code, to provide additional free letter mail and air transportation mailing privileges for certain members of the U.S. Armed Forces, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. WALDIE:

H.R. 9658. A bill to direct the Secretary of the Interior to take certain actions, and make an investigation and study, with respect to drilling and oil production under leases issued pursuant to the Outer Continental Shelf Lands Act; to the Committee on Interior and Insular Affairs.

By Mr. WHITE:

H.R. 9659. A bill to amend title I of the Land and Water Conservation Fund Act of 1965, as amended, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 9660. A bill to amend the Railroad Unemployment Insurance Act to eliminate the 4-day waiting period applicable to sickness benefits during an individual's second or subsequent registration period within any benefit year, and to waive the 7-day waiting period applicable to sickness benefits during an individual's first such period where sickness (and any required waiting period) began in the preceding benefit year; to the Committee on Interstate and Foreign Commerce.

By Mr. KOCH (for himself, Mr. ADAMS, Mr. BRASCO, Mr. BURTON of California, Mr. DINGELL, Mr. FRASER, Mr. HALPERN, Mr. HATHAWAY, Mr. HELSTOSKI, Mr. KYROS, Mr. MIKVA, Mr. OTTINGER, Mr. REES, Mr. REUSS, Mr. SCHEUER, Mr. SYMINGTON, Mr. TIERNAN, and Mr. WALDIE):

H.R. 9661. A bill to establish an urban mass transportation trust fund, and for other purposes; to the Committee on Banking and Currency.

By Mr. CUNNINGHAM:

H.J. Res. 607. Joint resolution to declare the policy of the United States with respect to its territorial sea; to the Committee on Foreign Affairs.

By Mr. HALPERN:

H.J. Res. 608. Join resolution to authorize and direct the Federal Trade Commission to conduct a comprehensive investigation of unfair methods of competition and unfair or deceptive acts or practices in the home improvement industry, to expand its enforcement activities in this area, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. HORTON:

H.J. Res. 609. Joint resolution consenting to the Susquehanna River Basin compact, enacting the same into law thereby making the United States a signatory party, making certain reservations on behalf of the United States, and for related purposes; to the Committee on the Judiciary.

By Mr. JACOBS:

H.J. Res. 610. Joint resolution proposing an amendment to the Constitution of the United States to provide for a national preferential primary election to select candidates for the office of the President and Vice President and to provide for the election of the President and Vice President by the popular vote of the people of the United States; to the Committee on the Judiciary.

By Mr. EILBERG:

H. Con. Res. 188. Concurrent resolution expressing the sense of the Congress that the United States should begin to reduce its military involvement in Vietnam; to the Committee on Foreign Affairs.

By Mr. OTTINGER:

H. Con. Res. 189. Concurrent resolution that it is the sense of Congress that the United States should begin to reduce its military involvement in Vietnam; to the Committee on Foreign Affairs.

By Mr. ROGERS of Florida:

H. Con. Res. 190. Concurrent resolution recognizing the courage of Apollo 8 astronauts and the appropriateness of their expressions of faith in Almighty God on their moon-circling mission, and encouraging the President of the United States and the National Aeronautics and Space Administration to allow similar freedoms on future space flights; to the Committee on Science and Astronautics.

By Mr. CLEVELAND:

H. Res. 349. Resolution establishing a Special Committee on the Captive Nations; to the Committee on Rules.

By Mr. MOSS (for himself, Mr. ALBERT, Mr. MILLS, Mr. RIVERS, Mr. HOLIFIELD, Mr. MADDEN, Mr. MORGAN, Mr. PRICE of Illinois, Mr. DELANEY, Mr. ASPINALL, Mr. HAYS, Mr. FLOOD, Mr. FRIEDEL, Mr. EDMONDSON, Mr. DINGELL, Mr. SISK, Mr. DENT, Mr. MCFALL, Mr. ULLMAN, Mrs. HANSEN of Washington, Mr. O'HARA, Mr. SMITH of Iowa, Mr. MATSUNAGA, and Mr. PEPPER):

H. Res. 350. Resolution to create a Select Committee on the Bureau of the Budget; to the Committee on Rules.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

94. By Mr. ALBERT: Memorial of the House of Representatives of the State of Oklahoma, memorializing the Congress to repeal all recently passed legislation which restricts the constitutional right of a citizen to keep and bear arms; to the Committee on the Judiciary.

95. By the SPEAKER: Memorial of the Legislature of the State of Oklahoma, relative to the interest rate of Federal moneys utilized for water-related projects; to the Committee on Interior and Insular Affairs.

96. Also, memorial of the Senate of the State of Massachusetts, relative to oil imports; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BARING:

H.R. 9662. A bill for the relief of Josephat Ahing; to the Committee on the Judiciary.

By Mr. LONG of Louisiana:

H.R. 9663. A bill for the relief of the city of Port Allen, La.; to the Committee on the Judiciary.

By Mr. McDONALD of Michigan:

H.R. 9664. A bill to provide for the advancement in grade of a certain officer in the U.S. Air Force Reserve; to the Committee on the Armed Services.

By Mr. O'NEILL of Massachusetts:

H.R. 9665. A bill for the relief of Angero and Theophilos Kamperides; to the Committee on the Judiciary.

By Mr. PEPPER:

H.R. 9666. A bill for the relief of Dr. Toshiyuki Ando; to the Committee on the Judiciary.

H.R. 9667. A bill for the relief of Enrique G. Balart; to the Committee on the Judiciary.

H.R. 9668. A bill for the relief of Fernando Domenicale; to the Committee on the Judiciary.

H.R. 9669. A bill for the relief of Enzio Enrico Bertoldi, his wife, Teresa Bertoldi, and their daughter, Maria Bertoldi; to the Committee on the Judiciary.

H.R. 9670. A bill for the relief of Giuseppe La Placa; to the Committee on the Judiciary.

By Mr. RODINO:

H.R. 9671. A bill for the relief of Daniel Brower; to the Committee on the Judiciary.

By Mr. ROONEY of Pennsylvania:

H.R. 9672. A bill for the relief of Georgina Infantino and son, Giovanni Infantino; to the Committee on the Judiciary.

By Mr. TIERNAN:

H.R. 9673. A bill for the relief of Dr. Tai Chung; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

83. The SPEAKER presented a petition of the City Council, Los Angeles, Calif., relative to the narcotics and drugs traffic at the Mexican border, which was referred to the Committee on Foreign Affairs.

SENATE—*Thursday, March 27, 1969*

The Senate met at 12 o'clock meridian, and was called to order by the Vice President.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Eternal Father, we thank Thee for the world about us, and for that deeper world within us which Thou hast made for Thy habitation. Remove from our lives all that corrupts or tarnishes the divine image or that is alien to Thee, may Thy spirit indwell and reign over us.

We thank Thee that once in the man of Nazareth Thou didst enter our fleeting life and make the pilgrimage in human flesh from the manger to the cross and beyond. And by Him and through Him we know the way we ought to journey. Grant us then a measure of His spirit that we may think as He thought, work as He worked, live as He lived, serve as He served, for the welfare of this Nation and the betterment of all mankind.

In His name we pray. Amen.

THE JOURNAL

Mr. KENNEDY. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Wednesday, March 26, 1969, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILL

Messages in writing from the President of the United States were communicated to the Senate by Mr. Geisler, one of his secretaries, and he announced that on today, March 27, 1969, the President had approved and signed the act

(S. 1058) to extend the period within which the President may transmit to the Congress plans for reorganization of agencies of the executive branch of the Government.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the Committee on the Judiciary.

(For nominations this day received, see the end of Senate proceedings.)

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. KENNEDY. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT UNTIL MONDAY, MARCH 31, 1969

Mr. KENNEDY. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 12 noon on Monday next, March 31, 1969.

The VICE PRESIDENT. Without objection, it is so ordered.

AUTHORIZATION FOR THE SECRETARY OF THE SENATE TO RECEIVE MESSAGES DURING THE ADJOURNMENT OF THE SENATE

Mr. KENNEDY. Mr. President, I ask unanimous consent that during the adjournment of the Senate, following the close of business today until noon on Monday, March 31, 1969, the Secretary of the Senate be authorized to receive messages from the President of the United States and from the House of Representatives, and that it be ordered that such messages be referred to the appropriate committees.

The VICE PRESIDENT. Without objection, it is so ordered.

AUTHORIZATION FOR COMMITTEES TO FILE REPORTS DURING THE ADJOURNMENT OF THE SENATE

Mr. KENNEDY. Mr. President, I ask unanimous consent that during the adjournment of the Senate, following the close of business today until noon on Monday, March 31, 1969, all committees be authorized to file their reports, including minority, supplemental, additional, and individual views.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. KENNEDY. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar.

There being no objection, the Senate proceeded to the consideration of executive business.

The VICE PRESIDENT. The nominations on the Executive Calendar will be stated.

EXPORT-IMPORT BANK OF THE UNITED STATES

The bill clerk read the nomination of Walter C. Sauer, of the District of Columbia, to be First Vice President of the Export-Import Bank of the United States.

The VICE PRESIDENT. Without objection, the nomination is confirmed.

DISTRICT OF COLUMBIA REDEVELOPMENT LAND AGENCY

The bill clerk read the nomination of John A. Nevius to be a member of the Board of Directors of the District of Columbia Redevelopment Land Agency.

The VICE PRESIDENT. Without objection, the nomination is confirmed.

OFFICE OF EMERGENCY PREPAREDNESS

The bill clerk read the nomination of Nils A. Boe, of South Dakota, to be an Assistant Director of the Office of Emergency Preparedness.

The VICE PRESIDENT. Without objection, the nomination is confirmed.

U.S. ARMY

The bill clerk read the nomination of Maj. Gen. Oren Eugene Hurlbut to be lieutenant general.

The VICE PRESIDENT. Without objection, the nomination is confirmed.

U.S. NAVY

The bill clerk proceeded to read sundry nominations in the U.S. Navy.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations are considered and confirmed en bloc.

DEPARTMENT OF THE TREASURY

The bill clerk proceeded to read sundry nominations in the Department of the Treasury.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations are considered and confirmed en bloc.

DEPARTMENT OF STATE

The bill clerk proceeded to read sundry nominations in the Department of State.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations are considered and confirmed en bloc.

AGENCY FOR INTERNATIONAL DEVELOPMENT

The bill clerk read the nomination of John A. Hanna, of Michigan, to be Administrator of the Agency for International Development.

The VICE PRESIDENT. Without objection, the nomination is considered and confirmed.

UNITED NATIONS REPRESENTATIVES

The bill clerk proceeded to read sundry nominations of United Nations representatives.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations are considered and confirmed en bloc.

NOMINATIONS PLACED ON THE SECRETARY'S DESK—IN THE MARINE CORPS

The bill clerk proceeded to read sundry nominations in the Marine Corps which had been placed on the Secretary's desk.

The VICE PRESIDENT. Without objection, the nominations are considered and confirmed en bloc.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The VICE PRESIDENT. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. KENNEDY. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

COMMITTEE MEETING DURING SENATE SESSION

Mr. KENNEDY. Mr. President, I ask unanimous consent that the Subcommittee on Administrative Practice and Procedure of the Committee on the Judiciary be authorized to meet during the session of the Senate today.

The VICE PRESIDENT. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that the House had passed a bill (H.R. 337) to increase the maximum rate of per diem allowance for employees of the Government traveling on official business, and for other purposes, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (H.R. 8508) to increase the public debt limit set forth in section 21

of the Second Liberty Bond Act, and it was signed by the Vice President.

HOUSE BILL REFERRED

The bill (H.R. 337) to increase the maximum rate of per diem allowance for employees of the Government traveling on official business, and for other purposes, was read twice by its title and referred to the Committee on Government Operations.

PROPOSED AMENDMENT OF TITLE 5, UNITED STATES CODE

The VICE PRESIDENT laid before the Senate a letter from the Secretary of Transportation, transmitting a draft of proposed legislation to amend title 5, United States Code, to authorize the payment of the expenses of preparing and transporting to his home or place of interment the remains of a Federal employee who dies while performing official duties in Alaska or Hawaii, and for other purposes, which (with an accompanying paper) was referred to the Committee on Government Operations.

PETITION

The VICE PRESIDENT laid before the Senate a telegram from the Governor of the State of Alaska, informing the Senate that he had signed Senate Joint Resolution 29 of that legislature, recommending the confirmation of Charles Meacham as Commissioner of the Fish and Wildlife Service, Department of the Interior, which was referred to the Committee on Commerce.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. PERCY:

S. 1701. A bill to remove the limitations on the rates of interest or investment yield on Government savings bonds; to the Committee on Finance.

(See the remarks of Mr. PERCY when he introduced the above bill, which appear under a separate heading.)

By Mr. CASE:

S. 1702. A bill for the relief of Nicola Galotto;

S. 1703. A bill for the relief of Rosa Pintabona; and

S. 1704. A bill for the relief of Lillian Biazzo; to the Committee on the Judiciary.

By Mr. ALLEN (for himself, Mr. EASTLAND, and Mr. MCCLELLAN):

S. 1705. A bill to prohibit the dissemination through interstate commerce or the mails of materials harmful to persons under the age of eighteen years, and to restrict the exhibition of movies or other presentations harmful to such persons; to the Committee on the Judiciary.

(See the remarks of Mr. ALLEN when he introduced the above bill, which appear under a separate heading.)

By Mr. ALLEN (for himself, Mr. GOLDWATER, Mr. BENNETT, Mr. COOK, Mr. DOLE, Mr. FANNIN, Mr. GURNEY, Mr. HANSEN, Mr. MANSFIELD, Mr. MCCLELLAN, Mr. MUNDT, Mr. RANDOLPH, Mr. SPARKMAN, Mr. STEVENS, Mr. TALMADGE, Mr. THURMOND, Mr. TOWER, Mr. WILLIAMS of Delaware, and Mr. YOUNG of North Dakota):

S. 1706. A bill to strengthen the antiobscenity laws in order to protect minors against the distribution or sale of obscene materials through the mails or interstate commerce, to establish the Division of Obscenity Control in the Department of Justice, and for other purposes; to the Committee on the Judiciary.

(See the remarks of Mr. ALLEN when he introduced the above bill, which appear under a separate heading.)

By Mr. JACKSON:

S. 1707. A bill to establish a Commission on Government Procurement; to the Committee on Government Operations.

By Mr. JACKSON (for himself and Mr. MAGNUSON):

S. 1708. A bill to amend title I of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. JACKSON when he introduced the above bill, which appear under a separate heading.)

By Mr. MONDALE:

S. 1709. A bill for the relief of Dr. Shean-Ming Liu; to the Committee on the Judiciary.

S. 1710. A bill to donate to the Minnesota Chippewa Tribe, White Earth Indian Reservation, some submarginal lands of the United States, and to make such lands parts of the reservation involved; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. MONDALE when he introduced the last above-mentioned bill, which appear under a separate heading.)

By Mr. TYDINGS:

S. 1711. A bill to establish the position of court executive in the District of Columbia Court of General Sessions, and for other purposes; to the Committee on the District of Columbia.

By Mr. SYMINGTON (for himself and Mr. EAGLETON):

S. 1712. A bill to provide for the appointment of an additional district judge for the Western District of Missouri; to the Committee on the Judiciary.

(See the remarks of Mr. SYMINGTON when he introduced the above bill, which appear under a separate heading.)

By Mr. CRANSTON:

S. 1713. A bill for the relief of Florentino Adona, Jr.; to the Committee on the Judiciary.

By Mr. JACKSON:

S. 1714. A bill to amend titles 10 and 32, United States Code, to authorize additional medical and dental care and other related benefits for reservists and members of the National Guard, under certain conditions, and for other purposes; to the Committee on Armed Services.

By Mr. BYRD of West Virginia (for Mr. MONTOYA):

S. 1715. A bill for the relief of Kong Wing Sik; to the Committee on the Judiciary.

(See the remarks of Mr. BYRD of West Virginia when he introduced the above bill, which appear under a separate heading.)

By Mr. RANDOLPH (for himself and Mr. BYRD of West Virginia):

S. 1716. A bill to provide Federal financial assistance to States to enable them to pay compensation to certain disabled individuals who, as a result of their employment in the coal mining industry, suffer from pneumoconiosis and who are not entitled to compensation under any workmen's compensation law; to the Committee on Labor and Public Welfare.

By Mr. YARBOROUGH:

S. 1717. A bill to amend the Internal Revenue Code of 1954 to increase from $600 to $1,200 the personal income tax exemptions of a taxpayer (including the exemption for a spouse, the exemptions for a dependent, and the additional exemptions for old age and blindness); to the Committee on Finance.

(See the remarks of Mr. YARBOROUGH when he introduced the above bill, which appear under a separate heading.)

By Mr. HANSEN:

S. 1718. A bill to provide for the conveyance to the city of Cheyenne, Wyo., of certain real property of the United States heretofore donated to the United States by such city; to the Committee on Government Operations.

By Mr. HATFIELD (for himself and Mr. TYDINGS):

S. 1719. A bill to provide for the payment of reasonable costs, expenses, and attorneys' fees to defendants in actions by the United States for the condemnation of real property after determination of the amount of just compensation, or after abandonment of such actions by the United States, and for other purposes; to the Committee on the Judiciary.

(See the remarks of Mr. HATFIELD when he introduced the above bill, which appear under a separate heading.)

By Mr. FONG:

S. 1720. A bill to amend the Federal Aviation Act of 1958 in order to authorize certain reduced-rate transportation to individuals who are 21 years of age or younger; to the Committee on Commerce.

(See the remarks of Mr. FONG when he introduced the above bill, which appear under a separate heading.)

By Mr. BROOKE:

S. 1721. A bill to promote the orderly adjustment of tobacco production and marketing; to the Committee on Agriculture and Forestry.

S. 1722. A bill for the relief of Nam Minh Doan Bouchard; to the Committee on the Judiciary.

(See the remarks of Mr. BROOKE when he introduced the first above bill, which appear under a separate heading.)

By Mr. INOUYE:

S. 1723. A bill for the relief of Yan Sin Po, Tsang Kwai Yau, Ling Shing, Yung Wah Hap, and Li Cheung; to the Committee on the Judiciary.

By Mr. ERVIN:

S. 1724. A bill for the relief of Dr. Hussain I Saba, and his wife, Dr. Sabiha R. Saba; to the Committee on the Judiciary.

S. 1701—INTRODUCTION OF A BILL TO RAISE INTEREST RATES ON U.S. SAVINGS BONDS

Mr. PERCY. Mr. President, I am introducing proposed legislation today to raise the interest rates on savings bonds to reflect actual market rates of interest.

Millions of Americans have invested in savings bonds over the years in the faith that the Government would deal fairly with them. This faith has been betrayed in recent years as inflation has driven the cost of living up above the 4¼-percent yield of series E savings bonds. Inflation was at a 4.5-percent rate in 1968; thus, a savings bond holder failed to even match the cost-of-living increase by one-quarter of 1 percent. The larger investor who can afford to invest in units of $1,000 can avoid this problem as the Treasury will pay competitive market rates of interest for his money. The investor in savings bonds is actually losing money at current rates of interest.

Present rates of interest on U.S. savings bonds are clearly unfair. They are not good investments. Their interest yield should be raised. By depositing funds in savings and loan associations, an investor can obtain 4¾ percent to 5¼ percent or even more in some cases.

An investor with over $1,000 can buy 3-month Treasury bills which currently have more than a 6-percent return. Or he can invest in Federal Agencies bills

which last week returned a yield of 6.38 percent.

The increase in "E" bond interest rate last year from 4.15 percent to 4.25 percent does not in any way compensate for the rapid increase in inflation which erodes those yields.

The legislation I am introducing today will permit the Secretary of the Treasury to set interest rates on savings bonds at a level consistent with market rates of interest. The small investor should no longer be asked to lose money on his Government investments but should be able to obtain interest yields more commensurate with those who have larger sums to place in other investments.

Many business leaders have informed me they have pangs of conscience in trying to persuade their employees to buy savings bonds as they know they are asking their employees to put money in an uncompetitive investment.

Many Americans have invested in savings bonds as a convenient way to save with the faith that their investment would remain sound. Let us help keep these investments sound by raising interest rates on series E savings bonds to a fair market level.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1701) to remove the limitations on the rates of interest or investment yield on Government savings bonds, introduced by Mr. PERCY, was received, read twice by its title, and referred to the Committee on Finance.

S.1705 AND S. 1706—INTRODUCTION OF ANTIOBSCENITY BILLS

Mr. ALLEN. Mr. President, I introduce, for appropriate reference, two bills designed to further protect minors against the harmful effects stemming from distribution or sale of obscene materials through the mails and by means of interstate commerce.

Before introducing these bills it may be helpful to clarify the nature of the problem to which the bills are addressed. In this connection we need to recognize the magnitude of the problem and clearly understand the harmful consequences which flow from it.

Mr. President, we are confronted with a serious nationwide problem represented by an uninhibited traffic in smut conducted by unscrupulous individuals. This traffic utilizes mail and the instruments of interstate commerce to invade the privacy of homes with unwanted, obnoxious, obscene materials. This traffic has intruded into small towns and hamlets and even public schools throughout the Nation. Much of this traffic involves high school students and has become so widespread that J. Edgar Hoover has said that it amounts to "a wholesale invasion of America's schoolyards and playgrounds." In support of that conclusion, U.S. postal officials estimate that over $500 million worth of obscene material is sold to youth through the mail each year.

Mr. President, these facts indicate the magnitude of the problem. Now let us consider some of the harmful effects which can reasonably be attributed to this unrestrained traffic in smut and obscenity.

In the March 1968 FBI Law Enforcement Bulletin, Mr. Hoover said:

> The publication and sale of obscene material is big business in America today . . . It is impossible to estimate the amount of harm to impressionable teenagers and to assess the volume of sex crimes attributable to pornography, but its influence is extensive.
>
> Sexual violence is increasing at an alarming pace. Many parents are deeply concerned about conditions which involve young boys and girls in sex parties and illicit relations . . . Pornography in all its forms, is one major cause of sex crimes, sexual abberations and perversions.

Substantial evidence is available to indicate a direct relationship between the shocking increase in youthful crime and violence and the corresponding increase in the volume of traffic in pornography. The effects are measurable in the increased involvement of youth in serious crimes such as criminal homicide, forcible rape, robbery, aggravated assault, burglary, larceny, and automobile theft.

There is yet another aspect of the problem. Federal, State, and local antiobscenity laws are in a large measure ineffective due to current disarray and uncertainly in the law occasioned by U.S. Supreme Court decisions in the area of antiobscenity legislation. State legislatures do not know, and the U.S. Supreme Court has not stated with an essential degree of certainty, what legislative regulations of the trade will be permitted. Obviously, something less than unanimity of opinion exists among members of the Supreme Court.

However, since obscenity is not protected by the first amendment of the Constitution and since Congress has an unquestioned power to protect the public interest in this area, and particularly as it relates to interstate commerce and use of U.S. mail, there would seem to be compelling reasons for Congress to take the initiative and tackle the problem. We can enact legislation consistent with Supreme Court standards to the extent that such standards can be ascertained and we can also go on record with an expression of unequivocal intent to suppress illegal traffic in obscenity.

Mr. President, we recognize that the Commission on Obscenity and Pornography created by Congress last year can contribute much information and opinion of value to Congress. Its investigations, presentations of fact, conclusions, and recommendations will doubtless prove helpful when completed and presented to Congress some time in 1970. We believe, however, that creation of the Commission was not intended to be an equivalent to a moratorium or a cease-fire in the war waged against this evil. To the contrary, we believe that at this time a clear-cut indication by Congress of a determination to eradicate this pox on the body politic would provide the Commission with needed guidance and encouragement. Certainly a refinement of existing Federal antiobscenity laws is needed and will prove helpful to law enforcement personnel on the State and Federal levels. More importantly, congressional concern for evil influences of obscene materials upon the youth of our Nation cannot, in my judgment, safely be shelved or postponed until 1970 or 1971.

Mr. President, with the above considerations in mind, I now introduce the first of two antiobscenity bills.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1705) to prohibit the dissemination through interstate commerce or the mails of materials harmful to persons under the age of 18 years, and to restrict the exhibition of movies or other presentations harmful to such persons, introduced by Mr. ALLEN (for himself, Mr. EASTLAND, and Mr. MCCLELLAN), was received, read twice by its title, and referred to the Committee on the Judiciary.

Mr. ALLEN. Mr. President, the first bill is a companion bill to H.R. 5171 introduced in the House of Representatives by Congressman CHARLES E. BENNETT, of the Third District of Florida, with 40 cosponsors. This bill is patterned after a New York State statute, the provisions of which were upheld by the U.S. Supreme Court in the case of Ginsberg *v.* United States (383 U.S. 629).

In substance this bill makes it unlawful for any person knowingly to sell, offer for sale, or deliver in interstate commerce or through mails certain materials to minors. The bill states with clarity and preciseness the nature of proscribed materials and sets forth legal criteria for judging the harmfulness of such material. The criteria provided has been approved by the U.S. Supreme Court in the Ginsberg case.

In addition, the bill provides that the Supreme Court and the courts of appeals of the United States shall not have jurisdiction to review any factual determination made in Federal district courts on the question of materials considered harmful to minors.

At this point, Mr. President, it is necessary that we briefly comment on the last provision. I personally believe that Congress has the power, in proper cases, to limit or exclude U.S. Supreme Court jurisdiction as it relates to the procedural right to review on appeal determinations of factual issues made in State and in Federal district courts. Moreover, I believe that there is a genuine need for Congress to impose such limitations in cases involving issues arising from enforcement of State and local laws against obscenity and in other areas involving the exercise of police powers of State governments.

In summary, I wholeheartedly agree that the jurisdictional provision of section 2 of this bill is valid and an appropriate exercise of power by Congress.

On the other hand, we are dealing with Federal laws and not State laws and while a strong case can be made for limiting appellate jurisdiction in this case, we are persuaded that the purpose of this bill can be accomplished without the added precaution represented by the jurisdictional provision. Moreover, we are concerned that a confrontation on the jurisdictional issue might needlessly jeopardize adequate consideration of the main features of the bill.

These considerations are offered in explanation of the second antiobscenity bill which I now introduce on behalf of myself, and Senators GOLDWATER, BENNETT, COOK, DOLE, FANNIN, GURNEY, HANSEN, MANSFIELD, MCCLELLAN, MUNDT, RANDOLPH, SPARKMAN, STEVENS, TAL-

MADGE, THURMOND, TOWER, WILLIAMS of Delaware, and YOUNG of North Dakota.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1706) to strengthen the antiobscenity laws in order to protect minors against the distribution or sale of obscene materials through the mails or interstate commerce, to establish the Division of Obscenity Control in the Department of Justice, and for other purposes introduced by Mr. ALLEN (for himself and other Senators), was received, read twice by its title, and referred to the Committee on the Judiciary.

Mr. ALLEN. This second bill, Mr. President, retains the substantive provisions of the first bill. However, it deletes the procedural provision relating to appellate jurisdiction. This important deletion is not the only difference between the bills. The bill now under consideration supplements the first in several other important particulars. For one thing we believe that the nature and magnitude of the problem suggests the desirability of extraordinary law enforcement efforts by the Department of Justice. We suggest the need for "war on obscenity" to be conducted with the same fervor and same degree of Executive concern as demonstrated in the "war on poverty."

With this last object in mind, the instant bill establishes a Division of Obscenity Control in the Department of Justice. The Division is charged with the responsibility of administration of Federal antiobscenity statutes throughout the United States and in the District of Columbia, and it is charged with responsibility for providing technical assistance to the States and local governments in the administration of their laws relating to the illegal trade in obscene matter. In addition the Division shall conduct nationwide education and information programs on obscenity and its serious consequences.

Mr. President, we can do better in the area of law enforcement of existing antiobscenity laws. We have the know-how, the intelligence, and the resources to stamp out this monstrous evil in our midst. What is needed is a determination, a commitment, a marshaling of resources and talents under competent leadership and supervision to meet this challenge. Such is the purpose of the Division of Obscenity contemplated by the last-mentioned provision.

There are other differences in the revised bill which are designed to strengthen and expand the scope of the criminal provisions. The revised version includes a provision designed to reach individuals who might print, publish, create, or manufacture proscribed materials harmful to minors and it establishes procedures for mailing certain materials which might be harmful to minors. Among other things, the prescribed procedure requires a signed receipt indicating the age of the addressee as a condition of delivery by the Post Office.

Provisions are also included in this bill to recognize an exception for materials disseminated to persons or institutions having scientific, educational, or other special justifications for possession of such material and a provision which defines the term "interstate commerce" as used for purposes of this law. These are major differences. There are also minor differences of a nature designed to meet what we consider to be valid technical objections to the first bill.

Mr. President, we believe that the bills under discussion form the basis for effecting a compromise which hopefully can gather support sufficient for enactment of a new law in this area. We are encouraged in this belief by reason of the long standing and continuing concern of the Senate with the problem of obscenity and by reason of the careful study already given the subject by many Senators. Furthermore, we believe that support of the instant bill may be significant not only as a reflection of geographic representation indicating the pervasiveness of the problem but also as an indication of a general desire to reconcile differences in approaches and to hammer out a new antiobscenity law.

Mr. President, the Senator from Arizona (Mr. GOLDWATER) has been most generous with helpful suggestions and encouragement in preparation of the revised bill. A debt of gratitude is owed to him for his determination and dedication to the worthy cause of providing a solution to this problem.

Mr. President, I ask unanimous consent that the remarks of the distinguished Senator from Arizona (Mr. GOLDWATER) be printed in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

The statement of Mr. GOLDWATER is as follows:

Today Senator Allen and I, together with 17 other Senators, offer a bill which I believe this country needs and demands in order to protect our youth from the degrading, outrageous filth which is being sent through the mails and other channels of interstate commerce.

In short, our bill will make it unlawful to pander obscene materials through the mails or interstate commerce to children or to produce such materials knowing or intending they will be so disseminated to children. Further, it will place all Federal enforcement powers regarding obscenity into one division of the Department of Justice.

Mr. President, I believe this bill is in response to a national menace. To me the present situation represents a clear and present danger to the American people. The exposure of minors to the kind of trash that is being sent through the mails and other means of commerce can only result in the impairment of the ethical and moral development of our youth.

As far as the citizens of my State are concerned, there must be prompt and effective action taken at the highest levels of Government to stop the purveying of obscenity to minors. There is something terribly wrong in this land, when in a single morning's mail I have received as many as six letters from parents and concerned citizens of my State who plead that steps be taken to eliminate the unsolicited smut being sent to their homes through the mail.

Mr. President, I believe there is one decisive action we can take to answer the American public—and that is to pass a strong new law aimed squarely at the protection of minors. Strangely enough, there is no such law now on the books.

There is no question that the Government has an interest and an obligation to protect the welfare of our children. To this end our bill has been prepared with deliberation. We realize the measure must be strong to succeed in its purpose. But at the same time it must be safeguarded against the attacks of those knee-jerk civil libertarians who will see more social value in the output of smutmakers than in the protection of minors from exposure to materials which are undermining to their normal development.

Mr. President, every effort has been made to make this measure Constitutional. The United States Supreme Court has offered a guide in a recent decision upholding a statute of New York State designed to protect minors from obscene matter. This case, *Ginsberg* v. *New York*, 390 U.S. 629 (1968) has served as an aid in framing our bill. Also, the bill is patterned after the provisions of a revised law adopted by Congress only sixteen months ago for the District of Columbia (D.C. Code 22–2001). Thus, most of the provisions of our bill have already been tested and approved in the courts and by the Congress.

Mr. President, I wish to call attention to one feature of the bill which we believe is original and is likely to offer a very practical means to prevent obscene materials from reaching children. Due to the problem that some persons will be able to evade the purposes of the law because of the difficulty of proving that they knowingly sent obscenity to a child, we determined that some of the burden should be shifted to the purveyors of filth to keep their trash out of the hands of minors. Therefore, our bill includes the requirement that any publisher or seller who knows or has reasonable cause to know that any matter which he intends to mail is obscene and harmful to minors must indicate on the cover of such mail that the contents are harmful if exposed to minors. This provision further requires that any matter sent through the mails which shows such an indication shall not be delivered unless the postman obtains a receipt signed by an adult. Of course, there will be no penalty inflicted on the mailman in case he should make a mistake.

But the purveyor of filth will be guilty if he sends prohibited material through the mails in unmarked containers. On the other hand, if the sender does use the required indication, the matter will not be delivered indiscriminately to whomever opens the mail first, but will only be handed over in person by the mailman to an adult.

Hopefully, any adult receiving such material—which likely was unsolicited in the first place—will destroy it. At the very least, he will be able to keep it away from any minors in his family. As a further step, he will be in a position to notify his post office that all mail with such a marking is objectionable and should not be delivered at all to his residence. I should point out that nothing in this provision will make lawful any conduct which is otherwise prohibited. If the seller "knowingly" mails obscene matter directly to a minor he will be guilty of violating the major purpose of the law whether or not he indicates that the matter is harmful. Or if a seller forwards matter in the mails which is obscene both to minors and adults, he will run afoul of the criminal code regardless of whether the cover included a warning to children.

Mr. President, I believe there are precedents for this type of provision in many areas of the law. For one, the Gun Control Act of 1968 requires that firearms cannot be sold to anyone who does not appear in person at the dealer's place of business unless the dealer first forwards a prescribed statement by registered or certified mail with a return receipt requested to the chief local law enforcement officer. The parallel is clear. In both cases an additional burden is imposed on the seller because of the over-riding interest of the Congress in protecting the public safety. Consequently, lest any weeping towels be brought out because of the slight fee the makers and purveyors of smut will have to pay as handling charges to the

postal service, I point out that the procedure is clearly reasonable in light of the objectives of our bill and is a practice that Congress has used before. As to the requirement that a designation be made to identify the nature of the contents, we are all familiar with precedents such as the laws which require warning messages on the labels of cigarettes and notices on the face of advertisements that look like bills but in fact are only offers to sell.

Mr. President, in summary I urge that action be taken on legislation along these lines as soon as possible. If anyone wishes this problem to be studied further, I make an appeal to pass this law or one with a similar purpose first and then to focus any study on ways to strengthen the law or add to it. The American people deserve the most effective laws we can conceive to eliminate this danger to our youth. We must act now.

S. 1703—INTRODUCTION OF FEDERAL LANDS FOR PARKS AND RECREATION ACT OF 1969

Mr. JACKSON. Mr. President, I introduce, for appropriate reference, the Federal Lands for Parks and Recreation Act of 1969.

The purpose of this measure is to make surplus Federal property available to State and local governments for park and recreational purposes at prices which reflect the important role recreation and open spaces play in our contemporary life. This bill is in accord with and in furtherance of our longstanding national policy as expressed in the land and water conservation fund and other measures designed to encourage State and local governments to acquire and develop lands for parks and outdoor recreation.

This bill is of special importance to many of our major metropolitan areas where the need for parks and open spaces is greatly increasing while at the same time the limited land available is being dedicated to other, often incompatible, purposes. If we are to improve the quality of life and surroundings for the residents of our major cities, we will have to take advantage of every future opportunity to acquire land adjacent to where people live for recreational and park purposes.

In spite of our longstanding national policy to encourage and assist State and local governments in the acquisition of open spaces we are not coming close to meeting the need. A recent report of the National League of Cities on "Recreation in the Nation's Cities: Problems and Approaches" concludes:

> Land acquisition (for parks and recreation facilities) has become difficult, if not impossible, in most of the Nation's cities. Except in outlying areas land is very scarce and even in outlying areas it is extremely valuable. Even when there is land available the need for new acreage far outstrips available funds.

As a result of the high price of potential park and recreation areas which are located where they are needed most—where the people are—many cities are unable to meet the demand. The League of Cities report notes, for example, that San Antonio, Tex., a city of 722,000 people has been able to acquire an average of only 6 acres of park land per year between 1945 and 1961. It is estimated that 170 acres should have been added each year if the needs of city residents were to be met. This same picture of inadequate revenues to meet the public need for open space is repeated in city after city.

One way to meet this need for city parks and recreation areas is to take advantage of every available opportunity to see that appropriate parcels of surplus Federal property are dedicated to the highest and best use of the American public. The crowding, the congestion and the growing pressures of modern life make it clear that one of the highest and best uses of land in the last one-third of the 20th century is for parks and open spaces.

Today, there are over 30 million acres of land presently held in fee ownership and used by the Department of Defense alone. Periodically, portions of this property are declared surplus. Many of these surplus military installations are located in or near major metropolitan areas and afford a great opportunity for urban park and recreational complexes. Surplus property held by other departments of the Federal Government afford similar opportunities.

Mr. President, passage of the measure I propose today will make it possible for the Congress to insure that the States and units of local government in this Nation have a chance—a financially realistic chance—to acquire these lands for park and recreational purposes.

The Federal Lands for Parks and Recreation Act of 1969 would amend the Land and Water Conservation Fund Act by providing that for a period of 5 years after the date of enactment, surplus Federal property could be conveyed to State and local governments for park and recreational use at less than the 50 percent of fair-market value required under present law.

The bill provides three methods by which a State or its political subdivision may acquire surplus Federal property for park and recreational purposes. First, if the State or its political subdivision originally donated the property to the Federal Government, it may be reacquired at no cost. Second, the property may be acquired at the purchase price which the Federal Government paid for the property. Third, where the State or its political subdivision so elects, surplus property may be acquired at 0 to 50 percent of fair-market value. The price is to be determined on the basis of standards relating to suitability, accessibility, need and the highest and best use of the property.

One of the most significant features of this measure is that it does not require the use of condemnation powers. As a result, it provides a means whereby needed open space may be made available without having to move people out of established neighborhoods.

Mr. President, I became aware of the urgent need for legislation on this subject when it became apparent that Fort Lawton—a military installation of over 1,100 acres in the city of Seattle—would soon be declared surplus to Federal needs. Acquisition of this area by the city for park and recreation purposes is in the national interest. The problem Seattle and many other units of local government face, however, is that paying 50 percent of fair-market value may be financially impossible. This is especially true when the property is located in or near a major metropolitan area and the land appraisals are based on commercial, industrial or high density residential development.

The problem posed is national in scope. The Citizens Advisory Committee on Recreation and Natural Beauty recommended that legislative action be taken in its June 1968 annual report to the President and to the President's Council on Recreation and Natural Beauty. The Citizens Committee stated at page 5 of the report:

> OUTDOOR RECREATION AND FEDERAL SURPLUS LANDS
>
> Each year vast amounts of land become surplus to the operating needs of the Federal government. Some of the land is disposed of through sale to public or private entities while other acreages are held for future disposition. We are interested in assuring that the public outdoor recreational needs will be served in the sale or disposition of these lands, and that the eventual use of such lands is compatible with the land use plans and objectives of the public jurisdiction in that area. We recommend that the Administration seek legislation to permit the disposal of surplus lands at no cost to public bodies for park and recreation purposes. We recommend that, where possible, military lands be made available for public outdoor recreational use.

Enactment of this legislation would benefit every State and every area of the country which has Federal property and installations which may someday be surplus to Federal needs. It is imperative that we act and act now to insure that these lands are available for public use.

As Members of the Senate are aware, under the provisions of the Land and Water Conservation Fund Act the proceeds from the sale of surplus Federal real property are paid into the fund for use by Federal, State, and local government for recreational land acquisition and development. My bill would result in some reduction in revenues paid into the fund. This small reduction would, however, be offset many times by the value of new park and recreational lands made directly available to the Nation. Very often, the sale price realized from many of these properties is relatively small when compared with the overall receipts to the land and water fund. To local government, however, the 50-percent-of-fair-market-value requirement under present law can be too much for overextended and limited budgets. When this is the case, the land may be forever lost to public use.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD at the conclusion of my remarks.

Mr. President, it is my understanding that a report entitled "Utilization and Disposition of Federal Lands for Recreation" was prepared last summer which also recommends legislation on this subject. This report was prepared by the President's Council on Recreation and Natural Beauty at the request of the

Vice President of the United States, who serves as Chairman of the Council.

This report has not been released and I do not know what specific legislative recommendations it proposes. I would, however, urge Vice President AGNEW to release the report and to see that the administration's proposed legislation be transmitted so that it may be considered together with my bill.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1708) to amend title I of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), and for other purposes, introduced by Mr. JACKSON (for himself and Mr. MAGNUSON), was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

S. 1708

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Lands For Parks and Recreation Act of 1969".

SEC. 2. Section 2(b) of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), as amended (effective March 31, 1970, Section 2(b) becomes Section 2(a) pursuant to the provisions of Public Law 90-401, July 15, 1968), is further amended by deleting the last sentence and adding the following new paragraphs:

"*Provided, however,* that notwithstanding the provisions of the Surplus Property Act of 1944, as amended, and the Federal Property and Administrative Services Act of 1949, as amended, States and their political subdivisions shall have the right, for a period of five years from the date of enactment of this Act, to acquire from the United States surplus Federal real and personal property for park and recreation purposes by the following methods:

(1) Where the State or its political subdivision originally donated the property to the United States, the surplus Federal property may be reacquired at no cost;

(2) Where the United States paid valuable consideration for the property to the State, its political subdivisions, an association, or to an individual, the State or its political subdivision may acquire the surplus Federal property at the original cost of purchase; or

(3) Where a State or its political subdivision so elects, it may acquire surplus Federal property at 0 to 50 percent of the fair-market value as determined by the General Services Administration in accordance with the recommendations of the Secretary of the Interior based on the following standards:

(i) the suitability of the property for park and recreational uses;

(ii) the accessibility of the property to major population centers;

(iii) the need for park and recreational facilities in the immediate geographical area;

(iv) the highest and best use of the property taking into consideration the need of future generations for parks, open spaces and recreational opportunities.

The Secretary of the Interior is directed to prepare and publish guidelines and regulations for implementing these standards in making the price discount determinations set out in this section.

Except as provided in this section, nothing in this Act shall affect existing laws or regulations concerning disposal of real or personal surplus Federal property to schools, hospitals, States and their political subdivisions.

S. 1710—INTRODUCTION OF A BILL TO DONATE CERTAIN LANDS TO THE MINNESOTA CHIPPEWA TRIBE, WHITE EARTH INDIAN RESERVATION

Mr. MONDALE. Mr. President, I am today reintroducing legislation which I first introduced on May 23, 1967. This bill, identical to S. 1830 of the 90th Congress, restores to the Minnesota Chippewa Tribe, White Earth Reservation, certain submarginal lands of the United States and makes such lands part of the reservation. These properties consist of approximately 28,700 acres purchased by the Federal Government during the mid-1930's under title II of the National Industrial Recovery Act. The lands were so acquired in order to retire them from private ownership, to correct maladjustments in land use, and with the expectation that they would be made available for tribal use.

Mr. President, these lands were originally owned by the Minnesota Chippewa Tribe. Unfortunately, they were allotted under the allotment act and subsequently passed from Indian ownership. The Government acquired the lands at a cost of $175,664. In 1963, when similar legislation was introduced in the Congress, their market value was placed at $474,000 by appropriate governmental agencies.

Similar legislation has already been enacted, Mr. President, restoring property to the Seminoles of Florida and to the Pueblos and other tribes in New Mexico. I am, therefore, most hopeful that this legislation will receive favorable consideration during the present session. I ask unanimous consent that the text of the bill be printed at this point in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1710) to donate to the Minnesota Chippewa Tribe, White Earth Indian Reservation, some submarginal lands of the United States, and to make such lands parts of the reservation involved; introduced by Mr. MONDALE, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

S. 1710

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all of the right, title, and interest of the United States of America in the lands, and the improvements thereon, that were acquired under title II of the National Industrial Recovery Act of June 16, 1933 (48 Stat. 200), the Emergency Relief Appropriation Act of April 8, 1935 (49 Stat. 115), and section 55 of the Act of August 24, 1935 (49 Stat. 750, 781), and that are now under the jurisdiction of the Department of the Interior for the administration of the benefit of the Minnesota Chippewa Tribe, White Earth Reservation, are hereby declared to be held by the United States in trust for this Indian tribe, and the lands shall be parts of the reservation heretofore established for the tribe.

SEC. 2. Nothing in this Act shall deprive any person of any right of possession contract right, interest, or title he may have in the land involved.

SEC. 3. The Indian Claims Commission is directed to determine in accordance with the provisions of section 2 of the Act of August 13, 1946 (60 Stat. 1050), the extent to which the value of the title conveyed by this Act should or should not be set off against any claim against the United States determined by the Commission.

S. 1712—INTRODUCTION OF A BILL TO PROVIDE FOR THE APPOINTMENT OF AN ADDITIONAL DISTRICT JUDGE FOR THE WESTERN DISTRICT OF MISSOURI

Mr. SYMINGTON. Mr. President, in my own behalf and that of my colleague, Senator EAGLETON, I introduce, for appropriate reference, a bill to provide for an additional Federal judge for the western district of Missouri.

The U.S. Judicial Conference has recognized the need for an additional Federal judge in the eastern district of Missouri. However, because of an unfortunate series of circumstances, consideration was not given to the approved recommendation for an additional judge for the western district of Missouri by the Judicial Council of the Eighth Circuit.

It is my understanding that an additional judge in the western district is justified by the workload experience of that district, and this is, of course, reflected by the request of the Judicial Council of the Eighth Circuit.

I support the provision in S. 952 for an additional Federal judge for the eastern district of Missouri as well as an additional judge for the western district of Missouri, as provided under the terms of the separate bill we introduce today.

I would hope for early and favorable action in this Congress.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1712) to provide for the appointment of an additional district judge for the Western District of Missouri, introduced by Mr. SYMINGTON (for himself and Mr. EAGLETON), was received, read twice by its title, and referred to the Committee on the Judiciary.

S. 1719—INTRODUCTION OF A BILL PROVIDING JUST COMPENSATION IN FEDERAL CONDEMNATION CASES

Mr. HATFIELD. Mr. President, on behalf of myself and the Senator from Maryland (Mr. TYDINGS), I introduce, for appropriate reference, a bill to provide for the payment of reasonable costs, expenses, and attorneys' fees to defendants in actions by the United States for the condemnation of real property after determination of the amount of just compensation, or after abandonment of such actions by the United States, and for other purposes.

The purpose of the measure is to give full effect to the provision of the fifth amendment of the U.S. Constitution, ensuring that private property shall not be taken for public use without just compensation. The bill seeks to correct a longstanding inequity by making available to defendants certain legal resources commensurate in degree to those of the Government.

Currently, in Federal land condemnation proceedings, the owner of condemned property who believes the proffered price to be less than his estimate of the value of the property must, after other measures fail, go to court to have the fair value determined. The costs of bringing this legal action are borne by the property holder alone. Thus, even if a court determines that the land in question is more valuable than the Government offer indicated, the property owner must assume the costs of the litigation. His judgment then is discounted by the costs which he has incurred in pursuit of his constitutional right to just compensation.

For a small property owner, assuming costs of attorneys' and appraisers' fees may effectively preclude pursuit of legal remedy. Even if the remedy is pursued, the costs may prove especially burdensome. An individual who owns a small tract of land—which he values at $5,700 or $5,800—may be offered only $5,000 by the Government. If the property holder decides to take the case to court and wins, he is then saddled with considerable fees for an attorney and professional appraisers. These costs may well exceed the difference between his estimate and the Government's estimate of the property's value. The result is that the landowner, who has valiantly protected the value of his property, ultimately receives less than fair compensation for his property. The net receipt to the landowner, then, is the fair value of the property minus legal and other fees—expenses incurred solely in order to prove that the Government was wrong and parsimonious in its offer.

Not only is the end result unfair. Throughout the proceedings the Government has an unjust advantage in attempting to convince property holders to accept the initial offer. Government officials can argue that the legal and other costs incurred by the landowner in court action would bring no appreciable financial benefit. Yet to better insure justice, the Government's offer should stand on its own financial merits; the condemnor should not have the added coercive advantage which now exists.

Further, the landowner must not only use his own resources to defend against an apparently inadequate offer, but he is faced with the prospect that the Government may simply drop its condemnation proceedings after court action has begun. This results generally from the fact that the Government can, after reassessing the situation, decide that the need for the land is not as great as initially presumed. The landowner, again, is the ultimate loser; he must still pay legal and other fees incurred up until that point. He keeps his land, but has suffered substantially from the Government's action. For this governmental wrong, no remedy now exists.

Mr. President, the bill which I have introduced provides that the costs and expenses incurred by the defendant in legal action shall be paid by the U.S. Government, if it is determined that just compensation for the landowner's interest exceeds by 10 percent the maximum amount offered by the United States before the institution of the action. The measure also provides that where the United States dismisses the action before the judgment, the court is to enter judgment requiring the United States to pay the defendant landowner a sum equal to the costs and expenses incurred.

This legislation benefits from and draws upon the successful experience of Oregon legislation dealing with condemnation proceedings. Oregon statutes provide that in land condemnation cases property owners can recover reasonable attorneys' fees as determined by the court. These fees are recovered if the jury makes an award higher than the initial Government offer. Because of this legal remedy the guarantee of just compensation is thus better insured. The Federal Government, Mr. President, must similarly insure this protection.

Considerable support for this measure has come from the Oregon bar. The bill's predecessor, introduced in the 89th Congress, enjoyed the support of the board of governors of the Oregon State bar, the judicial committee of the Oregon State bar, the Bar Asociation of Union and Lane Counties, and others.

It is my feeling that this bill, if enacted, would guarantee that the protection of just compensation would be truly secured. I urge its prompt enactment.

Mr. President, I ask unanimous consent that the text of this bill be printed at this point in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1719) to provide for the payment of reasonable costs, expenses and attorneys' fees to defendants in actions by the United States for the condemnation of real property after determination of the amount of just compensation, or after abandonment of such actions by the United States, and for other purposes, introduced by Mr. HATFIELD (for himself and Mr. TYDINGS), was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

S. 1719

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) chapter 161 of title 28, United States Code, is amended by adding at the end thereof the following new section:

"§ 2415. Actions for the condemnation or taking of real property

"(a) If, in any action brought by the United States for the acquisition of any interest in real property through the exercise of the power of eminent domain, it is determined that just compensation for such interest exceeds the maximum amount offered by the United States for such interest before the institution of that action, any judgment entered in that action in favor of the United States with respect to that interest shall provide for the payment to the defendant having the title to that interest of (1) the amount determined to constitute just compensation for that interest, and (2) a sum equal to the aggregate amount of the costs and expenses incurred by such defendant incident to that action: *Provided,* That no payment for costs and expenses shall be made unless the judgment awarded exceeds the maximum amount offered by the United States before the institution of the action by ten percent. If, after the institution of any such action, the United States dismisses such action before compensation has been determined and paid, or such action is dismissed upon motion of the defendant having title to that interest for failure of prosecution of such action, the court shall enter in that action, upon application made by such defendant, judgment requiring the payment by the United States to such defendant of a sum equal to the aggregate amount of the costs and expenses incurred by such defendant incident to that action.

"(b) If, in any such action brought by the United States with respect to any interest in real property, it is determined that the United States is without lawful authority to acquire that interest through the exercise of any power of eminent domain, any judgment entered in that action in favor of the defendant shall provide for the payment to the defendant by the United States of a sum equal to the aggregate amount of the costs and expenses incurred by the defendant incident to that action.

"(c) If, in any action brought against the United States for the recovery of just compensation for the taking of any interest in real property, it is determined that such taking occurred without a tender of compensation to the plaintiff for such interest or that just compensation for the interest taken exceeds the maximum amount tendered to the plaintiff for such interest by or on behalf of the United States before the institution of that action, any judgment entered in that action in favor of the plaintiff with respect to that interest shall provide for the payment to the plaintiff of (1) the amount determined to constitute just compensation for that interest, and (2) a sum equal to the aggregate amount of the costs and expenses incurred by the plaintiff incident to that action: *Provided,* That where a tender has been made to the plaintiff for such interest by or on behalf of the United States before the institution of action, no payment for costs and expenses shall be made unless the judgment awarded exceeds the maximum amount offered by the United States before the institution of the action by ten percent.

"(d) As used in this section—

"(1) the term 'United States' means the United States Government, any department, agency, instrumentality, or officer thereof, and any corporation owned or controlled by the United States Government; and

"(2) the term 'expenses' includes, but is not limited to, expenses reasonably incurred for appraisal and other expert services incident to the preparation and trial of a civil action, and a reasonable attorney's fee incurred incident to the preparation and trial of such action and the review of any judgment or decree entered therein, as determined by the court in that action."

(b) The chapter analysis of such chapter is amended by adding at the end thereof the following new item:

"2415. Actions for the condemnation or taking of real property."

SEC. 2. The amendments made by this Act shall be effective with respect to all actions brought on and after the first day of the third month beginning after the date of enactment of this Act (1) by or on behalf of any department, agency, instrumentality, or officer of the United States or any corporation owned or controlled by the United States Government for the acquisition of any interest in real property through the exercise of the power of eminent domain, or (2) by any party for the recovery of just compensation for the taking of any interest in real property by or on behalf of any such department, agency, instrumentality, officer, or corporation.

Mr. TYDINGS. Mr. President, I am pleased to cosponsor with the distin-

guished senior Senator from Oregon (Mr. HATFIELD) a bill to provide the payment of costs and fees of litigants in certain property condemnation proceedings.

This bill is similar, in large measure, to S. 1351, introduced during the 90th Congress by Senators MORSE and HATFIELD. That bill would have allowed payment of reasonable costs, expenses, and attorneys' fees by the Government to defendants in condemnation actions brought by the United States, if the defendant was awarded any judgment in excess of the Government's initial offer.

The Subcommittee on Improvements in Judicial Machinery held hearings on this bill on April 5 and May 7, 1968, and heard representatives of the American Bar Association, various Oregon attorneys, and other interested parties. During the course of these hearings concern was expressed that S. 1351, as introduced, had the potential of stimulating litigation and causing expense to the Government in cases where the ultimate jury award was not substantially greater than the last Government offer. Under these circumstances, even though the Government's offer might be reasonable, an intransigent property owner could resist condemnation, win a jury verdict only a few dollars more than the best Government offer, and, under S. 1351, receive all expenses of litigation.

The main thrust of this legislation is to protect the just compensation provisions of the fifth amendment to the Constitution and to protect a property owner from being forced to accept an unreasonable offer by the Government because of the weight of expenses attached to defending a land condemnation suit. It is not meant to stimulate needless litigation. Consequently, I, as chairman of the Subcommittee on Improvements in Judicial Machinery, suggested that the Government be liable for reasonable costs and attorneys' fees only when the jury award exceeded by 10 percent the amount offered by the United States prior to suit. Such a provision will assure that this legislation will not stimulate needless litigation but will protect the just compensation of a litigant whose property has been grossly undervalued by the Government. I am pleased that Senator HATFIELD has adopted this 10-percent provision in the bill he introduces today.

This legislation is needed and will correct a serious deficiency in existing law. It will not only better assure the protection of just compensation, but it will encourage the Government to make a fair offer initially in order to avoid the costs of litigation. It will give the property owner an opportunity to secure a more equitable price for his property through negotiation than he would have obtained previously. I commend the distinguished Senator from Oregon on his introduction of this legislation and look forward to working with him to secure its passage.

S. 1720—INTRODUCTION OF A BILL TO AMEND THE FEDERAL AVIATION ACT OF 1958

Mr. FONG. Mr. President, I am deeply concerned by the initial decision of the Civil Aeronautics Board hearing examiner with respect to standby youth fares. If accepted by the Board, his recommendation to eliminate these fares would have a very detrimental effect on the Nation and on my own State of Hawaii. I believe that such fares provide vast benefits to our youth in terms of education experience and safety; they also strengthen our domestic airline industry.

The hearing examiner has recommended that these reduced rates should be discontinued because they are "unjustly discriminatory." His recommendation to the CAB is understandable in light of a recent circuit court ruling that these fares were unjustly discriminatory under existing law and remanded the case to the CAB for a decision not inconsistent with that court's ruling.

I believe the court interpreted the law under too narrow a construction. I concur with the CAB position in its argument before the circuit court that all factors related to the tariff, such as competition, public welfare, public safety, and airline profit have a bearing on whether this rate is unjustly discriminatory.

Let me review some of the reasons that I feel are important in considering the value of these fares.

One of the major factors the examiner did not emphasize in his initial decision is the "blackout" characteristics of these student fares. The majority of the airlines which offer these reduced rates restrict their use to offpeak hours or days. In other words, the youth fare can be utilized on major airlines only during periods that are unpopular with the general public. They are used to fill up seats that might otherwise remain empty.

The students or young adults who use this plan are subject to restrictions not imposed on the general air traveler. In addition to restrictions on days and time period in which they may travel, they have no assurance that they can get on a plane of their choice or that they will not be "bumped off" by a passenger who has a reserved seat somewhere along the line. I, for one, do not believe that these young people are receiving "substantially equal service," for they are not allowed the primary luxury of travel—the ability to leave or arrive as fits your schedule. It is conceivable that they might wait hours, or even days, before they are allowed to board a plane.

The CAB examiner stated that youth alone is not enough to allow this reduced rate to continue. Under present law, narrowly construed, he may be correct. However, I should like to point out that our country has a history of using arbitrary ages as a qualification for various discounts. All we need to do is look around us to see student rates at hotels, movie theaters, plays, and public transportation systems. We are a society which places a high priority on our youth and I feel that the youth fare is another valuable method of doing so.

Many of the airline representatives who testified before the examiner indicated that the "youth market" is very elastic. They felt that the cost of travel had much more impact on the 12-to-21 age group than it did on the population above that level. The airlines, therefore, conceived this plan which would increase the traffic by our youth and increase the profit of the airline industry.

Mr. Brenner of American Airlines made this statement when queried if there were sound transportation reasons behind the youth fares:

> Well, yes. This goes to the fundamental concept of the youth fare. The youth fare, of course, had one purpose, one main purpose, to provide this—by providing this discount to an elastic market, to generate in our opinion, and we believe it has succeeded, more revenue than it would cost to handle this. The businessman's market is not an elastic market.

Again, in response to a question by the CAB examiner as to why American does not offer a standby fare to all passengers, Mr. Brenner replied:

> The test of a sound promotional policy should rest with the elasticity of the market you are dealing with . . . .

Statistics provided by American Airlines indicate that only 9.4 percent of the youth passengers were on some type of business trip, while over 60 percent of their regular passengers were on a business trip. United and TWA statistics indicated that less than 5 percent of their youth-fare passengers were on business trips. Continental statistics indicate that between 35 and 45 percent of their current youth-fare passengers would not have made the trip by air had the discount not been in effect. These statistics indicate beyond any doubt that the elimination of these fares would severely limit the amount of air travel by our youth. If they did not travel by air, Continental's statistics indicate that over 50 percent of those students would travel by automobile.

When the CAB approved the military standby fares, the Board noted the contention by the Department of Defense that there is a safety factor involved in encouraging many servicemen "who would otherwise travel by automobile over great distances or hitch-hike to their destinations to avoid the risks of the highway by utilizing the military fares." I feel that this contention applies to the youth fares. Any automobile insurance company will affirm the high degree of risk involved in the under-25 age group of drivers. I am sure that anyone who has children of driving age is aware of this fact. It is translated into the cost of our automobile insurance. Therefore, I think that this contention of safety should apply with more vigor in this situation.

I should also like to point out to the Senate that these same hearings indicated the fact that these fares were very profitable to the airline industry. Every airline that kept statistics in this area affirmed that these reduced fares promoted traffic by our youth and brought profit to the industry.

I should now like to address myself to a specific situation—Hawaii. As you know, Hawaii is a State surrounded by water. We are an island community and we are forced, therefore, to travel from island to island by air. It is the only efficient and practical method of travel. Airplanes are our lifeline to the continental United States.

We also have a disadvantage that is prevalent in many small States; we have

only one university in our State and only several small colleges. Consequently, many of our residents must send their children long distances to mainland colleges. We are separated from the continental United States by 2,500 miles and from the east coast by about 5,000 miles.

This distance places great hardship on the parents of college students in our State. Transportation costs alone are a heavy burden. In this situation, I feel that the elimination of these student fares may make the difference in whether or not a student from Hawaii can afford to attend a mainland college. At the very least, it will prevent many of our students who are away at school on low budgets from returning to their families during vacations.

The student fare is also important to Hawaii for the education of our youth. Since the only method of travel between our islands is by air, our students cannot visit different cities, monuments, or historic places on the various islands without flying. The student fare provides them with an opportunity to visit and learn about areas of our State which they otherwise might not have.

For these reasons, and because I feel so strongly about the necessity of retaining these fares, I introduce today legislation to amend the Federal Aviation Act of 1958 to authorize the reduced-rate transportation to individuals who are 21 years of age or younger.

My bill would amend section 403(b) of the Federal Aviation Act of 1968 to include youth 21 years of age or younger. These exemptions already include airline directors, officers, employees, and members of their immediate families; witnesses and attorneys attending legal investigations in which the air carrier is interested; persons injured in aircraft accidents; doctors and nurses attending such persons; and ministers of religion under such conditions as the Board may prescribe. I propose to include our youth in this group of persons who are exempted from the statutory rule against unjust discrimination.

I should like to emphasize to my colleagues that my amendment is enabling legislation. The airlines will not be forced to retain these fares if they are not profitable or feasible. It will provide, however, the statutory authority for the CAB to approve youth fares proposed by any of the airlines.

I hope the Senate Commerce Committee will schedule early hearings on youth air fares and report legislation for prompt Senate action.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1720) to amend the Federal Aviation Act of 1958 in order to authorize certain reduced-rate transportation to individuals who are 21 years of age or younger, introduced by Mr. FONG, was received, read twice by its title, and referred to the Committee on Commerce.

S. 1721—INTRODUCTION OF THE TOBACCO MARKET ADJUSTMENT ACT

Mr. BROOKE. Mr. President, today I am introducing a bill to be known as the Tobacco Market Adjustment Act of 1969. This bill would have the effect of phasing out price supports for tobacco production over a 4-year period, beginning in 1970, and prohibiting use of government funds to advertise or promote this product.

As a legislator, a parent, and a concerned citizen, I find it appalling and totally unacceptable that the Federal Government presently has more than $750 million in loans outstanding from the Commodity Credit Corporation to support the price of tobacco. Tobacco has been shown, in numerous Government and private studies, to be highly injurious to health. It is known to be a major factor in causing cancer of the throat and lungs. Heavy smokers can expect, on an average to lose 6 minutes of their lives for every cigarette they smoke. The overall effect can be to cut as much as 8 years off the life of an average smoker, and to reduce his productive capacity over a much longer timespan.

Congress has already indicated its deep concern with this problem by requiring a warning to be posted on all packages of cigarettes indicating that the contents may be injurious to health. And various proposals have been made which would prohibit the advertising of cigarettes through the mass media.

Despite these concerns, however, price supports for many different kinds of tobacco continue. And what is more, our Government spends large sums of money to advertise this product in foreign countries.

I am well aware of the contribution which tobacco makes to our economy and to our balance of payments. Some 650,000 families are engaged in the production of this crop. The annual value of this cash crop is roughly $1.3 billion. In addition, tobacco exports, valued at $686 million in 1968, make a significant contribution to our balance of payments.

I am well aware that this legislation will not end the production of tobacco, or to prohibit its sales. Tobacco will still be grown and sold at competitive market prices as long as people insist on its dubious pleasures. But I believe very strongly that Federal tax dollars should not be used to support the price of a product which has been proven by agencies of our own government to be injurious to health.

I believe this is an area in which economies can wisely and well be made, while at the same time helping to improve the health of our people. Surely there are more constructive uses for these hundreds of millions of dollars than continued subsidies for a "nonessential" product which has been proven harmful.

Mr. President, I ask unanimous consent that the full text of this bill be printed at this point in the RECORD, and I invite the cosponsorship of my colleagues.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1721) to promote the orderly adjustment of tobacco production and marketing, introduced by Mr. BROOKE, was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

S. 1721

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Tobacco Market Adjustment Act".

SEC. 2. The Congress hereby finds and declares—

(1) that medical evidence of the harmful effects of smoking on personal health has been amply developed and analyzed by the Surgeon General of the United States and other qualified authorities;

(2) that the United States Government and the governments of many other nations have published detailed scientific evaluations demonstrating the adverse effects of smoking on health and have undertaken information campaigns to acquaint the public with the hazards associated with the use of tobacco;

(3) that the widespread use of such harmful substances constitutes a danger not only to personal but to public health, in view of the epidemic proportions of illnesses associated with the use of tobacco in our society and of the particularly grave implications of continued habituation of the youth of our country; and

(4) that continued governmental support of tobacco production and marketing is incompatible with the responsibility of the Federal Government to protect the health of American citizens.

SEC. 3. Title I of the Agricultural Act of 1949, as amended, is amended by adding at the end thereof a new section as follows:

"SEC. 108. Notwithstanding any other provision of law—

"(1) No producer of tobacco shall be eligible for price support on his 1970 crop of tobacco unless he withholds from the production of tobacco during the 1970 crop year not less than 25 per centum of the tobacco acreage allotment for his farm for such crop year.

"(2) No producer of tobacco shall be eligible for price support on his 1971 crop of tobacco unless he withholds from the production of tobacco for the 1971 crop year not less than 33⅓ per centum of the tobacco acreage allotment for his farm for such crop year.

"(3) No producer of tobacco shall be eligible for price support on his 1972 crop of tobacco unless he withholds from the production of tobacco for the 1972 crop year not less than 50 per centum of the tobacco acreage allotment for his farm for such crop year.

"(4) No producer of tobacco shall be eligible for price support on his 1973 crop of tobacco unless he withholds from the production of tobacco for the 1973 crop year not less than 75 per centum of the tobacco acreage allotment for his farm for such crop year.

"(5) Beginning with the 1974 crop, no price support shall be made available under this or any other Act for any crop of tobacco.

"(6) Any acreage withheld from the production of tobacco in any crop year pursuant to the provisions of this section may be devoted, in accordance with such rules and regulations as the Secretary may prescribe, to the production of crops other than tobacco; and any such acreage so withheld from the production of tobacco in any crop year shall, for the purposes of determining tobacco acreage allotments for any future years, be deemed to have been planted to tobacco in such crop year.

"(7) No Federal funds may be expended on or after July 1, 1970, for the purpose of advertising or promoting the sale or use of any kind of tobacco or tobacco product; and no Federal funds may be expended for the purpose of subsidizing in any way the export of tobacco to any foreign country. The foregoing provision shall in no way affect the export of tobacco for use by members of the Armed Forces of the United States serving in foreign countries.

"(8) The Secretary is authorized to issue such rules and regulations as he deems appropriate in order to carry out the provisions of this section."

ADDITIONAL COSPONSORS OF BILLS AND JOINT RESOLUTIONS

Mr. BENNETT. Mr. President, I ask unanimous consent that, at its next printing, the name of the distinguished Senator from Tennessee (Mr. BAKER) be added as a cosponsor of the bill (S. 845) the ammunition redefinition bill. This makes a total of 35 cosponsors.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from Alaska (Mr. GRAVEL) and the Senator from Pennsylvania (Mr. SCHWEIKER) be added as cosponsors of the bill (S. 765) to amend the Public Health Service Act to provide for the establishment of a National Lung Institute.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Minnesota (Mr. MONDALE) I ask unanimous consent that, at its next printing, the name of the Senator from Oklahoma (Mr. HARRIS) be added as a cosponsor of the bill (S. 811) to require the Secretary of Agriculture and the Director of the Bureau of the Budget to make a separate accounting of funds requested for the Department of Agriculture for programs and activities that primarily stabilize farm income and those that primarily benefit consumers, businessmen, and the general public, and for other purposes.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from South Carolina (Mr. HOLLINGS), the Senator from Hawaii (Mr. INOUYE), the Senator from Washington (Mr. MAGNUSON), the Senator from Wisconsin (Mr. NELSON), the Senator from New Jersey (Mr. WILLIAMS), and the Senator from Ohio (Mr. YOUNG) be added as cosponsors of S. 1189, a bill I introduced February 28, 1969, which would improve educational quality through the effective utilization of educational technology.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, at the request of the Senator from Indiana (Mr. BAYH), I ask unanimous consent that, at their next printing, the name of the Senator from Idaho (Mr. CHURCH) be added as a cosponsor of the bill (S. 472) to increase the annual amount individuals are permitted to earn under title II of the Social Security Act without suffering deductions, and of the bill (S. 1209) to eliminate in certain cases the requirement that an insured individual have first been admitted to a hospital in order to qualify under title XVIII of the Social Security Act for extended medical care services.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. COOK. Mr. President, at the request of the Senator from Maryland (Mr. MATHIAS) I ask unanimous consent that, at its next printing, the name of the Senator from Maryland (Mr. TYDINGS) be added as a cosponsor of the bill (S. 1223) to provide for the issuance of a special series of postage stamps in commemoration of the 50th anniversary of the National Federation of Business and Professional Women's Clubs.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. COOK. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Pennsylvania (Mr. SCOTT) be added as a cosponsor of the bill (S. 1689), the Toy Safety Act.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, at the request of the senior Senator from West Virginia (Mr. RANDOLPH), I ask unanimous consent that, at its next printing, the names of the Senator from California (Mr. CRANSTON), the Senator from Connecticut (Mr. DODD), the Senator from Hawaii (Mr. FONG), the Senator from Idaho (Mr. CHURCH), the Senator from Kansas (Mr. PEARSON), the Senator from Maine (Mr. MUSKIE), the Senator from Maryland (Mr. TYDINGS), and the Senator from South Dakota (Mr. MCGOVERN) be added as cosponsors of the joint resolution (S.J. Res. 7) proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that at its next printing, the name of the Senator from Idaho (Mr. CHURCH) be added as a cosponsor of the joint resolution (S.J. Res. 20) proposing an amendment to the Constitution of the United States relating to the nomination and election of the President and Vice President of the United States.

The VICE PRESIDENT. Without objection, it is so ordered.

SENATE RESOLUTION 173—RESOLUTION REQUESTING THE PRESIDENT TO RELEASE FROM ACTIVE DUTY CERTAIN MEMBERS OF THE ARMY NATIONAL GUARD

Mr. FONG. Mr. President, I submit for appropriate reference, a resolution calling upon the President to order the immediate deactivation of the men of the 29th Infantry Brigade who were called to active duty in May 1968.

Of the 24,500 men called to active duty at that time, 4,070 men were from the State of Hawaii. The men from Hawaii constituted 17 percent of the total number recalled nationally.

For the size of the State of Hawaii which has a population of less than one-half of 1 percent of the national population, this callup of 17 percent from Hawaii was most unjust and inequitable. It forced upon Hawaii a burden 45 times larger than her just share.

Immediately upon hearing the announcement of the activation of the 29th Brigade I sent a telegram to President Johnson and the Secretary of Defense, urging that the order for the 29th Brigade be canceled. I pointed out that Hawaii was being directed to furnish a much higher number of men, based on population, than any other State in the Union, and also that this large levy on a small State imposed a serious burden on the Honolulu Police Department which lost 40 men in the callup, on Hawaii's building industry, and on many other groups in Hawaii who lost many of their highly trained employees because of this recall.

The initial reason given for calling up so many men from one unit was that they had been trained together to accomplish a specific military mission and should be kept together. They were also needed to fill an emergency need.

Since these men were called to active duty they have been sent to Vietnam individually and in small groups. Immediately upon hearing that the 29th Brigade was being broken up in this manner I again telegramed the Department of the Army urging the deactivation of the 29th Brigade. I pointed out that the men of the 29th were being sent to Vietnam on a piecemeal basis and were being assigned to different units there. Since they were not being utilized together, the reason given for their recall was no longer valid and they should be returned to civilian life.

I regret that the Department of the Army and the Defense Department have not seen fit to correct this grave injustice done to Hawaii.

We in Hawaii are patriotic citizens. We have responded to the utmost in time of war and have compiled one of the most outstanding records of war service. Hawaii suffered disproportionately high fatalities in Korea and in Vietnam. Today, as always, Hawaii's men continue to serve in combat with exemplary courage.

As no affirmative response has been given to our appeals for justice and equity I am compelled to bring this matter to the attention of the Senate. Already more than Hawaii's fair share of men called to active duty last May have been assigned to duty in Vietnam.

I urge that the Senate do justice and equity to Hawaii by seeking correction of the disproportionate number of Hawaii Army reservists and national guardsmen called to active duty last year.

The reasons given for their recall that they were trained together and should be kept together in service and that they were needed in an emergency are no longer valid as they have been sent to Vietnam on a piecemeal basis and the emergency in manpower shortage does not now exist.

I urge the Senate Armed Services Committee to take quick favorable action on this resolution conveying to the President that it is the sense of the Senate that justice and equity be done.

The VICE PRESIDENT. The resolution will be received and appropriately referred.

The resolution (S. Res. 173), which

reads as follows, was referred to the Committee on Armed Services:

S. RES. 173

Resolved, That the President is hereby urged and requested to release immediately from active duty members of the 29th Infantry Brigade, United States Army, who were ordered to active duty as an emergency measure in May of 1968.

SUPPLEMENTAL APPROPRIATIONS BILL, 1969—AMENDMENT

AMENDMENT NO. 91–8

Mr. FULBRIGHT submitted an amendment to the joint resolution (H.J. Res. 584) making a supplemental appropriation for the fiscal year ending June 30, 1969, and for other purposes, which was ordered to lie on the table and to be printed.

(See reference to the above amendment when submitted by Mr. FULBRIGHT, which appears under a separate heading.)

NOTICE OF HEARINGS ON S. 11, THE INTERGOVERNMENTAL PERSONNEL ACT OF 1969

Mr. METCALF. Mr. President, I should like to announce that the Subcommittee on Intergovernmental Relations of the Committee on Government Operations will hold 1 additional day of hearings on S. 11, the Intergovernmental Personnel Act of 1969, on April 1.

It is the purpose of S. 11 to strengthen intergovernmental cooperation and the administration of grant-in-aid programs; to extend State and local merit systems to additional programs financed by Federal funds; to provide grants for improvement of State and local personnel administration; to authorize Federal assistance in training State and local employees; to provide grants to State and local governments for training their employees; to authorize interstate compacts for personnel and training activities; and to facilitate the interchange of Federal, State and local personnel.

S. 11 embodies, with some modifications, the provisions of S. 699, the Intergovernmental Personnel Act of 1967, which was passed by the Senate on November 7, 1967, and is based on investigations made by the Subcommittee on Intergovernmental Relations over the past 3 years, and on many suggestions offered by witnesses in hearings held on S. 699 and other legislation.

The hearings will be held in room 3302, New Senate Office Building, beginning at 10 a.m. Previous hearings on this legislation were held March 24, 25, and 26.

THE UNITED STATES SHOULD RECOGNIZE RED CHINA

Mr. YOUNG of Ohio. Mr. President, the establishment of a workable relationship with the government of mainland China is one of the most important problems facing our Nation today. The facts are that from late 1965 to this good hour I have advocated that the United States follow the example of Mexico, the United Kingdom, France, and other nations, and recognize the Government of Communist China, instead of relying on Hong Kong as a listening post and observatory into the vast area of mainland China with its population of one-quarter of the inhabitants of the entire world. Following recognition, we should invite that nation to open an embassy in Washington and we then open and maintain an Embassy in Peking. The time for such diplomatic exchange is long past due.

On April 20, 1966, I spoke in the Senate, as recorded in the CONGRESSIONAL RECORD, volume 112, part 7, page 8644, urging that our Government recognize the Government of Communist China.

Nations, like individuals, should not ignore the facts of life. Recognition of one nation by another never means approval of the ruling regime of that country. For example, early in the first term of the administration of Franklin D. Roosevelt the United States recognized the Government of the Soviet Union. It was stated at that time and well understood that our recognition of the Soviet Government would not imply any approval of the political structure of that nation. Our acknowledgement by official action that the Peking government exists and has been for many years the government of China is only a matter of stating the obvious. It does not imply our approval of that regime any more than our recognition of the Soviet Union, Spain, Greece, or any one of a number of nations ruled by Communist or Fascist dictatorships or military juntas indicates our approval of these regimes or their ideological bases.

Our embassy in the Soviet Union provided a valuable listening post and furnished us with much information during the Stalin regime when Russia was a closed society. Yet there were, and are, rightwing extremists who all along denounced our recognition of the Soviet Union. We are, and have been over recent years, greatly handicapped in acquiring information about, and in dealing with, Communist China, being dependent upon our consul general in Hong Kong for intelligence reports.

With Red China exploding crude nuclear weapons and engaging in serious border fighting with the Soviet Union along their 6,500-mile common border, a U.S. Embassy in Red China would undoubtedly be of great value to us. If the administration is seriously interested in normalizing relations with China, it should take steps toward entering into meaningful diplomatic and economic relations with the Peking government. Should the arrogant Communist dictators of China rebuff that effort, their refusal would result in a propaganda victory for the United States.

The Peking government has been the duly constituted and permanent government of mainland China for 20 years. It has governing authority over some 750 million men, women, and children—nearly one-fourth of the world's population. Red China unquestionably exists and just as unquestionably it will exist, immensely more powerful, 5 years from now. In spite of this fact, we continue to pretend that Red China is not there and that perchance some miracle will happen to solve this perplexing problem.

Furthermore, it is folly to believe that mainland China is ever going to be conquered by Chiang Kai-shek's little army of many generals and no combat experience, in virtual exile on Formosa, protected by our airpower and 7th Fleet. We have for 19 years been supporting that corrupt and boastful old warlord, Chiang Kai-shek. When he was driven from the Chinese mainland in the civil war, he sought a haven in Formosa for himself and his beaten army. Almost immediately his army massacred some 17,000 unarmed people. With our help he then established himself in power. His government is a puppet government of the United States.

Despite the boasts in the mid-1950's of Secretary of State John Foster Dulles and those in the China lobby about unleashing Chiang-Kai-shek to reconquer the mainland, it has been and is our 7th Fleet and airpower and more than $10 billion of American taxpayers' money that has maintained this Nationalist Chinese Government, so-called, on the island of Taiwan. Ardent supporters of Chiang Kai-shek remind one of Mississippi extremists who are still waving the Confederate flag a century after the Civil War ended. Chiang is a tiger without any teeth. He has an over-age army of 600,000 at Taiwan. Over the years he has boasted of invading the Chinese mainland. This, of course, with the proviso, and he does not mention this, that the United States furnish all-out support from our Air Force and 7th Fleet, and that our warships and warplanes protect the convoy of American transports necessary to transport this invasion force. The time is long past due that we should withdraw all support from Chiang Kai-shek and cease pretending that the small island he dominates is a nation deserving of our support and of any prominence whatsoever in the United Nations. It is true that he has an army of 600,000 which is capable of parading in competition with the Shriners and would probably be about as good in combat.

Chiang Kai-shek has been making the empty boasts for years of his intent to invade the Chinese mainland. He is a braggart and a faker and it is high time our State Department officials stop catering to him.

I advocate that the United States should withdraw immediately all our soldiers in Taiwan serving as military advisers. I urge that without delay we open negotiations with Communist China and that Chang Kai-shek be denied any further support from us, not only as far as Asia is concerned but in the United Nations. It is fakery that this corrupt warlord with his little island, where Madam Chiang has taken over the ownership of the Grand Hotel and most of the worthwhile real estate, should be regarded as a nation worthy of a seat in the General Assembly.

Leaders of Communist China have in the past expressed disinterest in joining the United Nations. However, the United States should urge the chiefs of state of those nations which have heretofore recognized Red China and are presently enjoying lucrative trade with that huge nation to join with us in offering a place in the United Nations to this huge na-

tion which we have been so myopic as to disregard altogether or treat as an outlaw.

Ambassador Edwin Reischauer, former Ambassador to Japan and one of our great Asiatic experts, has been proposing for some years that our Government accord recognition to Communist China and sponsor its admission to the United Nations.

Of course this corrupt warlord, Chiang Kai-shek, who has been subsidized over the years by our taxpayers, will cry out in rage against our recognition of Red China; against reopening trade channels with Red China; against any attempt whatever by the United States to improve relations with the Peking government. In 1959 I was in Taiwan, and after listening to the bombastic statements of Chiang Kai-shek and questioning him, Madam Chiang interjected herself, ranting about the imminent invasion of mainland China by Chiang's forces. She disregarded the fact that except for our airpower and 7th Fleet and our taxpayers' money, the Red Chinese would have crushed the forces of Chiang Kai-shek long before then, and very likely she and Chiang would have been residing in the United States at that time.

Mr. President, of course, any change in our China policy should recognize the right of self-determination for the people of Taiwan, including safeguards for all minorities. A solution for the future status of Taiwan, the Pescadores, and the offshore islands should be sought within the framework of the United Nations.

Unfortunately, since 1950 the United States and the Government of mainland China have adopted policies which stand like a great wall between the two nations preventing all normal contacts. We do not speak to one another, except occasionally at the ambassadorial level at Warsaw. In the meantime, the world moves on and there are tremendous changes everywhere.

Mr. President, a mature society, like a mature man, faces its problems squarely. It does not bury its head in the sand and dream that its problems will disappear when it lifts its head. Such fantasy fools no one, and all the while precious time is lost that could be devoted to solving these problems.

There is probably no greater threat to world peace today than the threat posed by the Red Chinese dictators. They are arrogant, hostile, and apparently devoid of mercy or desire for cooperation. They are violent Communists in the Stalin pattern. Time and time alone will lessen the bitterness they feel toward the nations of the Western World, including czarist Russia, that oppressed China during the 18th, 19th, and around the turn of the 20th century. The European powers in particular humiliated the Chinese and helped themselves by merciless military action to vast parcels of Chinese territory, often under the guise of 99-year leases. Recent border clashes between Soviet and Chinese troops stem directly from border disputes arising from that period of colonialism.

China, with her 750 million disciplined, hard-working and dedicated people will be incapable for many years of developing the weapons necessary to challenge our security. Mao Tse-tung has stated his nation needs 30 years of peace and development. Nonetheless, it is the most powerful nation in Asia. Notwithstanding occasional economic setbacks, China is a formidable fighting opponent for any nation. We should face reality. As her industrial economy advances, more and more nations will expand trading relations with her.

In spite of occasional serious reverses, due in large part by drought, her agricultural economy is progressing and all reports indicate that she has managed to overcome widespread starvation, heretofore so common in China and India and other hugely populated countries in the Far East in times of crop failure and other national disasters. Illiteracy in China will soon be a thing of the past. Education, however biased, is progressing at an unprecedented rate.

The reality of China of 1969 is that, having survived the fires of adversity, it is an awakened giant that for better or worse will have a profound influence upon the kind of world in which we and our children's children will be living.

National interests can be accommodated when the will to reconcile them exists on both sides. By and large, the United States and the Soviet Union have learned after more than 20 years of the cold war that their conflicts must be reconciled peacefully in this nuclear age. We should apply the lessons of the past to our future with China. It will be a National tragedy if we continue this period of conflict with that nation—a period in which vast amounts of our Nation's energies are devoted to military power at the expense of our social and cultural development. We have many times over the military force necessary to defend ourselves. We would do better to use our energies to help free people everywhere create a way of life that would lead them to utterly reject the lure of communism.

The facts are that from a military standpoint Red China today is a paper dragon if and when the ability to wage a prolonged offensive war on land, at sea, and in the air is considered. It is overrated as a great military power. It has crude nuclear capability, that is true. However, it will take at least 5 or 10 years before it will have the know-how to deliver any nuclear warheads on targets. Its air force is inferior. It has no surface navy except a few torpedo boats and gunboats—no modern transports—nothing except thousands of junks. It is an agrarian nation, with 85 percent of its population engaged in agriculture. On the Pacific, under the Pacific, and in the air over the Pacific, we have a more powerful Navy, submarine fleet, and Air Force than all the nations of the world combined.

Furthermore, there is certainly no inevitability of a war between us and China. We live in such different political and economic environments that like land and sea animals, we hardly meet. We have no real reason to tangle with each other.

Just as we have learned at great cost and hazard to live at peace with the Soviet Union, we should make up our minds to accept Red China's existence, to respect her legitimate interests, and to meet her challenge other than by military containment. Let us hope that we will do so before another 20 years of the cold war and the arms race elapse.

Mr. President, there is no assurance nor certainty that were we to recognize Red China the attitude of its leaders toward us would become any less intransigent or more cooperative than at present. However, it seems highly advisable that we face up to the problem of recognition if we hope to restrain the expansion of Red China without war and if we are to have a direct assessment and judgment of Chinese interests and intentions, so vital in this grim period of international anarchy.

In addition to recognition, there are other steps that we can take to help reduce tensions between our Nation and the people of mainland China. We should unilaterally take steps in the direction of free travel between the United States and mainland China. We should explore the possibilities for cultural and student exchanges. We should show our concern for the well-being of the people of China by examining areas of technical cooperation such as exchange of information on food production, family planning, irrigation and water development.

We should permit the sale to Communist China of food and other nonstrategic items through commercial channels as do many other nations of the free world. Our allies, including neighbors such as Canada, are prospering by their trade with that country for which the Chinese are paying in gold at the world price. The Canadian Government has sold almost $1 billion worth of Canadian wheat for gold, cash on the barrelhead, to Red China. Australia has sold Communist China more than $500 million worth of wheat.

Very definitely, American producers and manufacturers should be permitted to sell to Red China at world prices whatever the nationals of that nation may wear, eat, drink, or smoke, and in turn, buy the products and handicrafts of the Chinese. We have farmers and industrialists who would like to sell their surplus products in the markets of the world. Obviously, this also would be a step toward world peace. Nations, like individuals, are unlikely to fight with their customers.

Every effort must be made to involve the Red Chinese Government in international negotiations regarding such issues such as disarmament, nonproliferation of nuclear weapons, and the limited nuclear test ban. The cooperation of a nation numbering one-fourth of the inhabitants of the globe is absolutely vital to the establishment of workable disarmament agreements. Toward that end, it is imperative that Red China join the community of nations and be admitted to the United Nations.

The United Nations is not an honor society, membership in which is a reward for "being good." It appears sometimes to be a debating society. If so, a forum where representatives of nations keep talking rather than start bombing has a definite advantage. As matters now

stand China, with her many millions who solidly support their government, is excluded. Being outside the U.N., Red China is not constrained to keep its actions in harmony with any web of collective agreements. It can keep on ignoring, insulting, and defying world opinion.

The absence of Peking has been a critical element blocking effective U.N. consideration of the Vietnam problem and other Asian security issues. Absence from the U.N. leaves China out of arms-control agreements on nuclear weapons that have been arrived at and are now being negotiated.

Our decision years ago not to accord diplomatic recognition to the Red Chinese was based in part on the belief that failure to do so would somehow inhibit the success of that regime. Actually, the reverse has proven to be the case. Our refusal to recognize China and our attempt to exclude it from the world community has relieved it from the responsibilities of United Nations participation, has deepened our ignorance of Chinese internal development, and has allowed Red China's nuclear weapons capacity to emerge unchallenged and unfettered by international obligations. It has allowed us to become a convenient hate symbol in a period of dynamic Chinese growth and development. It has impaired the United Nations' ability to deal effectively with problems affecting world peace.

Mr. President, there is nothing to indicate that recognition at this time would either change Red China's attitude toward the United States or her dedication to the promotion of world revolution and the ultimate destruction of the capitalistic system. However, time is a great healer. There should be a basic rethinking by our citizens, the Congress, and among officials of the executive branch of our Government regarding Asia in general, and China in particular.

Any attempt to reach an understanding for peaceful coexistence with the Peking regime will demand great patience, understanding, good will and a readiness to enter into honorable compromises. Both sides must be willing to take a hard look at the charges hurled at each other over the years in an effort to understand and clarify the issues dividing them. I urge that a proper policy for our country would be to offer the olive branch of coexistence and peace in the future to China. The time has past when this Nation could afford to adhere to that rigid idea that it is unthinkable to permit the very thought of recognition of Communist China or of its admission into the United Nations. China has a great history, tradition, and culture going back thousands of years. Nevertheless, by reason of technological superiority and weapons of war, the European nations throughout the 19th century seized vast areas of China, oppressed the Chinese, contemptuously regarded them as inferior and humiliated them. For example, England fought a war and killed many Chinese in the 1840's because the Chinese governing authorities tried to suppress opium traffic which was extremely lucrative to English merchants. This is known to the shame of the British as the opium war. It resulted in the seizure of the island of Hong Kong and other areas that had been Chinese for thousands of years.

In speaking out for diplomatic recognition of China, I recognize the facts of international life. In fact, I speak today for the generation of Americans who did not participate in framing our present Chinese policy. We all condemn the outrageous actions and aggressions of Chinese Communist leaders, but here is a de facto government stronger than ever before. We would do well to consider actions that would encourage more responsible behavior rather than to seek to crush a people as the British Empire did in the opium war.

Mr. President, I make these remarks today because I am thinking of tomorrow and of many tomorrows. I am thinking of generations of Americans yet to come. In fact, I am thinking of my four granddaughters and of other children and grandchildren of today who in a comparatively few years will become the guardians, keepers, and trustees of this Nation. We want them to have a nation that is the last best hope for permanent peace in this world, a nation not only supreme in power but one that is solvent whose citizens, fully protected in all their civil rights and civil liberties, enjoy contentment and comfort in a peaceful world free from hardship, aggression, and the sorrows of war. I am thinking of our great Nation in a peaceful world. Let us strive to do our utmost that future generations in our United States of America may live in peace and happiness in a peaceful world instead of in fear and terror and then eye hath not witnessed nor finite mind conceived the future grandeur, glory, contentment, and happiness of our people.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. KENNEDY. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The VICE PRESIDENT. Without objection, it is so ordered.

INTERPARLIAMENTARY UNION MEETING IN VIENNA, AUSTRIA— APPOINTMENT BY THE VICE PRESIDENT

The VICE PRESIDENT. The Chair, under the provisions of Public Law 170 of the 74th Congress, appoints the Senator from Indiana (Mr. BAYH) to attend the Interparliamentary Union Meeting, to be held at Vienna, Austria, on April 7 to 13, 1969.

THE NINTH MEXICO-UNITED STATES INTERPARLIAMENTARY CONFERENCE APPOINTMENT BY THE VICE PRESIDENT

The VICE PRESIDENT. The Chair, in accordance with Public Law 86–420, appoints the Senator from West Virginia (Mr. BYRD) and the Senator from New York (Mr. JAVITS) to attend the Ninth Mexico-United States Interparliamentary Conference, to be held in Mexico on April 2–8, 1969 to replace Senators BAYH and MURPHY, who are unable to attend.

THE JOINT COMMITTEE ON REDUCTION OF NONESSENTIAL FEDERAL EXPENDITURES — APPOINTMENT BY THE VICE PRESIDENT

The VICE PRESIDENT. The Chair, pursuant to the provisions of Public Law 77–250, appoints the Senator from Nebraska (Mr. HRUSKA) to the Joint Committee on Reduction of Nonessential Federal Expenditures vice Senator ALLOTT, resigned.

XXX—GENOCIDE CONVENTION: MORE IMPORTANT THAN FISH

Mr. PROXMIRE. Mr. President, the Senate of the United States is a unique body. Only the Senate can approve certain executive appointments, and only the Senate can ratify treaties made with other countries. This is a very important power—it gives this body the opportunity to work with the President to map out general foreign policy for the Nation. Over the years, the Senate has unreservedly exercised this power, forming hundreds of official agreements with other countries.

Since the Genocide Convention was introduced to the Senate by President Truman in 1949, the Foreign Relations Committee has held hearings on over 100 treaties. Also during this time, the Senate has given its advice and consent to more than 100 treaties.

A random sampling of some of these treaties can only raise serious doubt as to their historical and practical importance. We have a Tuna Convention with Costa Rica, a Halibut Convention with Canada, a Shrimp Convention with Cuba, and, of course, we cannot forget the "Pink Salmon Protocol." It took a treaty to build a bridge across the Rainy River, and another to allow licensed American drivers to drive on European highways. To expedite the importation of advertising samples, we have the Commercial Samples Convention. Our national security is guaranteed by our treaties of amity with Muscat and Oman.

It is not my intention to suggest that any of these treaties should not have been ratified by the Senate. I am certain that they are all in the national interest and necessary to us.

But each of these treaties is very limited in scope. In every case, they promote either profit or pleasure. Mr. President, I fail to see why a treaty to save wild geese should be given precedence over a treaty to save human beings.

The Genocide Convention was drawn up neither for pleasure nor for profit. It was adopted by the United Nations in order to guarantee the life, the rights, and the dignity of man. Therefore, Mr. President, I plead with the Senate to look beyond the screens of obstruction to perceive its obligation to mankind.

Let us now ratify the Genocide Convention.

After 20 years, after three Presidents of the United States during that period have warmly recommended the Genocide Convention, it is time for the Senate to act to ratify it.

THE APOLLO 8 MISSION—THREE BRAVE MEN

Mr. INOUYE. Mr. President, on December 27, the world watched as our three astronauts splashed down in the Pacific after their historic flight around the moon. Since the Apollo 8 mission, much has been written about this magnificent feat in space exploration.

A letter to the "three brave men" which appeared in the Honolulu Star-Bulletin expresses very simply but with great feeling the significance of this mission for all Americans.

I wish to share with Senators this tribute to our three astronauts who have realized our dreams. I ask unanimous consent that the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

A LETTER TO THREE BRAVE MEN

(By Jim Becker)

GENTLEMEN: You have done a brave thing. An amazing thing. A thing that boggles the mind.

You have flown to the moon. And you have flown back again.

A journey to the moon! It stuns us to read those words, displayed on the front page of a newspaper as routinely as the holiday traffic toll or the latest peace talk snarl.

You are going to hear today and on many days to come many things about your brave journey. All of what you hear will be sincere, and some of it may even be eloquent.

You are going to hear about how you have lifted the horizons and taken a giant scientific step and raised the dawn of a new era. All of that will be true.

But would you like to hear about how you have made some of your fellow earthlings feel?

Those of us who frankly don't understand very much about giant scientific steps and who aren't sure how it is possible to put a big space ship with three men inside into an orbit or send it whirling around at 25,000 miles an hour without even a motor running.

And never will understand it, for that matter, despite all the well-meaning efforts to explain it to us?

Would you like to know what you have done for us?

Well, gentlemen, we live in times that try men's souls and their nerves and even their will to get up and go out and face the daily traffic jam and the weekly wipeout and the monthly mugging at the hands of fate's fickle fist.

It is a tough world, gentlemen, as you know, and the only light a man sees at the end of most tunnels is liable to come from an explosion of some kind or other.

It is a world in which the neighbor you are supposed to love—and would really like to, sometimes, when you think of it—is liable to blow his car horn at you or cut you off at the intersection, or play his radio in your ear or grab your parking place before you even get a chance to love him.

It is a world in which some people would rather burn our cities down than live in them, and in which the easiest thing is to sit around and blame "them" for everything.

And when you battle that often, your spirits sag and your sights get lower and even to think of flying to a world you know not of, as Hamlet said, is enough to paralyze the will, and lose the name of action.

And soon you wonder if all is paralyzed, and no one will gain the name of action.

And then you three came along, men who dare to dream and to fly to those worlds one knows not of, with the name of action written clear.

And we think back to a fellow named Shepard, sitting alone, completely alone—in the tip of that fantastic rocket on the Florida launching pad, seven years ago, waiting to be shot off into a world he knew not of.

And a fellow named Glenn, who was cast into an orbit around the earth, and, circled it, unparalyzed, in action.

(Yes, and of the Russians, too, Gagarin, wasn't it?, and Titov, they were men who dared to dream. Brave men. Human beings.)

There have been these brave men before you, some now dead for their bravery, and bravery is not a commodity you can measure on a chart.

Some men are brave who only serve at Sears, and put clothes on their kids and umpire at the Little League.

But there are none so brave as those who fly to worlds they know not of, as those who do not lose the name of action.

And because you have done it, because you three had that kind of bravery, those of us who have more mundane struggles to face in a world we know well of, are helped to find the name of action, too.

And because you three are our countrymen, sons of our soil, we are helped to find that action in the land we know of.

And the first Good Earth you touched after your journey to the moon was our earth, Hawaii's earth.

You are welcome to it, men from the moon. You have made it a little easier to struggle along upon it.

FUTURE HOMEMAKERS OF AMERICA WEEK: FOCUS ON POSITIVE ACTION

Mr. PROXMIRE. Mr. President, the period of time between March 23 and March 29 has been set aside to observe National Future Homemakers of America Week and its theme, "Focus on Positive Action." Some 600,000 members of 12,000 local FHA chapters throughout the United States and Puerto Rico are at this moment engaged in service projects, and in activities to promote good will and the principles of positive citizenship.

My home State of Wisconsin is fortunate to have the national vice president of the central region, Marilyn Drew of Rice Lake. This central region has 175,000 FHA members in 13 States. Miss Drew attends Rice Lake High School, where she is the editor of the school paper and a member of the student council, the National Honor Society, and the forensics squad. The State's own 15,000 members are led by Beth Monson of Hammond, Wis., president of the Wisconsin State FHA Association, and Mrs. Esther Brown of Madison, Wis., State FHA adviser.

As Estelle Hunter, national president of the FHA, so aptly put it:

> The overall objective of Future Homemakers of America is to help individuals improve personal, family, and community living. . . . During this week FHA members across the country will stress constructive activities.

These members assist in local Headstart programs, help the mentally retarded and the handicapped, organize tutorial programs for underprivileged children, visit the elderly, assist in the March of Dimes, serve as hospital candy stripers, and carry out many other projects which give practical application to their classroom learning.

Founded as a nonprofit organization in 1945, the FHA has served more than 12 million high school youth. The members themselves have always set their own goals and planned their own activities and projects, developing the opportunity for leadership and creativity. It is an organization, according to one member "in which common interests in home economics values are realized, friends are made, and family bonds are strengthened."

Mr. President, in an age when we hear in the news only about the young people participating in riots, illegal protests, and other forms of rebellion, it is comforting to find that these dissenters are but a small minority of the total youth population. The 600,000 teenagers of the FHA do not get into trouble with the law—they are too busy organizing worthwhile projects with constructive results. And while the hippies, the yippies, and the malcontents may continue to burn American flags, they will never eclipse the good citizenship and positive action of the responsible majority in such organizations as the Future Homemakers of America.

THE SCOURGE OF UNEMPLOYMENT

Mr. MONDALE. Mr. President, the distinguished junior Senator from California (Mr. CRANSTON) was scheduled to deliver a speech before the Women's National Democratic Club this noon, but was unable to appear because he was called away from Washington by the death of his mother.

I know that all of Senator CRANSTON's colleagues join me in expressing our sorrow at his loss.

Mr. President, the remarks which Senator CRANSTON was to deliver today are so timely that I have requested his permission to place them in the RECORD. I particularly call the attention of this body to a sentiment which I share completely:

> I find unacceptable the notion that there is any such thing as an acceptable increase in unemployment. Acceptable to whom? I want to know! And callous, total indifference to how many millions of men and women may be unemployed is, of course, an even worse attitude.

The Senator goes on to say of the relationship between unemployment and inflation:

> That is the bitter paradox: those who already suffer the most from inflation will be the same people who will suffer most from efforts to curb inflation. . . . Unemployment is not a private inconvenience to be kept at acceptable levels. It is a national scourge to be wiped out altogether.

Mr. President, I ask unanimous consent that Senator CRANSTON's remarks be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR ALAN CRANSTON BEFORE THE WOMAN'S NATIONAL DEMOCRATIC CLUB, WASHINGTON, D.C., MARCH 27, 1969

A not-so-funny thing happened to the Nixon administration on its way to developing a program to fight inflation.

It seems to have been stopped by some long-standing hang-ups. Because it is understandably up-tight over using the power and the money of the federal government in

ways that might drastically increase unemployment, it doesn't appear even to be thinking about steps it might take to reduce unemployment. And that is less understandable.
